The Extension and Research programs in agriculture and related disciplines, which have characterized and caused in large part the fantastic success of American agriculture, have long been a joint effort of the Federal and State governments and, in the case of Extension, county government. Recent legislation calls for the teaching endeavors in agriculture to be a federal-state partnership. Eyes are now pointed toward Congress to carry forward and provide leadership to these partnerships.

5. Of special concern to the long time contributions research and education can make to the stability and strength of American agriculture is the apparent decreased interest, demonstrated in the President's budget, to the formula funding of research and education programs. The budget calls for some increase in short-term grants. The benefit of these grants to help the universities respond to individual problems of high national interest cannot be argued. Yet, we all know that farming or ranching or the production and maintenance of timber and other natural resources succeeds only with stability—stability in weather, federal programs, etc. If research and education programs are to serve farmers and our other clientele effectively we need the stability and the long time strength of the Hatch-Smith-Lever, McIntyre-Stennis and other formula funds. Grants are a bit like the weather; they go up and down.

6. States have made significant progress over the past decade in providing facilities on land-grant university campuses for research programs. Yet one cannot be optimistic about the future. As university enrollments plateau and decline because of declining numbers of high school graduates and a slight drop in the percentage of high school graduates who go on to college, there is a high chance state legislatures will associate the universities' building needs with that enrollment, not fully recognizing or associating the facility needs with the significant research and extension programs headquartered at our land-grant university campuses. We urge, therefore, strong funding for research facilities at universities in support of the research programs in agriculture and related disciplines.

In summary, our charge in Agriculture and the natural resources at the universities we represent is to help our major clientele group—the farmers, ranchers and those re-

sponsible for the major renewable resources—to survive and to achieve a reasonable level of living. Our charge is also to help the students who aspire to produce our food, tend our renewable resources, or work in other professions to maintain our capacity to produce, to be well equipped for their challenging assignment. We seek your support of and continued investment in helping us meet this charge.

I would close with one illustration. A farmer from Columbia, South Dakota, appearing before the Appropriations Committee of the South Dakota Legislature a few years ago to support increased investments in agricultural research and extension said:

"1936 was a dry year. I had a $200 property tax bill and couldn't pay it. Last year was dryer. I had a $2,000 tax bill. I paid it and also had to pay quite a bit of income tax. Why? In large part this was due to the adapted small grain varieties that have been developed and released, the drought resistant alfalfa and grasses and the corn lines selected and developed for our short growing season and low rainfall. This work has been done by the Agricultural Experiment Station and the educational program that caused adoption and implementation has been done by the Extension Service."

Mr. Chairman and members of the committee, I thank you for your interest, your attention and your support. I would be pleased to respond to questions.●

## WHO'S KIDDING WHOM ABOUT FEDERAL LOAN GUARANTEES?

### HON. STEPHEN J. SOLARZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. SOLARZ. Mr. Speaker, much has been heard in the Congress lately concerning the question of Federal loan guarantees for New York City. I would like to call the attention of my colleagues to a brief item which appeared in the New York Times and puts the whole question of Federal guarantees in a clearer perspective. The author of the article is Victor Gotbaum, a good friend of mine, a vocal supporter of New York City, and also the executive director of District Council 37 of the American Federation of State, County and Municipal Employees. That union along with the other municipal unions of New York City has already purchased over $2 billion of city bonds with some of the assets of their members pension funds.

For anyone who is looking for a brief factual account of our other Federal loan guarantee programs, I strongly urge them to read the following item:

WHO'S KIDDING WHOM ABOUT FEDERAL LOAN GUARANTEES?

(Comments by Victor Gotbaum, Executive Director, District Council 37)

If Congress votes to guarantee two billion dollars of New York City loans, it will increase the amount of federal guarantees issued next year from 81 to 83 billion dollars.

The Congressional Research Service estimates that by next year the total amount of outstanding loans guaranteed by the federal government will be 324 billion dollars.

The estimate for fiscal 1979 is 368 billion.

Two billion dollars will increase the total amount of federal loan guarantees outstanding in 1978 by six-tenths of one percent.

Who's kidding whom?

The federal government guarantees loans for home owners, multi-national and other corporations, farmers, businessmen, shippers, steel companies, students, foreign governments, new communities.

Less than two weeks ago, the Senate passed a farm subsidy bill that will cost American taxpayers two billion dollars in direct cash to the farmers and an estimated six billion dollars in higher food prices. (No comment is intended here on the merits of the bill.)

This single act of the Senate, according to the Congressional Budget Office, will raise the cost of living by one to one and a half percent in the next two years.

It will add $200 to $300 to the food bill of a New York family of four.

Let's take a quick look at some of the federal loan guarantees issued just last year, i.e.,

The FHA, 11.5 billion. Student loans, more than a billion dollars. Farmers Home Administration and Rural Electrification Administration, 8.5 billion. Maritime Administration, 955 million.

The U.S. government guaranteed interest and principal on bonds to build R.F.K. Stadium in Washington.

The Federal government has been guaranteeing loans for Americans and others for generations.

It's the right and responsibility of the government to serve its people this way.

Why should this right and responsibility end at New York City's borders?

A Wisconsin Senator leads the attack on New York City as unworthy of federal guarantees. While a Wisconsin Congressman leads the lobby for a federal guarantee of 109 million dollars in loans to American Motors Corporation.

American Motors employs 8000 workers in Kenosha, Wisconsin.

Wisconsin legislators don't attack the management of American Motors or demand that Wisconsin voters working for AMC give up fringe benefits and take wage cuts to qualify their company for federal guarantees.

The issue of loan guarantees for New York City, unfortunately, is not fiscal.

It's political.

It's too easy to generate attention by attacking New York City.

A Congressman representing agri-business and the suburbs of Disneyland comes to New York as an instant-urban-expert.

To TV cameras, microphones and reporters assembled he declares that New York must "do more" and expresses deep concern that extending federal guarantees to this city will invite national bankruptcy.

It's time to call a fact a fact. And an American city an American city.

New York is part of America. Billions of our tax dollars have gone to farmers, big business, home owners, car drivers, students, doctors and every other level of American life.

In spite of, and all during our desperate fiscal crisis we sent out billions more than we received from Washington.

Our money didn't go out with lectures, threats and demeaning attacks on the millions of other Americans who regularly receive federal aid.

Federal guarantees of New York loans will not cost the nation one cent.

No one's food bill will go up. No one's taxes will go up. No one's gas, oil, or any other bill will go up.

New York City has done more than any other city in American to reduce costs and balance its budget.

Our schools, parks, subways, hospitals, our streets and bridges have deteriorated from cuts in the people and money available to maintain them.

The simple fact is that this city is *entitled* to federal loan guarantees to help us on the road back.

The irony is that even those politicians who most loudly oppose the loans don't want New York to go bankrupt.

They just don't want to give up a good issue.

Our thanks to Senator Jacob Javits for some of the figures presented here. They were researched by the Congressional Research Service at the request of Senator Javits.

## SALT II—STATUS AND PROSPECTS

### HON. ROBIN L. BEARD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. BEARD of Tennessee. Mr. Speaker, various administration spokesmen have recently stated that the proposed SALT II agreement is 90 percent wrapped up, that the remainder should be finalized in the near future, and that the Congress can expect to consider the agreement this year.

To date the negotiated terms of the proposed SALT II agreement, and in particular the terms of the protocol, in my view, are inadequate and unacceptable from the standpoint of U.S. national security interests. Even if those 10 percent of the outstanding issues are all negotiated in the U.S. favor—and they will not be—the agreement, in my view, would still be unacceptable. Yet, I also believe it is possible within the present SALT II negotiations framework to reach an agreement that would meet both United States and Soviet security requirements.

The prospective SALT II agreement will not restrict in any militarily meaningful way Soviet strategic force developments, deployments, and capabilities. The proposed terms of the SALT II agreement, however, impose significant restraints on the U.S. ability to respond to those Soviet strategic programs which pose the greatest threat to strategic stability, and the agreement threatens to prevent the United States from making those of its strategic forces that are threatened more survivable.

I have discussed many of my concerns with the proposed SALT II agreement in the past. Let me briefly highlight a few of those concerns now.

The proposed SALT II treaty, in my view, will be a bar to future meaningful arms control agreements.

Under the terms of the proposed treaty the United States will legitimize and codify the throw-weight advantages presently possessed by Soviet ICBM's.

The Soviets will be permitted a 7-to-1 ICBM throw-weight advantage, with three times as many ICBM warheads, with each warhead having an average of three times more yield. With improved accuracy, the Soviets could further fractionate the payload of their ICBM systems, and further increase their ICBM warhead numbers.

Thus, in the future, as we try to reduce the number of strategic nuclear delivery vehicles permitted each nation, the Soviets could, in fact, retain more warheads because of their throw-weight superiority.

There are also a number of Soviet weapons systems which will not be restrained by the proposed SALT agreement in any meaningful way.

The Soviet Backfire bomber, for example, will not be counted under the total number of strategic nuclear delivery vehicles permitted each side. Whether the Soviets intend to use the Backfire in an intercontinental role is less important than the fact that the bomber could be so used. Thus, to the extent the Backfire is not counted under the total aggregate permitted each nation it undermines the U.S. objective of controlling total strategic delivery vehicles permitted each nation.

With the Backfire unrestricted, the Soviets could equal or surpass the United States in deliverable megatonnage in the bomber leg of their strategic forces.

With the permitted deployment of the SSN–18 submarine ballistic missile, and its follow-on for the Typhoon ballistic submarine, the Soviets could equal or surpass the MIRV capability of U.S. SSBN's. Thus, the Soviets could equal or surpass the United States in capabilities in each leg of strategic forces, and they would do this at a time when the United States could no longer be confident that the U.S. Minuteman force could survive a surprise Soviet attack.

Under the proposed SALT II agreement, the Soviet SS–20 mobile intermediate range ballistic missile can be deployed in unrestricted numbers. Thus, the Soviets have a system which can rapidly be converted to an intercontinental ballastic missile. The SS–20 consists of the first two stages of the mobile SS–16 ICBM; by building and storing the missile's third stages the SS–20 could quickly be modified to an SS–16. More importantly, simply by reducing the SS–20's payload and by making fuel modifications, the SS–20 itself could be given an intercontinental capability.

The range restrictions on the ground- and sea-launched cruise missiles, in my view, do not seem appropriate without some concessions from the Soviet Union. More importantly, the range restrictions on the air-launched cruise missile, especially in light of the President's unilateral cancellation of the B–1 bomber, will deny the cruise missile access to many critical Soviet targets, and these restrictions will degrade the cruise missile's penetration capabilities.

These illustrations, and there are many such other examples, all point to possible serious asymmetries in United States-Soviet strategic capabilities, but they are not, in my view, central to the issue of strategic stability.

The greatest source of strategic instability is the growing vulnerability of the U.S. silo-based ICBM force—the Minuteman—to a surprise Soviet attack. By early in the next decade the United States could not be confident that Minuteman would survive a preemptive Soviet attack. This is no longer an issue of contention. With or without SALT, as Secretary of Defense Harold Brown has acknowledged, the Soviets will have this capability.

In such an attack the Soviets would also destroy the nonalert U.S. bombers and submarines. The United States, in such an attack, would lose as many as 6 to 10 million Americans and we would still face a superior Soviet strategic reserve force.

Further, our retaliatory capability would rest with those submarines that survived the initial attack, and the cruise missile which would encounter serious penetration difficulties. By contrast, the preponderance of the Soviet capability would still be in time responsive weapons.

Perhaps the threat of that U.S. retaliatory capability would deter the Soviets from ever initiating an attack in the first place, but that retaliatory capability bears no correlation with presently prescribed U.S. deterrence and defense objectives. This retaliatory capability reflects what is commonly known as a "minimum deterrence, assured destruction only" posture. This posture is premised on the belief that differences in strategic capabilities are unimportant, and its advocates hold that the view that nuclear superiority has no political or military utility. This view, however, is actually less important than the present guidelines and objectives for employing U.S. nuclear strategic forces, and the damage criteria and requirements we have prescribed for U.S. strategic forces to complete.

The United States without a survivable ICBM as part of the strategic Triad would not be able to maintain crisis stability, escalation control, essential equivalence, and all those other elements of policy now believed necessary for deterrence. These elements of U.S. strategic policy are a composite view of preceding administrations and they have served for over three decades to prevent the outbreak of nuclear war.

If we fail to redress the vulnerability of the U.S. ICBM leg of the U.S. Triad, we would place an overreliance on the SLBM fleet, a system that is not capable of being used against the total spectrum of Soviet targets. Equally significant, we would deny ourselves a hedge against a Soviet ASW breakthrough. This breakthrough could be as sudden as it would be ingenious. More importantly, with the $C^3$ vulnerability of U.S. submarines, and the fact that no more than two-thirds of the 41 submarine fleet could be at sea at a given time, the ability of the Soviets to neutralize only a portion of the at-sea submarines would seriously degrade U.S. retaliatory capabilities.

Similarly with the cruise missile, the system is susceptible to prelaunch survivability and penetration problems. It certainly could not be used against terminally defended targets, and those targets would constitute the bulk of the U.S. requirement for the cruise missile in the absence of having the ICBM.

For these and other reasons, then, we cannot fail to redress the vulnerability of the U.S. ICBM leg of the *Triad*; we certainly cannot afford to codify this vulnerability into a future SALT agreement.

The proposed SALT II treaty prohibits either nation from constructing new fixed ICBM launchers. The principle behind this proposed term is to stop both the United States and Soviets from deploying more strategic missiles.

The problem, however, is that we are trying to control missiles by controlling silos. Unfortunately there is no direct correlation between the two. Without verifiable restraints on missile development and production we cannot control missiles since missiles, especially those with a cold launch capability, can be launched from cannisters from anywhere the Soviets might want to launch them.

Conversely, if the United States can adequately verify Soviet strategic missile development and production, then there should be no real reason to be concerned whether they are deployed in a fixed or mobile mode, unless the United States wanted and had the capability to destroy those Soviet silos in a first strike; this, however, is not a U.S. objective, and the United States does not possess such a capability. Silo limitations would deny the Soviets the ability to deploy their extra missiles in those silos in which missiles are already in place, but their extra missiles could still be used for launching from cannisters or reload in the fixed silos.

By contrast, by permitting each nation to deploy mobile ICBM's, the problem of verification for missile development and production would not be changed. But the ability of both nations to deploy mobile ICBM's would prevent either nation from credibly attacking and destroying a sufficiently large number of the other side's mobile ICBM's in a first strike. Thus, mobility for ICBM's would actually enhance rather than undermine strategic stability.

In short, if the United States can verify Soviet ICBM development and production within a satisfactory margin of error, ICBM mobility would contribute to deterrence. If the United States cannot adequately verify Soviet ICBM development and production, then those missiles would still be produced and stored, and therewith could be used whenever the Soviets wanted to.

The real threat to strategic stability, in point of fact, comes from the Soviet capability to neutralize the U.S. Minuteman force; the United States does not have a similar capability. Thus, it is the United States, and not the Soviets, which needs to deploy a mobile or multiple aim point ICBM system. A SALT II ban on constructing new fixed ICBM launchers thus works against the United States, because a future survivable U.S. ICBM system might require the construction of additional launchers for redundancy, and to insure survivability; the above SALT provision would preclude that option.

The SALT II Protocol would also ban testing and deployment of a mobile ICBM, for the duration of the protocol. This provision was put in at U.S. insistence, not Soviet insistence.

The U.S. rationale is that this prohibition would stop the Soviets from deploying their mobile SS–16 ICBM. As pointed out earlier, unless we constrain the mobile SS–20 ICBM—which we will not—this provision will only hurt the United States. Moreover, since the United States cannot credibly threaten Soviet ICBM silos it is unlikely the So-

viets would trade in their more capable silo-based ICBM systems for the SS–16, especially since they can deploy the SS–20 in unlimited numbers.

Even if it is correct, that the United States will not test the so-called MX system—and by that I mean the concept to develop a more survivable ICBM—the Soviets, and the U.S. arms control community, will undoubtedly insist that this provision be incorporated into a future SALT III agreement. Thus, the provision serves no useful purpose, and it poses many serious future problems.

For that reason I believe it is essential that the SALT II agreement explicitly provide for the counting and deployment of mobile ICBM, and that the provision in the protocol, put in at U.S. insistence, which bans the testing and deployment of a mobile ICBM, be eliminated.

An agreement which stated:

The development and testing of ICBMs for the purpose of allowing their deployment and launching from multiple aim points is allowed. The concept of deployment at multiple aim points includes ICBMs that are mobile and also ICBMs that are deployed at several redundant fixed sites. Also, the development and testing of associated canisters, transporters, and launchers is allowed.

If ICBMs are deployed in a multiple aim point mode, they will be counted under SALT limits in terms of the number of missiles and not in the context of launchers. The side undertaking such a deployment must provide for the adequate verification of the number of missiles deployed.

Such a provision, in my view, with a commitment from the administration to develop and deploy a multiple aim point ICBM system—and this survivable basing mode could be used for the present Minuteman force—would facilitate Senate ratification of the proposed SALT II agreement.

A multiple aim point ICBM system would significantly contribute to strategic stability and future arms control agreements.

Such a system would deny any nation the incentive from striking first, because the attacking nation would expend more of its forces than it destroyed, thereby placing itself in an inferior post attack position. Thus, it is unlikely that a nation would risk a preemptive attack, and a contribution to deterrence would be made.

If the MX could be pinned down as some of its critics contend, so too could Minuteman. This would preclude the United States from using Minuteman in a launch under attack situation. Moreover, once pinned down the Minuteman force could be destroyed with a minimum force expenditure, thus placing the attacker in a superior position. As mentioned earlier, by attacking MX, the attacker would end up in an inferior position.

Verification of the multiple aim point system is not considered an insurmountable problem in the U.S. scientific community. The Soviets do not bring up the issue of verification at SALT, because they are obviously confident the nature of our open society and their own national means of verification permit adequate verifiability. From the U.S. standpoint, a violation of the SALT limitations, on a large enough scale, to overcome the stability provided by the system, would not escape detection; and cheating below that level would not be militarily significant.

Moreover, the SALT provision I recommend would explicitly provide that the "side undertaking such a (mobile ICBM) deployment must provide for adequate verification of the number of missiles deployed."

Equally significant, the deployment of a multiple aim point ICBM system would allow each nation to take further reductions in the number of strategic nuclear delivery vehicles because such a system would make each nation relatively insensitive to cheating that would go undetected.

The two major issues presently holding back a SALT agreement is the Soviet insistence to be permitted to deploy one new ICBM system, and their insistence to deploy the follow-on system to the SSN–18, for their Typhoon ballistic submarines. With these and other outstanding SALT II issues concessions by both nations are still to be made. Thus ample opportunity exists to incorporate a provision into the treaty explicitly providing for the counting and deployment of a mobile ICBM. Equally significant, the provision in the protocol banning the testing and deployment of a mobile ICBM, which is being put in at U.S. insistence, should also be withdrawn. Both of these actions would give substance to the position in the statement of principles that both sides agree to measures to "strengthen stability, including the maintenance and enhancements of the survivability of permitted strategic offensive forces." These actions would also illustrate the administration's commitment to maintaining the survivability of the ICBM leg of the U.S. Triad. And it is, in large part, because of the concern in Congress that the administration plans to dramatically change U.S. strategic deterrence objectives, requirements, and capabilities, that the projected SALT II agreement appears so unpalatable. A clear sign from the administration that it intends to proceed with the development and deployment of a more survivable land-based ICBM would, therefore, undoubtedly restore much of the administration's lost credibility.●

## IN HONOR OF RETIRING LONG BEACH FIREFIGHTERS

### HON. MARK W. HANNAFORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. HANNAFORD. Mr. Speaker, on Saturday, April 15, I will be taking part in a tribute to 27 public servants who are retiring after many individual years of sacrifice for the betterment of the lives of citizens who live in Long Beach, Calif.

They are members of the Long Beach firefighting force, and they deserve the recognition of all Congressmen and Congresswomen assembled. To this end, Mr. Speaker, I would like to commend the men listed below and enter each of their names in the official RECORD of proceedings for the House of Representatives.

Mr. Speaker, I know you will join me in saying "thanks" to these hard-working, self-sacrificing firemen from Long Beach, and in wishing them well in their future endeavors:

James D. Andrews, Curtis E. Baker, Ronald G. Bentley, Jack B. Campbell, George R. Caplinger, Carleton L. Christopherson, Merle E. Combs, Stanley S. Duree, James E. Gember, William H. Hite, Jr., Arnold A. Hoxmeier, Paul W. Humiston, James R. Krueger, Donald J. Lehnert, Alex Miller, Willis J. Moffitt, Clarence H. O'Neill, Douglas D. Penskofer, Harold R. Peterson, George R. Pinkerton, Arthur H. Radin, Floyd G. Schwartz, Oscar K. Steffen, Charles J. Tyack, Joseph A. Valenzuela, Robert J. Wells, Fred L. Woolcott.●

## PREVENTING A RETURN TO EXECUTIVE ABUSES

### HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. MAZZOLI. Mr. Speaker, on Thursday the House is scheduled to consider H.R. 1, the Ethics in Government Act of 1977. This is a very important step in our efforts to restore the public's confidence in their governmental officials.

H.R. 1 requires complete financial disclosure by some 20,000 high-ranking Federal employees, their spouses and dependents. Title I has been left blank for a floor amendment to add H.R. 11941, the Legislative Branch Disclosure Act, which requires comprehensive financial disclosure by Members of Congress, their employees, and candidates for Congress.

I have the privilege of serving on the House Judiciary Committee and on the Select Ethics Committee. I have had the unique opportunity to work on financial disclosure requirements for both the legislative and executive branches. I have been a part of the lengthy hearings and debate on these important reforms, and I am well aware of the hard work which has gone into reporting sound, workable proposals to the House.

I am very proud of the final work products. However, I do have one reservation about H.R. 1, and I intend to offer an amendment on the House floor to correct what I believe is a serious flaw in this measure.

Under the language of H.R. 1, employees must file annual financial disclosure reports, the reports are open to public scrutiny, and refusal to file reports—or the intentional reporting of false information—exposes an employee to criminal penalties of up to $10,000 in fines and imprisonment of up to 1 year.

H.R. 1 gives the President wide discretionary authority to exempt from public disclosure financial reports of intelligence officials.

The Judiciary Subcommittee on Administrative Law adopted—and the full Judiciary Committee concurred—an amendment to take that authority a step further.

In addition to exempting intelligence officials' reports from public review, the President has been given the authority to allow the filing of false financial disclosure reports by these same officials.

In short, intelligence officials will file truthful reports with the President and could be authorized then to disclose false information to the public for cover purposes. No one would be allowed to examine the true reports or to challenge the President's decision to allow the false disclosure.

There was no testimony—in public or in closed session—to justify the granting of this exception. A one-sentence request from the CIA stands alone as justification for the provision.

When the House takes up H.R. 1, I intend to offer an amendment deleting the false reporting provision. I attempted to have that exemption deleted during Judiciary Committee consideration of H.R. 1, but my efforts failed. The text of my amendment follows:

AN AMENDMENT OFFERED BY MR. MAZZOLI TO H.R. 1

On page 30, line 20, strike "In addition" and all that follows through the end of the subsection.

I hope the House will support my amendment to remove the false reports language. It would be unconscionable for a provision of a financial disclosure bill—held out to be an ethical reform and aimed at restoring public confidence in Government—to lay the groundwork for a return to executive abuses we have seen in the past.

At the very least, the CIA and its associates in the intelligence community should come before the House and Senate Intelligence Committees to justify—if that is possible—the need for such an exemption and to offer feasible alternatives.

Following is an article I wrote on the subject which was published by the Washington Post on April 1, 1978.

FINANCIAL DISCLOSURE: SHOULD WE LET CIA AGENTS LIE?

During the second week of April, the House is scheduled to consider H.R. 1, a measure calling for comprehensive governmental financial disclosure. Yet, H.R. 1, officially entitled the Ethics in Government Act, ironically—and unacceptably—gives the intelligence community the legal right to lie.

In commenting on the bargain struck between former Central Intelligence Agency director Richard Helms and the Justice Department, President Carter said, "A public official does not have a right to lie." Attorney General Bell said of the same case. "It sets the intelligence community out on a new course."

Despite those commendable statements of principle, the administration, through the CIA, delivered a letter to my House Judiciary subcommittee requesting in one sentence that the subcommittee authorize the CIA to lie to the public and to Congress. Without any testimony to justify that extraordinary action, the subcommittee agreed.

The contradiction between the "new course" for the intelligence community hailed by the administration and the legal right to lie it subsequently requested of Congress could not be more striking.

H.R. 1 requires a complete financial disclosure by some 20,000 high-ranking federal employees and their spouses and dependents.

Under the bill, most of those employees must file annual reports making public such information as source and amount of income; source, value and description of gifts given and received; value and identity of personal and real property; and certain liabilities and business relationships.

Refusal to file reports—or the intentional reporting of false information—exposes an employee to criminal penalties of up to $10,000 in fines, and imprisonment for up to one year.

In a concession to the intelligence agencies, the bill contains a provision that would allow the president to exempt from public disclosure any financial reports filed by an intelligence agent. The provision is designed to protect an intelligence agent working under the cover of being an employee of a nonintelligence agency of the federal government.

However, this "cover" provision clearly was not satisfactory to the CIA. The agency requested that the president additionally be authorized to allow an intelligence agent to disclose to the public a false financial report.

Under the CIA's proposal, agents would file truthful reports with the president and disclose false information to the public for cover purposes. No one would be allowed to examine the true reports or to challenge the president's decision to allow the false disclosure.

There was neither public nor closed-session testimony to justify the granting of that exception. The CIA's one-sentence request stands alone in justification of the provision.

The CIA did meet with me and my staff to discuss its proposal. However, the offer of that meeting was made after my subcommittee had agreed to the proposal and after the CIA learned that I intended to challenge the provision in full committee.

From my meeting with the CIA I gather the agency justifies the false-disclosing provision because it facilitates placing intelligence agents in top posts in nonintelligence federal agencies.

Such an exception may not be cause for alarm with a president, an attorney general and a CIA director who do not believe public officials have an inherent right to lie. They guarantee the disclosure exception will be infrequently and judiciously exercised.

But persons with vastly different attitudes could succeed to those positions. They might not be prudent or watchful in the exercise of the disclosure exemption. That could easily lead to executive branch abuse of the Constitutional rights of American citizens.

It would be unforgivably ironic if a provision of a financial-disclosure bill—held out to be an ethical reform and aimed at restoring public confidence—were to lay the groundwork for a return to executive abuses.

The false-report language also contradicts Carter's statement in transmitting this proposed legislation to Congress: "The American people must be assured that no one, regardless of position, is above the law."

Further, there are policy reasons to question an unrestrained CIA use of other governmental agencies for cover. Previous revelations of CIA use of the Peace Corps and State Department as "cover" organizations have damaged the credibility of those agencies in many countries and limited their ability to perform their missions successfully.

To grant such blanket exemption without careful testimony and serious congressional debate is not responsible lawmaking.

The House should remove the false-reports language from H.R. 1. Then the CIA and its associates in the intelligence community should be requested to come before the House and Senate intelligence committees to justify—if that is possible—the need for such an exemption and to offer feasible alternatives.

One alternative would be to require those committees to consider all requests for the right to publish false financial reports and to review annually the need for that provision.

Another alternative would allow falsifying only the salary and the employing agency of an intelligence agent. A third option would be to limit the life of the exemption to three years. Its extension would depend upon our experience with it.

The House has a choice to make. It can permit—under the guise of ethical reform—a step backward in its efforts to correct past intelligence excesses and abuses.

Or, as I hope it will do, it can send a powerful and assuring message to the nation that no public official has a right to lie and none will be permitted to do so.●

---

## RETIRING JIM FARBER OF POTTSVILLE, PA., HAS SERVED PEOPLE WELL

### HON. GUS YATRON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. YATRON. Mr. Speaker, today, I would like to take a few minutes to pay tribute to a man who I am proud to represent in the Congress, Charles J. Farber. Known to all as Jim, this remarkable man recently retired as superintendent of streets for the city of Pottsville, Pa., after 34 years of faithful and conscientious service.

My purpose in bringing Jim Farber's story to the attention of my colleagues is to provide further documentation to the basic theory on the greatness of America. That theory is that our people—diverse in background, patriotic in purpose, generous of heart, and humble in spirit—are the Nation's greatest asset. Jim Farber is a case in point.

Jim served the people of Pottsville under five different mayors, both Democratic and Republican, which in itself is indicative that his retention was based solely on his abilities rather than any political affiliation.

His only and primary concern was to his municipality and the people who lived therein.

His snow removal program was considered Pennsylvania's finest, for reasons that he refused to sleep until the city's streets were completely cleared. Every year he attended Pennsylvania's ice and snow school to further his education so he could better serve his people.

Jim Farber's efforts drew national admiration and praise when, in 1974, he was featured in a national construction magazine.

Even more noteworthy is the fact that Jim's selfless dedication to helping others has garnered a tremendous love and respect for him among the people of Pottsville.

Jim Farber is a modest man, but an individual who has every right to stand tall and hold his head high as he looks to the future. It is men such as he who have contributed so much to making to-

day better than we might have hoped for and tomorrow even more promising as we face the challenges ahead.

I welcome the opportunity to be in the chorus singing the praises of this hard-working, decent, honest, and loyal American.

On behalf of the Congress of the United States and the grateful people of Pottsville, I offer our sincere appreciation to this man who has served so long and so well.●

## SOME THOUGHTS ON CONGRESSIONAL REPRESENTATION

### HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington report for April 12, 1978, into the CONGRESSIONAL RECORD:

SOME THOUGHTS ON CONGRESSIONAL REPRESENTATION

One of the questions asked me most frequently is whether a Congressman should vote as the majority of his constituents wish or as he himself thinks best. The question is intriguing because it goes to the very heart of our representative form of government.

On one view of the matter, the Congressman is an agent of his constituents, an official who carefully monitors their opinions and then casts his votes accordingly. This view was summed up by a Congressman who once said to me, "I'm in Congress to represent my district. What is good for the majority of my constituents is good for the country. It only fouls things up when a Congressman votes for what he thinks is the national interest." However, on another view of the matter a Congressman is free to express his own opinions on public policy. Edmund Burke, the famous eighteenth century Irish statesman, said that a representative owes his constituents his judgment. Burke also said that a representative is betraying his constituents rather than serving them if he sacrifices his judgment to their opinions.

Whether a Congressman is an agent of his constituents or is free to use his own judgment is a classic problem for our representative form of government. Politicians, political scientists and philosophers have discussed it for decades. I do have a general view on it. The opinions of constituents certainly exert an important influence on a Congressman's votes. He has a moral and constitutional obligation to take them into account, and in any case the issues of public policy are so many and so different that he must often listen to his constituents as he struggles to reach decisions. He must constantly check the "pulse" of his district as he makes his judgments. A Congressman is not a representative if his actions bear little or no relationship to his constituents' opinions.

The attitude back home looms very large in Congress, but it is not the only factor which influences congressional voting. The insights and knowledge that a Congressman gains as he goes about his business are also important. Like any other person, he develops opinions that are very much his own on some issues. When those issues are debated, his personal outlook plays a prominent role in his final decision.

It is not possible to say which of these influences is more important in actual practice. The answer would vary from issue to issue and from Congressman to Congressman. Nor is it possible to say which of these influences should be more important in theory. To my way of thinking, both of them should have a place. The Founding Fathers had the right idea. They intended a Congressman to listen to his constituents, study the issues at hand and then exercise his best judgment. In their view, a Congressman sometimes has a duty to mold opinion, not just to follow it. He is not supposed to be a mere "seismograph" to record shifts in popular belief. He is elected because the voters have confidence in his judgment and his ability to use that judgment responsibility. If the Founding Fathers had wanted a Congressman always to take the stance of the majority, then they probably would have established a national referendum instead of a national legislature.

The idea of the Founding Fathers is good enough in itself, but there are other reasons to reject the view that a Congressman must always vote with the majority of his constituents. A genuine problem is the inability of a Congressman to be certain where the majority lies on any one issue. He may have some idea of their stand, but in the absence of a referendum or a comprehensive public opinion poll he cannot really be sure what they think. Very often the silent majority is just that—silent. Thus, a Congressman could not always vote his constituents' preferences even if he wanted to.

There would be enormous obstacles in trying to discover the majority viewpoint on each of the hundreds of issues that come before Congress every year. Referendums would be required almost daily in the nation's 435 congressional districts. Few voters would participate in the referendums and there would be real questions about validity of the results. Just getting the necessary information to the people would be beyond the combined capabilities of the government and the press. The costs of such a system and the bureaucracy it would create would be unacceptable to us. And—in the final analysis—the results of constant sampling of opinion would not be all that reliable. Public opinion polls would not be an adequate substitute. They have very real limitations, too, and their results must be examined with great caution and a clear recognition of the margin of error.

I am firmly convinced that a Congressman must be part listener, part leader. He is not, however, the only one to carry the responsibility of leadership. Constitutents must sometimes mold the opinion of their Congressman. I know of no member of the House of Representatives whose mind has not been changed a number of times by the advice of a thoughtful, concerned constituent. The process of give-and-take between constituents and Congressman, each listening and leading in turn, is the genius of our representative form of government.●

## NEW JERSEY GREEN THUMB PROGRAM WINS AWARD

### HON. HELEN S. MEYNER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mrs. MEYNER. Mr. Speaker, it is my pleasure to inform the House of Representatives that the New Jersey Green Thumb program has received the National Distinguished Superior Performance Award at the National Green Thumb conference.

Operating under title IX of the Older Americans Act, Green Thumb provides part-time, continuing employment for rural, low-income senior citizens. The New Jersey Green Thumb program was among the first pilot programs begun in 1965 under Operation Mainstream. Starting with only a handful of workers, it has grown to its current level with 684 workers enrolled in the program.

Mr. Speaker, the success of New Jersey's Green Thumb program is attributable to its dedicated staff and the senior workers themselves. I offer several statements as indicative of the support that Green Thumb receives from its administrators, its employees, and myself. These statements are excerpts from testimony received at hearings of the Select Committee on Aging which I chaired in Hacketttstown, N.J.

But one person will come to you at the end of the day, and it is a great reward—maybe it is not much, but it means a lot—when they come at the end of the day and say: "Thank you for a good hot meal, and for all the problems that I have caused you." But when they say "Thank you for a job well done," to me that is good pay. Testimony of Irene Stem, senior citizen employee of New Jersey Green Thumb speaking of the end of a working day.

From its inception in 1965, the Green Thumb Program has been dedicated to dispelling the myths regarding the aged in our society; to educating the public and successfully demonstrating the overall benefits that the older American can contribute in the meaningful, self-respecting, productive capacity of maturity. We are proud of our workers, and of our program, which provides the most services at the least cost." Testimony of Anne Gillingham, District Director New Jersey Green Thumb Program.

Mr. Speaker, I congratulate the staff and the senior participants of the New Jersey Green Thumb program. I ask my colleagues to remember their words when we consider the Older Americans Act reauthorization and the Department of Labor Appropriations bill.●

## FREE ENTERPRISE WEEK ESSAY WINNER

### HON. W. HENSON MOORE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. MOORE. Mr. Speaker, on December 15, 1977, I inserted remarks into the CONGRESSIONAL RECORD informing the House that for the first time ever in my district and possibly anywhere in the United States, a Free Enterprise Week was going to be held within the Sixth District of Louisiana during the week of January 8 through 14, 1978. That week's activities did, in fact, take place and were a tremendous success.

Mr. Speaker, a part of the activities and certainly a most important part was an essay contest conducted in most high schools throughout the sixth district. High school students were encouraged to prepare an essay on what the free enterprise system meant to them. A select grading committee then gave great attention to these essays and winners were selected from each of the

four parishes which competed. Then from those four finalists, a sixth district or Free Enterprise Week winner was selected.

The winner was Ms. Deborah Arthur who is 17 years old and a midterm graduate of Franklinton High School in Franklinton, La., which is the parish seat of Washington Parish. She is the daughter of Mr. and Mrs. Thomas C. Arthur of that city. Her essay was truly an excellent composition on what the free enterprise system means to our young people who have their future ahead of them in this economic system in our country. She read her essay for an audience of about 500 people at a free enterprise awards banquet in Baton Rouge, La., on Saturday evening, January 14, 1978.

Following is the text of her essay:

"FREE ENTERPRISE: THE COMPETITIVE SYSTEM"

A free enterprise system is the mechanism by which labor, resources, and skills are brought together to produce and distribute the enormous variety of things people need and want. Our nation's free economy means we have freedom in choosing the products and services we buy, the jobs we seek, the businesses we start, where we sell our products, and the price we sell them for.

Two hundred years ago when our country first began, individuals made almost all the economic decisions; today things have become much more complicated. Even though Americans still exercise freedoms of economic choice, we have now what may be called a "mixed economy". That is, three groups play a major decisionmaking role. The groups are the consumers, who look for the best value in return for what they spend; the producers, who seek the best income for what they offer; and the federal, state, and local governments which seek to promote the safety and welfare of the public, and to provide services in the public interest. While members of these three groups make decisions in our economic system, the key role that makes everything work is played by we the people, in our role as the consumer.

Throughout history there has been the problem that all of our needs and desires cannot be fully satisfied in a world of limited resources; therefore, many societies have attempted to solve the problem by dictating what individuals' needs and wants should be. Yet, economic freedoms and personal freedoms interlock. When individuals are told how they must conduct their economic lives, and where there are obstacles to such economic freedoms as spending choices and career choices, personal freedoms are inherently involved.

In the American economic system, decision making is shared by consumers, producers, and governments; our country goes where we decide to take it. These choices can be made wisely only if the choices we make are based upon an adequate understanding of our economic system. Our challenge and privilege is to make wise choices in our use of economic resources to best satisfy our needs and wants. We must do this now and in the future.●

## NO HOUSE OF LORDS IN THE CONSTITUTION

### HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. HANSEN. Mr. Speaker, there should be a "Special Congressional Medal of Honor" for persons with the courage and foresight a majority of Congressmen have demonstrated in the current critical fight to save the constitutional powers of the House of Representatives, the voice of the people. A constitutional crisis exists and these Members have risen to the challenge by sponsoring House Concurrent Resolution 347 which reaffirms the traditional provision that there will be no disposal of U.S. property by treaty alone.

The immediate issue of concern is not one of preserving American access to the Panama Canal, but to preserve the House of Representatives as a coequal legislative body as the Constitution provides. A Senate obviously bent on becoming a House of Lords aided by an expedient Executive Department attitude pushing approval of the Panama treaties at any cost is expanding the "self-executing treaty" concept beyond any reasonable precedent to override all other provisions and safeguards of that great document.

The leadership of that would-be imperial body has told me the House will get nothing or no more than we can successfully demand, provisions of the Constitution to the contrary notwithstanding.

I am shocked and deeply disturbed at this high-handed effort to deprive the people's voice, the House of Representatives, of our rightful responsibilities.

As sponsors of House Concurrent Resolution 347 which now has 238 cosponsors, Members of this body have registered their determination that the Senate's grab for power at the expense of the House will not succeed.

The constituents of these Members of Congress and all Americans can be grateful for their willingness to stand firm for the Constitution and the protection of the rights of the people. I am sure these citizens are confident that with well over half the Congress committed to stopping a runaway Senate that a vote can now be taken to formally put the House on record—and it can if these same Members and others will now join our special effort to bypass the pitfalls and get the measure up for a timely and early vote.

Again, we are fighting for the honor and prerogatives of the House of Representatives and it will take unusual courage and unprecedented action to slice through the obstacles—the signing of a discharge petition.

In conference with key House leaders who would normally avoid such a process, we are in agreement that this is probably that one time when this legislative device has real use and credibility. JOHN MURPHY, chairman of the Committee on Merchant Marine and Fisheries which has jurisdiction in this matter has courageously placed principle above procedure as has Minority Leader JOHN RHODES in advocating that Members of the House sign a discharge petition.

Many Members have consistently declined as a matter of principle or policy to sign discharge petitions but the constitutional confrontation has become so critical that key leaders of the House are advocating this emergency procedure and first time signers are abundant as the list now swells above 150. Only 68 additional signatures at this critical time on discharge petition No. 6 will assure that House Concurrent Resoluton 347, which Members have so wisely cosponsored, will receive an early vote and the rights of the House and the people will have been properly protected.

I am deeply appreciative of the splendid attitude and courageous adherence to principle which has been demonstrated.

Mr. Speaker, I include for the RECORD the following Dear Colleague distributed April 10, 1978 requesting signers for discharge petition No. 6:

IT IS AN EMERGENCY

1. I can refuse to sign discharge petition #6 even though the Chairman of the affected committee and other key leaders of the House are breaking all historical precedent by advocating its one-time use on a constitutional issue of major impact on the legislative process and our system of checks and balances.

Or:

2. I can sign discharge petition #6 to prevent the gagging of the House by an imperial Senate acting to implement an arbitrary concept of self-executing treaties which would establish a legislative process excluding required action by the House of Representatives in violation of Articles I and IV of the Constitution.

The challenge is great. The Constitution is imperiled by executive expedience and legislative arrogance.

DEAR COLLEAGUE: The Constitutional authority of the House is threatened. By virtue of the vote last week refusing to recognize the legitimate Constitutional role of the House of Representatives with respect to the Congressional power to dispose of federal property the Senate has rubber stamped a State Department maneuver which is in clear violation of historical precedent as established by our founding fathers.

There is no need to point out the mischief which might take place if the concept of "self-executing treaties" is allowed to prevail where property disposal and appropriations are involved. Once the precedent exists, where will the lines be drawn? Will Treaty approval power further expand to preclude any need for action by the House of Representatives in matters of foreign policy? If the possibilities are expanded, will self-executing treaties even allow tax adjustments and other appropriations-type authority exclusive of House action?

It is inevitable that the House will act on any Panama Treaty approval implementation—this is even conceded by the Administration. The question is will we act in constitutional partnership so nothing is formulated that is not supported by timely action of both Houses of Congress or will we only be taken in as a junior partner after implementation has begun and conditions are set where the choice lies between rubber stamping what has already been decided or finally working our will at the risk of breaking promises and creating an international incident.

There are two fights involved—one over the Panama Canal and one over the Constitution. I ask that, whatever your feelings regarding the Panama Treaty issue, you continue to *fight for the rights of the House* and preservation of our proper constitutional role as Representatives of the people. The House must assert itself and preserve the Separation of Powers. This Constitutional principle must remain intact.

When the will of the House is so thwarted by certain influences then we must turn to the only legislative tool capable of alleviating

the situation. Therefore, I have initiated discharge petition number 6 which would allow for immediate consideration by the entire House of H. Con. Res. 347 which has 237 cosponsors. Over 150 Members have already signed this discharge petition and the number is increasing rapidly.

DISCHARGE PETITION NO. 6 SUPPORTED BY COMMITTEE CHAIRMAN JOHN M. MURPHY

". . . It remains of paramount importance that House Members sign discharge petition No. 6 . . the most expeditious means of bringing the Resolution (No. 347) to the floor and allowing all Members to express a position on a matter that vitally affects the power of which we are trustees."

DISCHARGE PETITION NO. 6 SUPPORTED BY MINORITY LEADER JOHN J. RHODES

". . . if ever there was a time for this unusual procedure to preserve our legislative system and the constitutional provisions for checks and balances, this is it. I have accordingly extended my support both as a co-sponsor of H. Con. Res. 347 and as a cosigner of discharge petition No. 6 and strongly encourage all Members to do the same."

Letter to Congressman George Hansen, April 4, 1978.

It is urgent because of time factors that you join us immediately. Please sign discharge petition No. 6 today.

Sincerely,

GEORGE HANSEN,
*Member of Congress.*

SENATORS ALSO CONCERNED

BROOKE. ". . . there should be no 'short cuts' in the decisionmaking process related to the Panama Canal treaties. The benefit of the doubt on this matter should clearly be given to a strict adherence to procedures. And this means that the House of Representatives, as an equal partner with the Senate in legislative matters, should assume the responsibility I believe the Constitution places upon it regarding the disposition of U.S. property." ". . . here we have clear title to the property. There has been no dispute about that whatsoever." Congressional Record, April 5, 1978, S. 4795.

ALLEN. "The House of Representatives is not involved in the ratification procedures, but it must be involved in legislation authorizing the disposition of property." Congressional Record, April 7, 1978, S. 5053.

HATCH. "I think Congressman Murphy laid it out pretty fairly, and I urge my fellow Members of Congress in the House of Representatives to do exactly that and to bring this matter to a head." Congressional Record, April 7, 1978, S. 5083.●

## CONGRESS SHOULD CANCEL ITS COST-OF-LIVING SALARY INCREASE

### HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. MAZZOLI. Mr. Speaker, the President yesterday unveiled his anti-inflation plan.

The main specific action proposed by President Carter was to place a 5.5-percent "cap" on the cost-of-living increase for Federal employees scheduled for October.

This action makes it all the more imperative that Congress cancels its own cost-of-living salary increase which would take effect this October also.

I wrote the Post Office and Civil Service Subcommittee on Presidential Pay Recommendations urging that legislation be immediately reported to the full House which would eliminate the 1978 cost-of-living increase for Members of Congress.

The President's commitment to controlling inflation is laudable. He has taken a step in the right direction in promising an all-out effort to hold down the Federal budget, including more frequent use of his veto power if necessary and more forceful persuasion of private industry as to price and wage increases.

We must follow President Carter's lead. Congress must bite the bullet and take a strong position against inflation by waiving its salary adjustment scheduled for October 1978.●

## COMPREHENSIVE CONGREGATE HOUSING FACILITIES AND SERVICES ACT OF 1978

### HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. ROYBAL. Mr. Speaker, I am today with Congressman CLAUDE PEPPER, Chairman of the Select Committee on Aging, introducing legislation designed to insure that each elderly person residing in federally assisted housing has the opportunity to live in an environment conducive to his/her needs. This bill would authorize the Secretary of the Department of Housing and Urban Development to award grants to developers of federally assisted housing for the elderly for the construction of congregate facilities and the provision of supportive social services.

When the House of Representatives established the Select Committee on Aging 3 years ago, it recognized that previous attempts by Congress to identify the unique problems confronting senior citizens and to develop solutions aimed at solving those problems had been largely unsuccessful. Consequently, the Aging Committee was instructed to assist Congress in improving its performance by focusing attention on issues of crucial importance to the welfare of this Nation's 23 million older persons.

As Chairman of the Aging Committee's Subcommittee on Housing and Consumer Interests, I am pleased to report that my subcommittee has devoted considerable energy to examine the housing problems of the elderly and to exploring alternatives designed to modify and embellish the conventional solution to this country's housing problems—bricks and mortar. There is no doubt in my mind that this approach has proved inadequate to meet the housing needs of older persons. Instead, we must view housing for the elderly from another perspective. With increased life expectancy and with the advantages of modern medicine, the elderly are now able to lead more active lives and enjoy a more independent life style than ever before. Yet because the elderly become increasingly frail and less mobile with advancing age, their housing requirements can be expected to differ significantly from those of the general population. Hence, the ideal environment for a large segment of our elderly population is apt to be one that permits them a substantial degree of independence, while at the same time facilitating access to nutritional, health, housekeeping, transportation, social, and other supportive services.

It is my belief, and I am certain that my colleagues in Congress will concur, that in the past, the special housing needs of senior citizens have often been ignored by those Federal agencies, such as the Department of Housing and Urban Development, responsible for implementing Federal housing programs. Persons involved in the policy decisionmaking process appear to approach elderly housing problems with the mentality that those elderly persons who cannot maintain their complete independence belong in nursing homes. In contrast, our policy objective should be to enable senior citizens to maintain their independence as long as possible, thus preventing or delaying premature institutionalization. Confinement in an institution is repugnant to a basically healthy, but frail elderly individual who fears that life in a nursing home will mean the loss of his/her dignity, self-respect, and independence.

It has been estimated that more than 3 million elderly individuals may require assisted living arrangements and approximately 2.4 million could be helped in a residential congregate housing setting with services. Without this type of facility, many of these elderly persons will have to go to nursing homes. Studies of nursing home populations indicate that one-third to one-half of the residents would be able to function in less intensive care settings, such as congregate housing, if they existed.

For example, a study by Robert Morris found that between 250,000 and 300,000 persons are annually assigned to costly institutions for reasons other than medical needs. The U.S. General Accounting Office, after studying 378 patients in Michigan nursing homes, concluded that 80 percent did not require skilled nursing care and should not be in a nursing home. Other studies have shown that 53 to 61 percent of the patients in nursing homes in New York City did not need to be there and in Minneapolis, this figure was 30 to 40 percent.

A survey of public housing authorities by Wilma Donahue shows that approximately 80 percent of the elderly residents would benefit from a congregate housing facility.

Some experts have referred to nursing homes as places for "premature functional death" and many believe that they are responsible for the shortened life spans of some residents. Thus, it is imperative that we adopt a national policy that will discontinue the use of nursing homes for the impaired elderly who do not need them. The appropriate alternative appears to be congregate housing, which is a means to lengthen an individual's stay in the community in a semi-independent environment. In addition, it should prove to be a more eco-

nomical housing arrangement than institutionalization.

Existing housing laws contain no mechanism for the financing of congregate services. The focus of Federal policy for the elderly has been directed principally at income maintenance through such programs as social security, supplemental security income, and veterans benefits. While these programs have been somewhat successful in reducing poverty among the aged, they do not provide the income necessary to enable tenants of federally assisted housing to pay for the supportive services necessary to maintain their independence.

One may well be justified in inquiring as to why congregate services cannot be provided to the elderly living in federally assisted housing through existing programs, such as those authorized under the Older Americans Act or title XX of the Social Security Act. My colleagues and I on the Select Committee on Aging have frequently raised the same question. It appears that there are a number of reasons to explain, but not justify, HUD's and HEW's poor performance in integrating programs. We have been told that jurisdictional squabbles which, have earned Federal agencies a reputation of being unresponsive bureaucracies, are to blame in part for the absence of coordination. In addition, the use of funds is often determined at the State and local level, and local units of government must balance competing priorities with limited financial resources, inadequate to meet the spiraling need and demand for supportive services. Thus, there is no guarantee under existing programs that services will be made available in the amount, frequency, and duration required by elderly residents of federally assited housing.

The principal aim of this legislation, however, is not to promote the cooperation of Federal agencies. While this is a worthy objective, its accomplishment would take many years with no immediate relief for the elderly. Instead our bill, if enacted, provides a more direct solution by transforming the concept of congregate housing from a possibility into a reality. It would make supportive services an integral and vital element of housing for the elderly.

Last month, I sponsored with Representative ST GERMAIN another bill, H.R. 11309, which is a less comprehensive version of this legislation in that it only covers public housing, excluding other important housing programs serving senior citizens such as sections 8, 202, and 236. Naturally I would like to see prompt action taken on the more comprehensive legislation. I believe that the evidence we have supports the need for such a program. However, I can appreciate the importance of proceeding cautiously with new, untried and untested programs. Therefore, I intend to lend my full support to both proposals, with the hope that Congress will acknowledge the importance of providing congregate services by enacting at least a limited program. Once this program is operating, we will have the opportunity to evaluate it by weighing its relative costs and benefits. I feel certain that it will score highly as a cost effective program that promotes the dignity and self-esteem of elderly beneficiaries. Its success should induce Congress to expand the program so that congregate services can be made available in all federally assisted senior citizens housing.

At present there are few, if any, housing choices available and appropriate for senior citizens. Independent living arrangements and institutionalization lie at opposite ends of the housing spectrum, with a wide void in between. This bill is needed to fill in the "gray area." The availability of congregate housing would solve the housing dilemma faced by many senior citizens by providing another relatively inexpensive alternative. Therefore, I recommend its speedy consideration and enactment by Congress.●

## NEW YORK IS LOSING THE PEOPLE'S LAWYER

### HON. NORMAN F. LENT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. LENT. Mr. Speaker, at the end of 1978, the State of New York will lose a great public servant. Attorney General Louis J. Lefkowitz, affectionately and appropriately known as "the people's lawyer", has chosen to retire from the position he has held continuously since 1957 and to which he was elected on five occasions.

During his long public career (he was first elected to the New York State Assembly in 1928) he established a reputation as one of New York's most popular vote-getters. His quick stride, limitless energy, and remarkable memory for names enabled him to effectively cover vast areas of New York State during his election campaigns. Winning margins of over 1 million votes were his hallmark.

During the 21 years he served New Yorkers as their attorney general (no other attorney general in the history of the office had a longer tenure), he initiated positive programs for greater protection of consumers, investors, and the legitimate businessman. He created a Bureau of Consumer Frauds and Protection. This bureau was the first agency of any State government which was exclusively concerned with the enforcement of laws enacted for the protection of the consumer.

He was elected president of the National Association of Attorneys General in 1962. He received the Louis E. Wyman Award in 1967, which is presented annually to the State attorney general who "has done most to advance the objectives of the National Association of Attorneys General to help make the United States a better place in which to live for all."

Of all the things written and said about "Louie" since his retirement announcement, nothing more eloquent than the following article expresses the personal loss that will be felt by thousands of citizens of New York who were the attorney general's "clients" for the past 21 years.

By the way of congratulations to Louis Lefkowitz on a job well done, I offer at this point in the RECORD a tribute to Louie written by columnist Murray Kempton, entitled, "Lefky Put the Little Things Right, Too":

"Don't go into things that are not in your jurisdiction."—The Farewell Address of Attorney General Louis Lefkowitz, March 1, 1978.

Louis Lefkowitz has the face that seems to have learned the secrets of the grave, the eyelids a little weary and every line and feature somehow suggesting itself as repository of a thousand privities and mysteries. That face is the mask where Louis Lefkowitz conceals his innocence.

There passes into retirement with him the memory of the only absolutely pure-hearted public man I have ever known.

The unkind gods amused themselves slaughtering New York City newspapers in the '60s, and their carnage reached its climax in 1966, when the World-Telegram, the Journal-American and the Herald Tribune consummated their suicide pact. This funeral occasion brought doubtful lamentations from Senators, Mayors and Governors about strong voices of the public conscience being stifled.

It escapes my recollection that Louis Lefkowitz had anything to offer on the subject of the lights of freedom going out. All he did was call us at the Telegram to say that, if anyone there couldn't find another job, he had two summer openings in Consumer Affairs. It was a pity about Louis Lefkowitz; he had so little capacity for abstractions.

My discovery of Louis Lefkowitz as the only present help in time of trouble occurred in the summer of 1962 when I did my family the disservice of transferring us all to Washington. We loaded our furniture, wished the movers Godspeed, and made our way to the hut we had rented in the dimmer outreaches of Camelot. A day passed, and then another with no sign of the moving van. Calls to the home office produced only the exquisite courtesies hot July evenings draw forth from Brooklyn truck dispatchers.

It was at last too much even for Mrs. Kempton's exemplary tolerance and she said containedly but definitely, "Do something." It was one of those moments of challenge that I had never met before and haven't since; but, as luck would have it, Louis Lekowitz image appeared front and center among the clouded shadows of my brain; and I called him up. The moving van appeared the next morning. Louis Lefkowitz had made me a man, if only pro tem.

It has been my fixed conviction ever since that, when the good Lord finally gave up on us, He left Louis Lefkowitz behind as the only resort for the insulted and injured. If you were cheated, he'd get your money back; he might not punish the cheater; but then most times he couldn't; the commercial code was not, after all, written to protect the innocent.

I confess that I kept him a secret the way food critics ought to with really good restaurants; but once or twice I yielded up his name to quite desperate cases; and he always somehow righted the wrong done them. He would do it for anybody: Louis Lefkowitz would take a contract for a beggar on the street.

It was always faintly amusing to think of him as the incarnation of law enforcement for the State of New York, because he was generally too busy bandaging the victim to make much of the pretense of scourging the evildoer.

And now he is departing; and who will take his place? Someone morally indignant, I suppose; and what good have they ever done us? Louis Lefkowitz wants to be remembered as "the People's Lawyer." If that suits his taste, so be it; but the title seems inadequate for the shining memory he takes away with

him. For me Louis Lefkowitz will always be the People's Fixer.●

## MY RESPONSIBILITY TO AMERICA

### HON. JOHN P. HAMMERSCHMIDT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. HAMMERSCHMIDT. Mr. Speaker, I would like to take this opportunity to commend the Veterans of Foreign Wars and its ladies auxiliary for their tireless efforts to instill a sense of patriotism in the youth of America, and for their sponsorship of the Voice of Democracy Contest. This year, more than one-quarter of a million students participated in the competition for five national scholarships which are awarded as the top prizes.

In my view, the true spirit of this creative endeavor has been captured and made vivid by Susan Diane Dunn, the winning contestant from the State of Arkansas. Susan presently attends Hartman Public High School, but has already announced her long-range plans to pursue a legal education at the University of Arkansas at Fayetteville. The text of her outstanding essay follows for your review:

THE 1977-78 VFW VOICE OF DEMOCRACY SCHOLARSHIP PROGRAM, ARKANSAS WINNER, SUSAN DIANNE DUNN

The responsibilities of today's teenager in our society are many and vary greatly within the scope and the vastness of the different responsibilities. To give meaning to the word responsibility, one must necessarily have an understanding of the word duty, as the two are almost inseparable. Foremost among these responsibilities are to love, defend, and maintain the freedom our forebearers fought so valiantly to achieve.

Honor parents and family, abide by and uphold the laws of our country, for the basis of our freedom lies in strong family ties and swift, sure justice under our laws.

It is our obligation to have a deep appreciation of our country's majestic beauty and resources, and to guarantee the right of succeeding generations to the same unspoiled beauty, clean air, and waterways as they were handed down to us. And to continually strive to make a better life for all mankind.

Not among the least of these responsibilities of the individual is to improve himselm through a life-long program of education, personal growth and development.

To fulfill our responsibilities to our country, family, and society requires our constant attention and endeavors in the daily facets of our lives. We must protect our freedom by being active in state and local politics and keeping our elected officials informed as to how we want them to represent us.

We owe a portion of our time to the betterment of our communities by engaging in civic clubs, educational organizations and in activities of the church.

And by preparing ourselves for the responsibilities of adulthood and parenthood, which are indeed among the greater of our responsibilities, for it is truly said that "An apple does not fall far from the tree."

To be an American gives me the feeling that I can go forth unafraid and that no foreign oppressor will threaten the security of the nation or my loved ones.

I go forth each day with the knowledge and deep appreciation that I am free, not only as stipulated in the Constitution of the United States, but also in my own God-given right. And as long as ours and each succeeding generation upholds the responsibilities of "being an American", as indeed our forefathers bought our freedom by sacrifice of their lives and fortunes, we shall remain free.

The teenager's role of citizenship in our country's future must be the constant awareness of an everchanging society as we struggle to solve the problems brought about by over population, world-wide hunger and famine, industrial growth and the omnious energy shortage.

Our role as citizens of this country demand that we give equal attention to each of these and many more problems and at the same time maintain the basic principles by which our country was founded.

The task is before us, the obstacles great, but the rewards are infinite.●

## EXIT VISAS FOR THE RABINOVS

### HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. UDALL. Mr. Speaker, roughly 5 months ago I was informed of the unfortunate plight of two Soviet citizens, Arkady and Lena Rabinov, who have been trying unsuccessfully for several years to gain permission to emigrate. I am happy to report to the House that, according to U.S. Department of State, the Rabinovs have now been granted permission to leave the U.S.S.R.

We can all be happy that the Rabinovs are finally able to emigrate from the Soviet Union, but I think it is also appropriate to point out, in the interest of future emigrants, the expense at which these visas were procured. The Rabinovs were refused exit visas five times by the Soviet authorities. Both lost their jobs when they applied for emigration permits and were forced to live off of the charity of friends. Not only were Arkady and Lena punished for their desire to leave the country, but because of his son's request for an exit visa, Arkady's father was dismissed from a position as a professor at the University of Leningrad, a job he had held for over 25 years.

It seems to me that Mr. and Mrs. Rabinov were not "granted" their visas, they earned them. Six years of poverty, unanswered questions, family separation, and waiting—all clearly intended as deterrents to other potential Soviet emigrants—were the price extracted from this unfortunate couple. I am not too impressed with a government which uses these methods to discourage its citizens from departing.

Fortunately, things are headed in the right direction. In the past few years, there has been some increase in the number of exit visas issued to Jews and to people with relatives outside the U.S.S.R. Last year there was an increase of 25 percent over the 1976 rate.

The U.S. Department of State has been actively supporting the cases of Soviets who wish to emigrate, and a large portion of the credit for the latest trend must go to officials in that Department. During his visit to Moscow last March, Secretary Vance stressed U.S. support for family reunification and Jewish emigration, and presented a list of Soviet Jews who had previously been refused exit visas, including the Rabinovs, to the Soviet Government. State Department influence was also applied during Minister Gromyko's visit to the United States in September 1977 at the Belgrade Conference last year, and during the January 1978 visit of Soviet parliamentarians to the United States.

It is my sincere wish that this trend continue. Citizens of the Soviet Union have for too long been denied the basic human and political rights to which they are entitled, and which are enjoyed by citizens of the United States and of other truly democratic countries.●

## TRIBUTE TO LONG JOHN NEBEL—AN INSTITUTION IN NEW YORK RADIO

### HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. BIAGGI. Mr. Speaker, it is with great sadness that I report the passing of Long John Nebel one of the most celebrated of all media personalities in the New York market. Long John succumbed to cancer after a long and grueling fight.

Long John Nebel was an institution in New York late night radio for more than 20 years. He held down the all night radio slot on several major stations beginning with WOR in 1956 and ending with WMCA with a 12-year stint with WNBC in the middle. He attracted a large and loyal audience due in part to his personal zany style and the unique variety type format of his shows. They ranged from panel discussions to "open lines" where people could speak their minds. It is a technique certainly not invented by Long John, but without question perfected by him. His listeners were more than an audience, they were totally devoted to him, they followed him from station to station without missing a show. He was a cult hero.

Long John throughout his career kept a remarkable pace. At his peak he did six 5-hour shows a week and for a short time added a 2-hour show on Sundays. He achieved the prestigious $100,000 a year club as "The Iron Man of the Microphone" as he was described by the New York Post.

From 1972 until his death Long John was joined on his show by his lovely wife, Candy Jones. Together they were an intellectually stimulating duo, providing the highest quality of radio entertainment.

Long John Nebel will be missed. He made insomnia a pleasure for millions of New Yorkers over the past two decades. Many felt he may have contributed to it because it was so difficult to turn his show off. New York has lost one of its most unique entertainers and I express my condolences to his wife and daughter.

At this point in the RECORD I would like to insert the obituary prepared by the New York Times on the life of Long John Nebel:

LONG JOHN NEBEL, 66; WAS HOST FOR ALL-NIGHT TALK SHOW ON RADIO

(By Eleanor Blau)

Long John Nebel, whose all-night radio talk-shows attracted thousands of insomniacs and other "night people" for more than 20 years, died of complication from cancer Monday at the New York Sheraton Hotel. He was 66 years old and had been living at the hotel for several months.

Mr. Nebel was co-host with his wife of the Long John Nebel-Candy Jones Show, heard nightly from midnight to 5:30 A.M. on WMCA. "He was the first to do an all-night talk show on radio and the first to have a network talk show," said Dennis Israel, vice president and general manager of the station. "His show was controversial, intelligent and a great part of history. There will never be another Long John Nebel. It's an era that went away."

Mr. Nebel got his start on all-night radio on WOR in 1956 after an official of that station observed his patter at an auction house, according to his biographer, Donald Bain.

ALMOST IMMEDIATE SUCCESS

Long John, so-called because of his slender 6-foot-3-inch frame, was almost an immediate success and Mr. Bain attributed two trademarks to that popularity. Mr. Nebel became involved in the occult, inviting as guests on his show, people who claimed to have been from outer space. And he developed a panelist concept in which unknown people in various lines of work joined him almost as co-hosts from time to time. Mr. Bain, one of those panelists, recalled, "They were nobodies—people John just kind of liked and felt had some flair for being on the air. And they became very, very close, a sort of fraternity."

As for the people said to be from outer space, Mr. Nebel was hardly a believer. "He was one of the great put-ons of all time," Mr. Bain said. "He wasn't serious about the occult. It was a way to identify himself in the New York market with something different."

Among his put-ons, Mr. Nebel convinced listeners there was a pending shortage of cigarette-lighter wicks because of a drought in Wisconsin where most of the wicks were "grown."

He was a master at finding the weaknesses of a guest he considered a phony, and would let the victim "hang on his own noose," Mr. Bain said. And he was a great storyteller.

In a strident, very deliberate manner of talking "he could take forever to tell a story yet he would never be boring," Mr. Bain said. "He had a great sense of detail. I remember sitting with John and he took about an hour talking about returning an electric blanket to Macy's and it was literally fascinating."

And he was a giggler. "I remember him telling a story about a headless woman and eventually John was just helpless, falling off his chair."

Mr. Nebel was born in Chicago with the last name of Zimmerman and took the name of his stepmother who adopted him, later dropping "K" from the spelling. He never went beyond the eighth grade in school and used to say in later years that his show, in which he interviewed people from all walks of life, was his best education.●

## NEW RIVER, A NATIONAL RIVER

### HON. NICK JOE RAHALL II

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. RAHALL. Mr. Speaker, I recently joined with my colleagues, Senators ROBERT C. BYRD, JENNINGS RANDOLPH, and Congressman HARLEY O. STAGGERS by introducing legislation that would establish the New River Gorge as a national river in West Virginia as was recommended to the Congress by Secretary of Interior Cecil B. Andrus on behalf of the Carter administration.

In a letter transmitting the administration's legislation, the Secretary said:

The New River and its gorge possess outstanding scenic, geologic, recreational, botanical, fish, wildlife, historic and cultural and mineral values.

He also added that—

it becomes apparent that a major effort must be launched aimed at preserving and at the same time intensively managing these superlative natural, historical and recreational resources.

I know that my West Virginia colleagues who share sponsorship of this bill are pleased to share with me the fact that the administration has recognized the national significance of the New River Gorge and the needed Federal legislation to protect this national resource. This is a major step towards enactment of vitally needed protection for the gorge area.

The bill will be referred to the Interior and Insular Affairs Committee and the Senate Committee on Energy and Natural Resources. It is my hope that careful study will be given to the legislation and that early hearings will be held where all views on the bill may be heard.●

## DR. LLOYD G. JONES

### HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. ANDERSON of California. Mr. Speaker, when Supt. Dr. Lloyd G. Jones states that he knows the Torrance Unified School District inside and out, he speaks as an individual with authority and knowledge, who since 1948 has worked at a number of levels within the system.

Thus, when Dr. Jones retires on June 30, 1978, the Torrance community will lose the leadership of an individual who has always demonstrated a unique knowledge and understanding of their educational needs.

Born in Riverside, Calif., on October 30, 1917, Dr. Jones moved with his family to the city of Torrance at the age of 1. He graduated from Narbonne High School in nearby Harbor City in 1936, and continued his then burgeoning interest in entertainment as a singing waiter at Clifton's Cafeteria. As a child, Lloyd Jones had appeared in several feature films, and attended school on the film sets with such child stars as Shirley Temple, Jackie Searles, and Mickey Rooney.

After singing at various hotels and clubs in Southern California during the "torch song" era, Lloyd Jones entered the U.S. Army's Special Services Division in 1942, entertaining troops at bases in the States and abroad.

Following the war, Dr. Jones attended Laverne College, graduating with a bachelor of arts degree in history in 1948. Immediately after his graduation, he joined the Torrance Unified School District as an elementary school teacher—the beginning of a long and successful career in education.

The following years were exciting for Dr. Jones and his lovely young wife, Maxine, and their family. He received his master's degree in education in 1952 from the University of Southern California. Professionally, Dr. Jones' abilities were being recognized as outstanding in the field of education, and he became vice principal and then principal at Seaside Elementary School.

In 1963, Dr. Jones earned his Ed. D. from the University of Southern California in educational administration. He served as curriculum consultant, assistant superintendent (elementary education), and deputy superintendent for education until becoming superintendent of schools for the Torrance Unified District on April 21, 1971.

The excellent reputation which the Torrance Unified School District has earned over the years is due in no small way to the many contributions Dr. Jones has made over the years through his leadership, ability, and knowledge of the district. Among the awards he has received during his many years of service are the Honorary Service Award from them the Seaside Parent-Teacher Association; the Torrance Elementary School Principals' Association Golden Apple Award; and the National Congress of Parents and Teachers Honorary Life Membership from the Torrance Council of Parent-Teacher Associations, Inc.

Professionally, Dr. Lloyd Jones is a member of the American Association of School Administrators, school superintendents of cities of 100,000 to 300,000; Association of California School Administrators; California City School Superintendents; Southern California City School Superintendents; and the Parent-Teacher Association.

Dr. Jones has also been an active and involved member of the Torrance community. He sits on the Advisory Board of the Torrance Family Branch, Young Men's Christian Association of Metropolitan Los Angeles; the Executive Committee of the South Bay District of the Boy Scouts of America; the Board of Directors of EDUCARE; and served as honorary chairman, School Night for Scouting in October 1975.

Dr. Jones never forgot his early love of music, an interest that has continued to grow over the years. He is also an avid golfer, and enjoys landscaping and art. His many interests and lively personality will, I am sure, keep him very busy in the years ahead.

My wife, Lee, joins me in wishing Dr. Lloyd G. Jones the best of fortune as he brings his long and successful career in educational administration to a satisfying conclusion. We would also like to extend our congratulations to his lovely wife, Maxine, and their sons, Allan and Evan.●

CONGRESSIONAL SALUTE MEMORIALIZING JOHN D. CECCHINO OF GARFIELD, N.J., AND COMMEMORATING MOUNT CECCHINO, MOUNTAIN RESERVE PARK, WAYNE, N.J.

## HON. ROBERT A. ROE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. ROE. Mr. Speaker, I wish to call to the attention of you and our colleagues a most significant happening in America's history which is taking place in my congressional district upon the official designation and dedication of Mount Cecchino, a 750-foot peak located in Mountain Reserve Park of my hometown of Wayne, N.J., in commemoration of the lifetime of achievements of the late John D. Cecchino, outstanding educator and humanitarian, of Garfield, N.J.

Mount Cecchino memorial project which was sponsored by the faculty and students of the New Milford High School, New Milford, N.J., under faculty chairman, Mr. Joseph L. DiBernardo, and student chairman, Miss Marcia Knebel, in cooperation with the residents and governing officials of the respective communities, commemorates the deeds of our people which have made our representative democracy second to none among all nations throughout the world.

The teamwork among the students, faculty, governing officials, and residents of the community was dynamic and successful. Their quest to honor a former teacher whose standards of excellence in his daily pursuits dedicated to the education of our people, young and adults alike, had truly inspired the strength of the people's will to hold steadfast his memory, honor his deeds, and place an indelible mark on the quality of his leadership endeavors as an educator received national approval upon the official naming of Mount Cecchino by the U.S. Board of Geographical Names.

Mr. Speaker, I know you will want to join with me in commending the students, teachers and residents of New Milford for their most noteworthy endeavors and share the pride and joy of John Cecchino's wife, Nina; their son, John, Jr.; daughter, Susan; brother, Carlo, a Bergenfield councilman; and sister, Frances DuPre of Brooklyn.

John Cecchino was a highly respected and revered teacher, a fact that is now mirrored in the Mount Cecchino memorial project. At the time of his passing on March 1, 1976, he was New Milford's Community School director. He coordinated the adult school and the Saturday fun shop, and for many years had been student activities director of the high school. John had been a history teacher at the high school since 1954 and is past president of the New Milford Education Association.

Mr. Cecchino was affectionately known to a generation of New Milford students as "Mr. C." He is a graduate of Paterson State College and received a master's degree from Montclair State College. He was named to Who's Who in American Universities.

John was also a member of the New Jersey Education Association, the Benda-Roehrich Veterans of Foreign Wars Post No. 2867 in Garfield, and the Garfield Third Ward Democratic League. He served as certified clerk for the city of Garfield in 1965–70 and was past president of the Garfield chapter of UNICO. Born in the Bronx, John had lived in Garfield for 30 years.

Mr. Speaker, there were many, many testimonials written in tribute to John Cecchino. I have selected an editorial from his prestigious hometown newspaper, the Garfield Messenger, which, with your permission I would like to insert at this point in our historical journal of Congress, as follows:

IN MEMORIAM—JOHN C. CECCHINO, EDUCATOR

Garfield has lost an outstanding citizen and friend—a truly magnificent educator—devoted father and husband—a realistic, fun-loving and gregarious man. The large turnout from New Milford schools where he was employed and local people was ample testimony as to the true quality of this school man.

To John Cecchino, education consisted in preparing the moral character of young people, teaching them the fundamentals and invaluable principles accepted in preparing them for a good life. It consisted in giving them from tenderest childhood, the notion of human dignity. Education to him directed his actions, inspired his behavior in all his contacts with mankind and at the same time helped him master himself. This is what made him a true educator.

John tried in every way to give his young charges, the elements of his intellectual activity because to him it meant the unalterable foundation of his life, enabling him to adapt himself to the variations of his environment and to link these variations to past and future events.

John grew up the "hard way", obtaining first his high school equivalency certificate and then working his way through college and later obtaining his master's degree while teaching. From teacher, he rose in rank to become adult school director and later coordinator of studies. This is evidence of his zeal and potential. And to John we do say:

John built a beautiful temple,
With loving and infinite care,
Planning each facet with patience,
Laying each stone with prayer;
All praised his unceasing effort,
For the temple this great teacher built
Was something unseen by men.

His gifts were many and sundry. He always said give to your enemies—foregiveness; to your opponent—tolerance; to your friend—your heart; to a customer—service; to all men—charity; to a child—good example; to yourself—respect.

Mr. Speaker, may I also present to you at this time excerpts of statements made by his associates, faculty and student members, which have intertwined his goals and objectives in seeking life's purpose and fulfillment with the love, affection and esteem in which he was held by all who had the good fortune to know him, as follows:

HIS TRIBUTE—ADULTS

An outstanding person in the game of life who finished too soon . . . teacher, safety patrol, remedial reading, introduced Special Education, first AVA Coordinator, originated Adult Ed and Saturday Fun Shop, President of Teachers Association, Activities Coordinator, member of Steering Committee, honorary coach . . . referred to as Mayor of Garfield . . . affinity for students of all kinds . . . consoling word and confident arm . . . leavening agent in emotionally laden situations . . . personnel file loaded with commendations about his extensive service—W. R. SNYDER, *Principal.*

Mr. "C" left much for all of us . . . taught us how to enjoy life . . . our mediator, our compromiser, our faculty diplomat . . . never lost the feeling of boy in himself—JOHN DOMBROSKI, *Teacher Representative.*

Typifies the dictionary definition of unique—the one and only, different from all others, having no like or equal, singular, unusual, rare . . . His heart was always several sizes too large for problem currently at hand—DAVID E. OWENS, *Superintendent of Schools.*

He loved life, he loved contact with people, he loved being with people . . . No one ever spoke unkindly of him—ALFRED J. MITCHELL, *Vice President, Board of Education.*

Vision, leadership, and determination helped adult ed blossom in this town. . . . John was a handshake, a booming "Hello" and a wide grin . . . You knew it was genuine . . . He left his mark on all he touched—IRENE KWITEL, *President, Adult Ed.*

Eternal optimist . . . saw good and best in all of us . . . a shoulder to lean on . . . gave us confidence when we needed it and a belief in ourselves when down in the dumps—MYRNA ALPERIN, *President, Saturday Fun Shop.*

Hate was never in his heart . . . I doubt he ever knew how to . . . never too busy to listen . . . never turned anyone away—EVELYN SEIPEL, *Secretarial Representative.*

HIS TRIBUTE—STUDENTS

Mr. "C" had a rapport with us that many people strive for all their lives—GERALD LOGAN, *President, Student Council.*

A unique individual, an outstanding educator, and a true humanitarian . . . searched for the underdog and rallied to his cause—ARLENE SMITH, *President, Honor Society.*

His cheerful greetings were: a wink of the eye, a nod of the head, and a raised hand—STEVE EIGE, *Emerald Staff.*

So often we give materially, yet it is when we give from the heart that we truly give a special gift. . . This is the way Mr. "C" gave to us, a giant in every sense of the word!—MARA MAMORSTEIN, *Editor-in-Chief, Knight News.*

If something bothered him, you never would have known it because he never complained—LARRY MINTZ, *Treasurer, Spanish Honor Society.*

He was the type of person you couldn't help love because he was filled with love—JULIE GRIDINSKY, *Class of 1979.*

He was special because he cared about people in a world whose general tendency was apathy. . . . A man like him comes around once in a lifetime—KEVIN KELLENBERGER, *President, Class of 1978.*

We are grateful to have shared our high school years with this fine human being—GWENN GHIOSAY, *President, Class of 1977.*

We shared tears and sorrow for him, but we should smile if we can. . . . He would have liked it better that way—ROBERT AZUMA, *President, Class of 1976.*

The other night I asked God, "Why did he have to go now? I loved him so much!" God looked back at me and said, "I know, but I loved him so much more!"—MIKE ADASHESKI, *Student.*

The man to go to when you had something on your mind—COLLEEN MAYE, *Student.*

He will never die in the students' eyes because they will always remember him—ANTHONY BOTTIGLIERO, *Student.*

Considerate, self-giving, fun-loving, all together a nice, true person—PAUL CICCIA, *Student.*

We should not remember him by how he died, but how he lived—TARA MAYE, *Student.*

If you're listening, Mr. Cecchino, everyone gets it sometime in their life, and you were our gift from God—LISA GETELMAN, *Student*.

No task was too great as long as he knew he was able to help someone or even to make the situation seem a little worse than it was—LINDA CECCO, *Student*.

His favorite quote was, "Something of ourselves remains wherever we have been"—BONNIE LEE PERRY, *Student*.

Today we say our last good-bye, but in our hearts, he'll never die—MARY LOU BURKE, *Student*.

CONCERT CHOIR FINAL TRIBUTE

"Glorious Everlasting.
"If We Only Have Love."

STUDENT POEM

"A GREAT GUY"

Mr. C. was a really great guy,
Who was above and beyond all the rest.
He always said the kids were great,
And he knew they were always the best.

He did everything that he had to,
And he did everything that he could.
He helped the kids in every way,
And he did all he thought he should.

He was a man with the greatest of love,
And he showed it every day.
He always went singing down the hall,
And he always had something happy to say.

Mr. C. was a special man,
That's why we loved him so dearly.
He always told us how much he cared,
And he made his love quite clearly.

We are very grateful to have known such a man,
Who gave us everything that he had.
If we think back on all the fond memories,
It'll be impossible to ever be sad.

—JEANNIE SAPUNARICH, *Student*.

Mr. Speaker, it is a pleasure and privilege to have this opportunity to extend our heartiest congratulations to John's family and seek this national recognition of him and his good deeds which is now forever lastingly etched in the magnificent setting of Mount Cecchino, and applaud the vision and untiring efforts of the people who diligently pursued a landmark place for John in the history of America. We do indeed salute the Honorable John D. Cecchino, outstanding educator, good friend and great American, for his distinguished contribution to the quality of life and way of life here in America.●

## WASTE TREATMENT SYSTEM

### HON. GOODLOE E. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. BYRON. Mr. Speaker, on May 24, 1971, nearly 7 years ago, I made a statement on the floor of the House to bring to the attention of my colleagues the exciting news that a ground-breaking ceremony had taken place on a federally financed project to recycle and reuse waste water from the Sterling Processing Corp. poultry plant in Oakland, Md.

I rise at this time, Mr. Speaker, to give the House of Representatives and the American people an accounting of what has transpired in the 7 years since I praised this worthwhile project on the floor of the House. I am pleased to be able to report that the project is a technical success—the waste water from the plant is being treated to such a degree that it could be safely recycled and reused in the processing of chickens in the plant. However, I am deeply disappointed to also have to report that the project is a bureaucratic failure—that is, it is so mired in redtape and indecision by Federal agencies that I am afraid a half million dollars and 7 years of effort have been completely wasted—sacrificed at the alter of bureaucratic incompetence.

Yesterday I testified before the House Appropriations Subcommittee on HUD and Independent Agencies because I believe the actions of the EPA in the Sterling case reflects adversely on the EPA's ability to spend water quality research funds wisely. I would like to include in the RECORD at this point a copy of this testimony and my 1971 RECORD statement:

STATEMENT OF HONORABLE GOODLOE E. BYRON BEFORE THE SUBCOMMITTEE ON HUD-RELATED AGENCIES, COMMITTEE ON APPROPRIATIONS

Mr. Chairman and Members of the Subcommittee: I would like to express my deep appreciation to you for this opportunity to present to you the problems encountered in my district by a poultry processing plant which has been unable to obtain the approval of the Environmental Protection Agency for the use of recycled water in the plant. All attempts to solve this problem have failed, and I am seeking the assistance of this Committee, through language in your Committee report, to direct the E.P.A. to approve the project.

I would like to outline briefly the history of this problem in order to put the present impasse in its proper perspective. The Sterling Processing Corporation is one of the major employers in Oakland, Maryland—the county seat of Garrett County, which is located in the mountains at the western end of Maryland. In the mid-1960's, the town of Oakland notified Sterling Processing that it expected to have difficulty supplying the large amounts of water necessary to wash and process the chickens in the plant. Furthermore, the effluent from the plant flows into the Youghiogheny River, which is a wild and scenic river. Therefore, anything that can be done to promote water conservation and reduce the effluent at the plant is very worthwhile.

Consequently, a demonstration project was designed to see if it is possible to treat the water discharged by Sterling Processing in such a way that some of the water could be recycled and reused in the plant. The plan to implement this project calls for mixing the recycled water—which is already drinking-quality pure—with regular well water on a 50–50 basis, treating it again in the plant's water purification system, and then reusing it in the plant to process chickens.

This project was funded by the federal government in January 1971 at an original cost of $146,000. Seven years and a half million dollars later, I am pleased to be able to report to this Committee that the project is a technical success. Waste water from the chicken plant is being treated and purified to such a degree that it is considered as pure as drinking water, that is, "potable", by water quality experts who have made this water the most thoroughly tested water in the country.

However, I am equally disappointed to have to report that the project is a bureaucratic failure. This project has been stymied by the failure of the Environmental Protection Agency and the Department of Agriculture to agree on a definition of "potability" as it applies to recycled water.

Several years after the initial grant award to the Maryland Department of Health to build the recycling system, the E.P.A.'s Office of Water Supply raised questions about the quality of the water in the system. The E.P.A. would not certify the water as potable, which is necessary to clear the way for the Department of Agriculture to approve the use of the recycled water in the chicken plant. To resolve these uncertainties about the water, the E.P.A. spent an additional $113,000 to finance further studies of the water by one of the nation's top experts in water quality, Dr. Julian Andelman of the University of Pittsburgh. Dr. Andelman concluded that the water is safe to use and poses no threat to the public health. The Maryland State Health Department also certified the water as potable. In every other poultry plant in the state, that certification alone would have been enough to obtain the approval of the Department of Agriculture for the source of water in the plant. However, because of the questions raised by E.P.A. over this project in the past, the U.S.D.A. also asked the E.P.A. Office of Water Supply to certify that the recycled water is potable. In what must be a classic example of bureaucratese, E.P.A. stated that it had no objection to the use of the recycled water in the plant, yet it would not certify that the water is potable. The problem rests with the fact that the E.P.A.'s definition of potability is based on the use of raw water, not recycled water, even though the recycled water may be of superior quality than raw water. Without a statement of potability from the E.P.A., the U.S.D.A. would not permit the use of the recycled water in the chicken plant.

The E.P.A. Office of Water Supply is unable to cite anything specific about the recycled water that causes their reluctance to certify it as potable, as so many other experts have done. Instead, at several meetings I have held to try to resolve this matter, the E.P.A. has stated that there may be some unknown qualities in the water which might suggest that it should not be used as drinking water, although it is safe to use to wash chickens. These unknown qualities were not tested for by Dr. Andelman, E.P.A. claims, because the state-of-the-art of water quality research has changed since it made its grant to him. I asked E.P.A. if it would be possible to conduct more research on the water at Sterling to answer whatever questions it might now have about the water which prevent it from certifying the water as potable. Amazingly, E.P.A. replied that it could not formulate the questions needed to conduct further research because not enough was known about whatever it is E.P.A. wants to research further. And if additional research is to be conducted, by the time it would be finished, E.P.A. stated it would have still additional questions to pose based on further developments in the field. Therefore, it would still be impossible to certify that the water is potable. In other words, the E.P.A. Office of Water Supply will never state that recycled water is potable regardless of the findings of expert after expert who has studied the water at Sterling Processing.

When I asked E.P.A. officials how they could possibly justify the expenditure of a half million dollars on the water recycling system at Sterling Processing if they had no intention of ever letting it be implemented despite its demonstrated technical feasibility, I was treated to a spontaneous display of bureaucrats instinctively explaining how each of them personally had nothing to do with the earlier decisions on the project.

I think it is important that we look at this problem from the position of my constituent, Mr. Gilman Sylvester, the President of Sterling Processing. He was recently featured on the front cover of the national trade journal, Poultry Processing and Marketing. I have given each of you a copy of

this magazine to review. You will note that Mr. Sylvester's kindest characterization for his dealings with the federal government on this matter is "total frustration." You can imagine Mr. Sylvester's feelings when you consider the fact that the federal government made a commitment to this project seven years ago, has spent hundreds of thousands of dollars to make it a technical success, Mr. Sylvester has invested more than $100,000 of his company's funds in the project, and now the E.P.A. will not make the necessary decision to implement the project he has worked so hard to achieve. If it had turned out that recycled water is unsafe, then Mr. Sylvester and I could understand the E.P.A.'s inaction over this matter. But the experts have approved the Sterling water and Mr. Sylvester believes in the project. You will note that in the magazine article I have given you, Mr. Sylvester is pictured drinking the recycled water. My legislative assistant has also visited the plant and he drank the water. I am pleased to report that the quality of his work has improved markedly since that time.

To give you an example of the level of coordination between the E.P.A. and the U.S.D.A., in this matter, the U.S.D.A., which has the legal responsibility to approve the water supplies of the nation's poultry processing plants, first learned about the project from a Congressional Record statement I made in 1971 about the groundbreaking of the project.

I think it is very significant that all of these problems with the Sterling recycling project are occurring at the very time that top officials of E.P.A. have been making statements that America in the future may have to turn to water recycling and reuse as a way of conserving water supplies and meeting strict water pollution control standards. The authorization for fiscal year 1978 for research in water recycling and other dinking water research programs was $25 million. The budget request for fiscal 1979 is $10.9 million.

If there is ever to be a case where water recycling is in the national interest, then Sterling Processing in Oakland, Maryland is it. There is a need here for both water conservation and the reduction of effluents. The recycled water will not be used as drinking water, but only in a 50% mixture with raw water before being treated again for use in processing chickens. This water has been thoroughly tested and found to be safe by some of the country's top experts in the field. If E.P.A. will not take steps to enable the use of recycled water at Sterling Processing, then I don't think it will ever allow the use of recycled water. My experience with E.P.A. on this project convinces me that it is not in a position to spend any money on water quality research wisely. I therefore request this Committee not to appropriate any funds for E.P.A.'s water quality research unless the Committee report specifically directs the E.P.A. to take all necessary steps to enable the use of recycled water at Sterling Processing. I believe this issue is larger than the use of recycled water in Oakland, Maryland. It involves the future water policy of this country and the very credibility of the federal government itself to act rationally.

I would like to submit additional material concerning this matter for the hearing record. Thank you very much.

---

PLANT IN OAKLAND, MD., BREAKS GROUND FOR DEMONSTRATION WASTE TREATMENT SYSTEM

Mr. BYRON. Mr. Speaker, on May 18, 1971 ground was broken at the Sterling Processing Corp. poultry plant in Oakland, Md., for a demonstration pilot plant for secondary waste treatment.

This is a demonstration project sponsored by the Sterling Processing Corp., the Department of the Interior, and the Maryland Department of Health and Mental Hygiene. I commend these efforts. Mr. Gilman Sylvester, the plant manager, has invested much time, effort, and enthusiasm in getting this project started. The Republican of Oakland carried the following story on May 20, 1971, describing the ground breaking:

GROUND BROKEN FOR PILOT PROJECT AT STERLING PLANT

Ground was broken Tuesday at the Sterling Processing Corporation poultry plant, just west of Oakland, for a building to house machinery for the recirculation of secondary waste effluent and its reuse in the plant itself. This is the first attempt in the United States for such a project.

The 300 gallon per minute double filtration system to be installed will be a demonstration pilot plant. Total cost will be $204,000 with a grant of $146,000 coming from the Department of the Interior, and the balance being furnished by the State Health Department and the Processing Corporation. The results are expected to contribute greatly to conserving the water supply of the town of Oakland and serve as an example for other industrialists to follow.

The Sterling corporation already has a waste treatment plant that is 99 percent effective in treating its industrial waste water and has its own water filtration system. The water will go into two aerated lagoons, be treated for some two weeks and then go through the new filtration system and back to the water treatment plant with the water being a potable water source.

Richard Lyons, of the State Health department, will be at the plant on full time basis and will serve as project supervisor at the site.●

MALCOLM JOHNSON SET STANDARDS FOR JOURNALISTS

## HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. FUQUA. Mr. Speaker, a great journalist has retired. Oh, I know we can throw around words like "great" and other adjectives and not really mean them. In the cast of Malcolm Johnson, that statement is true and all who know of his contributions agree.

Malcolm Johnson retired at the end of January after 42 years as a journalist and as a humanitarian. That career began in Jacksonville in 1937, joining the Associated Press' Jacksonville bureau in 1939, moving to its Tallahassee bureau in 1940 and covering the Capitol for the AP for 14 years before becoming editor of the Tallahassee Democrat in 1954.

His daily column was required reading for Floridians, 25 newspapers carrying his comments. His community was an entire State, not just his beloved Tallahassee.

Under his direction the Tallahassee Democrat became universally recognized as one of the finest daily newspapers for a circulation of its size in the Nation. Professional journalists over the Nation have long praised its quality.

That is to his credit and is an indisputable fact.

But an aspect of his life that is not as well known was the time he found to give to young journalists and the respect in which he was held by them. I know of many, many men and women who have told me of the regard they had for his opinion of the profession and how he was never too busy to impart his wisdom and confidence to them.

One told me that Malcolm Johnson had the greatest influence on his life of any person he had known except his parents, and that man was a pretty good journalist in his own right.

Another side of the man is demonstrated in Funders, Inc. which each year raises money to send poor youngsters to summer camp. This brief experience often provides the impetus to change the course of a youngster's life.

It is significant of the man that Funders started when a group of Boy Scout leaders came to Malcolm and asked him to help with a drive to send more scouts to summer camp. "Why just scouts and why just boys?" he asked and formed a corporation to send all needy kids to camp.

Malcolm Johnson has been asking "why" about a lot of things and seeking the answers for a long time. The result has been a richer life for those his influence touches and has touched.

No mention of Malcolm can be made without noting the Upsy Daisy Plant Uplift Society, formed when engineers were staking out the first Leon County section of Interstate 10. Long a student of local wildlife, his works on birds and flowers in the Tallahassee area are considered classic, he became concerned when he found that the new roadway would destroy the largest patch of wild azaleas in the area. He wrote a column and got permission from the road builders for residents to harvest the plants before they were destroyed. It was a miserable day when the dig was scheduled, but they came by the thousands. Since then there have been 15 others, all well attended, one recorded on national television.

When I think of the times he has seen in his career in Tallahassee, I marvel at his many contributions. He saw this beautiful community grow from a relatively small southern town to the active capital city of the Nation's eighth largest State.

Not only did he observe and report events, he shaped them.

In his office at the Tallahassee Democrat when last I visited him there, he sat in his old rocking chair. Quiet, relaxed, his bushy eyebrows moved in concern with the quick thrust of his mind He has a unique ability to move through minutia to the heart of the matter and this was one of his strengths as a journalist.

Much was written and said about Malcolm as he took his leave of his active newspaper career so I wanted to wait a while and then say something about a man I have long admired.

Since my election to the Florida Legislature nearly 20 years ago, I have been a fervent reader of his. Sometimes I have been at the receiving end, but never was he unfair or vicious. He made his points and while those of us in public office may not have always agreed, we always listened. And in listening, we learned.

It is like the man that his final column contained this paragraph at the end:

We'll get the kind of government the people permit. Wise and good officials will make government work to the benefit of their constituents under the worst constitutional forms. If you elect bad officers, you'll get bad government with the best of laws and constitutions.

It would be unfair not to mention the gracious lady who made so much worthwhile. The one-time Jacksonville newspaperwoman directed the furnishings and decoration of the Prince Murat House at the Tallahassee Junior Museum; the columns, now the home of the Chamber of Commerce; and Marjorie Kinnan Rawlings' home at Cross Creek. Dorothy Johnson is a remarkable lady whose contributions deserve all of the plaudits she has received.

Perhaps the finest tribute I can think of is to repeat something Malcolm once wrote about his profession in which he said:

What other work could have sat me at the ringside of history in national politics, scientific advance, and natural phenomena? Flying with astronomers to get above the clouds to photograph an eclipse . . . watching the first movies of the development of a chicken in the egg . . . talking to a killer moments before his walk to the electric chair . . . reporting the birth of a third political party presidential candidate . . . watching men rise to seats of the mighty, and fall again . . .

My field has been politics, Florida's in particular. Others of our craft have and do find the same excitement in sports, in covering riots and raids, crime and courts, war and economics.

Whatever there is that people want to read and know about, you'll find a person dedicated to learning and writing about it for their benefit—and reaping high satisfaction, even after inevitable frustrations in his pursuit of the news.

And it always will be that way, because people will keep on yearning for information they haven't the time nor means to gather firsthand.●

## THE RIGHT TO PRIVACY VERSUS NATIONAL SECURITY

### HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. MAZZOLI. Mr. Speaker, the House Intelligence Committee will soon have before it legislation to create new charters for the intelligence community.

This legislation will be complex and many faceted, but in many instances, we will be debating one fundamental question: What sacrifices of individual liberties and rights are necessary to safeguard our national security?

The following article from the April 7, 1978 New York Times raises one aspect of this question. While I do not necessarily endorse Mr. Paper's remedy for this problem, I do believe that his article presents a distressing problem with which the committee must deal.

The need of the Federal Government to obtain phone records in some cases involving our national security is clear. However, the review of a neutral court would help insure that the Government's reasons for requesting the records are legitimate.

And, certainly, if the records are to be used in a criminal prosecution an individual ought to have the right to challenge the Government's access to these records, and to review the propriety of the Government's prior obtaining these records.

Mr. Paper's article follows:

NUMBERS, PLEASE

(By Lewis J. Paper)

MAPLEWOOD, N.J.—A civil-rights worker in Mississippi, Spiro T. Agnew and newspaper reporters—these and thousands of others have something in common: The Government once secretly obtained records of their private telephone conversations.

In every case, the Government did not bother to advise these individuals that their telephone records were in its hand. Nor were they told why the Government wanted these records or what it intended to do with them. In fact, the Government did not have to explain anything to anyone—all it had to do was direct telephone companies to turn over the requested records.

The Government's unlimited power to obtain telephone records, protected by law, is still a part of our national experience.

That power depends on Section 605 of the Communications Act, which commands telephone companies to release records of private communications when served with a court subpoena or with a "demand of other lawful authority." The law does not specify who or what that "other lawful authority" is. Nor does it require the Government demand to be approved by a neutral court. And the law is similarly silent on the purposes for which the records can be used. In short, the law's grant of power is as unrestricted as anyone can imagine.

Not surprisingly, the law has been abused. Thus, the Federal Bureau of Investigation obtained the telephone records of a civil-rights worker in 1969 in an effort to harass and discredit a group that J. Edgar Hoover considered extreme. In 1968, President Johnson used the guise of "national security" to obtain the telephone records of Mr. Agnew, then the Republican Vice-Presidential nominee; Mr. Johnson was hoping to find information that could be used publicly to embarrass Mr. Agnew. And in 1974, the Internal Revenue Service obtained the records of telephone calls made by reporters in one newspaper's Washington bureau. The I.R.S. was not investigating a violation of the law by the reporters; instead, it was trying to determine whether anyone in the I.R.S. was the source of newspaper stories criticizing the Nixon Administration.

There is no public record documenting the precise number of records obtained, but if public and private comments of telephone company officials are any indication, the statistics are enormous. It would be difficult to blame telephone companies for past or present abuses, however. After all, they are only obeying a lawful request.

Fortunately, the opportunity for corrective action is at hand. The Senate is considering an omnibus intelligence bill that authorizes the collection of telephone records in national-security investigations only in "exigent circumstances" or when the Attorney General determines that the acquisition of records is "necessary and reasonable." This is a step in the right direction, but it does not go far enough: The privacy of telephone communications should not depend on the discretion of Government officials, no matter how good their intentions; moreover, the bill does not include nonsecurity agencies and departments.

Congress should broaden and strengthen the proposal in two ways.

First, the law should require all requests for telephone records to have the prior approval of a neutral court. This is the general practice when the Government makes other private searches, and there is no reason to make an exception for telephone records. Second, the law should require the Government to advise the individuals involved that records of their private telephone conversations have been requested, and those individuals should be given an opportunity to ask the court to deny that request.

These procedures are essential to protect constitutional rights and should be suspended only for good cause in carefully defined situations.●

## EDITORIAL COMMENTS ON PRESIDENT'S DECISION TO DELAY PRODUCTION OF NEUTRON BOMB

### HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the following editorial from the Washington Post concerning the President's decision to delay production of the neutron bomb.

The editorial follows:

[From the Washington Post, April 6, 1978]

THE NEUTRON DECISION

All things being equal, the president could make his decision concerning the procurement and deployment of neutron weapons in a clean, isolated, even philosophical way. He could weigh the military pluses and minuses of these so-called "enhanced radiation" warheads strictly in terms of whether they would—as some argue—1) make East-West war less likely by providing NATO with relatively "clean" and controllable tactical nuclear weapons that an enemy would readily believe the Western forces might use or 2)—as the counterargument goes—make it all too likely that any East-West confrontation in the NATO area would turn into a nuclear exchange, since the very "manageability" of the neutron weapons would tempt the side that had them to introduce them.

But all things aren't equal, and that detached, clinical kind of choice is, in our view, no longer available to Mr. Carter—at least not without very bad consequences. We say this with more than routine reluctance and regret, because a year ago, when something more nearly akin to political and diplomatic lab conditions prevailed, we ourselves found it fairly easy to reach a judgment *against* the president's going forward with the weapons. We found the second of the views cited above the more persuasive. And we have held that opinion up to now. But it seems to us that the president has lost—in some measure, forfeited—the luxury of such a choice. We now feel that if neutron weapons are to be held out of the Western arsenal, they should be negotiated out with the Russians—and only for something considerable in return.

Let us be very plain about this: The most important altered circumstance that seems to us to argue for Mr. Carter's going ahead with a decision to procure the weapons is the evident unwillingness of the Soviet Union to slow even by a hair its buildup of what are called "theater weapons," a gigantic and ever-growing arsenal of medium-range nuclear missiles, tanks and the rest, trained remorselessly on Western Europe. American awareness of that buildup has become a good deal clearer and sharper in the last year or

The Soviets have also done much to transform the international politics of the issue into a circus. It is as poignant as it is preposterous that so many well-intentioned arms controllers have taken to the streets

and Xeroxes to single out and protest this particular range of weapons. What is poignant is that the whole propaganda thrust of the Soviets—their effort to capitalize on the Western democracies' open internal disagreement on precisely this question—has altered the character of the decision Mr. Carter will make on it. It has made it more, not less, desirable for him to let the weapons go forward, at least to the procurement stage.

If the Soviets wish to influence the deployment of these weapons in the NATO theater they should be given every chance to do so—by the appropriate means, which is *by trading off some of their own increasingly NATO-directed arms,* arms that have had more than a little to do with justifying the need for the neutron weapons in the first place. We will be frank to say that Mr. Carter seems to us to have permitted the setting for his decision to get way out of hand and to have let the choice be framed by others for him. But now it seems to us he really needs to make a forthright, no-nonsense decision to proceed, with a view to negotiating the weapons out at whatever point in the production-deployment sequence an opportunity may arise to get a reasonable return.●

## RURAL DEVELOPMENT POLICY ACT

### HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. OBERSTAR. Mr. Speaker, testifying on behalf of the National Association of Towns and Township, Mr. Warren Youngdahl recently underscored the need for greater Federal focus on the development of rural America.

The national association is a federation representing public officials from over 13,000 units of local government around the country. NATAT is unique among Washington-based public interest groups in that it is the only one comprised of predominantly smaller communities, nonmetropolitan in nature. Considering that a very substantial proportion of Americans live in such localities, NATAT provides the focus for a vital intergovernmental perspective.

During hearings before the Agriculture Subcommittee on Family Farms and Rural Development, chaired by Congressman RICHARD NOLAN, Mr. Youngdahl presented his valuable insights regarding the Rural Development Policy Act, H.R. 10885.

Mr. Youngdahl is a supervisor for Marcell Township in the northwest portion of Minnesota's Eighth Congressional District. He is also vice president of the Minnesota Association of Township Officials and long-time member of Minnesota's Rural Development Council. I am very pleased to submit for the consideration of my colleagues. Mr. Youngdahl's concise and informative evaluation of this important rural development legislation:

THE RURAL DEVELOPMENT POLICY ACT—A MUCH-NEEDED COORDINATING MECHANISM

At its last meeting here in Washington, the National Association's Board of Directors voted unanimously to support H.R. 10885, the Rural Development Policy Act. NATAT recognizes the need for a two-pronged, comprehensive approach to solving the institutional problems of rural America: a top-down and a bottom-up attack on the obstacles in the federal system which impede efforts to improve the quality of life for people living in the non-metropolitan sectors of our country. We view H.R. 10855 as an important legislative initiative which will provide a much-needed and long overdue focus in Washington for coordinating the development of rural policies and programs. It will also support the efforts of the Secretary of Agriculture in fulfilling his mandate, under Section 603 of the Rural Development Act of 1972, to promote effective non-metropolitan development and growth in the United States.

FEDERAL RURAL DEVELOPMENT COUNCIL

This bill provides for the establishment of a Federal Rural Development Council, comprised of Cabinet members and the heads of major federal agencies, and under the direction of the Secretary of Agriculture. We see this as a fundamental provision of the law because it would institutionalize the rural sector at the highest level of government and would provide the opportunity for communication between, and coordinated action through, our nation's chief policy makers. In terms of development programs, a Rural Development Council will help alleviate some of the urban bias which now permeates our federal structure. For example, the Economic Development Administration's Public Works Program is weighted in favor of larger communities because one of its criteria for chosing grant applicants involves absolute numbers of unemployed. Clearly, this provision discriminates against smaller rural communities. The Department of Housing and Urban Development's Small Town grant program, a provision of the Community Development Act of 1977, similarly gives larger communities an advantage in the selection process. Many other federal programs have arbitrary population cut-offs which cut thousands of non-metropolitan communities out of the system entirely.

It is situations like those I have just enumerated which we feel a strong Federal Rural Development Council could begin to remedy.

RURAL DEVELOPMENT ADVISORY COMMITTEE

The National Association of Towns and Townships is very enthusiastic about another provision of the Act which establishes a Rural Development Advisory Committee, comprised of representatives of state and local government, rural residents, and organizations with an expertise in rural matters. We view this Advisory Committee as a feature which is vital to an effective decision-making process. Now, for the first time, our nation's policymakers will have the benefit of direct input and feedback from rural officials and will be able to hear first-hand how federal programs and policies are working—or not working—in the community.

A strong Advisory Committee is a key to the success of the Rural Development Council, and NATAT recommends that adequate funding be provided to underwrite the travel and meeting expenses of Advisory Committee members. While we recognize that it is the President's desire to reduce the number of federal advisory groups, especially those which have outlived their usefulness, we hope that he and the Congress will recognize this Advisory Committee as an integral part of a national rural development effort.

INCREASED FUNDING AUTHORIZATION FOR RURAL PLANNING

As members of this Subcommittee are no doubt aware, the current authorization for rural development planning grants under Section III of the Rural Development Act is $10 million. This level of funding is inadequate to meet our planning needs at the local level.

At a meeting of Minnesota's Rural Development Council, we discussed this situation and agreed, along with our executive director, Mr. John Kostishak, that if public officials are to be able to respond to the need for planning the development of our rural communities nationwide, then significantly higher levels of funding must be provided. I think another important measure of the need for additional funds is indicated by the number of calls received by the Department of Agriculture earlier this year regarding the planning grant program. Even before the regulations for administering this program were drafted, the Department received over 600 inquiries from officials around the country about the program.

Obviously the need exists. Countryside America is painfully aware of this need as urban growth has begun to creep haphazardly into many rural areas. We wholeheartedly support that provision of the Act which allows for increased funding and, as a local government organization, believe it will enhance our capacity to be more effective partners in the intergovernmental system.

Again, on behalf of the Board of Directors of the National Association of Towns and Townships, I want to thank Chairman Nolan and the members and staff of the Subcommittee for the opportunity to share our views on this monumentally important piece of legislation.●

## BUFFALO BILL DAM MODIFICATION BILL

### HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. RONCALIO. Mr. Speaker, today I am introducing legislation to authorize the addition of a 25-foot collar on the top of Buffalo Bill Dam in Park County, Wyo., to provide additional storage capacity in Buffalo Bill Reservoir and for other related purposes.

Buffalo Bill Dam, completed in 1910, is named for the early day scout and showman who actively promoted the Shoshone project, perhaps our first federally built reclamation works. The dam was the tallest structure of its kind when built at 325 feet. It is a constant radius curvature structure with a base width of 108 feet, crest width of 10 feet, and crest length of 200 feet.

The dam was built primarily for irrigation storage with water first delivered to farms in 1908. Power production facilities were not added until 1922 with another power plant installed in 1948 for a total generating capacity of about 10,600 kilowatts.

Water from Buffalo Bill Dam and Reservoir irrigates about 94,000 acres with the newest irrigation unit, the 19,200-acre Polecat extension, being authorized on March 11, 1976. The current gross value of power and crop production from the project averages $8 to $10 million annually. The facilities also provide recreation and fish and wildlife benefits.

During the 68 years of operation at Buffalo Bill, the total storage capacity has been reduced by sedimentation, from an original storage capacity of 456,000 acre-feet to about 424,000 acre-feet today, a loss of about 32,000 acre-feet.

While the Bureau of Reclamation has determined there is sufficient storage now to serve both the Shoshone Project and the new Polecat Bench extension unit, last year's drought raised concern that under extended dry conditions there may not be adequate water supplies for the entire project.

Furthermore, there are ever increasing demands for water in Wyoming, especially for growing towns and cities, industrial development, and energy activities. If we can provide new storage through modification of existing facilities, it will be at a lower cost and without the environmental ramifications of building an entirely new structure in another location flooding another valley.

The modification of the dam authorized in my bill would provide an additional storage capacity of 271,000 acre-feet. The new water would be available for industrial and municipal use, irrigation, hydroelectric power generation, recreation, and fish and wildlife conservation. The bill also authorizes replacement of the outdated 1922 Shoshone powerplant and construction of a visitors center, dust abatement dikes, and impoundments.

Buffalo Bill Dam was subject to safety studies after the Teton Dam disaster which determined that under the worst possible flood conditions, the dam would hold. But water would crest 7 feet over the top of the dam with a potential $10 million damage to dam abutments, power facilities and downstream roads, bridges, farms, private structures, and buildings. Yet the study did not recommend any corrective action.

The work authorized in this bill, adding 25 feet to the height of the dam, would eliminate concern of floodwaters going over the top of the dam and would also provide valuable and needed additional water storage capacity. Cost of the entire authorized work is estimated to be $56,200,000 based on 1977 prices.

Buffalo Bill Dam is listed in the National Register of Historic Places and the American Society of Civil Engineers has designated it as a National Historic Civil Engineering Landmark. It is altogether appropriate that through today's technology this structure be made even more useful than ever thought possible by our early day reclamation planners and engineers.●

## THE UNITED STATES CAN DO MORE IN SUPPORTING INTERNATIONAL ALTERNATIVE ENERGY PROGRAMS

### HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. BROWN of California. Mr. Speaker, one of the areas where the United States has neglected its role in the world, and where we can easily show true leadership is in the area of developing alternative energy technologies and resources. As with most subjects, there is litigation on the books which authorizes U.S. activities in the Department of Energy, the Department of State, and AID. But as with most programs, this program suffers from inattention and inadequate resources.

One effort to tap the substantial resources in the Department of Energy's domestic energy research, development and demonstration program has been proposed by a coalition of some 50 Congressmen as an amendment to the Department of Energy's fiscal year 1979 authorization bill. The text of this amendment, which was primarily sponsored by my friend and colleague from California, Mr. BEILENSON, follows:

AMENDMENT TO DOE AUTHORIZATION

SEC. . (A) The Secretary is directed to use to the fullest extent practical, the domestic energy research, development and demonstration activities in support of the Department's international energy program.

(B) The international energy program shall support the energy programs of the President and the Congress which are established in the Department of State and the Agency for International Development.

(C) $20 million are authorized for this purpose, of which no less than $5 million shall be used for programs in research, development, and application of small-scale, decentralized technologies utilizing renewable energy sources for the rural areas of developing countries.

Other approaches to this obvious opportunity for U.S. trade and world leadership can easily be envisioned. I am sure that either this, or some similar amendment will, in fact, be approved this year. The reason I raise it here is to alert others to the issue and the potential of this type of U.S. effort.

As we consider alternative energy technologies, we need to recognize that we do not work alone in this field. In several technologies, other nations are substantially ahead of the United States. Other nations have already recognized the need for greater utilization of indigenous energy supplies.

A recent editorial in Science magazine put this matter in focus when it stated:

From the standpoint of energy research programs, the United States is clearly the leader in terms of quantity and scope. . . . But with respect to converting research into production facilities that make a difference to the country's energy supply, the United States lags.

Other countries seem to be moving into this gap, although they still lack the great research resources of the United States. A broader approach to this issue, similar to that described in the above amendment, is needed to move the United States in this direction.

The Science editorial follows:

[From Science magazine, Apr. 4, 1978]

ENERGY AND DEVELOPMENT

The United Nations Conference on Science and Technology for Development to be held in Vienna in September 1979 could be an important constructive event. Many observers, however, fear that it will be just another confrontation of politicians from developed and less developed countries. Transfer of science and technology cannot be accomplished by the interaction of politicians or by gifts of black boxes or tons of blueprints—a prerequisite is human interaction at an expert level.

The organizers of the U.N. conference might well draw lessons from a symposium entitled "Energy and Development in the Americas," held from 13 to 17 March near Santos, Brazil.* Participants came from 16 countries and included about 110 scientists, engineers, and government representatives. They brought to the meeting different backgrounds of knowledge and experience, and found mutual pleasure and benefit in friendly interchanges. Topics covered included nuclear energy, oil, oil shale, coal, synthetic fuels, hydropower, windmills, hydrogen, solar energy, biomass, efficient use of energy, and energy for rural peoples. The participants shared the belief that the days of cheap oil are over and the conviction that each country must survey its own energy resources and move toward an energy independence based on indigenous supplies.

For Latin America in general, this means an emphasis on solar energy, biomass, and the development of large hydropower potentials. Venezuela has a great oil resource in its Orinoco tar sands; Brazil, oil shale: Colombia, substantial coal reserves; and Mexico, newly discovered oil; but the region as a whole is lacking in fossil fuels.

A problem much on the minds of participants was the continuing crowding into cities of the peoples of Latin America. There was a search for a means of slowing this trend by making rural life more attractive. Ways of creating cheap, small, practical energy sources were discussed. A problem of the cities is to provide electricity. Today, Argentina, Brazil, and Mexico are proceeding with nuclear power plants. Some of their neighbors are considering following this path.

From the standpoint of energy research programs, the United States is clearly the leader in terms of quantity and scope. This country is also becoming expert at building "demonstration plants." But with respect to converting research into production facilities that make a difference to the country's energy supply, the United States lags.

Brazilians are moving ahead with the production of alcohol for motor fuel and of charcoal from eucalyptus trees for steel mills. The use of palm oil to supplement diesel fuel is on the horizon, and the development of hydro-power is continuing.

Two speakers from outside the Western Hemisphere provided additional perspectives. The French are proceeding with the operation of a nuclear reprocessing plant and with practical means of disposing of nuclear wastes. They have developed and are implementing long-range plans for their energy future. If one takes into account the skimpy resources of the Indian subcontinent, the United States is put to shame by the Indians. They are building a large number of biomass converters to produce methane from cow manure. The heating value of the methane is five times that of the cow dung. Sludge from the digesters makes excellent fertilizer.

This international meeting, sponsored jointly by the Brazilian Society for the Progress of Science and Interciencia, was organized in less than 6 months. In the year and a half remaining before the Vienna meeting, the United Nations still has time to create sessions and an atmosphere in which significant interchange can occur.—PHILIP H. ABELSON.●

## H.R. 7700, THE POSTAL SERVICE ACT OF 1977

### HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. GOLDWATER. Mr. Speaker, I supported H.R. 7700, with the sincere

hope that this bill will return the Postal Service to some degree of respectability. The bill will now return to the President and the Congress some of the oversight over the Postal Service that we relinquished in 1971. The Postmaster General will again be a Presidential appointee, Congress will be able to veto any policy changes, such as cancellation of Saturday mail deliveries and the closings of rural post offices. The bill requires the Postal Service to detail to Congress each year how it plans to spend its money, and it abolishes the Board of Governors.

The Postal Service in its present form is just not fulfilling the purpose for which it was created. It is plagued by mismanagement and lack of accountability. There are few incentives for its managers and employees alike.

The passage of the Postal Reorganization Act in 1971 was supposed to make the Postal Service more efficient. However, what we have today is almost total public dissatisfaction. The U.S. Postal Service is one of the 10 largest corporations in America, whose labor force is surpassed only by General Motors and American Telephone and Telegraph. The Reorganization Act authorized Congress to appropriate an annual public subsidy of $920 million for the Postal Service from 1972 to 1979. That amount was to decline thereafter until 1984, when the subsidy could be eliminated, because the Postal Service was supposed to be able to break even by that date. The closest the Postal Service came to breaking even however, was in fiscal year 1973, when the deficit was $13 million. It has been down hill ever since.

Part of the problem lies in the passage of the 1971 Postal Reorganization Act. On the one hand, the law says:

> The postal service shall have as its basic function the obligation to provide services to bind the Nation together through the personal, educational, literary and business correspondence of the people.

However,

> Postal rates and fees shall provide sufficient revenues so that the total estimated income and appropriations to the Postal Service will equal, as nearly as practicable, total estimated costs of the Postal Service.

It is obvious that public-service and break-even mandates are incompatible.

Part of the problem lies in the fact that the Congress did not give the Postal Service enough freedom while at the same time we failed to require cost-effective management or put a limit on nonmail delivery expenses.

While I supported H.R. 7700, I consider it only an interim solution and a distasteful one at that. The fact that the Postal Service has not worked out to our expectations, does not mean that the concept was a mistake. I think that what we need are the right people who can do the job. Obviously, this has not been done. Mismanaged private companies lose customers and eventually go bankrupt, and it is this threat and the promise of profits that makes private enterprise work.

There is no such performance incentive within the Postal Service.

One solution may be the repeal of the private express statutes. Competition just may generate the innovations and efficiencies so badly needed in the Postal Service. This competition from private carriers would drive down first-class rates, particularly for local delivery. During the 1840's and 1850's, private express companies forced the Government to lower its first-class rates from 25 cents to 3 cents—a rate that survived until 1958.

Another solution which does not exclude the first, would be to denationalize the Postal Service. There is no reason for continuing postal service as a nationalized industry merely because it has historically been a Government enterprise. When the Federal Government and the post office were founded in 1789 there was little alternatives to Government ownership and operation of the postal system. However, means of financing large-scale businesses have long since been available. There is no longer any need for the Federal Government to remain the sole supplier of postal services.

As a privately run business, the Postal Service would compete with other forms of communication and distribution, and would flourish or die according to its success in meeting the needs of its customers. The Postal Service would then pay taxes instead of being a drain on the Treasury. It would raise needed capital in the open market at a fair cost rather than wastefully through tax-financed Government guarantees. In other words, it would get the job done, or give way to something better.

There is no doubt that many questions need to be answered should full private competition come to pass. But, private enterprise has given us good service. We do not hear many complaints about telephones, energy, airlines, and so forth, which is all the more reason why I believe private enterprise can also give us good mail service.

Thus, this "yes" vote of mine is the last one I will cast for postal subsidies or other bail-outs when they are not accompanied by other reforms or requirements that insure quality of service for the American public and insure that American tax dollars are not being poured down a rat hole.●

---

## ARMS SALES TO EGYPT AND SAUDI ARABIA—PRESIDENT'S PROPOSAL MUST BE REJECTED

**HON. ROBERT W. KASTEN, JR.**

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. KASTEN. Mr. Speaker, in the near future, President Carter is expected to formally submit his three-part proposal to sell sophisticated fighter planes to Egypt and Saudi Arabia. The President's proposal is a dangerous "all or nothing" package that links the sale of weapons to these countries with the sale of long-promised aircraft to Israel.

The administration's Middle East policy is reckless. It has transformed the United States from a partner with Israel to a problem for Israel.

Certainly, this latest pronouncement by the administration is evidence of this transformation. It comes at the wrong time and can do nothing but further exacerbate the already tense situation that exists in the Middle East. The road to peace is difficult, and the administration has chosen to throw one more stumbling block in the way.

Israel is today what it has always been—our principal ally in the Middle East. While there have been occasional differences of opinion over the specifics of U.S. policy with respect to Israel, every American President since Harry Truman has affirmed our commitment to insure the survival of Israel.

We entered into that commitment knowing full well the obstacles ahead. We did so, because of our affinity for a nation built on the same democratic principles as our own country; our ties to the cultural and religious heritage of the Jewish people, and our profound admiration for the readiness of the Israeli people to fight, when necessary, to defend their existence as a free and independent state.

Our original commitment to the Jewish people has been a cornerstone of American foreign policy. We cannot permit the current machinations of the Carter administration to undermine that commitment, particularly at this most critical time in the Middle East negotiations.

### THE ADMINISTRATION PACKAGE

While it is rumored that the administration may alter its February proposal, it appears that the President will continue to endorse arms sales for Israel, Egypt, and Saudi Arabia as part of a package, leaving Congress the narrow option of approving or rejecting the entire package. I am opposed to the concept of a package sale, and I am firmly opposed to selling sophisticated weaponry to the enemies of Israel. I hope that Congress will soundly reject the proposal—thus sending a clear message to the White House that their drifting Middle East policy will not be tolerated.

### ARMS FOR ISRAEL

In February, the administration proposed the sale of 15, F–15 fighter planes for Israel. These are sophisticated, long-range fighters. Israel had requested 50 F–15's, 25 of which it is already acquiring. The administration has reduced the number of the additional F–15's Israel will receive from 25 to 15. Israel also requested 150, F–16 fighter/bombers, with the administration approving the sale of only 75, for approximately $1.5 billion.

The United States has a standing commitment since 1975 to sell Israel these aircraft. A pledge to maintain Israel's defensive strength through providing advanced equipment was written into the Sinai II disengagement agreement. The sale of F–15 and F–16 fighters should proceed as promised during the Ford administration. We cannot allow our allies to believe that promises by one American administration will be subject to reversal by successive administrations.

U.S. policies in the past have been directed consistently toward seek-

ing a balance of military force among the nations of the Middle East. In contrast to its neighbors, Israel has only the United States from which to purchase arms. It must have full confidence that the United States will supply the weapons necessary to insure its own defense.

ARMS FOR EGYPT

The second part of the administration's proposal includes the sale of 50 F–5E's for Egypt. These are short-range fighter/bombers that have been priced at $400 million for the shipment.

Unlike the sale of F–15's and F–16's to Israel, there is no prior U.S. commitment to sell either F–5E's to Egypt nor F–15's to Saudi Arabia. The sale of offensive weaponry to Egypt, in particular, represents a dramatic turnabout in U.S. Mideast policy.

Part of the administration's rationale is that Egypt must have reasonable assurances of its ability to defend itself now that it no longer receives military equipment from the Soviet Union. That logic is faulty. Egypt is presently strong enough to deter any real threat to her by a hostile neighbor. Egypt continued to receive arms from the U.S.S.R. through 1977. Moreover, Egypt is presently receiving advanced aircraft from Britain and France and is having her fleet of Mig 21's refurbished by Lockheed and General Electric. Unlike Israel, Egypt's defensive strength does not depend upon the United States.

Providing F–5E aircraft to Egypt would go against U.S. interests in the Middle East. It would result in providing offensive weapons to both sides of a conflict and threaten Israel's security during sensitive peace negotiations.

Mr. Sadat's earlier peace initiatives were applauded by the world. If he really wants peace, he does not need more fighter-bombers. If he decides to pursue the war option, the United States cannot assume the position of having supplied Egypt with weapons it will use against our long-time ally, Israel.

ARMS FOR SAUDI ARABIA

The third, and most objectionable element of the arms package is the proposal to sell 60 F–15's to Saudi Arabia at a cost of $2.5 billion.

The F–15 is the most advanced air-superiority fighter in the world. It is capable of long-range attacks and interceptions. F–15's would enable Saudi Arabia to strike deep into Israel. This sale would effectively alter the balance of power in the region against Israel and make a military solution rather than a negotiated settlement more appealing to the Arab countries.

The national interests of our country in assuring peace and stability in the Middle East would be jeopardized by this sale.

America's aim of assuring Israel's security will be directly undermined by the F–15 sale to Saudi Arabia, whose planes with long-range lethal missiles could neutralize Israel's F–15's on a 1-to-1 basis and pose an unprecedented threat to Israeli bases and cities.

In the last 4 years, Saudi military strength has increased significantly. Since 1973, Saudi Arabia has spent more than $12 billion on advanced weapons and military construction.

The sale of the F–15's will mean a tripling of Saudi air strength compared with 1973. Saudi acquisition of the F–15's would be particularly disturbing in light of the ongoing expansion of their air bases, especially their principal base at Tabuk, which is only minutes flying time from Israel's Red Sea port of Eilat. The presence of so advanced a weapons system on Israel's borders will not enhance Saudi Arabia's security. Rather, it will make Saudi participation as a fourth confrontation state in a future Arab conflict with Israel more likely.

The words of King Khalid in May 1976 cannot be overlooked as we review the terms of this sale:

When we build up our military strength we have no aims against anyone except those who took by force our land and our shrines in Jerusalem—and we know who that is. We also believe that the strength of Saudi Arabia is a strength for the whole Arab and Islamic world. We always intended to make use of all military equ'pment that might help build our military strength.

FAVOR ISRAELI SALE

Mr. Speaker, there is absolutely no reason why these sales must be treated as a package deal. Each sale should be scrutinized on its own merits, with Congress making the final decision of how we proceed. Long-promised arms to Israel should not now suddenly be held hostage to our country's military relationship with Saudi Arabia or our erratic political relationship with Egypt.

I favor providing Israel with 25 F–15's and 150 F–16's—the full amount of these aircraft Israel needs for its defensive purposes. Such a sale is in keeping with previous U.S. commitments to our ally. I am opposed to the sale of F–15's to Saudi Arabia and the F–5E's to Egypt.

As Congress makes its decision on these proposed sales, I am reminded of the moving words of former Prime Minister Golda Meir, in an article she wrote for the New York Times in January 1976:

There are 21 Arab states, rich in oil, land, and sovereignty. There is only one small state in which Jewish national independence has been dearly achieved. Surely it is not extravagant to demand that in the current power play the right of a small democracy to freedom and life not be betrayed.●

## THE WHITE HOUSE STAFF

## HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. DERWINSKI. Mr. Speaker, I have been a longtime advocate of giving our Nation's Chief Executive all the flexibility he needs in hiring and compensating members of his White House staff. At times, I have felt quite lonely in that position. Now, I am happy to see I am in prestigious company. The Washington Star, in an April 8 editorial, emphasized the folly of trying to put constraints on the size if the White House staff. As the editorial pointed out, as long as the staff is subjected to the budget process, it will be kept within bounds. The editorial follows:

[From the Washington Star, April 8, 1978]

THE WHITE HOUSE STAFF

The most recent legislative authorization for White House staffing having been enacted nearly 40 years ago, it probably is time to bring things up to date. The 14 presidential assistants allowed in the 1939 law hardly fits the need of the 1970s, even for a president who has pledged to shrink the government.

But the corrective measure that came up in the House the other day seemed a peculiar way to go about it.

In the first place, it came to the House floor under a procedure that permitted no amendments and therefore required a two-thirds vote. Evidently the bill's supporters thought it was non-controversial, a notion of which they were quickly disabused. It produced much huffing and puffing, especially on the Republican side; not only did it fail to get a two-thirds majority, it barely got a simple majority (207 for and 188 against).

Telling a House member that he can't offer an amendment to legislation on the floor smacks of steamroller tactics and it's apt to get a member's back up even if he doesn't have strong feelings one way or another about a bill.

Republican members had, or at least feigned, strong feelings against the bill. Remembering Democratic jibes about the size of White House staffs during recent Republican administrations, they complained that the bill would nearly double the number of super-grade positions—from 55 to 100—on the president's personal staff. The bill also would allow an unlimited number of White House employees below the super-grade level.

The Republicans understandably had trouble reconciling President Carter's pledge to reduce the White House staff with the White House's support of a bill that would authorize a big increase in the staff and with its adamant position against subjecting the bill to amendments on the floor.

The president's special assistant for administration, Hugh Carter ("Cousin Cheap," they call him around the White House because of his parsimonious ways), explained that Mr. Carter had no intention of doubling the staff and, in fact, had reduced it since he took office; but "we wanted to have plenty of flexibility in the future in the event of an emergency like World War III or something and needed to increase the staff."

Of course! You never can tell when another world war might come along. Even brush fire wars can require a lot of White House attention—remember Vietnam?

But where do you start or stop in the numbers game? Obviously 14 high-echelon staffers aren't enough. But should the ceiling be 55, or 100, or some other number? If the law establishes a ceiling above the number currently on hand, does that tend to encourage the White House to move toward the maximum allowed?

Why not authorize the president to have as much staff as he, the Office of Management and Budget and the Congress deem appropriate for the work at hand? The White House ought to be required, of course, to justify its personnel requests to the appropriate committees of Congress. And it ought to be required to account for the floaters that it "borrows" from time to time and for varying periods from other executive agencies.

The White House ought not be constrained by a numerical quota. It pays, as Cousin Hugh suggests, to stay loose at the seat of national government. Surely the annual budget process can keep the staff size within appropriate bounds.●

## REPRESENTATIVE JACK KEMP TESTIFIES IN SUPPORT OF FUNDING FOR ENVIRONMENTAL AND PUBLIC WORKS PROGRAMS

**HON. JACK F. KEMP**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. KEMP. Mr. Speaker, yesterday I testified before the Public Works Subcommittee of the House Committee on Appropriations on behalf of crucial environmental protection and public works programs in my congressional district and in western New York. There are a number of these projects that have gone unfunded or underfunded in President Carter's fiscal year 1979 budget.

These projects represent the culmination of many years of hard work by State, local, and Federal officials, along with the people of the Niagara frontier, to create a better environment, better living conditions for homeowners in flood-prone lands, and an improved waterway system all around the Buffalo area for increased commercial and recreational use.

I particularly urged the subcommittee to appropriate funds for the Ellicott Creek Flood Control project, which has been halted due to the administration's policy of no new starts. The construction of this project is crucial to the environmental well-being of Amherst, Williamsville, and the entire 38th Congressional district. Such construction starts as this represents also mean many more jobs, and a badly needed economic stimulus to western New York.

A copy of my statement follows:

STATEMENT OF REPRESENTATIVE JACK KEMP OF NEW YORK BEFORE THE SUBCOMMITTEE ON PUBLIC WORKS OF THE COMMITTEE ON APPROPRIATIONS; APRIL 12, 1978

Mr. Chairman and my fellow members of the Committee on Appropriations:

I am here this morning to testify in support of—

Additional funding for the Ellicott Creek flood control project of $1,100,000;

Additional funding for the Cattaraugus Harbor Project of $1,640,000;

Additional funding for the Great Lakes/St. Lawrence Seaway Navigation Season Extension Study of $1,025,000;

Additional funding for the Lake Erie Wastewater Management Study of $400,000;

Additional funding for the Great Lakes to Hudson River Waterway Study of $215,000; and the Administration's budget level requests for—

Scajaquada Creek Flood Control Construction Project;

Black Rock Lock, Tonawanda Harbor, and Buffalo Harbor maintenance funds; and

Buffalo Metropolitan Area Study (Tonawanda Creek).

Mr. Chairman, I would like to take this opportunity to thank the Committee for providing me with this opportunity to testify today; and I would especially like to thank Mr. Nowak and the other Western New York Representatives who have worked so hard on these Public Works projects.

SPRING FLOOD THREAT IN WESTERN NEW YORK

Because of the now famous "Blizzard of '77" along with the inordinately heavy snowfalls in this past winter of 1978, Western New York is faced with an urgent necessity of preventing potentially disastrous flooding throughout the Niagara Frontier. The flooding potential is caused by the melting snow and ice left over from the record snowfalls. Last year the Buffalo area underwent an unusually slow spring, which resulted in a comparable slow but steady snow melt. Spring of 1977 also saw a lot of high, dry winds that evaporated much of the snow.

This year the snow level was almost as deep. In a February 11, 1978 article in the Buffalo Evening News, reporter Paul McClennan states, "While the snow today is not as deep, the concern is almost as great. In the upland areas with streams leading into Lake Erie, the corps estimates there is the equivalent of 4 inches of water in the snow pack compared with a long-term average for this time of year of 1.67 inches. That's a lot of water if the snow suddenly melts and flows into otherwise small creek beds. . . . Combined water content of snow in the Lake Erie and Genesee River tributaries spells potential trouble for residents throughout Erie County from Cattaraugus Creek through the Buffalo-Cazenovia-Cayuga creeks region to the Ellicott and Tonawanda Creek watershed."

This potential threat to the homes and citizens of my District underlines the unpredictability of nature, especially in a northern area such as Buffalo, New York, where the slightest variance from the norm can spell disaster for countless numbers of people. We in the Federal Government have a responsibility to do all that we can to prevent such devastations as this potential flooding to the best of our ability, particularly when literally thousands of dollars have already been spent on preparatory studies and various planning stages. To literally halt construction of vital flood control projects is indefensible when such action is taken arbitrarily, without good reason.

ELLICOTT CREEK FLOOD CONTROL PROJECT

The Administration has designated no funding for this extremely important flood control project. I find it unconscionable that the Administration could let a major project such as this suffer needless delays by totally eliminating vital funds in the FY 79 budget. This project is of major importance to the entire Western New York area, and I urge the members of this Subcommittee to restore the Corps' full funding request of $1,100,000.

Ellicott Creek is the largest tributary of Tonawanda Creek and drains an area of approximately 110 square miles in Erie, Genesee, and Wyoming Counties. The Ellicott Creek Basin includes all of the villages of Alden and Williamsville and parts of 2 cities, one other village, and 10 towns.

Portions of the lower basin—notably the towns of Amherst and Lancaster—are subject to periodic flooding, sometimes of an extensive nature. The danger of this is even greater given the unusually large snowfalls of the past two years, and the runoff that occurs from the melting snow and ice in the spring.

The development of the Ellicott Creek project has suffered a temporary setback as the result of extensive Corps of Engineers studies which determined that extremely weak soil conditions now exist along the banks of the creek. I was informed by Col. Daniel D. Ludwig, District Engineer for the Corps in the Buffalo area, last June 3, that this meant that the existing channel could not be enlarged as previously proposed without significant structural (floodwalls and utility and road relocation) changes and resulting adverse impacts. The solution which Col. Ludwig proposed was a new channel, extending from Pfohl Park and rejoining the creek just upstream of Niagara Falls Boulevard.

On March 9 of this year, I received a letter from Col. Ludwig elaborating on the Ellicott Creek project. Col. Ludwig's letter follows:

DEPARTMENT OF THE ARMY,
BUFFALO DISTRICT,
CORPS OF ENGINEERS,
*Buffalo, N.Y., March 3, 1978.*

Cong. JACK KEMP,
*House of Representatives,*
*Washington, D.C.*

DEAR MR. KEMP: I certainly appreciate the thoughts given in your letter of 24 January 1978 in response to my December letter appraising you of the status of projects and studies in your Congressional District.

In rereading your letter and my recent correspondence to you, I realized that while I have advised you of our capabilities for FY 1979 and our current progress on the Scajaquada Creek project, I had not given you an update on the Ellicott Creek flood control project. In my recent letter and meeting with you I indicated my current efforts are being devoted towards completing the Phase II Design Memorandum and that I expect to have that document approved in time for a 1979 start of construction. Actually, construction in 1979 is not only contingent upon timely completion of the Phase II Design Memorandum but also upon actions by my higher headquarters and possibly even by Congress with regard to the Phase I Design Memorandum which I completed last year.

The Phase I Design Memorandum was submitted thru the North Central Division of the Office of the Chief of Engineers and the Board of Engineers for Rivers and Harbors (BERH). The Phase I General Design Memorandum has a twofold purpose, (1) to depict construction proposed in response to your legislation in 1974 WRA (Sec. 14, PL 93-251) and gain OCE approval for construction of the lower portion of the project, (2) serve as a report as required by the basic authorization (Sec. 201 of 1970 WRA, PL 91-611) requiring review of Sandridge Reservoir. It has been determined that a Post Authorization Change Report is the vehicle by which we will address the requirement of basic authorization regarding review of Sandridge Reservoir. Modified Plan E is now recommended in Phase I GDM in lieu of the Sandridge Reservoir. A construction start on the lower end of project requires a minimum of one year after OCE approval of the pertinent part of Phase I GDM covering the lower portion of the project authorized by your 1974 legislation. OCE is now reviewing the Phase I GDM.

I trust that this letter will bring you up to date on the Ellicott Creek project. If you need any additional information, please contact me.

Sincerely yours,

DANIEL D. LUDWIG,
*Colonel, Corps of Engineers,*
*District Engineer.*

As you can see, the Ellicott Creek Flood Control Project has undergone substantial study and effort by the Corps of Engineers, and is most desperately needed by the people of Western New York. It is crucial that the Congress restore the Corps' requested funds to this budget so that this vital work can continue on schedule.

CATTARAUGUS CREEK SMALL BOAT HARBOR

This is another important project for which the Administration has budgeted no funds, but for which the Corps of Engineers' FY 1979 capability is $1,640,000. This project involves the construction of two breakwaters at the mouth of the creek and the dredging of a channel between them. The project is designed to keep the creek mouth open to reduce the threat of flooding resulting from ice jams and to provide recreational boaters unrestricted passage between the creek and Lake Erie. A detailed design of the Cattaraugus Creek small boat harbor project is com-

plete, and the plans and specifications will be completed this summer. Funding is now needed to begin construction.

GREAT LAKES-ST. LAWRENCE SEAWAY NAVIGATION SEASON EXTENSION

Here the Administration has budgeted $6,459,000 out of the Corps FY 1979 capability of $7,484,000, leaving a difference in funding of $1,025,000. The extension of the winter navigation season is crucial on the Great Lakes-St. Lawrence Seaway corridor to all states which are served by commerce along this waterway.

Mr. Chairman, I support the Great Lakes-St. Lawrence Seaway Navigation Season Extension Demonstration Program and the funding recommended by the Corps of Engineers for this project of $7,484,000.

Extending the navigation season on the Great Lakes is of major importance to the Port of Buffalo. Traffic moving from the upper lakes, down the chain, and into the St. Lawrence Seaway frequently uses the facilities at the Port of Buffalo; thus, the longer the navigation season on the entire lakes, the greater the use of the Port of Buffalo.

There has been a remarkable increase in tonnage after December 15 over the years the demonstration program has been extended, with increased tonnage through the Soo Locks and St. Mary's River operations up as high as 9.1 million tons. However, due to the severity of the winter of 1976–77, the winter for which the latest figures are available, tonnage fell to 2.93 million tons. Clearly, the Corps' work on extending the navigation season on a reliable basis is vitally needed.

Any adverse environmental effects are minimal, and some environmental benefits have actually been obtained through controlling damage caused by free-flowing ice.

This demonstration program has worked effectively and efficiently. The savings and benefits of the extended season include direct shipping costs, increased and stabilized incomes and employment, and many other regional benefits. There are estimates of $1.9 billion increase in regional output and $560 million in wages per year, which would create about 38,000 new jobs within the Great Lakes Region. These are estimates that have been made by the Bureau of Economic Analysis of the Department of Commerce.

Congress in 1970 recognized the urgency for improving water-borne commerce in the system, when it put the Winter Navigation Board to work to study and demonstrate the feasibility of year-round, system-wide navigation.

In the 1974–75 and 1975–76 winter seasons, traffic has moved full-season through the Soo Lock from Lake Superior into the lower lakes, carrying millions of tons of cargo. This has resulted in a benefit-cost ratio for upper lakes navigation through January each year in excess of 3 to 1. For full-system, year-round service, the benefit to cost ratio is estimated to be 9 to 1.

Extension of the season will do a number of things. It results in fuel savings. It disturbs the environment less than other modes of transportation which would have to be used. It increases use of vessels and port facilities. It makes greater use of capital facilities, and it provides for more stable employment, providing jobs on a 12-month basis for labor. I very strongly urge this Committee's support for full funding of this request, as more delays in the extension of the winter navigation season will have serious ramifications on all Great Lakes Ports, including the Buffalo harbor.

LAKE ERIE WASTEWATER MANAGEMENT STUDY

The funds requested by the Administration for this study are exactly half of the Corps' FY 1979 capability—$400,000 out of a potential $800,000. If full funding is restored, a final feasibility report of the Lake Erie Wastewater Management Study will be completed in June 1978. This report will contain a recommended wastewater management program for several Lake Erie tributaries. According to the Corps, these watersheds will be intensively monitored, and the results will be used to develop a basin-wide plan for restoring Lake Erie to an acceptable water quality level. Detailed engineering and design of the recommended wastewater management program for the entire Lake Erie watershed is scheduled to commence after review and approval of this plan by the Congress.

ALL AMERICAN TRANSPORTATION SYSTEM/GREAT LAKES TO HUDSON RIVER WATERWAY

Along with my Western New York colleagues, I strongly support an increase in the President's budget request from $35,000 to $250,000 for the Great Lakes to Hudson River Waterway Study. This action has the full approval of New York State, and would serve to coordinate two previously authorized studies. In 1973 the Corps was authorized to investigate waterborne commerce between the Great Lakes and the deep-draft Hudson River flowing down to the Port of New York. This study concentrated on the eastern portions of the New York State Barge Canal System, examining its feasibility for commercial use, while limiting any study of the western end of the Barge Canal System to a feasibility for recreational use. In May, 1977, the House Public Works Committee approved a new Congressional authorization for the Corps to study and all American Transportation System—a comprehensive study designed to examine multi-modal transportation systems from Lake Erie to the eastern seaboard, in light of the increased projected use of the Great Lakes to transport low sulphur coal from the Western States to the east, and the availability of Buffalo as a central transshipment point for further transportation of such shipments to points east. As a Representative from Western New York, I was particularly interested in this study's focus on the reestablishment of the Port of Buffalo as a major shipping and trade center for the northeast. In the interests of comprehensive and coordinated planning and efficient government investment, I, along with my colleagues from Western New York, propose to consolidate the substantive aspects of these two studies under one authority and one appropriation.

I would like to point out most emphatically that this study does not duplicate previous studies made by the Corps to simply enlarge the Erie Barge Canal for increased access by existing traffic. The purpose of this study is to determine which among all alternative modes of transportation, including an enlarged Barge Canal and possible transshipments by rail, truck, or additional traffic on Lake Ontario, will be the cheapest and most efficient method of transporting projected increases of energy fuel such as low sulphur coal from the Western states that primarily will use the Port of Buffalo as a transshipment center from the other Great Lakes ports. The completion of this project would provide an alternative transportation system to the Welland Canal port that is currently diverting traffic from the economically depressed Western New York area. I must emphasize, however, that the St. Lawrence Seaway is projected to be severely overcrowded by the late 1980s, with major delays involved—approximately the date of the completion of the project if full funding for the study is received. In addition, all examinations of the expansion of the Erie Canal emphasize that, because of certain environmental and economic considerations, the Erie Canal will only be considered to be expanded to an enlarged barge canal. There are absolutely no plans to expand the Canal into a deep draft ship waterway, in competition with the St. Lawrence Seaway.

SCAJAQUADA CREEK FLOOD CONTROL CONSTRUCTION PROJECT

Mr. Chairman, I support the full funding that the Administration has budgeted for the Scajaquada Creek Construction Project, in the amount of $500,000.

Flooding along this creek has been persistent and at times severe. Floods in May 1957, January 1959, August 1963, and September 1967, the latter two causing substantial damage, have been replaced in recent years with flooding every year. The Corps' design memorandum concluded that this annual flooding has been caused principally by the nearly complete urban development along its course. Flooding again this spring is again a distinct danger.

This is not a large project in dollar terms. It is a large project, however, to those who now must annually suffer from the consequences of not doing this construction work. The total cost is projected at $3,260,000, a small mount as most flood control projects go. The benefits to the people of Cheektowaga, Lancaster, Depew, and Buffalo are certainly worth this investment shared by the Federal and local governments.

In a letter to me dated February 3, 1978, Corps of Engineers District Engineer Daniel Ludwig has outlined for me the progress of this badly-needed flood control project. Unfortunately, due to some unforeseen circumstances primarily involving weather disruptions during the Blizzard of '77 and real estate purchase delays by the New York State Department of Environmental Conservation (NYSDEC), Col. Ludwig informs me that he has been unable to utilize fully the FY 77 funds allotted to this project. I am enclosing Col. Ludwig's letter here in my statement for the record:

DEPARTMENT OF THE ARMY,
BUFFALO DISTRICT CORPS OF ENGINEERS,
*Buffalo, N.Y., February 3, 1978.*

Hon. JACK F. KEMP,
*House of Representatives,*
*Washington, D.C.*

DEAR MR. KEMP: The purpose of this letter is to inform you of the current status of the Scajaquada Creek Flood Control Project in the town of Cheektowaga.

In our letter of 28 January 1976, we informed you that the final design and plans and specifications were being completed. We also informed you that no new construction starts were being included in the President's FY 77 budget. However, add on funding was subsequently provided in the FY 77 Appropriation Bill to enable us to proceed with construction of the Scajaquada Creek project. Unfortunately, delays due to the impact of our own emergency work early last year and delays by New York State Department of Environmental Conservation (NYSDEC) in obtaining required real estate have prevented me from effectively utilizing the FY 77 funds.

We had anticipated some delays with property acquisition and had purposely divided project construction into two contracts to allow an early start in areas where real estate problems appeared minimal. However, real estate for the Stage 1 construction still was not available until late in September 1977. The Stage 1 contract was then advertised and finally awarded in early November 1977 (FY 78).

I am bringing this to your attention because of your role in obtaining the FY 77 funds which I had stated a capability to use. I want you to know why we have not succeeded in performing as planned in FY 77, and I want you to know that it is now apparent the same real estate acquisition problems may delay the start of the Stage 2 construction contract in FY 78. I have drawings and specifications available for Stage 2

construction, but I cannot advertise until all lands, easements and rights-of-way are available from the State. I now expect to award the Stage 2 contract in September of this year, but such a late award will mean that the available FY 78 funding will not be expended. I have closely coordinated this situation with officials of NYSDEC and will continue to do so. I am satisfied they are doing everything within their power to expedite their real estate acquisition activities.

My present schedule is to complete Stage 1 in October 1978. Stage 2 construction is now scheduled to start in November 1978 with completion in June 1980.

I will continue to keep you informed on the Scajaquada Creek project. I will also advise you concerning any funding transfers that take place. In the meantime, please feel free to contact me if you have any questions about this matter.

Sincerely yours,

DANIEL D. LUDWIG,
*Colonel, Corps of Engineers,*
*District Engineer.*

I have received assurances from Commissioner Peter A. A. Berle of the NYSDEC, however, that the Department of Environmental Conservation has been working with Col. Ludwig "to assure that the easements are provided to the Corps of Engineers before the Corps' scheduled advertising date." In a letter which I received from Commissioner Berle on March 20, the Commissioner said, "I can assure you that this Department is doing everything possible to see that the project is built on schedule."

I am confident that the Corps' request for $500,000 in FY 79 will be fully utilized, and will help to bring this vitally-needed project back on schedule.

BLACK ROCK LOCK, TONAWANDA HARBOR, AND BUFFALO HARBOR

I support the Administration's request for $865,000 for River and Harbor maintenance of the Black Rock Lock and Tonawanda Harbor, and $1,415,000 for the Buffalo Harbor. These ongoing projects are the mainstay of the Port of Buffalo's economic activity, and are crucial to the continued viability of Buffalo as a Great Lakes Port. I am pleased that the Administration recognizes the importance of these projects.

BUFFALO METROPOLITAN AREA STUDY (TONAWANDA CREEK)

Additional data is needed to complete the report on the construction of two shallow detention reservoirs, normally dry and arranged in series along Tonawanda Creek between the village of Alexander and the city of Batavia. The Corps has informed me that this additional data should decrease the amount of funding and time that will be required for the project in its postauthorization stage. The Administration's request for $222,000 will be sufficient to complete this study.

OTHER PUBLIC WORKS PROJECTS IN THE 38TH CONGRESSIONAL DISTRICT OF NEW YORK

Mr. Chairman, there are other important projects such as shoreline erosion construction in Angola along Lake Erie that remain of prime importance to the residents of the 38th Congressional District of New York, but which are funded on a continuing basis by the Corps of Engineers and do not need to be listed here. I would like at this point to thank Col. Ludwig of the Buffalo Corps for all his assistance in the past two years, for providing the New York Congressional delegation with efficient, quick and thorough advice and counsel, and for providing the people of Western New York with dedicated and selfless service.

Mr. Chairman, I wish to thank the Subcommittee for its time this morning and for the consideration of these matters.●

## AID TO ZOOS NECESSARY TO PRESERVE WILDLIFE

### HON. G. WILLIAM WHITEHURST

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. WHITEHURST. Mr. Speaker, the April 17, 1978, issue of U.S. News & World Report contained an excellent summary of actions that are being taken throughout the world to preserve wildlife, and made an excellent case for the need to intensify these efforts.

I would like to take this opportunity to share this article with my colleagues, and to call particular attention to the final three paragraphs. Since zoos are indeed becoming "Noah's arks," I believe that it is essential that we take prompt and positive action on legislation such as H.R. 11295 to insure that these last refuges of many species provide the best possible facilities for their care and preservation.

The article follows:

PRESERVING WILDLIFE—A WORLDWIDE STRUGGLE

Will the relentless spread of human population doom wild animals almost everywhere? The danger is spurring measures ranging from breeding programs to bans on hunting.

From one end of the earth to the other, an intensifying drive is under way to save wildlife from extinction.

Dozens of nations, rich and poor alike, are joining hands to try to stem the steady disappearance of the earth's birds, mammals, fish and plants.

Forty-four countries are working to stamp out a flourishing international traffic in rare animals and the products made from them.

Seafaring nations are cutting back sharply on the hunting of whales, the largest living creatures remaining on the globe.

Scores of countries are creating and expanding national parks and game preserves.

Inside and outside such preserves, the hunting of rare animals is being banned, and stiff penalties imposed for violations.

To replenish dwindling herds, conservation agencies are establishing special programs to breed and manage both wild and captive animals.

"The world has just begun to wake up to the fact that if something isn't done, it will lose its most spectacular wildlife," declares Keith M. Schreiner, associate director of the U.S. Fish and Wildlife Service.

GAPS IN ENFORCEMENT

Rare animals long have been protected by law in many countries. But enforcement has varied from place to place, and a thriving black market has encouraged massive poaching. Ivory from elephant tusks, for example, sells for $30 per pound on the world market. Zebra hides go for $600 or more. Rare animals such as pythons and ocelots fetch hefty sums from people with a hankering for an exotic pet.

It was to curb such international traffic that an endangered-species treaty was drafted in 1973 by 44 nations. The accord prohibits most imports and exports of more than 600 species of animals and provides for close cooperation between participating countries.

At the same time, the protection given endangered species of sea creatures has been stepped up. Since the early part of this century, the hunting of seals has been governed by international agreements. Whales were given little protection, however, until the early 1960s. At that time, the International Whaling Commission, made up of the U.S. and 16 other nations, began to lower quotas on how many whales may be taken.

The limit set for 1978 is 17,839, less than a third of the more than 66,000 taken in 1961. Experts believe that the quotas—if obeyed—will let the world's badly depleted whale herds grow significantly in the years ahead.

On land, perhaps the most conspicuous step in the battle to save wildlife has been the expansion of national parks, national forests and other refuges. No one has an exact count on just how many such parks now exist around the world. But World Wildlife Fund International, a money-raising group, says it has provided aid for more than 200 major parks in 74 countries since the fund was set up in 1961.

END OF AN ERA

The world's first national parks were established centuries ago as hunting preserves for European and Asian royalty. Today, with the need to protect wildlife recognized, hunting in such parks is being limited or banned altogether. Even Kenya, famous not long ago for old-fashioned African safaris and big-game hunts, has been forced to act. Last year, it banned all commercial hunting and prohibited the sale of animal skins and trophies.

The world's largest system of wildlife habitats is in the U.S.—a billion acres of national and state parks, forests, wildlife refuges and other wilderness areas. Every year, lawmakers add more acreage. Now pending in Congress are proposals to put a third of the entire state of Alaska under protection.

The U.S. also is a leader in programs to rescue endangered species by controlled breeding. This effort was given new emphasis in 1966, when Congress passed the Endangered Species Preservation Act. The federal Office of Endangered Species has set up recovery teams to bring 59 species back from the brink of extinction, and some progress is being made.

An early success story has to do with the fragile, graceful whooping crane. By the 1940s, only 14 of these birds remained in North America, so few that they couldn't replenish their flock. Scientists removed eggs from whooper nests and transferred them to the nests of sandhill cranes, a related species. The young whoopers were hatched and reared by the sandhill flock, under the close protection of federal authorities. Today, whoopers total 126, and scientists expect this number to keep edging upward.

Similar progress, though not so dramatic, has been made with such species as the gray whale, cougar, bighorn sheep and trumpeter swan.

TOO MUCH PROTECTION

Sometimes, endangered animals recover so well that they become threats to mankind. For example, the once-rare alligator has returned to the rivers and lakes of the Southeast in large numbers. Last fall, a man in Florida was killed by an alligator.

The result of such attacks: Alligators in Florida and several other Southeastern states have been moved from the "endangered" list,* which bans all hunting, to the "threatened" list, to permit the hunting of troublesome animals.

Despite the proliferation of wildlife-preservation efforts around the world, experts doubt that every species can be saved. Many conservationists, in fact, are gloomy about the long-range prospects. They cite the record: Between 1771 and 1870, 12 mammals became extinct. Between 1871 and 1970, at least 43 more species disappeared. Of the 10 million species of animals and plants on earth today, perhaps 25 percent could become extinct before the end of this century, some conservationists fear.

The impetus toward extinction springs

Footnotes at end of article.

from two human causes—uncontrolled hunting and the spread of human population. As people occupy a greater and greater share of the earth's surface, they are rapidly destroying wildlife habitats. This destruction is occurring on all continents but has been particularly evident in recent decades in Africa, Asia and Latin America, where human population-growth rates are especially high. An estimated 40 percent of the rain forests—where 10 percent of all known living species are found—were destroyed as people built farms and towns.

The result: Many once-plentiful creatures of the jungle and plain, such as the African elephant, are being forced into smaller and smaller areas, making food and shelter increasingly scarce. In some game parks of Rhodesia, elephant overcrowding is so severe that thousands of elephants are being shot so that the remainder will have enough food and water to survive.

Some authorities see the plight of the elephant and other threatened species as merely the latest chapter in what Herbert Spencer called "the survival of the fittest." After all, they say, extinction is a natural part of the evolutionary process. Many species, such as the dinosaur and the mammoth, became extinct long before human beings came on the scene, and further changes in nature's cast of characters seem certain as long as conditions on the earth continue to evolve.

If that is so, why even make an effort at wildlife preservation? Conservationists cite several reasons.

National pride is one; some endangered creatures, such as the American bald eagle, are considered patriotic symbols in their homelands. Preservation of beauty is another reason; many rare animals, like the tiger, are considered as beautiful and irreplaceable as Renaissance art.

MAN ENDANGERED?

Thomas E. Lovejoy, program director of the World Wildlife Fund's U.S. branch, suggests still another reason: "As a biological creature himself, man is dependent upon the survival of other creatures. If he continues to allow animals to become extinct, he may someday find himself endangered."

Whatever the arguments for saving wildlife, the efforts to do so are running into increasing resistance from people whose livelihoods would be affected. For example, porpoises were given protection by a 1972 federal law. Yet it took years of court action to force American tuna fishermen to alter their fishing techniques, which were causing the accidental killing each year of hundreds of thousands of porpoises swimming with the tuna in the Pacific Ocean. The changes, which involve use of large-mesh nets to avoid ensnaring the porpoises, reduced the kills by 96 percent.

Arguing that the whale hunt is an important part of their ancient traditions, Alaskan Eskimos in December won partial exemption from a worldwide ban on hunting the bowhead whale, a species that may number no more than 2,500. The Eskimos received permission from the International Whaling Commission to land up to 12 bowheads per year. Conservationists fear this may encourage Russia and Japan, which take 85 percent of the world catch, to seek further exemptions from the whale quotas.

LAST REFUGE

In one particularly controversial case, the Tennessee Valley Authority and some business groups are appealing to Congress and the Supreme Court to reverse a federal-court decision blocking completion of the 116-million-dollar Tellico Dam. The court held that the dam's completion would violate the Endangered Species Act by destroying the last remaining habitat of the snail darter, a 3-inch fish found only on the dam site.

The Tellico controversy raises an important question: How much are people here and abroad willing to pay to preserve wildlife?

Already, Americans pay hundreds of millions of dollars in federal and state taxes and for hunting and fishing licenses to support wildlife efforts. Most other developed countries also have extensive programs.

Most Third World countries, however, where much of the world's wildlife lives, are so pressed by massive social and economic problems that they have little money remaining for wildlife conservation.

In this situation, the fate of many animals is being left in the hands of the world's zoological parks. Zoos are becoming increasingly important as latter-day "Noah's arks," preserving in captivity animals that can no longer exist in the wild.

Some zoos, including those in London, Frankfurt, San Diego, and Washington, D.C., operate breeding farms where rare animals, such as the golden marmoset and Pere David's deer, are born and raised in captivity.

"We hope that such animals—some of which no longer exist in the wild—can someday be reintroduced there, perhaps in 40 or 50 years," says Theodore Reed, director of the National Zoo in Washington, D.C. "That may be possible if man doesn't turn all of his wilderness into desert and pollute his oceans."

TEN ENDANGERED SPECIES: HOW MANY ARE LEFT

Estimates by wildlife biologists:

| | |
|---|---|
| Black-footed ferret | 5 |
| California condor | 40 |
| Whooping crane | 126 |
| Florida panther | 200 |
| Mountain gorilla | 1,000 |
| Eastern timber wolf | 1,040 |
| Indian tiger | 1,800 |
| Bowhead whale | 2,500 |
| Utah prairie dog | 3,300 |
| Bald eagle* | 4,000 |

*Number in Lower 48 States.

NOTE.—U.S. species, except for gorilla, tiger and whale.

SOURCE.—U.S. Fish and Wildlife Service, National Oceanic and Atmospheric Administration, World Wildlife Fund, National Wildlife Federation.●

## NEED FOR FEDERAL SUPPORT OF BRIDGE REPLACEMENT

### HON. JIM LEACH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. LEACH. Mr. Speaker, as a representative from Iowa—the State which leads the Nation in number of deficient or obsolete bridges—I am very encouraged by the increased attention which the Federal bridge replacement program has been receiving recently. Both the hearings and the most recent legislation under discussion in the Subcommittee on Surface Transportation of the House Public Works and Transportation Committee have given this problem the attention which it so urgently needs.

I fully support new legislation to remedy the problem and to expand the special bridge replacement program which currently authorizes financial assistance for bridges on the Federal aid system at a level of $180 million a year under a 75–25 Federal/State matching formula. That level of assistance unfortunately does not even begin to meet the needs which were outlined in a January 9, 1978, U.S. News & World Report article entitled, "Weak Bridges: Growing Hazard on the Highways." That article pointed out that the number of unsafe bridges in the United States has risen to a staggering figure of 105,000 with an estimated replacement or repair cost of $23 billion. Iowa alone has nearly 14,000 such structures. Five of these, which already meet Federal criteria for assistance and which could be scheduled for construction within the near future, would require $110 million.

In addition, there are special needs and difficulties faced by bridges shared by more than one State. One such facility, the Keokuk bridge, crosses the Mississippi River from Keokuk, Iowa, in the congressional district which I represent, to Hamilton, Ill., in the district represented by Congressman TOM RAILSBACK. It is strategic as well to the commerce and transportation needs of Missouri. The Keokuk bridge was first constructed in 1871 for purposes of carrying trains and horsedrawn carriages, and is only 17.2 feet wide. Today, tractor trailers, which are nearly 8 feet wide, must stop to allow another trailer to pass. A swing span on the bridge is used about 3,000 times a year to permit free flow of Mississippi River traffic.

The Tri-State Bridge Committee, headed by Leona Nixon, executive director, has pointed out that:

Children have been born on a bridge during drawspan openings. People have died on our bridge. In a recent traffic safety study . . . the bridge accident rate was double the next highest accident rate of any intersection in the community. . . . With railroads leaving areas, trucking is becoming more and more important. Farmers on the Illinois side have been known to drive 60 miles to sell their grain rather than drive 10 miles to Keokuk. . . . This bridge is the hub of a tri-state shopping center of nearly 60,000 people serving the towns of Hamilton, Warsaw, Nauvoo, and Carthage in Illinois; Alexandria, Wayland, Kahoka and Memphis in Missouri. It is imperative that replacement of the archiac and hazardous 106 year old Mississippi River Bridge be expeditious.

The magnitude of this problem was further underlined during hearings which Congressman RAILSBACK and I chaired last year in Keokuk.

These kinds of problems are not uncommon, even for bridges entirely located within a single State. To deal more effectively with the bridge safety issue, I am today introducing legislation which goes beyond existing bridge replacement and repair legislation in several respects. Under this bill, the Secretary of the U.S. Department of Transportation could, for the first time, make available $200 million each fiscal year for the specific purpose of meeting the special needs of bridges connecting two States. Due to the unique budgetary difficulties which face such interstate structures in having to secure the agreement and financial commitment of more than one State government, relief can be stalled or delayed for indefinite periods. On the other hand, the failure or inadequacies of such bridges can pose critical problems for the commercial and transportation needs of the people in more than one State.

I applaud the efforts of several of my colleagues in trying to improve the assistance available for all bridges under

the existing program and am likewise urging an increase in aid for onsystem bridges from the current $180 million to $500 million. In addition, my bill would authorize $500 million more for off-system bridges, for a combined total each year of $1 billion to be apportioned to the 50 States.

The share distributed to each State would be calculated according to a ratio of number of bridge feet needing replacement or repair in that State to the national total of bridge feet needing aid. Funds so apportioned would be announced to each State 3 months prior to the beginning of the fiscal year in order to cooperate with State budget planning procedures, and would remain available to the State for obligation 2 years following the fiscal year in which the funds were first made available. Contrary to current Federal policy, such moneys would be available for rehabilitation in addition to replacement for bridges deemed significantly important, unsafe structurally, deteriorating, or functionally obsolete. Inventories of such structures, off and on the Federal aid system, are authorized by the bill.

It is my hope that the guidelines set forth in this legislation will be given consideration during the continuing review of comprehensive surface transportation legislation. The bridge problem is not only serious, it is urgent. We dare not wait for further loss of life or economic well-being in our communities before we take action.●

## TERRORIST THREAT

### HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. McDONALD. Mr. Speaker, terrorism does not take place in a vacuum. As Barron's editor Robert M. Bleiberg clearly understands, it is one tactic in the war against Western society designed to intimidate, disrupt, and demoralize the civilian sector. Mr. Bleiberg has accurately noted in his editorial commentary that appeared in the April 10 issue of Barron's that the basis for America's internal security protection against terrorism was the House Committee on Internal Security. The committee was responsible for providing Congress with the information it needed so as to enact new laws to meet changing challenges from our enemies. The House Committee on Internal Security was abolished just when it had begun investigations of international and domestic terrorism. The terrorism continues to increase which demonstrates that it is time for us to reconstitute the Internal Security Committee. We need laws to enable our law enforcement and intelligence agencies to move against the terrorists and their networks of supporters.

I urge my colleagues to join with me in urging the Rules Committee to report out House Resolution 48 so we can vote on reconstituting the Internal Security Committee. Toward that, I highly recommend Mr. Bleiberg's perceptive article:

TERRORIST THREAT—IN THIS COUNTRY ONLY THE LAW-ABIDING ARE LIVING DANGEROUSLY

Last month's issue of Enterprise, the Journal of the National Association of Manufacturers, carriers an article that strikes us as must reading these days for businessmen. In between such more or less standard features as "Personal Tax Reduction" and "World Trade Objective—Free But Fair" appears a piece with the jolting headline "How to Protect Yourself Against Terrorists," excerpted from a talk given before the NAM's Board of Directors recently by Edgar N. Best, deputy assistant director of the Federal Bureau of Investigation.

In two tightly packed pages, the FBI man proceeds to tell us all that we ever wanted to know—and perhaps a bit more—about kidnapping (or "hostage situation," as it's called). Pre-planning, we learn, is important: keep ready to hand, preferably in a red notebook, designed to alert your secretary to the situation, a hostage telephone checklist. See that your board of directors has duly passed a resolution authorizing the payment of ransom, and designating at least two corporate officers—"these things can happen at any time of the day or night"—as paymasters. Learn a few tricks of the trade, like opening up the lining of the case which will contain the money and marking it with your initials and the date. Above all: "One of the main things you must insist on is a simultaneous transfer of the ransom money and the victim. Really negotiate on that point. You don't want to pay the money and get the hostage later."

Along with the chauffeured limousines, three-martini lunches and other corporate perks, threats of terroristic attack now evidently go with the job. Indeed they do. Long a way of life in such troubled and volatile parts of the world as Argentina and Uruguay, acts of violence against businessmen, including kidnapping and murder, lately have spread to Western Europe, where crimes of the kind have erupted in France, Italy and West Germany. In this country, the FBI, though now under legislative and legal constraint, has gone on the alert.

In the first press conference held since he took office, William H. Webster, new Director of the Bureau, disclosed that besides making its expertise freely available to interested parties—for further information, call Jim Ingram at (202) 324-3000—his agency is stepping up anti-terrorist training at its academy in Quantico, Va. Those who are on the firing line, meanwhile, are taking what precautions they can. At the annual meeting of W. R. Grace & Co. two years ago (*Barron's*, May 17, 1976), J. Peter Grace made headlines and raised eyebrows when that bulge under his suit jacket turned out to be a revolver. Seems that his home had been cased and his name had turned up on a number of radical hit lists. One way or another, more and more U.S. businessmen these days are under the gun.

Like command, it's a lonely place. Unlike the state of affairs in other countries, or until recently in our own, the law enforcement authorities have been hard-pressed, if not helpless, to cope. Look at the dismal track record. Eighteen months to find Patty Hearst, fledgling terrorist who, so to speak, never left town. In New York City, the FALN, revolutionary group which claims to be fighting for Puerto Rican independence, has gone unapprehended for years while committing one atrocity after another, notably the bombing of Fraunces Tavern, a foul deed which left scores injured and took several lives. By the same token, the so-called New World Liberation Front, with virtual impunity, has boasted over 50 bombings in California, Colorado and Oregon, including attacks on the facilities of Adolph Coors, Dean Witter and General Motors, as well as on the homes of officers and directors of Pacific Gas & Electric, a favorite target.

In the Golden State (as our colleague, Jim Grant, not long ago carefully documented), wiretaps by city and state authorities are prohibited, nor may federal agents share whatever they glean in this way with the local police. Small wonder that since the first bomb exploded nearly half-a-decade ago, only the FBI has had even a measure of success in tracking down the perpetrators. For that matter, the forces of law and order everywhere lately have found themselves handcuffed. Left-wing lawyers, banded together in Communist fronts, have launched litigation aimed at frustrating undercover efforts by federal agents, one of whom has even been indicted (at the behest of the Department of Justice) for allegedly showing, in the performance of his duties, an excess of zeal. Congress, in turn, has opted to abolish the House committee which used to investigate subversion and terrorism, foreign and domestic alike. To add insult to injury, an aptly named Subcommittee on Oversight, headed by Rep. John Moss (D., Calif.—natch), lately has sought to intimidate and harass, if not put out of business altogether, Research West, Inc., one of the few private organizations with the expertise to help companies protect lives and property. In some parts of the country, including the nation's capital, terrorists evidently have free run of the place; only the law-abiding live dangerously.

Just how dangerously, the morning newspaper every few weeks or so makes alarmingly clear. According to one official source, terrorists launched 239 attacks—bombings, kidnappings and assassinations—on individuals and their property throughout the world last year, up from only 37 a decade ago. Using a different set of statistics, including others besides executives, the FBI's Best told the NAM that in 1977, "we had 270 cases of kidnapping and 291 hostages taken," up from 165 cases, involving 207 hostages, in 1976. Numbers aside, the attacks, on victims chosen either for their prominence or symbolic value, have grown increasingly bold and outrageous. Hans Martin Schleyer, a West German industrialist, was kidnapped and killed and his body stuffed into a car trunk. The home of a San Farncisco banker and director of Pacific Gas & Electric was ringed with fire bombs. FALN blasts, notably one outside the Mobil Building on 42nd Street in New York, which shattered windows and killed a passerby with deadly shards of glass, have become a more-or-less routine occupational hazard in Fun City.

In response, businessmen, at home and abroad, have begun to do what they can to protect themselves. That hot line to the FBI's Jim Ingram is perpetually busy, while private firms that specialize in industrial security report mounting interest in their services. Last year, the Conference Board disclosed that persistent terrorist attacks against business had forced a growing number of companies to tighten their security. Last November, *Newsweek* put the case more graphically. "Nervous executives are hiring bodyguards, armor-plating their cars, enrolling their chauffeurs in evasive-driving schools, equipping their homes and offices with security devices, cultivating an inconspicuous and unpredictable life-style and, in some cases, becoming virtual recluses. At the same time, most major corporations are devising elaborate security programs, spending millions of dollars in the process on everything from bomb-detection gear to kidnap insurance."

Self-help, of course, lately has grown increasingly vital, if not yet quite a matter of life-and-death. Owing to an unholy alliance of left-wing lawmakers, journalists

and alleged consumer champions (who advocate the endless aggrandizement of government power except in such realms as national or internal security), intelligence agencies have been all but crippled. The House Committee on Internal Security has been abolished. Throughout the country, files on subversive and violence-prone organizations, laboriously built up over decades, have been systematically impounded locked up or destroyed (perhaps liquidated is a better word). Law enforcement bodies by and large now are barred from penetrating Marxist-Leninist cells or even avowedly terrorist groups. And Research West Inc., which in its own small way has sought to fill the growing vacuum in personal and corporate security, has fallen afoul of the Moss Subcommittee; the latter has subpoenaed its confidential files and threatened its intrepid owner with a citation for contempt. That's what you call putting first things last.

In seeking to justify such incredible behavior, Congressman Moss et al. have tried to draw the line between advocacy and action, legitimate dissent and criminal conspiracy. All well and good, but thanks to the activists, that fine line has grown increasingly blurred. Thus, Ralph Nadar, that presumably peaceful advocate of social change, has been quoted as saying: "If someone tries to break into your house, you can retaliate lawfully. In the case of a nuclear reactor, the self-defense is projective. But what are you going to do, wait until radioactivity is all over the place? Shouldn't you destroy property before it destroys you?" Militants in the Clamshell Alliance, who several times have illegally occupied the premises of the Seabrook nuclear power plant of Public Service Co. of New Hampshire, and threaten come summer to stage a rerun, plainly have paid such counsel heed. (Critical Mass Energy Group, a Nadar anti-nuclear power group, is pushing the probe of Research West.)

At open meetings of the Socialist Scholars in the late 'sixties, left-wing extremists blatantly announced their plans to foment riots in the nation's cities. A defunct Fellow of the Institute for Policy Studies, socialist braintrust in Washington, D.C., has been unmasked as an agent of the KGB. Like diplomacy, terrorism is the pursuit of war by other means. It's a war this country is losing.●

## SALT "ASSURANCES"

### HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the following editorial by Mr. George F. Will concerning the proposed Salt II treaty.

The editorial follows:

[From the Washington Post, April 6, 1978]

THOSE SALT "ASSURANCES"

(By George F. Will)

The Washington Post recently carried an article that deserves national attention. It is an example of the kind of advocacy the nation soon will hear in defense of what the Carter administration is doing in the strategic arms limitation talks (SALT). It illustrates why the treaty that will be produced by Paul Warnke, the administration's chief negotiator, will be rejected by the Senate.

The article concerns the controversy about whether the Soviet Backfire bomber should be counted as a strategic weapon. The writer, Arthur Cox, is a paid consultant to Warnke. Cox's argument (published April 2) is as follows:

At Vladivostok, in 1974, Gerald Ford and Leonid Brezhnev agreed to limit each side to 2,400 strategic weapons. Although the United States knew Backfire's capabilities, the United States did not refer to it as a strategic weapon. And Backfire's supersonic capability proves that it is not a strategic weapon, because "at supersonic speed, its fuel would burn up before it could reach the United States."

And flying subsonic, Backfire "could easily be shot down by supersonic U.S. interceptors." To pacify American opinion, the administration wants "assurances" that Backfire will not be used strategically. Such assurances might include Soviet promises not to base Backfire in the Arctic and not to build tanker aircraft for refueling Backfire.

The refuting facts are:

In 1974, there were fewer than 25 Backfires deployed and there was no settled U.S. judgment about Backfire's range. Now it is known that, unrefueled, Backfire can strike U.S. targets and land in a third country, such as Cuba. And when refueled by airborne tankers, it can fly round-trip.

That Backfire cannot fly supersonic all the way to U.S. targets proves nothing. No supersonic bomber is supposed to operate supersonically during more than a small fraction of a mission. Fuel consumption cannot be sustained for long at supersonic speeds, especially at low altitudes, where such aircraft are designed to be able to operate supersonically.

The normal attack profile of supersonic bombers such as B1 (which President Carter shot down) and Backfire is "hi-lo-hi": a high subsonic flight to the enemy nation, a low radar-evading penetration with a short supersonic dash to the target, and a high subsonic return. The fuel penalty for using afterburners to fly supersonic in the low attack phase is so heavy that bombers must limit such use to brief bursts to elude enemy air defenses, and to sprint away from blast areas.

If, as Cox asserts, the supersonic Backfire should not be counted under SALT limits because it would be easy prey for U.S. interceptors, then surely he must insist that the United States should not be required to count its subsonic B52s, which are easier prey for the 2,600 modern Soviet supersonic interceptors. (The Soviets also have 10,000 air-defense missiles; the United States has none.)

Backfire's strategic capability is unquestionable, and its strategic role is anticipated in Soviet strategic writings. Soviet doctrine plans for a "third phase" nuclear conflict, which involves eliminating what remains of the enemy's nuclear capability (unemptied silos, command-and-control facilities). This would also be the "pin down" phase, when the enemy is driven to capitulation by continuing attacks on civilians.

It is said the United States could be "assured" that Backfire would not be used strategically in a nuclear crisis if the Soviets would not build refueling tankers, and would promise not to base Backfires in the Arctic. But the Soviets already have modernized heavy bombers to serve as tankers, and reportedly are building a version of the Il76 jet transport for tanker service. A Soviet promise not to base Backfires in the Arctic would not be reassuring. In a crisis, both nations would do what Kennedy did during the Cuban missile crisis: deploy forces at forward bases.

Neither Backfire nor the U.S. cruise missile was mentioned in the Vladivostok accord. One reason the United States did not demand inclusion of Backfire was that the Soviets would then have demanded limits on cruise missiles. Now Warnke has negotiated an agreement that limits the number of cruise missiles and limits them to a 600-kilometer range, while leaving the Soviets free to deploy an unlimited number of Backfires.

From its first sentence, which asserts that opponents of Warnke's treaty are really opponents of all strategic arms limitation, to its last sentence, which dismisses the Backfire controversy as a "charade," Cox's article is misleading. The narrowing, descending path to defeat in the Senate is paved with such stuff.●

## HELP FOR FARMERS: THE NEED FOR TRUTH IN LEGISLATION

### HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. CONYERS. Mr. Speaker, the plight of smaller farmers in America, like the plight of unemployed workers, is a condition that the Federal Government and our society in general have too long neglected. Both problems have common sources. In the absence of a full employment policy, the economy will continue to operate far below full production and employment levels, and farmers as well as urban workers will suffer inadequate incomes and high levels of joblessness. It is for this reason that I have devoted considerable effort to winning support for the Humphrey-Hawkins Full Employment and Balanced Growth Act. This legislation would put in place an economic plan that provides for a stable farm economy as well as health business and industrial conditions.

Another source of the problem is the tremendous increase in the concentration of economic power that has taken place in agriculture as well as industry. A direct result of this is the ability of big firms to engage in administered pricing and monopolistic tactics that raise consumer prices while denying small farmers and firms a fair rate of return.

The heightened political awareness and activism among farmers is to be applauded and cheered. The more citizens who get involved in the political process, the better off this country will be. This is how our Government ought to operate. In this spirit, I and my staff have devoted more than 10 hours with the more than 150 farmers who have called, wrote or visited me.

Unfortunately, what the great majority of small farmers need most to improve their situation will not come about through H.R. 6782. It is the wrong kind of measure, and is probably unacceptable to most Americans. This farm bill will have the following adverse effects for farmers and society as a whole:

Raise consumer food prices an additional 2 to 4 percent beyond the expected 7 to 9 percent;

Add an estimated $5 to $7 billion to an already large Federal budget deficit;

Assist the largest farms at the expense of small farms who it is estimated will receive only 15 percent of the bill's benefits;

Hurt dairy and livestock farmers by driving up feedgrain prices, further fueling long-term inflation; and

Will seriously deplete foodstocks which will further push up prices for consumers.

The sad truth is that farmers have been terribly misled by this bill which simply cannot accomplish what they and the rest of society need. The President has indicated in the strongest manner that he will veto such a measure.

There are other and better ways that I can support to assist farmers in trouble: Create new low-interest credit programs geared to hard-pressed farmers; increase the grain reserve program; prohibit large nonfarm corporations from investing in farm land; improve programs for direct farmer-to-consumer marketing, establish floor prices that are fair to the American farmer; and expand our agricultural products export programs.

While I appreciate the farmers' plight, under the circumstances I cannot vote for H.R. 6782.●

## SENATE COMMITTEE MEETINGS

Title IV of the Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meeting as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committees scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Thursday, April 13, 1978, may be found in Daily Digest of today's RECORD.

### MEETINGS SCHEDULED

#### APRIL 14

8:00 a.m.
Agriculture, Nutrition, and Forestry
Agricultural Research and General Legislation Subcommittee
To mark up FY 79 authorizations for the Commodity Futures Trading Commission.
324 Russell Building

9:00 a.m.
Armed Services
Research and Development Subcommittee
To continue hearings on S. 2571, FY 79 authorizations for military procurement.
224 Russell Building

Commerce, Science, and Transportation
To hold hearings on S. 1896, FY 79 authorizations for the Hazardous Materials Transportation Act.
235 Russell Building

Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To mark up S. 2527, proposed FY 79 authorizations for NASA.
1202 Dirksen Building

Judiciary
Improvements in Judicial Machinery
To hold hearings on S. 2253, to encourage prompt, informal, and inexpensive resolutions of civil cases by use of arbitration in U.S. district courts.
2228 Dirksen Building

Select Small Business
To hold hearings on the nomination of Milton D. Stewart, of New York, to be Chief Counsel for Advocacy, Small Business Administration.
424 Russell Building

9:30 a.m.
Banking, Housing, and Urban Affairs
To resume mark up of S. 2065, 2470, and 2546, bills to protect consumers' rights in the operation of electronic fund transfer systems.
5302 Dirksen Building

Environment and Public Works
To hold hearings on the nomination of William E. Albers, of the District of Columbia, to be Alternate Federal Cochairman of the Appalachian Regional Commission.
1224 Dirksen Building

Environment and Public Works
Resource Protect Subcommittee
To continue oversight hearings on and the reauthorizations for the Endangered Species Act (P.L. 93–205).
4200 Dirksen Building

Judiciary
Administrative Practice and Procedure Subcommittee
To resume oversight hearings on the operation of the witness protection program under the Organized Crime Control Act (P.L. 91–452).
S–126, Capitol

10:00 a.m.
Appropriations
HUD-Independent Agencies Subcommittee
To continue hearings on budget estimates for FY 79 for HUD.
1318 Dirksen Building

Energy and Natural Resources
Energy Conservation and Regulation Subcommittee
To continue hearings on S. 2692, FY 79 authorizations for the Department of Energy.
6226 Dirksen Building

Energy and Natural Resources
Energy Production and Supply Subcommittee
To continue hearings on S. 2692, FY 79 authorization for the Department of Energy.
3110 Dirksen Building

Foreign Relations
International Operations Subcommittee
To hold hearings on proposed FY 79 authorizations for the Board for International Broadcasting and Radio Free Europe/Radio Liberty.
4221 Dirksen Building

Governmental Affairs
To resume hearings on S. 991, to create a separate Cabinet-level Department of Education.
3302 Dirksen Building

10:30 a.m.
Commerce, Science, and Transportation
To hold hearings on the nomination of Henry Geller, of Virginia, to be Assistant Secretary of Commerce for Communications and Information.
5110 Dirksen Building

Judiciary
To hold a business meeting.
2300 Dirksen Building

#### APRIL 17

9:00 a.m.
Energy and Natural Resources
To hold hearings on S. 2821 authorizing funds to the Government of Guam to construct certain public facilities, and S. 2822, to provide for the rehabilitation and resettlement of Bikini Atoll.
3110 Dirksen Building

Human Resources
Employment, Poverty, and Migratory Labor Subcommittee
To mark up S. 2090 and S. 2081 proposing an extension of certain programs of the Economic Opportunity Act.
4332 Dirksen Building

Judiciary
Criminal Laws and Procedures Subcommittee
To resume hearings on S. 2013, to require the additional labeling of explosive materials for the purpose of identification and detection.
1318 Dirksen Building

Judiciary
Constitution Subcommittee
To hold hearings on S.J. Res. 65, to amend the Constitution so as to provide for representation of the District of Columbia in Congress.
5110 Dirksen Building

Special Aging
To resume hearings to explore alternatives in long-term health care for older Americans.
1224 Dirksen Building

9:30 a.m.
Environment and Public Works
Transportation Subcommittee
To resume markup of proposed Federal aid highway legislation.
4200 Dirksen Building

Judiciary
To resume considerations of S. 1874, to allow consumers and other parties who have not dealt directly with an antitrust violator to recover their damages under the antitrust laws.
2228 Dirksen Building

10:00 a.m.
Commerce, Science, and Transportation
To hold hearings on H.R. 9370, S. 2762, and S. 2582, to provide for the development of aquaculture in the United States.
235 Russell Building

Energy and Natural Resources
To hold hearings on pending nominations.
3110 Dirksen Building

Environment and Public Works
Environmental Pollution Subcommittee
To hold hearings on S. 2083, proposed Oil Pollution Liability and Compensation Act, and related bills.
6202 Dirksen Building

Finance
Public Assistance Subcommittee
To resume hearings on S. 2084, to replace the existing Federal welfare programs with a single coordinated program.
2221 Dirksen Building

Select Indian Affairs
To hold hearings on S. 2712, proposed Indian Program Evaluation and Needs Assessment Act.
6226 Dirksen Building

2:00 p.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for the Department of State, and on supplemental appropriations for FY 78.
S-146, Capitol

APRIL 18

9:00 a.m.
Environment and Public Works
Nuclear Regulation Subcommittee
To resume hearings on FY 79 authorizations for the Nuclear Regulatory Commission.
4200 Dirksen Building

Human Resources
Employment, Poverty, and Migratory Labor Subcommittee
To continue markup of S. 2090 and S. 2081, proposing an extension of certain programs of the Economic Opportunity Act.
4232 Dirksen Building

9:30 a.m.
Human Resources
Health and Scientfic Research Subcommittee
To mark up S. 2549, proposed FY 79 authorizations for the National Science Foundations; S. 2416, to extend through FY 81 the program of assistance for nurse training; and S. 2474, to extend through FY 83 the Public Health Service Act.
1318 Dirksen Building

10:00 a.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommitteo
To meet in closed session with Secretary of State Vance to discuss foreign policy.
S-146, Capitol

Banking, Housing, and Urban Affairs
Financial Institutions Subcommittee
To hold hearings on S. 2096, Right to Financial Privacy Act, and S. 2293, to modernize the banking laws with regard to the geographical placement of electric funds transfer systems.
5302 Dirksen Building

Energy and Natural Resources
Energy Conservation and Regulation Subcommittee
To resume hearings on S. 2692, proposed FY 79 authorizations for the Department of Energy.
Room to be announced

Energy and Natural Resources
Energy Research and Development Subcommittee
To mark up S. 2692, FY 79 authorizations for the Department of Energy.
6202 Dirksen Building

Environment and Public Works
Environmental Pollution Subcommittee
To continue hearings on S. 2083, proposed Oil Pollution Liability and Compensation Act, and related bills.
6202 Dirksen Building

Finance
Public Assistance Subcommittee
To continue hearings on S. 2084, to replace the existing Federal welfare programs with a single coordinated program.
2221 Dirksen Building

Judiciary
To resume hearings on FY 79 authorizations for the Department of Justice.
2228 Dirksen Building

Select Indian Affairs
To hold hearings on S. 2375, to establish guidelines to be followed by the Department of the Interior in response to petitioning Indian tribes seeking an acknowledgment of a Federal relationship.
5110 Dirksen Building

Select Small Business
To resume hearings on S. 2259, to expand and revise procedures for insuring small business participation in Government procurement activities.
424 Russell Building

2:00 p.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for International Organizations and Conferences, and on supplemental appropriations for FY 78.
S-146, Capitol

APRIL 19

9:00 a.m.
Environment and Public Works
Water Resources Subcommittee
To consider proposed water resources legislation.
4200 Dirksen Building

9:30 a.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To receive testimony from Attorney General Bell on budget estimates for FY 79 for the Department of Justice.
S-146 Capitol

Human Resources
Alcoholism and Drug Abuse Subcommittee
To hold oversight hearings on the coordination of Federal programs to combat drug abuse.
4232 Dirksen Building

Judiciary
Juvenile Delinquency Subcommittee
To resume oversight hearings on the Drug Enforcement Administration's efforts to control drug trafficking on U.S. borders with Mexico.
424 Russell Building

10:00 a.m.
Appropriations
Transportation Subcommittee
To hold hearings on budget estimates for FY 79 for the FAA, Department of Transportation.
1224 Dirksen Building

Banking, Housing, and Urban Affairs
Financial Institutions Subcommittee
To continue hearings on S. 2096 the Right to Financial Privacy Act, and S. 2293, to modernize the banking laws with regard to the geographic placement of electronic funds transfer systems.
5302 Dirksen Building

Energy and Natural Resources
Business meeting on pending calendar business.
3110 Dirksen Building

Environment and Public Works
Transportation Subcommittee
To hold hearings on the status of proposed construction of a Federal Interstate Highway near Memphis, Tennessee.
4200 Dirksen Building

Judiciary
To continue hearings on FY 79 authorizations for the Department of Justice.
2228 Dirksen Building

Rules and Administration
To resume hearings on S. 2 and S. 1244, to require periodic reauthorization of Government programs, and to consider other legislative and administrative business.
301 Russell Building

10:30 a.m.
Commerce, Science, and Transportation
To resume hearings on H.R. 9370, S. 2762, and S. 2582, to provide for the development of aquaculture in the United States.
1202 Dirksen Building

2:00 p.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To receive testimony on budget estimates for FY 79 for the FBI, and on supplemental appropriations for FY 78.
S-146, Capitol

APRIL 20

9:00 a.m.
Judiciary
Citizens and Shareholders Rights and Remedies Subcommittee
To hold hearings on S. 2390, the Citizens' Access to the Courts Act.
6226 Dirksen Building

9:30 a.m.
Appropriations
Agricultural Subcommittee
To resume hearings on budget estimates for FY 79 for the Department of Agriculture and related agencies.
1224 Dirksen Building

*Environment and Public Works
Nuclear Regulation Subcommittee
To consider proposed nuclear regulation legislation.
4200 Dirksen Building

Human Resources
Alcoholism and Drug Abuse Subcommittee.
To hold oversight hearings on the Drug Abuse Education Act (P.L. 91-527).
4232 Dirksen Building

Judiciary
To hold oversight hearings on the application and enforcement of the FBI Charter.
2228 Dirksen Building

10:00 a.m.
Appropriations
HUD-Independent Agencies Subcommittee
To continue the hearings on budget estimates for FY 79 for NASA.
1313 Dirksen Building

Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for the Department of Justice, and on supplemental appropriations for FY 78.
S-146, Capitol

Banking, Housing, and Urban Affairs
Financial Institutions Subcommittee
To continue hearings on S. 2096, the Right to Financial Privacy Act, and S. 2293, to modernize the banking laws with regard to the geographic placement of electric funds transfer systems.
5302 Dirksen Building

Commerce, Science, and Transportation
To resume consideration of S. 1381, setting standards for State no-fault benefit plans to compensate motor vehicle accident victims.
235 Russell Building

Energy and Natural Resources
Energy Conservation and Regulation Subcommittee
To resume hearings on S. 2692, FY 79 authorizations for the Department of Energy.
S-126, Capitol

Energy and Natural Resources
Energy Research and Development Subcommittee
To resume markup of S. 2692, FY 79 authorizations for the Department of Energy
3110 Dirksen Building

Select Indian Affairs
To resume hearings on S. 2375, to establish guidelines to be followed by the Department of the Interior in response to petitioning Indian tribes seeking an acknowledgement of a Federal relationship.
318 Russell Building

2:00 p.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To continue hearings on budget estimates for FY 79 for the Department of Justice.
S-146, Capitol

APRIL 21

9:00 a.m.
Agriculture, Nutrition, and Forestry
Foreign Agricultural Policy Subcommittee
To hold hearings on S. 2278 and S. 2641, the International Emergency Food Reserve Act.
324 Russell Building

9:30 a.m.
Commerce, Science, and Transportation
Merchant Marine and Tourism Subcommittee
To hold hearings to receive a report on Federal policies and programs relating to tourism.
235 Russell Building

Environment and Public Works
Resource Protection Subcommittee
To consider proposed resource protection legislation.
4200 Dirksen Building

Human Resources
Education, Arts, and the Humanities Subcommittee
To resume markup of S. 1753, authorizing funds through FY 83 for the Elementary and Secondary Education Act.
155 Russell Building

Human Resources
Handicapped Subcommittee
To mark up S. 2600, to extend certain vocational rehabilitation programs and to establish a comprehensive services program for the severely handicapped.
154 Russell Building

Judiciary
To resume consideration of S. 1874, to allow consumers and other parties who have not dealt directly with an antitrust violator to recover their damages under the antitrust laws.
2228 Dirksen Building

10:00 a.m.
Appropriations
HUD-Independent Agencies Subcommittee
To continue hearings on budget estimates for FY 79 for NASA.
1318 Dirksen Building

Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To continue hearings on budget estimates for FY 79 for the Department of Justice.
S-146, Capitol

Energy and Natural Resources
To hold hearings no pending nominations.
3110 Dirksen Building

Select Indian Affairs
To resume hearings on S. 2712, proposed Indian Program Evaluation and Needs Assessments Act.
457 Russell Building

APRIL 24

9:00 a.m.
Human Resources
Employment, Poverty, and Migratory Labor Subcommittee
To mark up S. 2570, to extend the Comprehensive Employment Training Act (CETA).
4232 Dirksen Building

9:30 a.m.
Environment and Public Works
Regional and Community Development Subcommittee
To consider proposed regional and community development legislation.
4200 Dirksen Building

Judiciary
To resume consideration of S. 1874, to allow consumers and other parties who have not dealt directly with an antitrust violator to recover their damages under the antitrust laws.
2228 Dirksen Building

10:00 a.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for the Department of Commerce, and on supplemental appropriations for FY 78.
S-146, Capitol

Banking, Housing, and Urban Affairs
To hold oversight hearings on monetary policy.
5302 Dirksen Building

Commerce, Science, and Transportation
To hold hearings on FY 79 authorizations for the Fishery Conservation and Management Act (P.L. 94-265).
235 Russell Building

Energy and Natural Resources
Parks and Recreation Subcommittee
To hold hearings on S. 2876, authorization ceilings and boundary modifications of units of the National Park System.
3110 Dirksen Building

Energy and Natural Resources
Public Lands and Resources Subcommittee
To hold oversight hearings on the implementation of the Surface Mining Act (P.L. 95-87).
6226 Dirksen Building

Finance
Taxation and Debt Management Subcommittee
To hold hearings on S. 2738, to provide for the indexation of certain provisions of the Federal income tax laws, and related bills.
2221 Dirksen Building

Foreign Relations
Foreign Assistance Subcommittee
To resume hearings on FY 79 authorizations for foreign assistance programs; S. 2420, proposed International Development Cooperation Act; and to mark up proposed FY 79 authorizations for the Peace Corps.
4221 Dirksen Building

2:00 p.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To continue hearings on budget estimates for FY 79 for the Department of Commerce, and on supplemental appropriations for FY 78.
S-146, Capitol

APRIL 25

9:00 a.m.
Human Resources
Employment, Poverty, and Migratory Labor Subcommittee
To continue markup of S. 2570, to extend the Comprehensive Employment Training Act (CETA).
4232 Dirksen Building

9:30 a.m.
Environment and Public Works
To consider proposed highway legislation.
4200 Dirksen Building

Judiciary
To resume oversight hearings on the application and enforcement of the FBI Charter.
2228 Dirksen Building

10:00 a.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To receive testimony from Secretary of Commerce Kreps on budget estimates for FY 79 for the Department of Commerce.
S-146, Capitol

Banking, Housing, and Urban Affairs
To continue oversight hearings on monetary policy.
5302 Dirksen Building

Energy and Natural Resources
To resume hearings on S. 499, 1500, 1546, 1787, and 2465, to designate or add certain lands in Alaska to the National Park, National Wildlife Refuge, National Wild and Scenic Rivers, and National Wilderness Preservation Systems.
3110 Dirksen Building

Finance
Public Assistance Subcommittee
To resume hearings on S. 2084, to replace the existing Federal welfare program with a single coordinated program.
2221 Dirksen Building

Foreign Relations
Foreign Assistance Subcommittee
To continue hearings on FY 79 authorizations for foreign assistance programs, and on S. 2420, proposed International Development Cooperation Act.
4221 Dirksen Building

2:00 p.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To continue hearings on budget estimates for FY 79 for the Department of Commerce, and on supplemental appropriations for FY 78.
S-146, Capitol

Banking, Housing, and Urban Affairs
Securities Subcommittee
To hold hearings on H.R. 8331, the Securities Investor Protection Act.
5302 Dirksen Building

Judiciary
To resume hearings on FY 79 authorizations for the Department of Justice.
2228 Dirksen Building

APRIL 26

9:00 a.m.
Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To hold oversight hearings to examine the science and technology aspects of the Federal Research and Development budget.
5110 Dirksen Building

Human Resources
Employment, Poverty, and Migratcry Labor Subcommittee
To continue markup of S. 2570, to extend the Comprehensive Employment Training Act (CETA).
4232 Dirksen Building

9:30 a.m.
Environment and Public Works
Regional and Community Development Subcommittee
To resume consideration of proposed regional and community development legislation.
4200 Dirksen Building

10:00 a.m.
Appropriations
HUD-Independent Agencies Subcommittee
To hold hearings on budget estimates for FY 79 for the Federal Home Loan Bank Board and the National Institute for Building Sciences.
1318 Dirksen Building

Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for the Arms Control and Disarmament Agency, Foreign Claims Settlement Commission, Japan-U.S. Friendship Commission, and the Legal Services Corporation.
S-146, Capitol

Appropriations
Transportation Subcommittee
To hold hearings on budget estimates for FY 79 for ConRail and the U.S. Railroad Association.
1224 Dirksen Building

Commerce, Science, and Transportation
To hold oversight hearings on the Fishery Conservation and Management Act (P.L. 94-265).
235 Russell Building

Energy and Natural Resources
To consider pending calendar business.
3110 Dirksen Building

Environment and Public Works
Nuclear Regulation Subcommittee
To mark up FY 79 authorizations for the Nuclear Regulatory Commission.
S-126, Capitol

Finance
Public Assistance Subcommittee
To continue hearings on S. 2084, to replace the existing Federal welfare program with a single coordinated program.
2221 Dirksen Building

Foreign Relations
Foreign Assistance Subcommittee
To continue hearings on FY 79 authorizations for foreign assistance programs, and on S. 2420, proposed international Development Cooperation Act.
4221 Dirksen Building

Rules and Administration
To resume hearings on S. Res. 166, to reorganize administrative services of the Senate, and to consider other legislative matters.
301 Russell Building

Select Indian Affairs
To hold hearings on S. 2358 and 2588, to declare that the U.S. hold in trust for the Pueblo tribes of Zia and Santa Ana respectively, certain public domain lands.
6226 Dirksen Building

2:00 p.m.
Appropriations
Transportation Subcommittee
To hold hearings on budget estimates for FY 79 for the National Transportation Safety Board and the ICC.
1224 Dirksen Building

Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for the FCC, Federal Maritime Commission, FTC, International Trade Commission, and on supplemental appropriations for FY 78.
S-146, Capitol

APRIL 27

9:00 a.m.
Agriculture, Nutrition, and Forestry
Foreign Agricultural Policy Subcommittee
To hold hearings on S. 2385, S. 2405, and S. 2504, bills to authorize the Commodity Credit Corporation to finance export credit sales of agricultural commodities.
324 Russell Building

Judiciary
Constitution Subcommittee
To resume hearings on S.J. Res. 65, to amend the Constitution so as to provide for representation of the District of Columbia in Congress.
5110 Dirksen Building

9:30 a.m.
Environment and Public Works
Resource Protection Subcommittee
To resume consideration of proposed resource protection legislation.
4200 Dirksen Building

Judiciary
To hold hearings on S. 1382, to establish criteria for the imposition of the sentence of death.
2228 Dirksen Building

10:00 a.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for the Civil Rights Commission, EEOC, and on supplemental appropriations for FY 78.
S-146, Capitol

Energy and Natural Resources
To hold hearings on pending nominations.
3110 Dirksen Building

10:30 a.m.
Commerce, Science, and Transportation
To continue oversight hearings on the Fishery Conservation and Management Act (P.L. 94-265).
235 Russell Building

2:00 p.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for the Renegotiation Board, SEC, and on supplemental appropriations for FY 78.
S-146, Capitol

APRIL 28

9:00 a.m.
Judiciary
Constitution Subcommittee
To continue hearings on S.J. Res. 65, to amend the Constitution so as to provide for representation of the District of Columbia in Congress.
5110 Dirksen Building

9:30 a.m.
Environment and Public Works
Resource Protection Subcommittee
To continue consideration of proposed resource protection legislation.
4200 Dirksen Building

Judiciary
Improvements in Judicial Machinery Subcommittee
To resume hearings on S. 1314, to provide that State and Federal prisoners may petition Federal courts in a writ of habeas corpus.
2228 Dirksen Building

10:00 a.m.
Agriculture, Nutrition, and Forestry
Foreign Agricultural Policy Subcommittee
To continue hearings on S. 2385, S. 2405, and S. 2504, bills to authorize the Commodity Credit Corporation to finance export credit sales of agricultural commodities.
324 Russell Building

Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To receive testimony on budget estimates for fiscal year 1979 for the Departments of State, Justice, Commerce, the Judiciary, and related agencies.

# SENATE—*Thursday, April 13, 1978*

*(Legislative day of Monday, February 6, 1978)*

The Senate met at 10:15 a.m., on the expiration of the recess, in executive session, and was called to order by Hon. WENDELL R. ANDERSON, a Senator from the State of Minnesota.

## PRAYER

The Reverend Charles A. Summers, pastor, Sixth Presbyterian Church, Washington, D.C., offered the following prayer:

God of old times, these times, and the times to come, receive our praise this morning. You are the Author of life and we praise You for the gift of another day. You are as close as our next breath, as steady as our heartbeat—and when these fail You will still be God. We are in Your hands: be merciful when we are discouraged, be harsh when we are selfish, be gentle when we are frightened.

O Lord, You have blessed us as a nation. May our thanksgiving issue forth in justice for the poor and the forgotten. May we always remember that the Earth belongs to You and is on loan to us. When our misguided zeal hinders Your plan, oppose us in order to save us.

We pray for the leaders of our country. We pray also for the many behind the scenes who type and file and push brooms. All are Your people, in need of Your care.

Now go with us in the work at hand. Grant that awareness of grace which frees us to serve. Give us strength to

seek the truth and to speak the truth we see. Grant us patience to listen to others and humility to know our own limitations. God, forgive us when we identify the goals of our Nation with the goals of Your kingdom.

In all things may our lives praise You as we look forward to the day when Your Christ shall reign. Amen.

## APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
*Washington, D.C., April 13, 1978.*

*To the Senate:*

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable WENDELL R. ANDERSON, a Senator from the State of Minnesota, to perform the duties of the Chair.

JAMES O. EASTLAND,
*President pro tempore.*

Mr. ANDERSON thereupon assumed the chair as Acting President pro tempore.

## THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent, as in legislative session, that the Legislative Journal be approved to date.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## APPOINTMENTS BY THE VICE PRESIDENT

The ACTING PRESIDENT pro tempore. The Chair, on behalf of the Vice President, appoints the Senator from Utah (Mr. GARN) as a congressional adviser to the SALT delegation in Geneva during 1978.

The Chair, on behalf of the Vice President, pursuant to Senate Resolution 110, 95th Congress, appoints the Senator from Maryland (Mr. MATHIAS) to serve as a member of the Select Committee on Ethics, in lieu of the Senator from Connecticut (Mr. WEICKER), resigned.

## RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from West Virginia.

## ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## PANAMA CANAL TREATY

Mr. MOYNIHAN. Mr. President, I rise to take this occasion of morning business to speak to what will be the concerns of this day in the Senate and in the days immediately to follow—the ratification of the Panama Canal treaties, and, particularly the question of the Senate advising and consenting to the ratification of this second treaty.

Mr. President, I would like to observe that in the course of this day the U.S. Senate is going to be put to a test of some importance. We are going to see just how much and how long the pattern of this Senate will continue, a pattern of being extraordinarily careful of strong adversaries and rather hard with weak allies.

I cannot forget, Mr. President, the time at the end of 1975 when I was Ambassador to the United Nations and the Soviet Union invaded Africa, sending an expeditionary force of Cuban mercenaries—a term President Carter properly used in his Wake Forest speech on March 17.

The Soviet Union invaded Africa, sending Cuban mercenaries, and they were prepared to fight. To the dismay of the Africans and of the United Nations Ambassador and our allies the world over, the U.S. Senate stood up and said, in effect, in no circumstances will any American fight back, or any American ally fight back, because the Soviets fight for real, they kill people who oppose them. The Cubans are in there and they are prepared to fight.

Now, we seem increasingly to prefer some symbolic victories over weak allies. A small country, Panama, that has been our friend from the day of its creation, has never threatened us, never in any way hurt us, even in times of our great need when it might have done so and used leverage, never sought it.

The Secretary of State, for some unknown reason, is leaving Washington today to fly to Rhodesia. Why the Secretary of State leaves the capital at this moment of crisis, I do not know. He will fly to Rhodesia where he will seek to incorporate the Marxist guerrillas in the government of that new black-ruled country—yet a biracial—country with a moderate, respected leadership. But why will the Secretary of State seek to bring into that government the Marxist guerrillas armed by the Soviets? The guerrillas say if we do not the Russians will send the Cubans and, of course, we will not resist it.

The Cubans fight. Apparently, the U.S. Senate will have nothing to do with people who fight, not particularly if they are enemies. Is it only our friends with whom we will be difficult? What has become of this great Nation?

I joined the U.S. Navy at age 16 in the middle of the Second World War, where I soon understood we had to fight if liberty was going to survive. Have we so forgotten what is required of men who would maintain freedom in a world where totalitarianism rises? Do we not understand that the men making our foreign policy already assume that the Soviet Union has a military advantage over us, and are saying that we must negotiate a SALT treaty because by the mideighties that Soviet strategic advantage will be irreversible?

Our foreign policy already portrays symptoms of a nation which knows it has been outmatched by the Soviet Union, and while this incredible transition takes place, this transformation takes place in our circumstances in the world, we sit about worrying and thinking of new ways to impose our machismo fears on the innocent and deserving Republic of Panama.

Mr. President, I hope we might get on with the real business of the Senate, which is defending freedom in the world against the enemies of freedom, and not imposing our unnecessary fears on a small country and a good ally.

I thank the Chair.

(Routine morning business transacted and additional statements submitted are printed later in today's RECORD.)

## CONCLUSION OF MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, may we have morning business closed?

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

## SPECIAL ORDER

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from New York is recognized, as in legislative session, for not to exceed 15 minutes.

## THE STATUS OF MIDEAST NEGOTIATIONS

Mr. JAVITS. Mr. President, I thank the majority leader for his generosity and thoughtfulness in preserving my time and I thank Senator MOYNIHAN for his ringing declaration for freedom.

THE STATUS OF MIDEAST PEACE NEGOTIATIONS

During the Easter recess, I visited Israel for the purpose of bringing myself up to date on the position and thinking of the Israeli Government, as well as to obtain a good understanding of the thinking of the opposition.

Based on my discussions with the leading figures of the Israeli Government and opposition, my discussions with the President and Secretary of State both before and after my visit to Israel, and upon my review of the various basic documents which I have seen, I should like to report to the Senate my observations and conclusions respecting the current status of Mideast peace negotiations.

Four weeks have elapsed now since Prime Minister Begin's visit to the United States. Also I have just returned from a visit to Israel where I went and conferred with Prime Minister Begin and the leading members of the Government and the opposition. Hence, it is appropriate for me to review the status of Mideast peace negotiations. First, it is quite clear that negotiations are continuing between Egypt and Israel despite some of the more dire implications that were drawn from the failure of President Carter and Prime Minister Begin to reach a meeting

of the minds on a number of important issues. The dark cloud which seemed to have descended on the scene when President Carter reported to Members of Congress what he felt to be the "six no's" he had received from Prime Minister Begin has been penetrated by new rays of light and hope.

In saying this I do not wish to imply any sense of complacency or euphoria. That would be seriously misplaced, for serious differences among the parties on key substantive issues remain. But, the process of negotiation is continuing. The United States has continued diplomatic exchanges with Israel and Egypt and all parties have demonstrated a willingness to reexamine their own positions as well as the positions of the others.

Potentially the most significant new development has been the visit of Israeli Defense Minister Weizman to Cairo for discussions with President Sadat and General Gamassy. A return visit by Defense Minister Weizman to Cairo is expected soon. Thus far, the visit of Mr. Weizman has not led to resumption of formal negotiations in the Political and Military Committees, as requested by Prime Minister Begin but press reports have stated that some substantial progress has been made on a number of key issues respecting the Sinai as well as the West Bank and Gaza problems.

There has been a major change in the overall negotiating atmosphere in another respect. The overriding sense of immediacy and impending doom which surrounded the visit of President Sadat to Washington in February—which contributed heavily to the adverse atmospherics of the Begin visit in March—has receded appreciably. Now, no one is contending that President Sadat's political position is in any immediate danger and the sense that the negotiating process is in a close and frantic race to meet a deadline has been dissipated. This has relieved much of the tension in the highly overcharged atmosphere which engulfed the Begin visit.

In looking back at the events leading up to the Begin visit, especially in light of what has now transpired in the 4 weeks since that visit, it is fair to say that the position of Israel, and the specific proposals that have been put forward by Prime Minister Begin, did not receive the "fair basis" objective consideration which they deserved. Instead, an exaggerated and at least partially inaccurate characterization of the Israeli's position—as being intransigent and narrow—was conveyed as the conclusion to be drawn from Prime Minister Begin's meetings with President Carter.

The atmosphere of great hope created by President Sadat's historic breakthrough visit to Jerusalem and Prime Minister Begin's reception of him and the atmosphere of near despair created by his visit to Washington combined—perhaps unavoidably—to produce a situation in which the conditions and stipulations of Egypt seemed to be given more weight and much more solicitude than the positive peace plan by Prime Minister Begin.

On the other hand, a very different set of spectacles was used to examine the position and proposals of Prime Minister Begin, which were subjected to critical and sometimes unsympathetic scrutiny.

In the more dispassionate atmosphere which I hope will now prevail, I believe that Israel's position will be seen as being considerably more flexible and more forthcoming than the characterization of it as being "Begin's six no's" lead the American people to believe. Accordingly, the time has come to restore a greater degree of symmetry to the standards which are applied in respect to the positions of President Sadat and Prime Minister Begin.

The differences between the United States and Israel as they were expressed by President Carter at the end of the Begin visit, in my judgment, resolve around a single point—the status of the West Bank and Gaza. The differences respecting the application of U.N. Resolution 242, and the Israeli settlements, all can be traced back to this one point.

And, the fact is that the status of the West Bank and Gaza in international law is unsettled and a subject of historic dispute.

For the purposes of the Mideast peace negotiations, the United States has adopted a simplistic view of the status of the West Bank and Gaza in international law—a position which is in doubtful harmony with previous positions taken by the United States.

It may be that the position assumed by the United States in the current peace negotiations, respecting the West Bank and Gaza, is justifiable on the grounds of what are perceived to be the diplomatic and political realities of the situation. But, since Israel's position has been criticized by the State Department on legal grounds, a brief review of the situation from an international law point of view is called for.

The dismemberment of the Ottoman Empire in the international settlement after World War I resulted in a British Mandate over Palestine. In 1922, Britain unilaterally carved the Kingdom of Transjordan out of the original Mandate and awarded it to the Hashemite leader who had recently been defeated by the Saudis in a dynastic struggle for control of what is now Saudi Arabia.

Pursuant to the Balfour Declaration, which promised the establishment of a Jewish Homeland in Palestine, the prefiguration of the State of Israel through immigration, took place during the period between World Wars I and II. This process was given great impetus and great urgency by the liberation of the Jewish remnant which survived the Nazi holocaust in Europe.

The British Mandate in Palestine acquired the legal sanction of the League of Nations. When the League was disbanded at the establishment of the United Nations, it is not even clear that the United Nations gave its explicit legal sanction to the British Mandate. In any event, on April 2, 1947 Britain informed the United Nations of its intent to divest itself of the Mandate and requested the General Assembly to make provisions for the "future government in Palestine." On November 29, 1947, the General Assembly voted its approval of the recommendation of the United Nations Special Committee on Palestine to partition Palestine into a Jewish and Arab state with some degree of economic union, and, an international trusteeship for Jerusalem. The plan was accepted by the Jewish agency but rejected by the Arab States. An outbreak of disorder and terrorism ensued and the Security Council refused to take action to implement the partition plan.

At midnight on May 14, 1948 the Palestine Mandate was terminated. The Jewish community immediately proclaimed the State of Israel within the territorial boundaries of the partition plan, and Israel was recognized by a number of states including the United States and the U.S.S.R.

Egypt, Syria, Transjordan, Lebanon, and other Arab states responded by attacking Israel, to deny it its statehood. a cease-fire began on July 18, 1948 and in February, March, April, and July of 1949 armistice agreements between Israel and Egypt, Lebanon, Jordan, and Syria respectively were negotiated by the parties and went into force. For Jordan these cease-fire lines included the West Bank; for Egypt they included the Gaza Strip.

In 1950, Jordan purported to annex the areas of the West Bank which it had occupied in the 1948 fighting. This annexation has never been recognized by the United States. Indeed, only two governments ever recognized that annexation—Pakistan and Britain. Egypt never purported to annex the Gaza strip, which it had occupied and which it continued to administer until it was captured by Israel in June 1967, at the same time that Israel also took the West Bank territory from Jordan.

I have included this brief review of the politico-legal history of the West Bank and Gaza because it is highly pertinent to an understanding of the present differences between the United States and Israel.

The essence of the Israeli Government's position is that the status of the West Bank and Gaza is different under international law from the position of the Sinai and the Golan Heights. The United States has refused to recognize any such difference. And, this has contributed materially to the dispute between the United States and Israel with respect to the meaning of U.N. Resolution 242 and the status of Israeli settlements in the West Bank which have been branded as illegal.

The position which has been put forward by the Begin government, as I understand it, maintains that Israel by right of conquest has a claim in international law to the West Bank and Gaza at least equal to the claim of Jordan which is similarly based on the right of conquest. At a minimum, Israel contends that the question of sovereignty over the West Bank and Gaza are unsettled questions in international law and thereby distinguishable from the question of sovereignty respecting the Sinai and Golan which admittedly are

within the internationally recognized borders of Egypt and Syria.

Admittedly, the Israel position is complicated by Mr. Begin's longstanding contention that Israel has a Biblically based claim to Judea, Samaria (West Bank) and Gaza District.

However, my purpose is not to seek to vindicate the claims put forward by Israel on the merits. Rather, my purpose is to show that Israel has a respectable legal basis for its contention that the status of the West Bank and Gaza is unsettled in international law, that it has not acted in a way which can be categorically branded illegal, that its position is not arbitrary or intransigent and—most importantly—that it has a basis for putting forward the proposals which it has tabled.

To argue that those proposals are entitled to be considered and discussed and to provide a basis for Egyptian counterproposals, is only to argue for equality and fair play, in my judgment.

A major difference has arisen between the United States and Israel with respect to the U.S. desire that Israel agree to the formulation that U.N. Resolution 242 applies "on all fronts". The Israeli Government believes passionately that this formulation commits it to eventual acceptance of a Palestinian sovereignty in the West Bank and Gaza, because it places the status of the West Bank and Gaza on equal footing with the status of the Sinai and the Golan Heights where there are jurisdically established Egyptian and Syrian claims of sovereignty. Israel feels that it is not legally obliged to do so. Also, Israel sees agitation and irredentism under such an interpretation starting at once for a Palestinian state (likely to be PLO dominated) in anticipation of the referendum as to the disposition of the West Bank to be made at the end of 5 years under its peace proposals.

It is at this point that the legal position of Israel's Government becomes interrelated with its overriding security requirements.

Within Israel I encountered a spectrum of views on the legal issues respecting the West Bank and Gaza, even within the Begin government. However, there is near unanimity within Israel with respect to its security claims on the West Bank. And, on security grounds, President Carter is said to have stated, as U.S. assumptions, that total Israeli withdrawal from the West Bank and Gaza are not required under U.N. Resolution 242—which balances withdrawal from occupied territories with "secure and recognized boundaries." It has even been implied that President Sadat is agreeable to security adjustments respecting the West Bank and Gaza.

In various public statements President Carter has suggested various arrangements involving an Israeli military presence in the West Bank and Gaza. Moreover, the previous Israeli Government informally suggested the Allon plan and opposition leader Peres has elaborated on that plan in numerous private discussions.

The Begin government has put forward a different approach which it feels would accomplish the same results. Instead of dividing the land of the West Bank, the Begin government has proposed a division of functions on the West Bank. In essence, it would reserve security functions to Israel and turn over "self-rule" civil functions to the Arab inhabitants of the West Bank.

The Begin government has not put forward its proposals on a "take it or leave it basis." It has specifically stated that its proposals are worthy to be the basis of counterproposals. This is not "intransigence" as that word is commonly understood.

The overriding impression which I received in Israel was one of a deep appreciation of the great contribution to the peace process which was embodied in President Sadat's historic peace initiative, and Prime Minister Begin's reception of it and an unabated determination to work to achieve tangible peace agreements based on the new opportunities opened up by that initiative—and in the efforts at mediation as they were then undertaken by President Carter.

Just about all Israelis, specifically including Mr. Begin's bitterest political opponents of the last 30 years, feel that Mr. Begin has made honest and far-reaching proposals in response to President Sadat's initiative. They share Mr. Begin's feeling that his proposals have not been given the consideration which they deserve. And, they share the feeling that a more critical and unsympathetic standard has been applied to Israel than to Egypt and President Sadat.

Under the circumstances, I see no rational grounds for the creation of an atmosphere of confrontation between the United States and Israel—this relationship must remain intact in our own and Israel's national interest.

I believe very strongly that a sympathetic and creative approach by the United States can lead to a reformulation of the issues which would eliminate most, if not all, of the "six no's" which were elicited from Mr. Begin. The object of U.S. diplomacy, surely, is to produce formulations which will produce agreement, not disagreement. And, all of the flexibility cannot be expected to come from one side.

Now that the pervasive atmosphere of immediacy and impending doom may have been lifted from the Mideast peace negotiating process, I believe there is a good opportunity for all parties to take a fresh look at what had seemed to be a serious impasse but which upon closer examination reveals many areas of agreement, enormous movement forward from the starting positions of President Sadat and Prime Minister Begin, and important areas for the reduction of remaining differences.

I believe that an important contribution can be made at this time by the United States in placing a renewed emphasis on the enormous benefits that would be opened to all parties by the achievement of concrete agreements. For, the fact of agreement will transform the situation in the Mideast. The way could be opened for dramatic, cooperative economic development—not only through the lifting of the crushing economic burden of armament but also through opportunities to enlist Israeli technological and managerial capacities and those of Egypt in support of the enormous capital resources of Saudi Arabia and other oil producers in a regional development plan.

The establishment of peace cannot mean a restoration of the pre-1967 status quo of bitter animosity. And, in a transformed Mideast the present fears and security preoccupations could be seen in a less compelling and threatening light, making the achievement of agreements easier to achieve and easier to implement.

President Carter has placed great emphasis on the need to face up to the Palestinian question "in all its aspects." Admittedly this has important implications for Israel. But, in my judgment, it is the Arab States, more than Israel, which have failed really to face up to the Palestinian question. On this point, the United States, having pressed Israel very hard, ought now to turn its attention to pressing the Arabs to face up—and stand up—to the PLO which remains as the single greatest obstacle by far to the achievement of peace in the Mideast. It is not enough in my judgment, merely to obtain acquiescence in the bypassing of the PLO in the present round of negotiations. It is not enough, in my judgment, to postpone the issue by holding open the prospect of a referendum in 5 years in which the PLO could come in and achieve a PLO State on the West Bank.

The time has come for the Arabs—those Arabs who believe in the negotiating process and who desire peace—to face down the PLO and demand of the Palestinian people a leadership prepared to accept achievement of peace with Israel—or forfeit the claim of a voice in the settlement respecting the West Bank and Gaza.

For despite the hopeful progress that has been made in the negotiations between Egypt and Israel, the PLO continues to make Lebanon its bloody plaything. Israel's exasperated incursion into southern Lebanon cannot, by itself, solve the PLO problem there. Israel has announced a plan for the withdrawal of its forces and I believe that Israel must comply in the proximate future with the call of U.N. Resolution 425 for the withdrawal of its forces from Lebanon. To fail to do so could embroil Israel in an unnecessary dispute with the United States over the use of U.S. supplied weapons there and give an opening to the "rejectionist" forces in the PLO and some Arab States to supplant the Arab-Israel search for peace with a confrontation in the Security Council where the Soviet Union will be only too ready to undercut the U.S. peace effort and seek to blacken Israel's name and to discredit Sadat and other peace inclined Arab leaders.

Mr. MOYNIHAN. Mr. President, will the Senator yield for 30 seconds?

Mr. JAVITS. I yield.

The ACTING PRESIDENT pro tempore. The Senator's time has expired.

Mr. MOYNIHAN. Mr. President, will the Senator from New Mexico have the goodness to yield for 30 seconds?

Mr. SCHMITT. Mr. President, the Senator from New Mexico is very happy to yield to the Senator from New York.

The ACTING PRESIDENT pro tempore. The Senator from New York.

Mr. MOYNIHAN. I do thank the Senator.

Mr. President, there can be few persons in this Nation who have been so much involved with the questions of the Middle East and the quest for peace in that region as the senior Senator from New York, and no person in the U.S. Congress—not one—has given this as close attention to the full extent of his incomparable capacity. Since the day that Israel became a state, JACOB JAVITS was in the Congress, and he has been involved in it step by step to this promising moment, and surely there has not been heard in this chamber, much less in this land a more masterful account of the situation now and once again an account which the way in which things can move forward.

I cannot more congratulate the Senator for showing us that there is so much more hope than we have been thinking of.

Mr. President, I shall ask unanimous consent to introduce into the RECORD, as a supplement to what Senator JAVITS said, an address I gave in New York on Friday which addresses, in particular, the curious fact that the U.S. Government insists that the settlement of Israelis of the West Bank are illegal and contrary to international law. When asked what international law Israel contravenes, we are told Article 49 of the Fourth Geneva Convention, which addressed itself to the practices of the Nazi government, and which forbids the transfer or deportation of populations into occupied territories. By what extent of imagination those 8,000 or 9,000 Israelis could have been said to have been transferred or deported by their government I do not know. And how insensitive of us to harken to Nazi practices with respect to an internal political problem in the Middle East.

Mr. President, I thank the Senator from New Mexico for yielding me this time

I want to say that the Senator from New York has performed brilliantly and I know we are in his debt. I desperately hope his address will be read in the White House, the State Department, and in Geneva.

I ask unanimous consent to have printed in the RECORD the text of the remarks I made at Temple Israel in New York City on April 7, 1978.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR DANIEL PATRICK MOYNIHAN

Two weeks ago a column by Mary McGrory in the Washington Star carried the headline: "Has the United States Changed Sides in the Middle East?" In describing the Carter-Begin talks, Miss McGrory wrote:

"The President went out of his way to characterize his talks with the Israeli Prime Minister as 'grim.' He sighed, when they finished, that peace seems 'far away.'"

And one week ago, in a column in Newsweek, George F. Will, writing of the Israeli Prime Minister's quite extraordinary opening offer in his negotiations with Egypt calling for self-rule for the West Bank and the return of the Sinai, asked how it could have come to pass that "the Administration praised Begin's proposal in December but disdains it in March."

This morning an editorial in the Washington Post observed that "through three major wars and countless incidents successive administrations have understood that the realities of Arab hostility justified the reading that in using American weapons across its borders Israel was acting in legitimate self-defense. Why, then, did the Secretary of State feel bound to slap Israel hard on Wednesday by informing Congress that Israel 'may' have violated the 1952 military aid agreements in its recent intervention in Lebanon."

These are the observations of independent journalists of quite varied politics. I cite them only to suggest what is the mood of observers in Washington today. It is one of anxiety and uncertainty.

For the first time in the history of the State of Israel the question is being asked whether the United States is breaking off its attachment to that nation. Or, as the Washington Post editorial states it, whether the security of Israel is "of fading American concern."

Can there, then, ever have been a more serious moment in the relations between our two countries?

I think not.

Accordingly as a Senator I wish to speak with great deliberateness, for I am fearful of being misunderstood by the President. I do not wish to anger him, and I hope not to have to oppose his policies. I would hope he might hear what I have to say.

Allow me then to repeat an opening paragraph from the address I gave to the United Jewish Appeal National Conference here in New York last December tenth:

"I have no quarrel with our government, and especially none with our President. He is a noble and truthful and wholly committed man. He struggles for understanding as do we all. I speak tonight in the spirit of Isaiah, trusting that indeed we might reason together, and learn from one another."

It is no longer the case that I have no quarrel with our government. I have a profound disagreement with those responsible for our Middle East policy.

I prefer to think I was careful about opening this disagreement. I am sure that through much of last year many persons wondered why I did not do so. Yet surely these are matters of an order that impose the greatest care, even caution.

On June 7, 1977 in a commencement address at Baruch College I spoke to the emerging doctrine within the Administration that the "East-West" conflict was receding and that we should direct our concern more to relations between the industrial North and the developing South. The President himself had spoken of the Soviets joining us in "common aid efforts" to help the latter. I said, however;

"If we genuinely care about the developing world, then we must look to the behavior of the Soviet Union, for with respect to the non-Communist regions of the world, be they developed or underdeveloped, there is one Soviet policy: the worse, the better. * * *

"In nation after nation, at conference after conference, what the Soviets seek is failure, breakdown, bitterness, mistrust. They judge that they thrive on this, and history certainly does not disprove them."

As summer passed, it began to seem necessary to speak more plainly. For, on October 1, like a rocket illuminating the whole of the landscape, there came the joint Soviet-American statement on the Middle East. In a document clearly drafted by the Soviets we were informed, in effect, that they were being asked by us to return to the Middle East to act in effect as a partner in bringing about or enforcing a settlement there. Among other things, the joint statement seemed to envisage a Palestinian state on the West Bank ruled by the Palestinian Liberation Organization.

There was an outcry here at home. There was shock elsewhere. On October 5 the Foreign Minister of Israel met here in New York with our President in long talks which Mr. Dayan described as "brutal." I put the matter as succinctly as I could in an address at Temple Israel in Albany on October 25:

"It bears repeating, first and foremost, that the Soviet Union is not interested in peace in the Middle East. * * * For decades, the Soviets have judged that their interests in the Near East are best served by chaos and upheaval, by war and revolution. This obvious attribute of Soviet policy has been the basis of the Mid East policies of successive administrations each understanding that the Soviet role must be minimized, not enhanced.

"Is there now evidence that the Soviet Union has come to share our interest in peace in the Middle East? We have followed the tragic developments in Lebanon, a pro-Western democracy now brought to ruin by Soviet arms and Soviet clients. We have watched the Soviets in their never-ending search for ethnic disputes, for regional rivalries, or whatever, which can be exploited for Soviet purposes. The bloodiest war now in progress in the world, that between Ethiopia and Somalia, is a prime example of this Soviet principle and where it leads.

"The history of the past three decades—or the news of the past week in review—both tell the same story: the Soviets strive to establish a strategic and ideological and political presence wherever they can. They say as much; they declare as much; they keep no secret of it."

The prospect of a restoration of the Soviet position in the Middle East was sufficiently alarming to President Sadat, so it seems to me, as to have triggered his decision to make his dramatic visit to Israel. Of a sudden, the President of Egypt and the Prime Minister of Israel had acquired a common interest in shoring up Western interests in the Near East, just as the West's leading nation seemed set on a course of inviting the Soviets back into the region!

Thus, as I felt obliged to say on December 10:

The President of Egypt saw that the policies of the United States were making his own position untenable. It was he who had expelled the Soviet Union from his country in 1972 and turned instead to the United States. Now the United States was bringing the Soviets back to the region. The downfall of President Sadat would be one of the first prices the Soviets would exact from the newly established partnership.

"And so Anwar Sadat took the great gamble of seeking peace on his own, directly with Israel in cooperation with such other Arab nations that would join him."

The state of the situation in the Middle East was once again illuminated, this time gruesomely, when on March 12 of this year, PLO terrorists attacked on the coast of Israel, killing thirty-seven civilians—fourteen children, twelve women, eleven men. And on the same day, Radio Moscow reported the event,

seeking to portray it as a military operation during which "over thirty soldiers" (emphasis added) were killed. Such is the Soviet interest in portraying acts of murder as legitimate military operations. And why not. Just a day earlier, Radio Moscow had broadcast the words of Yasir Arafat, whose own affinities in world politics were once again revealed by his use of the worn-out vocabulary of Soviet totalitarianism, as he spoke of an "imperialist-Zionist presence . . . a bridge for imperialist hegemony led by the United States." A murderous link, this relationship between the Soviet Union and the PLO, but a predictable one.

And so it is now necessary to speak bluntly, once again.

I believe that what is happening to American policy, not merely in the Middle East but in the world at large, is a gradual accommodation to the fact that the Soviet Union has not only become the equal to the United States in military power, but seems destined to surpass the United States.

Already in Washington Administration spokesmen are saying just this behind closed doors. We are being told that it is urgent that we get a strategic arms limitations agreement quickly else Soviet strategic power will have surpassed that of the United States by the mid-1980s. This can only mean a SALT treaty that would accommodate to that seemingly ineluctable trend.

And this, I believe, is the true explanation for the succession of events, large and small, overt and covert, by which the administration has quietly given in to the long sustained efforts of the Soviets to depict Israel as an outcast nation, an illegitimate nation, a nation whose very existence violates the standards of the international community.

This is not altogether new. But the vigor with which this point is pressed is surely new. Consider the administration's pronouncements on the illegal nature of the Jewish settlements in the Sinai and on the West Bank.

This matter seems to loom large indeed. President Carter himself said at a press conference on January 30:

"Our position on the settlements in occupied territories has been that they are illegal, that they are an obstacle to peace."

In an interview broadcast on the following February 14, Secretary Vance repeated this conclusion. He said, "The Geneva Convention, the so-called Fourth Geneva Convention considered this question and concluded that the creation of settlements in occupied territory was contrary to international law." This particular convention, concluded in 1949, was also invoked by Assistant Secretary of State Atherton in his appearance before subcommittees of the House International Relations Committee on October 19, 1977. Mr. Atherton said, "We see the Israeli settlements as inconsistent with international law."

True, in saying this, these men have not created a new stance for the United States. Some such claim has been made by administrations since 1967. But of course this is a nonetheless most debatable point. My own reading of the international conventions cited by the State Department in support of its position is that the administration's claim is weak indeed, probably wrong altogether.

The State Department's argument rests on its reading of Article 49 of the Geneva Convention of 1949 on "civilian persons in time of war." The Article outlaws "individual or mass forcible transfers" as well as "deportations." The last paragraph of the Article reads: "The occupying power shall not transfer or deport parts of its own civilian population into the territory it occupies." In a Department of State Briefing Paper prepared in July, 1977, the Department says: "The government of Israel is obligated by Article 49 of the Geneva Convention of 1949 on the Protection of Civilians not to transfer parts of its own civilian population to occupied territory."

We must note immediately that the convention and its prohibitions derive from the experiences of the Nazi era. We must immediately ask whether the presence of fewer than 10,000 settlers amidst an Arab population of about 700,000 is what the framers of the convention imagined as a violation. The settlers have acted voluntarily, often very much against the wishes of their government. How can they possibly be said to have been "transferred," or "deported" by that government? Even more, there is clearly no consensus among legal authorities as to who the "occupying power," especially in the West Bank, is.

No less an authority than Stephen Schwebel, Deputy Legal Adviser in the State Department, wrote in 1970 in the American Journal of International Law that the Israeli presence on the West Bank results from a lawful exercise of the right to self-defense, that Israel had a right to insist upon reasonable security measures to insure that the West Bank would not again be used to mount a similar threat, and that Israeli title to the West Bank was probably better than that of Jordan, in that Jordan had acquired the West Bank by an illegal annexation.

I do not wish to be understood as saying that settlements are either necessary or wise.

But it is more than a little wondrous how much the question of legality intrudes into this issue.

The President of the United States and the Secretary of State do not recurrently address themselves to questions of international law.

And yet the references to international law which we now associate with both of them somehow seem to involve Israel as they seem to involve no other place. And it is all the more strange in that Israel is the only party to the Mid East conflict where the rule of law is firmly established; where democratic institutions flourish; where civil liberties as we understand them are most fully protected.

It is really necessary for our own government to contribute, no matter how unintentionally to the large worldwide effort to deprive Israel of its very legitimacy as a state?

It is a disturbing tendency within this government to invoke the rules and the precedence of international law in a way that works to the political benefit of groups and organizations and states which have nothing but contempt for that very rule of law.

Justice Holmes once said that the Constitution is not a suicide pact, nor surely is the body of international law or the Charter of the United Nations. We must understand that a regime of law so exploited as to benefit the lawless for some short range political or diplomatic expedient, could well contribute to the ruin of the rule of law itself.

As more and more we accommodate to the rise of totalitarian power, we become less and less concerned with the needs of democracies. We find their procedures "irksome," we become impatient with their "quibbles" about law and language, forgetting that respect for law and language is the very essence of a democratic society.

We find the Israelis "difficult to deal with." Increasingly we interpret their respect for law and language, all of which requires them to move slowly and carefully if they are to move at all, as somehow an "obstacle to peace."

We contrast this with Egyptian "flexibility," by which we mean the easy cynicism of nondemocratic societies about procedures and texts—all "mere words"—and their ability to act within parliamentary consultations.

We proclaim for ourselves the role of mediator, but seemingly chose to show no comprehension of the asymmetry of negotiations between two such different political systems. Indeed, if we seem to prefer either of the two, it is the one least like our own.

For three years now I have been speaking of the failure of nerve in American foreign policy. I find it more pronounced now than ever. And I do urge the friends of Israel to consider that, now more than in the past, American policy in the Middle East reflects our policy in the world at large, and it is to that larger policy that our concerns must be directed.

The ACTING PRESIDENT pro tempore. The Senator from New Mexico.

Mr. SCHMITT. Mr. President, I wish to compliment the two Senators from New York for their leadership in this very difficult issue and for the perception and perspectives that they offer to it.

## HUD

Mr. SCHMITT. Mr. President, the proposed reorganization of the Department of Housing and Urban Development, known as HUD, has raised some vital questions with respect to the Department's housing program and the general responsiveness of our executive branch of Government.

Mr. President, we also now hear via the press that the Secretary of that Department has declared that it is now truly an urban agency, to some extent indirectly indicating that the rural portions of this Nation will suffer as a result.

There is widespread opposition to this current HUD reorganization. New Mexico is not the only State whose citizens and local and Federal officials are vehemently opposed to moving multifamily housing services great distances from their need.

Members of the housing community in the private sector, in both the real estate and construction industries, are protesting this move which would increase the difficulty and cost of providing needed housing and, of course, raised the cost of that housing to the people who need it. Citizens who have benefited from the HUD programs as implemented by local offices have expressed a very deep concern.

In fact, Mr. President, one Sunday afternoon in January, 400 people gathered in Albuquerque to vent their frustration with respect to loss of these particular services. There were people from all walks of life, from all political parties, from business, from labor, from real estate, including those people who benefit most directly. The proposed plan appears to be wracked with dissension in the upper echelons of the Department.

The ordered centralization of HUD and the resulting unresponsiveness and irresponsibility of certain officials of that Department whom I have contacted regarding this matter have progressed to the point of disbelief and beyond. There has resulted a display of total disregard for obligation and responsibility to all rural Americans (particularly those living west of the Mississippi) that is in-

credible in this Senator's opinion. It is inconceivable that Secretary Harris has ignored letters, avoided the issue, evaded questions in hearings, and, in general, has not felt obligated to respond at all, at least in a reasonable period of time, or substantively to Members of Congress with respect to a major action which will affect the lives of millions of people. When response is finally received—months after the fact—it is then with only vague generalizations rather than facts.

Given this state of affairs, how are we then to believe that the executive branch can or will be responsive to a New Mexican or any American with the dream of owning his or her own home? The local HUD office has done an outstanding job of providing decent, low-cost housing for the citizens of New Mexico. It has been shown that Albuquerque is one of the most efficient HUD offices in the country. If we have learned anything from the steady centralization of government over the past few decades, we can now surmise that the multifamily housing needs of New Mexico and other rural States would scarcely be served at all by moving crucial functions 700 miles east to Dallas. Mr. President, that would be the same as providing for the housing needs of Washington, D.C., from a central office in Chicago. We can also guess that even more essential single family housing services will be the next to go into regional, urban centers. In an effort to determine the Department's justification for the proposed reorganization move, I have repeatedly questioned its officials, as have other Senators and Congressmen. I anticipated straight, factual answers to my questions to Secretary Harris at a Banking, Housing, and Urban Affairs Committee hearing on January 27 of this year. This was not to be. Thus, this hearing was followed up with a letter on February 9, containing questions for the record. Incredibly, in subsequent hearings shortly thereafter, Mrs. Harris promised an answer within a week—it is now two and a half months since my original inquiry and letter to her and her followup commitment. Only yesterday, Mr. President, did I receive a response—a response of sorts, and I suspect the only reason she bothered to respond yesterday was due to the fact that she was scheduled to testify before the Banking Committee and today before the Housing Appropriations Subcommittee.

After more than 6 months, beginning way back last October or September, we still have no essential facts with which to support or not support Mrs. Harris' claims that efficiency will be increased by 23 percent, and that costs will be reduced by $550 million over the next 4 years.

Mr. President, we have done considerable research on this, and all of our facts indicate just the opposite, that inefficiency will increase and costs will rise. I can assure the Secretary that this arrogance will not go unchallenged during the current budget process. The people of New Mexico and the United States deserve to get answers to their questions, whatever they may be.

The Department led me to believe that I was the only Senator who appeared to be concerned about the reorganization. Yet some 20 Senators, one-fifth of this body, recently signed a letter to Senator RIBICOFF requesting that hearings be held on Senator MCINTYRE'S Senate Resolution 302, which would delay the reorganization until such time as the Congress could study it. Further, over 30 of my colleagues have expressed to my office their desire to meet with the President to make their deep concern on this matter known to him personally. I myself have already called the Vice President with no direct results. My congratulations to the Secretary and others in the Administration on the unique ability they have shown to unite the Members of the Senate along bipartisan lines—Secretary Harris, in particular has succeeded where others have failed.

Secretary Harris led me to believe that all regional offices would be treated equally under the reorganization. Yet Lubbock, Tex.; Grand Rapids, Mich.; Des Moines, Iowa; Bangor, Maine; Coral Gables, Fla.; Manchester, N.H.; Providence, R.I.; Houston, Tex., and apparently other cities have received moratoriums on the reduction in services. My repeated questions as to the rationale for such discrimination have fallen also on deaf ears. The response I did receive at one point was an assurance by Assistant Secretary Medina that these moratoriums are temporary actions for the duration of 1 year only. Still no answer as to why they are necessary.

And Mr. President, to top things off, as the Department was removing housing services from rural areas, such as New Mexico, a HUD study was ordered to determine how the Department could better serve rural areas. Commissioned on January 10, the study was due March 1. Not surprisingly, it is now the middle of April and there is no sign of the report. Once again, taxpayers' hard-earned dollars appear to have been thrown away on an executive branch study that may never see the light of day. Unfortunately, Mr. President, this use of studies to do nothing is not confined just to the present administration.

At the request of myself and several other concerned Senators, it is my understanding that an audit has now been conducted by the General Accounting Office with respect to HUD services in several cities. Although not yet official, apparently the audit initially reveals that HUD reorganization will cost the taxpayer more than the projected savings. This is in spite of the fact that the Department has answered almost any and every question about the reorganization with the stock reply that centralization will save approximately $550 million over the next 4 years, and result in an increase in time efficiency of 23 percent. Mr. President, we can find absolutely no factual justification for those claims.

Mr. President, it would appear that the administration's collective mind is made up on this. But when Senators cannot obtain straight answers to legitimate questions, when 20 Senators would like a closer look at the justifications for the reorganization plan, when 30 Senators are ready to express their deep concern to the President, when obvious fair play and credibility are mutilated, when dollars are wasted on studies which gather dust, when an independent GAO audit appears to reveal an increased cost with diminished services, commonsense dictates an end to this stubbornness and to the need for the Congress to take a hand.

This proposed move by the Department of Housing and Urban Development is another in a long line of "reorganizations" that take government from the people—and charge them more for doing it. What happened to the oft-expressed wish of this administration—in the campaign as well as more recently—to return government to the people? What has happened to repeated promises of increased services and decreased costs? And where is the common decency that would have given us straight answers necessary for Congress to have to evaluate the performance of the Department of Housing and Urban Development? New Mexicans and all Americans deserve more from those mandated to serve them, particularly those privileged to serve without being elected by those they either help or hurt. The battle is not over.

Mr. President, unless someone else wishes to make a comment on this matter during the remainder of my time, I will be glad to yield it back.

Mr. MOYNIHAN. Morning business, as I understand, was to be closed at 11 o'clock. I believe it is now 11 o'clock.

If I may make one observation, Mr. President, if the Senator had only waited 2½ weeks for a response from HUD, he has another month ahead of him.

Mr. SCHMITT. I understand, but it has been 2½ months. The battle was joined last October.

Mr. MOYNIHAN. Well, then this Senator still has 2½ months ahead of him.

Mr. SCHMITT. Well, it is good to see that it crosses both sides of the aisle.

## THE PANAMA CANAL TREATY

The ACTING PRESIDENT pro tempore. Under the previous order, the Senate will now resume the consideration of Executive N, 95th Congress, 1st Session, Calendar No. 2.

Under the previous order, the Senator from Kansas (Mr. DOLE) is recognized to call up an amendment.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield?

Mr. DOLE. I yield to the majority leader.

## ORDER FOR RECESS UNTIL 10 A.M. ON MONDAY

Mr. ROBERT C. BYRD. Mr. President, I have discussed this request with the proponents and opponents of the treaty, and it seems to be the general consensus that the request would be accepted, and I therefore make it now. It will give committees an opportunity to meet tomorrow without last-minute interruptions for rollcalls, and so on. The committees do need some time to meet during the lengthy debate on the two treaties.

Therefore, I ask unanimous consent that when the Senate completes its business today, it stand in recess until the hour of 10 o'clock on Monday morning. We can, later today, change the hour from 10 to 11. This will give committees ample notice, by getting the request consented to at this point, and ample time to schedule their meetings for tomorrow.

The ACTING PRESIDENT pro tempore. Is there objection? Without objection, it is so ordered.

Mr. ROBERT C. BYRD. I thank the Senator from Kansas.

## THE PANAMA CANAL TREATY

The Senate continued with the consideration of the treaty.

Mr. DOLE. Mr. President, parliamentary inquiry.

The ACTING PRESIDENT pro tempore. The Senator will state it.

Mr. DOLE. Is there a time limit on this amendment?

The ACTING PRESIDENT pro tempore. There is; one hour, equally divided.

UP AMENDMENT NO. 25, AS MODIFIED

Mr. DOLE. Mr. President, I send to the desk a modified form of amendment No. 3 and ask for its immediate consideration.

The ACTING PRESIDENT pro tempore. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Kansas (Mr. DOLE) offers an unprinted amendment numbered 25.

Mr. DOLE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The amendment is as follows:

In the second sentence of the first paragraph of article XI, strike out "for thirty calendar months" and insert in lieu thereof "until such date as is agreed upon by the members of the Panama Canal Consultative Committee, but not before January 1, 1990".

In paragraph 2 of article XI, amend subparagraph (a) to read as follows:

"(a) The authorities of the United States of America shall have the primary right to exercise criminal and civil jurisdiction over employees of the Panama Canal Commission who are citizens of the United States and their dependents, and members of the United States Forces and civilian component and their dependents, in the following cases:"

In paragraph 2(a)(i) of article XI, strike out "offense committed" and insert in lieu thereof "act or omission".

In paragraph 2(a)(ii) of article XI, strike out "offense committed" and insert in lieu thereof "act or omission".

In the text following clause (ii) of paragraph 2(a) of article XI, strike out "offenses committed" and insert in lieu thereof "acts or omissions".

Strike paragraph 6 of article XI.

Renumber subsequent paragraphs of article XI accordingly.

Mr. DOLE. Mr. President, on my time, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. NUNN). Without objection, it is so ordered.

Mr. DOLE. Mr. President, I ask unanimous consent that I may proceed as in legislative session for a period of 5 minutes, the time to be charged against the time of the Senator from Kansas.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. DOLE. On two matters, both relating to agriculture.

## THE DEFEAT OF THE EMERGENCY AGRICULTURE LEGISLATION

Mr. DOLE. Mr. President, I would just say that this country is astounded that the President of the United States should take delight, because of the defeat of the emergency agriculture legislation in the House of Representatives yesterday.

Frankly, this attitude is hard to understand, in the light of the serious crisis today in agriculture, and in the light of campaign commitments and promises made in 1976. But even beyond that, it is hard to understand how anybody could celebrate or indicate delight, or indicate that somehow it was a victory, that, because of administration prodding and lack of House support of it, a bill designed to help American agriculture was resoundingly defeated.

That is now history, and the farmers lost. I think the American consumers lost and rural America lost. The farmers are still in financial trouble, just as they were yesterday. There are still serious surpluses of certain commodities. There are still farmers leaving the land, selling their farms. They are still borrowing money where they can. Farm prices are still below the cost of production.

I would just hope that we can do now what we can. We are now at the mercy of the President of the United States. Whatever he will do for the American farmer must be done, from a legislative standpoint.

I cannot think of worse timing for a farm bill than to come up the day after the President announces to the world that he is going to veto it, and announces to the world that he is going to make it a symbol of fighting inflation.

I would suggest that once the price tag of $6 billion was put on this bill erroneously, the farmer never had a chance. It was picked up by the media. It was picked up by large newspapers advertising it as a $6 billion bill, which is not a fact. It is not true.

I can understand why many of my urban colleagues in the House could not vote for a $6 billion farm bill. I could not either. But I suggest now that we move ahead and do what we can for the American farmer. As American farmers have told me so many times, "If you do not eat, do not worry about my problem."

Well, we did not worry about his problem. We said no. He still has it. The American consumer still has a concern.

I would just suggest it is not a time for celebration; it is a time for rethinking, a time to find some provision which the President will support.

Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The Senate will resume executive session.

## THE PANAMA CANAL TREATY

The Senate continued with the consideration of the treaty.

UP AMENDMENT NO. 25, AS MODIFIED

Mr. DOLE. Mr. President, at the desk is a modified form of amendment No. 3 to article XI of the Panama Canal Treaty.

Consistent with the intent of article XI of the Panama Canal Treaty, which seeks to "provide for an orderly transition" of jurisdiction over the Panama Canal Zone, I have proposed an amendment which would simply extend the period for the transfer of jurisdiction from the United States to Panama. This treaty is being marketed by the administration as a "twenty-two year" transition document. However, a careful reading of the treaty provisions suggests that this is not a 22-year transition agreement—it is a 30-month transfer of title. Thirty months is entirely too short a period to avoid serious disruption in the lives of Americans and their dependents who live and work in the Canal Zone. In order to prevent confusion, disruption, and a massive exodus of Americans now residing in the Canal Zone, it is important to extend the transition period for a more orderly transfer of authority.

As things now stand, the treaty returns full jurisdiction over the Canal Zone to Panama as soon as the treaty enters into force, and it transfers all U.S. judicial, administrative, and regulatory authority to Panama 30 months later. After that, American citizens will be subject to Panamanian law, and subject to Panamanian civil and criminal justice as well.

More specifically, article XI provides the following: Effective immediately, Panama assumes full plenary jurisdiction over the entire Panama Canal Zone, and Panamanian courts assume jurisdiction over all new civil cases of a private nature involving American citizens. Only 30 months later, at the end of the so-called "transition period," Panamanian courts will assume jurisdiction over all criminal cases involving American citizens; the United States will withdraw all its police forces and lose all police authority in the former Canal Zone; and the U.S. court system will cease to function. American laws, regulations, and administrative authority will no longer be enforced. All this occurs, despite the fact that the United States retains the right to use certain designated areas and installations within the former Canal Zone until the year 2000. I question just how effective our rights of "use" will be for the remaining 20 years, after our laws and administrative authority end in 30 months.

UNFAIR TO AMERICAN EMPLOYEES

Mr. President, I believe the question is, does this constitute "orderly transi-

tion"? I do not know of many Americans who are willing to subject themselves to the justice and authority of the Panamanian National Guard. This provision will literally drive Americans out of Panama. If article XI remains unchanged, I believe we will see a mass exodus of U.S. engineers, pilots, and other canal personnel within the next 2½ years.

As a matter of fact, a public opinion questionnaire circulated among United States Canal Zone employees last November, and provided to me by the Panama Civil Council during my visit last December, demonstrates that 70 percent of those surveyed intend to leave the Canal Zone soon after these treaties are ratified. Over half of those who intend to leave indicated that their "primary reason for leaving" was the loss of American jurisdiction in the form of the police and court system in the Canal Zone. Fully 90 percent of those intending to leave plan their departure within 3 years after the treaties are ratified.

Think of it: 3,000 American employees in the Panama Canal Zone, who have played the central role in operating and maintaining the canal for decades; and 70 percent of the sampling which was surveyed indicated that they and their families would feel compelled to leave Panama soon after these treaties are ratified. Considering the treaty provisions, I am not sure that many of us can blame them.

American employees have served the canal well since it was completed in 1914. No employee should have to fear for his future job security, or for the protection of his personal rights, and those of his family. During our visit to the Panama Canal Zone last December, Senator PAUL LAXALT and myself visited with dozens of canal employees, who expressed distress about protection of their property and personal rights after the Panamanian police and courts take control. They deserve better than this. Their skill and dedication deserve the careful consideration of the U.S. Senate. We can give them proper consideration by simply extending the "transition period" to a length more suitable for "orderly transition," including proper training for Panamanian replacements.

DOLE AMENDMENT

Mr. President, this amendment I have offered will permit the Panama Canal Consultative Committee to study the matter after the treaty takes effect and, with the benefit of actual experience, make a recommendation as to when the period of transition should formally end. However, under the terms of this amendment, the period will in no event terminate prior to January 1, 1990. This date coincides with transfer of the administration of the Panama Canal Commission from United States to Panamanian leadership, under the terms of article 3 of the treaty. It is logical that primary U.S. authority over both the Panama Canal and the special Canal Zone areas should expire about the same time.

By allowing for this extended transition period, we will allow for a more orderly and gradual phase-out of American employees in the area, and of judicial and administrative control over them. Also, by preserving U.S. jurisdiction over civil cases as well as criminal cases involving American nationals during the transition period, we better protect the interests of our own citizens living in the area.

Thus, if this amendment is adopted, treaty arrangements will be as follows:

First. Panama will still assume full plenary jurisdiction over the Canal Zone upon entry into force of the treaty. And the United States will retain rights of use over certain designated areas and installations in the zone.

Second. The U.S. court system will continue to function, and will retain jurisdiction over all criminal and civil cases involving American citizens who are employees of the Panama Canal Commission, until at least the year 1990. This jurisdiction will also continue with respect to employee dependents, and to members of the U.S. forces and their dependents as well. It will apply to "acts or omissions" occurring during the transition period, or prior to it, within those areas and installations used by the United States under the provisions of the treaty.

Third. U.S. police forces will remain on hand, exercising their proper and limited authority within the areas and installations used by the United States, until at least 1990.

Fourth. The laws, regulations, and administrative authority of the United States, which are now applicable in the Canal Zone, shall remain in force during the extended transition period, just as they would for the 30-month period envisioned in article XI.

That is all. There is no change in other provisions in the treaty. Neither employment conditions nor defense provisions are changed in any way by this amendment. It is designed only to protect Americans residing in the Canal Zone, and to provide for a more orderly transition—not to obstruct or eliminate those transition arrangements.

Certainly, there is no way to guarantee that the same level of civil and political rights will be honored by the Panamanian National Guard once it gains total jurisdiction over the Canal Zone and Canal Zone employees. Given the very inconsistent record of the Panamanian Government with regard to human rights, and given the popular disdain for the Amercian presence in the zone, there is every reason to believe that the rights of our citizens may not be fully observed and protected. We realize that Americans are going to leave, but we do not want a mass exodus at the outset. We want an orderly withdrawal, and an orderly transition.

The best thing we can do is to provide an adequate period of time for an orderly transfer of judicial and police jurisdiction. This is all this amendment seeks to accomplish.

Mr. President, that is all this amendment seeks to do. That is all it does. I hope that the amendment will be accepted by the treaty proponents. It is not in any way designed to frustrate the pro-treaty forces, not in any way designed to frustrate the Panamanian leadership, it is not in any way designed to confuse American leadership. It is designed solely to provide a more orderly transition and to provide some protection for U.S. employees in the zone.

Mr. President, I reserve the remainder of my time.

Mr. MOYNIHAN. Mr. President, I rise to respond to the thoughtful and reasoned statements of the Senator from Kansas, and to state also why it is that the proponents of the treaty before us cannot in good faith accept his amendment.

The amendment to extend the transition period for the transfer of judicial jurisdiction is, in our view, unnecessary to protect the interests of U.S. citizens or to operate and defend the canal. Just as important, to us as to them, we feel it would be a needless insult to Panama.

I want to make clear that we do not suggest that the Senator from Kansas would intend such an insult, but it would be perceived as such. The Senator from Kansas is the most courteous and thoughtful of men and sensitive to others' feelings in a way that is not always encountered in public life. But it is, nonetheless, the case that we would be saying, in this instance, that Panama is not capable of administering its own laws in its own territory and that its laws are inherently unfair. There is nothing in our experience to warrant our saying that and, even if there were, it would be most impolitic to say so. This is not something a sovereign nation says to another sovereign nation when it wishes to maintain good and close relations.

With equal justice, countries in Latin America might have said to this country that our laws were not fair and our administration of justice was not equitable at a time when racial discrimination against black Americans and against Hispanic Americans was so common. Yet, without in any way endorsing our arrangements, they never chose to suggest some fundamental institutional incapacity to live up to their standards, as this amendment would suggest that we fundamentally believe that Panamanians could not live up to ours.

The Panama Canal Treaty and agreements in implementation of articles III and IV of the treaty contain carefully negotiated provisions to protect U.S. citizen employees of the canal commission, military personnel and their dependents, and to guarantee these individuals specified procedural rights in any criminal proceeding under Panamanian law. It is important to note that these guarantees and rights apply whether the alleged criminal act occurred in the canal zone or elsewhere in Panamanian territory. The extension of the transition period will only continue U.S. jurisdiction over offenses committed within the zone.

The fact is that Panama is another country and Americans who wish to go and live there are going to have to accept the normal circumstances that living in another country involves, which means being subject to its laws. Just as

importantly, it is a condition which we impose on Panamanians or any other foreigner living in our country. Simply, elemental respect for a friendly nation, an allied nation, surely behooves us to reject this proposal.

Mr. President, I wish to speak, at the outset of this last day of debate on general provisions of the treaty, about the general circumstances we find ourselves in. Particularly, I should like to speak to some of the opponents of the treaties, not least to the Senator from Kansas (Mr. DOLE), who knows the high regard in which I hold him. I must say that I am troubled at what seems to me to be a flight from reality, among both the liberals in the Senate and the conservatives in the Senate, a flight from the reality that the true concern of American foreign policy has to be with the threat from an evermore aggressive, evermore powerful Soviet Union. Our concern has to be with the expansion of totalitarian power in the world, with the growth of its military strength.

In the Senate, in late 1975, we faced the first clear challenge of the Soviet Union in the post-Vietnam period. The Soviet Union invaded Africa with a mercenary crops of Cuban soldiers. I used the word "mercenary" then, to the great horror of many persons. I might point out that President Carter used the same word in his Wake Forest speech just a month ago.

Mr. President, the openly flaunted Soviet aggression in Africa was clearly meant to be a test of our will in the aftermath of the defeat in Vietnam. The Soviets would see whether it would work. I was then the U.S. Permanent Representative to the United Nations and I found myself speaking out against the Russians, saying that, at the very moment when the last vestige of white imperialism was disappearing from the African Continent, suddenly the blue eyes were back, white men with European weapons murdering black men, and were we going to stand for this?

The Africans at that time were pleading. President Kenneth Kavnda, of Zambia was pleading in the private councils of his continent and in his capital, that someone come and stop the Soviets. I remember he called them the plundering tiger and its marauding cubs. "Come and help," they said.

Here in the U.S. Senate it was decided we would not help. Not only would we not fight, we would not even talk, or help others who would fight.

Mr. President, I cannot imagine a more difficult set of readings for some Members of our body, than that which they said in that debate, when one after another they said, in effect, we will not get into another Vietnam, this has nothing to do with the Soviets, just taking the anticolonialist side and they will be sorry they ever got in there.

And we backed down. We said, "They will fight and we will not."

Since that day, Mr. President, none of those speeches which said that we would have nothing to fear from the Soviets would be made on this floor today, I daresay.

But today, the Secretary of State is leaving Washington to fly to Rhodesia, a place an American Secretary of State has never visited. Why he does not want to be in Washington for the success of these treaties, I do not know. But he is leaving. He is going on two hopeless journeys—one to Rhodesia, the other to Russia.

In Rhodesia, he is going to be insisting that Marxist guerrillas armed by the U.S.S.R.—our Secretary of State is going to insist that Marxist guerrillas armed by the Soviet Union—be brought into the Government of Rhodesia, renamed Zimbabwe where a peaceful settlement and black majority rule have at last came about.

Why will he do that? Why will he, a man who was the Deputy Secretary of Defense during the Vietnam war—when fighting Marxist guerrillas was what we were supposed to be doing over there—insist on bringing the Marxists into the Government of Zimbabwe? Why? Because power comes out of the barrel of a gun, and the guns pointed at Rhodesia are Russian.

Every State Department spokesman who comes to Capitol Hill to talk to us says that we have to do this in Rhodesia or the Russians will send the Cubans in. The Russians will fight and, of course, we will not. We will never help anybody who will fight. That is apparently all past.

The talk is that the Russians will only be there a little while, they are just helping out, they will be sorry, and so on, and so on.

Let us all be honest. In northeast Africa, the Russians brought not just a general to Ethiopia but they brought General Petrov, the first time in the history of Russia that a commanding general of the Soviet land forces has commanded forces outside the land mass of the Warsaw Pact countries.

Our foreign policy more and more shows the behavior of a country whose Government thinks itself to be overmatched with respect to military power. And so we have let the Russians threaten us. And now, routinely, the Soviets use force and we do not. Therefore, we accede to them.

It has been observed, and properly, that so many people who oppose these treaties fear that the United States is declining in the world, withdrawing in the world, showing itself as abject in the face of hostility.

Indeed, editorial writers in Western Europe started digging out the old Stockholm peace pledge and denouncing the capitalist bomb the United States is proposing, because it will do away with people, not property. As the distinguished Senator from Georgia (Mr. NUNN), now presiding, has said, there cannot have been as great a victory of Soviet propaganda in the postwar period as the recent reversal of the United States on the neutron bomb.

But, in the main, the victories of the Soviet Union these days are military. They are the plain consequence of force. A government with a greater military power need not resort to psychological warfare. It is still working, so they will not give way, for, obviously, they think we are afraid.

Yes, I say to the opponents of this treaty, I share your concern about how the United States appears in the world, but I cannot see that genuine and proper interests are advanced by an action here which makes us appear to be acting against a weak ally in a manner we would never act against a strong adversary.

I ask, what will the world think of us if we are seen to impose our strength against weak friends, the strength which we would never direct against strong enemies?

It is a serious question. The world will not interpret our behavior as I think we will interpret it. The world will observe that we were not prepared to help anybody else—much less fight. We would not fight at all, we would not resist the Cuban invasion of Africa, a Russian invasion with Cuban armies. We would say that the Cubans are there liberating, or doing this or that, that they will soon be sorry, that they will go away.

I say, it was not just Senators who did this. Some of the most important institutions of the United States, especially the press, were talking, as the New York Times did, of the African quagmire.

When I gave an address on this matter here in Washington on December 2, 1975, Mr. Graham Hovey of the New York Times dismissed what I said as apocalyptic. He said that the idea the Russian invasion with Cubans in Africa poses any alarm or concern to us, why that is just nonsense. It is the sort of weakmindedness that started the cold war in the first place.

We heard the familiar excuses the Soviet-backed faction had more popular support, the other factions could not have much popular support, and so on.

At one time it was noted the United States helped them and we "know" anyone we are with has to be wrong.

We humiliated ourselves then, I think. It was not a question of involving ourselves in another Vietnam experience. It was a question of helping people in the face of Soviet aggression who asked for help. And now that Soviet aggression has become institutionalized. Any time the Soviets threaten to send Cubans, we give in.

But now, why do not the sponsors of these treaties address themselves to this question? We cannot get anywhere by imposing symbolic subjection upon the Panamanians. The Panamanians are our friends. The Panamanians are tested friends. There was a time when the Panamanians could have caused a very good deal of trouble for us in time of war.

There have been three Pacific wars in my lifetime. I joined the Navy when I was 16 years of age, in the middle of the Second World War, and there have been three Pacific wars since. In any event, the Panamanians could have caused us trouble, but they never did; they never even tried. They never took the opportunity even to suggest that they were going to exact a price. They have proved

to be friends. Why vent our fears on them?

If we will not face the Cubans, why do we want to humiliate the Panamanians? I want to be clear. I do not think anyone on the other side, especially not the Senator from Kansas (Mr. DOLE), wants to humiliate anyone. But they are frustrated, they know that this country is growing weaker in the world, day by day, visibly so, capable of being intimidated by the threat of force—not merely from the Russians themselves but even from their Cuban mercenaries. This is not the position of a strong and comforted Republic.

It is true surely, that the opponents of these treaties worry about that, and I share their concern. But I ask: Is their concern directed here to some constructive purpose? Will the world interpret the reservations and conditions we are imposing on this treaty as an act of strength or an act of weakness? Will the world judge that we acted from confidence or that we acted from fear—sometimes even secret fears, not publicly expressed?

Mr. President, neither I, nor any other, can speak for the world; but I have not been without experience in foreign affairs, and I suggest that the world will think we have acted from fear. The world will see in our effort to impose complex and meaningless and unnecessary conditions on our relations with Panama as the reverse of the Angola coin; because the Senate, when it faced the prospect that some serious opposition might be encountered, would have none of it. The Senate stood up and said one thing after another which at that time visibly was not so—that Angola was just having a tribal civil war in central Africa. That is what one distinguished Senator described the Soviet invasion of Angola as—a tribal civil war.

Nobody in central Africa thought it was a tribal civil war. They thought it was a Russian invasion. We would not help the people who would face it. Having shown our fear there, are we not also expressing our fear here? Should we not say we are a confident and decent people? We have a long and good relation with the decent people of Panama. We trust each other. You cannot live together in close relation as long as we have done without knowing whether we are worthy of mutual trust.

This trust is incorporated in these treaties—not in what is not there but, rather, in what is there. Our negotiators never could have raised with any other country in the world the dense mixture of American and Panamanian rights in the Canal Zone that these treaties incorporate, except that our relations with this other nation, this small but important nation, are so good and so sound. Why exacerbate it? Why make Panama the object for expressions of fears which should be confronted on their own?

If there are people in this body—and I hope there are—who are fearful of the U.S. position in the world, fearful of the positions of the free nations in the world, concerned for freedom, let us confront that. Let us not sublimate it by imposing upon Panama—friendly, proven, trustworthy Panama—conditions which are inappropriate to a republic.

We have shown our fear of the Soviet Union. Must we vent it on Panama? Can we not speak to the reality of our situation, which is that we profoundly misled ourselves in Angola?

It would have been one thing, when the Soviets invaded Africa, if we had said, "They have invaded Africa, and we are not going to do anything about it. It is not a place of interest to us, or not enough interest," or, "We will not do it," or, "We cannot do it." Instead, we said, "It is not an invasion. They are helping out anticolonial forces. It is a tribal civil war. They will soon be sorry."

Now they dominate the continent, and our policy is dictated by fear of them.

(Mr. CLARK assumed the chair.)

Mr. NUNN. Mr. President, will the Senator from New York yield for a brief observation?

Mr. MOYNIHAN. I am honored to yield to the distinguished Senator from Georgia.

Mr. NUNN. Mr. President, we have been debating these treaties now for, I would say, approximately 45 days. I am certain of the exact time.

Mr. MOYNIHAN. We have grown older in the service of these treaties.

Mr. NUNN. We have grown older—and wiser, I hope.

I have heard a lot of debate on the floor and a lot of speeches on the subject, both on and off the floor, in Georgia and in other places, but I must say that it has been a real pleasure for me to be in the chair of the Presiding Officer the last few minutes; because I think the Senator from New York has more succinctly and more accurately summarized the issue with which we are faced than has anyone else I have heard—not only with respect to the Dole amendment but also with respect to the overall ratification or rejection of these treaties.

The Senator has done a masterful job of that. He also has done a masterful job of summarizing the fears and frustrations that have been evidenced regarding these treaties which really more appropriately go to the overall legitimate concern about America's role in the world. I feel that the Panama Canal debates have become the symbol or the focal point for that very legitimate frustration that the people of this land have about what is happening to America in the world. I know that those fears and those concerns are felt be very patriotic, dedicated people.

I do not happen to believe, as the Senator from New York has expressed, that this is the appropriate vehicle at which those frustrations should be aimed.

I certainly agree with the Senator's observation about where the real challenge of the Soviet Union came in the post-Vietnam era. It came in Angola. I recall very well the night the U.S. Senate decided we would not give any aid. It was not a question of the United States intervening. It was not a question of the United States sending troops. It was not a question of the United States sending gunboats or airplanes or anything else. It was a question of the United States cutting off aid to our own friends in Africa—not white people, black people.

I recall that night very well, because I observed to some people in private that this decision was going to be looked back on with a great deal of sorrow by the U.S. Senate; because we would reap the harvest of that decision for months and years to come. I said that privately to several friends that night.

I have to say that I think the U.S. Senate that night reflected the mood of the American people at that point in history. I do not think it was a situation in which the Senate voted one way and the American people were of a different opinion. I think we correctly reflected that mood. I did not, because I voted with the minority, those who lost on that issue.

However, I believe we sowed the seeds that we are now reaping, not only in Ethiopia and Somalia but all over Africa as well.

I was briefed the other day by the Central Intelligence Agency in a classified briefing about the number of Cuban troops in the continent of Africa—looking at the map and coloring it red where there were Cuban military forces, supplied and paid for by the Soviet Union. It is astounding what is happening there.

So, the Senator, in my opinion, not only has made an outstanding speech on the overall relationship of the Panama Canal questions to the world. I believe he also has correctly identified the position in which we find ourselves in the world today.

The Senator from New York has more adeptly summarized the issues confronting us on these treaties and the issues that confront the United States in the world than any other remarks that the Senator from Georgia has been privileged to hear in 60 days of debate. I congratulate the Senator for what I think has been an outstanding series of remarks about these treaties and about the U.S. position in the world.

I must say that I also agree with the spirit of the amendment that the Senator from Kansas has sponsored, and I may very well vote for that amendment. The Senator from New York has addressed the overall issues that these treaties present, and the Senator from Kansas has talked about a specific issue on which I may very well agree with him.

So my remarks are not directed toward the Dole amendment but rather toward the outstanding, erudite, and articulate remarks that the Senator from New York has made about the position of the United States in the world today.

I thank the Senator.

Mr. MOYNIHAN. Mr. President, I could not be more moved by the statement of the distinguished Senator from Georgia who has attained to a condition of world eminence with respect to the matter of American military position in the world. I shall perhaps extend his thoughts just a moment, again trying to

speak to those who are fearful of these treaties.

The Senator from Georgia mentioned the debate over Angola, and let me just read some of the things that were said by the majority on that day, and the majority did not include the Senator from Georgia.

When Africans asked our help against the Soviet invasion, one Senator said, "We must heed the lessons of Vietnam." Another Senator said, "If we learned anything from our experience in Vietnam it is the folly of permitting a cold war mentality to lead us to choose sides in an internal conflict in a remote corner of Africa which presents no real threat to our national security or our vital national interests."

That is just 2½ years ago.

Was it an internal conflict? How did a Soviet invasion become an internal conflict that did not concern us anyway?

Yet today the Secretary of State is flying to an African country to help impose an incredible settlement there, for fear of Soviet intervention into that "internal conflict."

Another Senator had said that all the Russians were doing was supporting "anticolonialism."

The most flagrant, bloody, imperialistic act of our age, sending mercenary troops into Africa, murdering Africans, white troops murdering Africans and it was described as supporting anticolonialism. Yet another Senator said that if we in any way gave support to the anti-Soviet groups, we would be siding with repressive regimes in southern Africa, and so on.

My time is about to expire. May I just say, in conclusion, to the opponents of the treaties, that we have heard their voices and we share their concerns.

The PRESIDING OFFICER (Mr. NUNN). The time of the Senator from New York has expired.

The Senator from Kansas.

Mr. DOLE. Mr. President, the Senator from Kansas has 8 minutes remaining, is that correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. DOLE. Let me say I share the comments and views expressed by my colleague from Georgia with reference to the statement made, and I really believe the Senator from New York has performed a service. Maybe my amendment has served some purpose in giving the Senator a vehicle upon which to express himself and I think the views of many in this Senate. I would not disagree that perhaps we are pointed in the wrong direction, but I think there is this fear, not fear of the Panamanians—they are our friends, as the Senator from New York has pointed out. We hope they remain our friends. We seek that continued friendship. But there is this fear based on the very thing the distinguished Senator from New York has pointed out:

As I measure the distance from Havana to Panama City, it is not quite as far as from Havana to all these places in Africa, some 4,000, 5,000, 6,000, 8,000, 10,000 miles, where they now have Cuban troops.

There is this fear based on a record or lack of a record by this administration, and going back even into the last administration, again not the fault of President Ford, but the fault of some who stood on this floor and made the very statement the Senator has referred to with reference to Angola.

So I suggest that the Senator is absolutely correct. There is this fear that we will turn tail and run.

The Senator from Kansas tried to take some positive initiative by introducing a resolution several weeks ago suggesting we should endorse the agreement reached in Rhodesia by moderate leaders, and we were met with silence by the administration. There was a counter-resolution introduced that we should reject the proposed settlement.

So we find it very difficult. This Senator was very disturbed last year when we were in such a rush to normalize relations with Cuba, and we had a long debate on this floor. We had a vote on an amendment, and the amendment prevailed. Then the leadership undertook to water down the amendment so it was meaningless. It became the sense of the Senate. And some of us feel very strongly there should not be this rush to normalization as long as they are exporting communism.

I must agree with the Senator from New York. It is hard for this Senator to understand where we are. We always seem to be compelled or propelled, or whatever, trying to embrace the Marxists and bring them into an agreement as we are doing now in Rhodesia.

But the seeds were sown on this floor. The seeds were sown on this floor in the Angola debate when we turned our back on our friends and said, in effect, oh, I remember all the rhetoric, and I guess as it has been pointed out the results are now becoming known, but there is this fear. Maybe it is not justified. Maybe we do not understand. Maybe the opponents of the treaty did not understand.

But I say that is one of the reasons for some resistance to the treaty. It is certainly not the Panamanian people. But who knows what may happen next year or the next year with the record we have made in this administration? General Torrijos acknowledges close friendship with Castro. So I suggest that, for whatever it may be worth, there is that problem and perhaps if we had a strong policy, perhaps if we had said no, or perhaps if we had said yes, or said something in some part of the world, had we stood up to the Russians even in the Belgrade Conference on Human Rights, maybe we would have backed away from the debate on the treaty.

So I just conclude my remarks by suggesting that I hope when the Panama Canal debate is finished—and we have had almost enough—we could perhaps debate the questions raised this morning by the distinguished Senator from New York on a bipartisan, nonpartisan basis, to discuss the American interests and the American role, or lack of American interests, or lack of American role.

I just suggest that, as I said earlier, in this amendment, because of the stories in the last few days, I tried to be very careful in my remarks which are not designed to upset the Panamanian people, not designed to frustrate what may happen if the treaties are passed, but designed to bring about some orderly transition and designed to protect the rights of Americans.

That seems to be a responsibility that we have. Maybe again it is not justified. Maybe those fears or those concerns about the rights of Americans are ill-founded.

I assume, as the Senator from New York has pointed out, the Panamanian people have the capability, the potential, and the concern, and there will be no difficulties. I hope not.

But it seems to me that it is a matter that deserves consideration.

The Senator from Kansas has tried not to offer too many amendments. I must say this is not one that I consider to be a major amendment, but I offer it to point up the concern about the transition and whether or not there will be time enough, if there is this mass exodus of Americans, for the Panamanians to take control and to operate the canal and do all the other things they will be required to do if the treaties are ratified.

Mr. President, I think the time has about expired. The Senator from Kansas is willing to yield back the remainder of his time and accept a voice vote. I suppose there will be a tabling motion.

I yield to the distinguished Senator from Arizona.

Mr. GOLDWATER. Just a comment. When I was last in Panama I asked about the subject of pilots, and this is most interesting, and we have not talked about it during the course of this debate. There are 200 pilots who guide the ships through the canal. Of these there are only two who are Panamanians. Now, that surprised me because I thought Panama, as a seafaring nation—they are small boat people, but they did not look on themselves as seafaring although there are countless ships under the Panamanian flag.

The PRESIDING OFFICER. The Senator from Kansas time has expired.

Mr. DOLE. Mr. President, I ask unanimous consent that we might proceed for 2 additional minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. GOLDWATER. I will hurry it up.

To qualify a man to be a pilot on the Panama Canal requires, No. 1, that that man hold a master's ticket. Now, a master's ticket on the sea is not something you get overnight. I would say you spend at least 10 or 12 years, and then with that master's ticket it takes 8 more years to train you to be a pilot on the Panama Canal, and there are only 2 Panamanians out of the 200.

Yet I have heard some rumors in the last several days that American pilots on the Panama Canal may come home to

express their dislike and distrust of this treaty. This is just another point that the Senator raised that I think we should be aware of.

I have quite a bit of interest in this because I have my own captain's ticket—not master's ticket—and it took me 15 years to get it. You are not going to find an overabundance of masters beating their way down to Panama even though their pay is very, very good. This is another point I think we have to consider when we are discussing whether or not that canal can operate, and it is one of my major worries.

I thank the Senator.

Mr. DOLE. I thank the distinguished Senator.

I have indicated to the leadership that I am willing to accept a voice vote. I think I know what the outcome will be. We have made the case and, I assume, there will be a motion to table or will it be up and down?

Mr. CLARK. Up and down.

The PRESIDING OFICER. Is all time yielded back?

Mr. DOLE. I yield back the remainder of my time.

The PRESIDING OFFICER. All time is yielded back, the question is on agreeing to the amendment of the Senator from Kansas. (Putting the question.)

The amendment was rejected.

Mr. CLARK. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. MOYNIHAN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. Are there further amendments to article X?

AMENDMENT NO. 97

Mr. SCHMITT. Mr. President, I will be asking unanimous consent to consider amendment 97 which goes to articles II, III, XI, and XIII, and I believe there is no objection to the consideration of that amendment.

The PRESIDING OFFICER (Mr. PAUL G. HATFIELD). Without objection, it is so ordered.

Mr. SCHMITT. Mr. President, I ask unanimous consent that Senators THURMOND, GARN, LAXALT, DOLE, GOLDWATER, and DOMENICI be added as cosponsors to amendment 97.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SCHMITT. Mr. President, this amendment is the so-called cemetery amendment. It is a matter that has been delt with previously by this body with respect to the Neutrality Treaty. However, I will attempt to develop the arguments that it has been dealt with inadequately.

Mr. President, it seems that in the hurry to conclude the negotiations on the two treaties important issues were either not fully considered or not considered at all. One of the issues not considered during the negotiations with the Republic of Panama is that of the American cemeteries in the Canal Zone. That this issue has been brought to the attention of the Senate at all is due to the work of various veterans organizations, and whose work I commend today.

I understand the Veterans of Foreign Wars wrote to Secretary Vance about 5 months ago about this issue. It has been brought to my attention that the VFW is still awaiting a response from the Secretary.

The proponents of these treaties, the Neutrality Treaty and the Panama Canal Treaty, have not been willing to admit that the treaties do have some shortcomings, and have voted down every amendment proposed rather than examining that amendment on its merits. This is, of course, with the exception of the so-called leadership amendments to the Neutrality Treaty.

In effect, they have been saying that the wisdom of the administration and of the previous administrations is greater than the collective wisdom of the Senate, and, therefore, should not be questioned.

Various justifications for this position are given but, fundamentally, I think that is a correct statement of the case.

The amendment before us deals not with controversial issues upon which there is considerable disagreement but with an issue that has considerable support in this Chamber and among the American people.

Mr. President, the amendment, as I said, does not deal with the issues that have polarized us in this body over the last 2 months, but with an issue that I believe most, if not all, Members of this body and of Congress agree is an issue and must be resolved in one way or another.

The amendment, Mr. President, deals with the moral obligation of this Nation to the citizens who have in the past served this Nation in various capacities within the Panama Canal Zone. In the Canal Zone there are buried in two cemeteries 909 veterans and 3,993 civilians who were U.S. citizens. About 450 of the military personnel who are buried there were war veterans. These individuals were in part responsible for the construction, operation, and defense of what, up until now, has been a vital American waterway and, in fact, a vital international waterway, a truly international public service provided by this country in cooperation with other nations.

These individuals who are buried in the Panama Canal Zone dedicated their lives to serving the United States. This great country at least has an obligation to guarantee that their final resting place will be maintained properly and protected from desecration.

Mr. President, as I stated, the negotiators of this treaty did not even consider the issue of the American cemeteries.

Richard Wyrough, Deputy Director and Senior Adviser for Treaty Affairs in the State Department, testified before the House Veterans' Affairs Committee, Subcommittee on Cemeteries and Burial Benefits, on March 1, 1978. Portions of his statement are as follows:

I was a member of the United States delegation that negotiated the treaties, and I must say that it is a matter which was not specifically addressed during the negotiations. We first examined the question sometime after the treaties were signed in September 1977 as we began to turn our attention to the details of planning their eventual implementation.

Mr. President, I would add parenthetically I hope that is only partly true, that the details of planning the eventual implementation of the treaties were only discussed after the treaties were signed. I am afraid from what we have seen in the discussion of these treaties that that may be all too true in many points of the treaties, not just the question of the cemeteries.

I continue the quotation:

The Administration has explored in a preliminary way several possible solutions to the problem. We have not yet, however, approached the Panamanians with our ideas, although they are aware of the matter.

As Assistant Secretary Blumenfeld mentioned, our immediate concern has been with Mt. Hope cemetery, since it will be one of the properties turned over to Panama when the treaties are implemented. One option we have considered, inasmuch as Mt. Hope is actively being used by Panama today and would presumably continue to be so when it reverts to actual Panamanian control, is to negotiate an agreement for the maintenance of the American sector of the cemetery. Possible problems in connection with this option include funding, assuring proper American oversight responsibilities of the maintenance work, and assuring general access to American gravesites for relatives and friends of those who are interred in the cemetery.

Continuing with Mr. Wyrough's comments:

A second option is to offer a proposal to the next of kin of the deceased Americans buried at Mt. Hope whereby the United States Government at its expense would disinter the remains, transport them to the United States and reinter them at a site chosen by the relatives. All other costs associated with the move, such as purchase of the burial plot, headstone, etc., would be borne by the next of kin. Apart from the question of where to find the funding for our Government's portion of this proposal, there are other problems, such as the difficulty in locating the next of kin, what to do with the remains of those not claimed by next of kin, making arrangements for next of kin who claim the remains, but cannot afford the costs involved, etc.

As you can see, the problem is a thorny one, and the possible solutions I have discussed are not without their drawbacks. However, as Assistant Secretary Blumenfeld mentioned, we do have a proposal to put before you which we think presents a feasible approach to the matter. In closing, I should like to mention that the matter is not, as I mentioned earlier, something that we have discussed in detail with the Panamanians. While we do not anticipate any particular difficulties, we cannot be certain at this point as to their reaction.

Mr. President, I wish to stress Mr. Wyrough's statement that the cemetery issue "is a matter which was not specifically addressed during the negotiations." Yet, it seems that there is agreement by the Department of State and both proponents and opponents of these treaties that the fate of the American cemeteries is an important issue. These treaties are deficient in that they do not address this issue. If this issue was not addressed during the negotiation, I wonder how

many other equally important issues were not addressed.

Mr. President, it is important that this treaty be amended to provide for the continued maintenance of the American cemeteries. The distinguished Senator from South Carolina (Mr. THURMOND) offered a similar amendment to the Neutrality Treaty. While I supported that amendment, I feel that it is the Panama Canal Treaty that should be amended to provide for the protection of the final resting place of our citizens. It is this treaty which turns over the land, including the American cemeteries at Mt. Hope and Corozal, to the Republic of Panama.

My amendment, if adopted, would not change the treaty substantially. The land would be turned over to the Government of Panama on schedule. The amendment would only provide that the Government of Panama would grant the United States in perpetuity, without charges or taxation, the use of the American sector of the cemetery at Corozal. The remains buried at Mount Hope would be disinterred and reinterred at Corozal or at a National Cemetery in the United States depending on the wishes of the next of kin.

While proponents of the treaties argued that they were in agreement with this concept, they voted against Senator THURMOND's amendment. Instead, the Senate adopted a reservation offered by the distinguished Senator from West Virginia (Mr. RANDOLPH). I supported this reservation, but I do not feel that it can adequately protect the interests of the American people as it relates to our citizens buried in the Canal Zone. There are now many different interpretations of the usefulness of reservations to these treaties.

This reservation, at best, obligates only our Government to undertake negotiations to accomplish what would be accomplished under this amendment. Panama may not wish to so negotiate. What if no agreement can be reached if negotiations are undertaken? What will be the fate of the cemeteries?

Mr. President, there are some very serious questions that arise with regard to this situation. First, the issue of the amendment process. We have been told by the administration and the proponents of the treaty that it would be wrong to amend the treaties because that would entail another plebiscite in Panama. I submit that it is not the obligation of the U.S. Senate to concern itself with plebiscites in Panama. We are elected by the American people, not the Panamanian people. We have an obligation to the American people to make sure that these treaties represent the best interests of the United States. The inconvenience which the Government of Panama would face should a plebiscite be needed is not our concern, and it should not be the determining factor in our voting at any rate.

Mr. President, it is not that I think we should not find a balance between the interests of the United States and the interests of the Republic of Panama, the Western Hemisphere nations, and all the nations of the world on the issue of the Panama Canal Treaty. I think I have been very clear on that point in the amendment I offered to the Neutrality Treaty some weeks ago. However, in the case of the American dead, there is no question whose national interests are paramount.

A question about the need for a plebiscite in the Republic of Panama has already been raised. The Neutrality Treaty has been amended by the leadership amendments. Yet, the administration maintains that no new plebiscite is required in Panama. Serious legal and constitutional questions in Panama have been raised with respect to this interpretation, and have been more than buttressed by the efforts of many Senators, including those of Senator STEVENS in this Chamber.

On the other hand, the proponents have been willing to accept reservations and understandings to the resolutions of ratification. Senator RANDOLPH's reservation about the cemetery issue is an example. The proponents have argued that the reservation is binding on the Republic of Panama, but also have argued that since it does not change the treaty, no new plebiscite is required. I fail, Mr. President, to understand this particular rationale. Maybe I was brought up in too logical an environment to understand it. Either the reservations are binding and change the treaties and thus require a plebescite, or they do not require a plebiscite, since they do not change the treaties and are not binding. History will not allow the proponents to have it both ways.

Another important question is whether the Panamanian Government will accept this approach. The question involved not just this Government, but future governments. To quote Mr. Wyrough again, he stated:

> I should like to mention that the matter is not, as I mentioned earlier, something that we have discussed in detail with the Panamanians. While we do not anticipate any particular difficulties, we cannot be certain at this point as to their reactions.

I suspect that the administration also did not anticipate any "particular difficulties" when it decided to accept the DeConcini reservation to the Neutrality Treaty.

AMENDMENT NO. 97

Mr. President, I call up my amendment No. 97 and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The second assistant legislative clerk proceeded to read the amendment.

Mr. SCHMITT. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

> Before the period at the end of paragraph 2 of article II, insert a comma and the following: "except that the provisions of this Treaty shall not terminate with respect to such part of Corozal Cemetery as encompasses the remains of citizens of the United States of America.".
>
> At the end of the first paragraph of article III, add the following: "The Republic of Panama grants in perpetuity, without charge or taxation, to the United States of America the use of such part of Corozal Cemetery as encompasses the remains of citizens of the United States of America, which cemetery shall be administered by the American Battle Monuments Commission.".
>
> In the first paragraph of article XI, insert ", except for such part of Corozal Cemetery as encompasses the remains of citizens of the United States of America," immediately after "the former Canal Zone.".
>
> In the text above paragraph 2(a) of article XIII, immediately after "all real property," insert "except for such part of Corozal Cemetery as encompasses the remains of citizens of the United States of America,".

Mr. SCHMITT. Mr. President, should the Senate adopt this amendment (No. 97) there would be no question as to the future of the cemeteries; none whatsoever. Either a plebiscite would be held to agree to our position, or we would retain possession and control of the cemetery and the Canal Zone under the 1903 treaty, as amended, until other arrangements can be negotiated.

I hope other arrangements will be negotiated, and that this whole controversy can be resolved through a new set of negotiations dealing with all the issues, not just the cemetery issue, and with all interested parties involved.

However, Mr. President, if the administration feels that the Government of Panama will be willing to accept this proposal, the proposal embodied in amendment 97, then there is no reason for not including it in the treaty as an amendment. It seems that there is a doubt that Panama will be willing to go along with us on this matter.

There seems to be a fear of another plebiscite. I can certainly understand some of that fear with respect to the present Government of Panama. I do not understand it, and I am afraid I never will understand it, with respect to our own Government, a government which prides itself on being a representative democracy.

If what we have done here is not acceptable to the Panamanians, then we should find out now so that further negotiations can take place. It can only worsen the situation should disagreements arise later on this issue of cemeteries or on any other issue concerned with the treaties.

The problem with the Randolph reservation is that even if Panama accepts it as binding, they are compelled to negotiate with the United States. There is no provision in the reservation stating that an agreement must be reached, nor could there be any such provision.

On December 31, 1999, the United States must turn over the present Canal Zone to the Government of Panama, even if no agreement on the cemetery issue is reached, should this treaty be ratified without the amendment I and others are proposing today.

This is unacceptable to me and New Mexicans, and I believe to the majority of the American people, particularly those who have served their country in the military forces and in the Canal Zone.

Mr. President, I urge my colleagues to carefully consider our moral obligation to those who participated in the construction, operation, and defense of the Panama Canal and who are now buried on the land they worked for and defended, or who are next of kin of these same individuals.

Only by amending the treaty can we be certain that their gravesites will receive the dignity they deserve, the dignity which we have provided all other cemeteries containing American dead.

The reservation adopted by the Senate to the Neutrality Treaty, the Randolph reservation, is not a guarantee that these gravesites will, in fact, receive the dignity they deserve. Serious questions about the legality of the reservations have been raised. The administration's interpretations of international law with regard to reservations have not been clear. In fact, they have been contradictory. We cannot allow this issue to fall by the wayside due to misinformation or misunderstanding.

Mr. President, I urge the passage of this amendment. That concludes my opening statement. I will be happy to yield to the majority leader.

Mr. ROBERT C. BYRD. I thank the distinguished Senator.

Mr. President, I ask unanimous consent that the vote occur with relation to the amendment by Mr. SCHMITT at 1:30 p.m. today. I understand this has been cleared all around.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. I thank the Senator for yielding.

Mr. SCHMITT. Mr. President, I reserve the remainder of my time.

Mr. CLARK. Mr. President, I yield to the distinguished Senator from Vermont.

Mr. STAFFORD. Mr. President, I ask unanimous consent that I may proceed, as in legislative session, for not to exceed 1 minute.

The PRESIDING OFFICER. Without objection, it is so ordered.

## THE IMPORTANCE OF THE PUBLIC BUILDINGS COOPERATIVE USE ACT

Mr. STAFFORD. Mr. President, the Committee on Environment and Public Works last week conducted an oversight hearing into implementation of the Public Buildings Cooperative Use Act of 1976. This law is important. It increases the flexibility of the General Services Administration to meet Federal office space needs, while making Federal buildings more compatible with the community.

A major aspect of this law is its authority allowing GSA to acquire and convert older buildings into new Federal office space. This recycling opportunity has received wide attention lately in the architectural community. In fact, a majority of the AIA's recent design excellence awards were given to such conversion projects. Mr. President, I ask unanimous consent that an article on these awards for the recycling of older buildings be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARCHITECTS' AWARDS

(By Wolf von Eckardt)

Old buildings adapted to new use outnumber newly designed buildings eight to seven among the 15 winners of national honor awards for design excellence chosen by the American Institute of Architects this year.

This is in keeping with the still growing trend to "recycle" ornate, old structures that have outlived their original purpose rather than tear them down. The trend is due to a change in public taste and the fact that new construction has become just as expensive as renovation.

The seven-member AIA jury, headed by George M. Notter Jr. of Boston, said it was not concerned with authentic restoration so much as "excitement derived from something really special" in the design of the recycled building

The greatest popular and commercial success among the recycled award winners, no doubt, is the Faneuil Hall Marketplace in Boston. Architects Benjamin Thompson & Associates turned the deteriorating historic wholesale market into a lively "people place" which is attracting a million people downtown every day.

Among the other awarded recycling jobs are: an old school converted into the Center Stage theater in Baltimore (James R. Grieves, architect); the old Carnegie mansion converted into the Cooper-Hewitt Museum of Design in New York City (Hardy Holzman Pfeiffer, architects); a burned-out factory converted into a luxury apartment house in New York City (Bernard Rothzeid, architect); and an old police station converted into a museum of modern art in Boston (Graham Gund, architect).

A Washington, D.C., winner is Hugh Newell Jacobsen for transforming a Gothic Revival cottage in Chevy Chase into a modern house suitable for a modern art collection. Jacobsen has won 12 national AIA awards.

Among the new buildings honored are Skidmore, Owings & Merrill's addition to the Art Institute in Chicago and the late Louis L. Kahn's Yale Center for British Art—quite possibly the late master's best work.

Mr. STAFFORD. During last week's hearing, Mr. President, the committee received many thoughtful and valuable statements. But one of our witnesses—R. Randall Vosbeck of the American Institute of Architects—did a particularly outstanding job.

His testimony addressed in a clear and succinct way many of the issues, focusing on where the Federal buildings policy should be going. Because I believe it is a statement and analysis that should interest each Member of the Senate, I ask unanimous consent that Mr. Vosbeck's excellent testimony also be printed in the RECORD.

There being no objection the statement was ordered to be printed in the RECORD, as follows:

A STATEMENT BY R. RANDALL VOSBECK, FAIA

Mr. Chairman, my name is Randall Vosbeck, FAIA, member of the Board of Directors and Chairman of the Government Affairs Commission of the American Institute of Architects and a practicing architect in Virginia. Accompanying me today is David Caney, Director of Congressional Liaison on the Institute's staff. On behalf of the American Institute of Architects, the national society for the architectural profession, I would like to express our appreciation for the opportunity to address this committee on the efforts of the federal government to implement the Public Buildings Cooperative Use Act.

As you may know, the AIA was a strong and enthusiastic supporter of this particular legislation. In May, 1975 we testified in support of the bill before the Senate Subcommittee on Public Buildings and Grounds. We stated then, and we feel now, that the Act provides a common sense approach to the conservation of the nation's significant buildings and to greater and more attractive access to federal buildings by the general public.

Enacted in October, 1976, the Public Buildings Cooperative Use Act held the promise of federal leadership in the preservation and use of suitable buildings of historic, architectural or cultural significance. Additionally, the concept of multi-use was authorized. The location of commercial, cultural, educational and recreational facilities in federal buildings was seen as a means to promote a physical public involvement in the environment of government, reflecting a positive federal participation in local communities' activities and development. Adaptive use and preservation in-use make up the framework for the protection of our national building heritage while at the same time conserving the energy and materials expended in the past. The rich, sound and reusable historic fabric of our built environment can provide the federal government with good facilities and a tangible demonstration of its commitment to conservation and revitalization. Successful examples of such efforts exist in both the public and private sector. They vary from probably the best known example of adaptive use in the United States, Ghiradelli Square in San Francisco, to the lesser known but equally successful state office building in Montpelier, Vermont, which was reconstructed from an old hotel.

All too often, government buildings have been edifices housing the bureaucracy without regard or place for public interaction. People approach government buildings only when they must. More often they simply trudge past. The strong emphasis of the Cooperative Use Act on the involvement of the public through access and use sought to change this.

After one and a half years what has been the level of activity under the Act? Has the promise of change in the act been fulfilled? The General Services Administration (GSA) has presented its analysis of accomplishments pursuant to the provisions of the Act in the September, 1977 "Implementation Progress Report". Of the five projects selected for presentation in the report, two, the Old Post Office, Washington, D.C. and the Post Office-Custom House, St. Louis, Missouri were developed prior to the effective date of the Act. The other three examples are still in various stages of preliminary development. The number of government leases in historically, architecturally, or culturally significant buildings executed to provide for federal space needs has been relatively few to date.

With regard to long term multiple use activities in existing buildings, GSA states the number of opportunities to provide such activities are somewhat limited because of the lack of suitable space. As stated in that report, by far the greatest area of regional activity implementing the Act has occurred in the occasional use category. However, GSA admits that the full extent of the opportunities available in this one area appear to be virtually untapped. Reviewing this report, we think that the level of activity under the Public Buildings Cooperative Use Act can fairly be described as disappointing.

There seem to be two major impediments to the full realization of the objectives of the Act. The first involves the Advisory Council on Historic Preservation, (ACHP). The Public Buildings Cooperative Use Act has

given the Council an integral role to play. Under the statute, the Council is responsible for identifying the historically, architecturally and culturally significant buildings in a particular region and for preparing reports recommending to the federal government those buildings which may be suitable for the specific federal needs. GSA would also use the results of the regional identification process to compile annual building surveys to be used when considering short term lease arrangements to satisfy government space requirements. Responsibility for this national identification and reporting process can only be successfully met by proper organization and funding. Due to budgetary and organizational constraints, the ACHP has had great difficulty in meeting its statutory responsibility. Currently, ACHP has allocated one staff person at one-half time to provide GSA with all the surveys and reports demanded by the Act. At the appropriation hearings for fiscal year 1979, the Council requested no additional funding in its own name for this purpose and stated that it anticipates continued staffing at the present level. In light of the scope of its responsibilities, the inadequacy of the current resources available for ACHP's efficient participation are quite clear.

The other impediment to the effective accomplishment of the goals of the Act is the GSA Implementation Guidelines issued in April, 1977. The guidelines provide direction through policy statements and feasibility standards for the determination of "suitable" government action in carrying out this new law. The major emphasis of the guidelines with regard to preservation and multi-use is on new or newly acquired buildings. Given GSA's very modest level of activity in this area, new construction or acquisition proposals developed under the requirements of the Cooperative Use Act will only have an impact over a very long term. The most immediate action leading to the successful implementation of the Act could be the application of the multi-use program to existing federal buildings. But the guidelines now require that when public access space becomes vacant in federal buildings, multi-use activity can be considered only where there is no identifiable federal space need. Given the nature of the bureaucracy, such an eventuality will be rare indeed. Additionally, in order for a federal agency to prevent its relocation out of a public access area, it need only indicate that the relocation would result in an undefined "significant impairment" of that agency's operations. Both of these criteria are excessively vague and therefore lend themselves to interpretations that could frustrate the objectives of the Act. In their present form, we are afraid the guidelines will not facilitate multi-use programs in existing buildings.

We at the Institute believe that both of the above impediments to the successful implementation of the Public Buildings Cooperative Use Act can be eliminated. To increase the abilities of the Advisory Council on Historic Preservation, new staffing, organization, and funding arrangements must be provided. We understand that ACHP and GSA are now in the process of negotiating a contract for services required by the Act and that some funding accommodation has been reached for fiscal year '79. This is an appropriate and positive first step. As a small independent agency, ACHP needs a stable staffing and funding atmosphere in order to concentrate on its responsibility to deliver identification surveys and feasibility reports. Without this stability and security, their facet of the program will continue to hobble full implementation of the Act.

A more definitive and practical outline of agency efforts to promote multi-use activities must be developed. The purpose of the Act is clear and GSA's guidelines to facilitate that purpose must reflect the strong legislative emphasis on federal agency responsibility for its fulfillment. The guidelines should not allow agency complacency with existing space use or unrealistic space need projections to dictate the feasibility of multi-use opportunities. In order to prevent such a result, a rating system for space allocation and agency function relocation should be developed. Such a rating system could weigh agency space needs against the directive of the Act to provide greater public use and access. We believe that, in certain situations, the objectives of the Act demand that multi-use facilities can and should be given priority over agency functions in public access areas. At the least, the Act would seem to require that multi-use space be placed on an equal footing rather than last in line when assigning space.

If I may Mr. Chairman, I would like to make a side comment on an area not precisely pertinent to today's hearing but which may be relevant. I believe the committee, in dealing with this whole area of public buildings and federal space needs, could profitably re-examine the long term leased space program. Certainly, the federal government needs the flexibility to lease space on an emergency basis or for largely commercial convenience reasons, such as branch post offices in large office complexes. But reliance on leased space for long term base operations offices creates a number of economic and design problems and may generate pressures against the very purposes of the legislation we are discussing today.

First, GSA's leasing procedures, as we understand them, essentially call for a form of limited competitive bidding on a dollar per square foot basis for office space within a geographic area. This puts a tremendous emphasis on low first cost construction, often on cheap outlying land that lacks transportation, proximate housing and other amenities. Little consideration is given to life cycle costs, which may be of great importance in a lease-purchase arrangement, nor to the fact that the costs of transportation and other amenities such as food provision, ancillary services, housing, utilities and even basic items such as fire and police protection, are shifted to local governments and individuals. This point was brought out in the President's recent urban policy statement.

Second, from a design standpoint the long term lease program creates confusion and disparity as to who the designer's client really is. The person actually paying the architect's bill, the builder-developer, has a very limited interest in the building beyond maximum space for minimum cash outlay. The day to day user of a leased building, the federal government, has little leverage in the design beyond basic code compliance and final acceptance. And the public is left out of the picture altogether.

GSA's implementation guidelines for the Cooperative Use Act give extensive attention to historic preservation within the leased space program, as well they should be given the limited budgets for out-right acquisition and new construction. But we cannot expect much actual implementation here because of the practical disadvantage the guidelines place on federal leasing of historic or architecturally significant buildings. Under the guidelines, historic structures will have to compete on a strictly equal footing in terms of dollar costs with the least expensive speculative proposals. Since historic structures are, almost by definition, in urban centers, their land cost alone will preclude builders from trying to remodel them for federal use on the slim chance that they will be cost competitive. In addition, the guidelines specifically state that no relaxation in federal codes and standards will be made to accommodate historic preservation or adaptive use, apparently limiting the potential pool of candidate buildings of historic or architectural merit to those that miraculously meet or can economically be made to meet 1978 codes. This is a more stringent approach than almost any of the building codes used by local governments.

We would have hoped that GSA would have given historic preservation and adaptive use some differential edge in the leased space procedure to compensate for the indirect advantage federal use of these structures offers in energy conservation, urban rehabilitation, and in cultural richness. We realize that GSA is under heavy political and budget pressure to satisfy federal space needs through the long term lease program. Acquisition of space through very low market level leases has, on paper, a gratifying low short term budget impact. I suspect that this may well be false economy when all the societal and life cycle costs are factored in. In short, Mr. Chairman, it does us all little good to be here discussing greater public access to federal buildings or how these buildings can be used to enhance the urban environment and achieve better design quality, when GSA has to figuratively whip federal agencies and civil servants into even working in buildings put up their long term leases.

Mr. Chairman, I want to thank you for this opportunity to testify and reiterate our support for the Public Buildings Cooperative Use Act. We would be glad to try and answer any questions you may have at this point.

Mr. STAFFORD. Mr. President, I yield the floor.

## THE PANAMA CANAL TREATY

The Senate continued with the consideration of the treaty.

Mr. CLARK. Mr. President, I rise in opposition to the pending amendment for two principal reasons. First of all, it seems to me that the amendment is quite unnecessary for reasons I have tried to explain; and, second, that it does not accomplish any more, it seems to me, than we have already accomplished by the so-called Randolph reservation in the Neutrality Treaty.

The amendment would seek to accomplish, in effect, what the Senate has already accomplished in reservations Nos. 1, 2, and 3 to the resolution of ratification to the Neutrality Treaty.

These Randolph reservations were, of course, approved by the Senate by a vote of 96 to 1. As the distinguished Senator from New Mexico has indicated, he was one who voted for that, and one of the sponsors, as I was.

This requires the United States and Panama to negotiate for an agreement which would provide for the American Battle Monuments Commission to administer that part of the cemetery encompassing the remains of U.S. citizens. The conditions include flying the U.S. flag over the cemetery. The reservations also require the President to arrange the removal of remains of U.S. citizens presently in the Mount Hope Cemetery prior to the entry into force of the treaty.

Additionally, the reservations, since they were passed, require the United States, during the first 30 months of the treaty, to transport the remains of U.S.

citizens from the Canal Zone cemeteries to the United States, if desired by the nearest living relative.

Since these reservations are attached to the Neutrality Treaty, these provisions would remain in effect permanently, whereas the proposed amendment, the pending amendment, would become part of the Panama Canal Treaty which ends on December 31, 1999.

It seems to us that it is a more encompassing amendment, the reservations which were adopted in perpetuity, than would be the case with the Senator's amendment.

It is therefore questionable to us whether the rights which the amendment seeks would extend beyond the end of this century.

This possible conflict in interpretation could jeopardize the rights already set forth by the Senate in the reservations to the Neutrality Treaty convincingly passed. We have every reason to believe that the Panamanians indeed will accept this reservation.

For these reasons, we oppose the proposed amendment.

In short, Mr. President, what I am saying is just this: We have already agreed to the Senator's amendment in the so-called Randolph amendment by a vote of 96 to 1, reservations 1 through 3 of the Neutrality Treaty. This guarantees the rights of those who the Senator from New Mexico is concerned about. They have been dealt with in perpetuity.

I say finally that the Senator would get no more assurance from the Panamanians through an amendment than through a reservation. Each process is the same, insofar as its standing in law, and each process is the same insofar as the fact that the Panamanians would have to accept it. His amendment would become a part of the treaty only if Panama agreed to the amendment. The same is true of the Randolph reservation. Neither of them can stand alone. Both sides must agree.

It seems to me that we accomplish no more with this amendment than with the Randolph reservation. Each of them must be accepted by the Panamanian Government. So we see, really, no reason for the amendment, and perhaps a bit of a weakening of the issue by actually limiting the period of its effectiveness to the end of the century; whereas, the approved reservation on the Neutrality Treaty, in fact, assures it in perpetuity.

Mr. SCHMITT. Mr. President, just so we clear up the last point first, if the Senator will look at the portion of amendment 97 that goes to paragraph 2 of article II, we have taken careof that particular problem by adding:

except that the provisions of this Treaty shall not terminate with respect to such part of Corozal Cemetery as encompasses the remains of citizens of the United States of America.

That would provide for this aspect of the treaty to be in force in perpetuity.

Also, Mr. President, I should like to ask unanimous consent for Senator RANDOLPH, the sponsor of the resolution to the Neutrality Treaty, to be added as a cosponsor to this amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SCHMITT. Mr. President, the Senator from Iowa also said that the process by which amendments and reservations become effective is the same. Maybe I misunderstood the Senator, but I believe that it is correct to say that an amendment to a treaty is binding on all parties to the treaty, whereas a reservation is binding only on one party. I think that is sound international law. I am not a lawyer, but I believe it is.

I am also intrigued by the Senator's comment that Panama must agree to reservations and amendments. The only way that I am aware, under Panamanian law, that a change to a treaty can be agreed to is through a plebiscite. Is the Senator suggesting that all the reservations that we have added to the Neutrality Treaty and may add to the Panama Canal Treaty must be agreed to by a Panamanian plebiscite?

Mr. CLARK. The Senator will be glad to respond.

First of all, what I indicated, of course, was that whether we pass an amendment, as the Senator is proposing, or a reservation, as has been adopted by the so-called Randolph reservation, in either case, the Panamanians must, through their own procedures, accept either of those for them actually to become effective in international law.

In other words, we cannot simply pass any amendment that we please and, therefore, bind the Panamanians by our amendment. It is quite true that if we pass an amendment of this kind, which has not been previously discussed and negotiated, it would be my feeling that there would have to be a plebiscite. But certainly, in whatever procedure they use, whether it is by plebiscite or some other process, we cannot dictate to the Panamanians which amendment to accept, or which reservation. That is their decision. The same is true of a reservation.

All I am saying is whether we do this by reservation, as Senator RANDOLPH has done, or whether we do it by amendment, as the Senator from New Mexico proposes, in either case, this is simply an expression of our position. The Panamanian Government must accept the amendment through a plebiscite. The Panamanian Government must accept the reservation through their own procedures. I think something less than a plebiscite. But in either case, it has to be accepted.

In other words, we cannot enforce our view on the other party to the treaty. They both have exactly the same standing in law. Both must be agreed to by the Panamanian Government, and one gains no more by one process than by another in the eyes of international law or as we or the Panamanians would view it.

Mr. SCHMITT. I appreciate the Senator's remarks. I agree that either a reservation or an amendment, to be effective, must be agreed to by the Panamanians. I submit that by their own law, that requires a plebiscite and not just the agreement of the present government.

Mr. CLARK. Speaking of the amendment?

Mr. SCHMITT. Speaking of both, I am afraid, because otherwise, I see no other way for it to be constitutionally binding, according to Panamanian law, on future Panamanian governments.

Mr. CLARK. Of course, that would be for the Panamanian Government to decide.

Mr. SCHMITT. It may be for them to decide, but by the reading of Panamanian law that we have discussed many times in this debate, I think it would be safe to assume that any future government could interpret that law as having required a plebiscite and they can negate the value of any reservation to the treaty.

If we are going to have some process—and I think by law, Panamanian law, the process required is a plebiscite—then we might as well do it as an amendment. If the amendment is not agreed to, then we revert back to the 1903 treaty and the appropriate amendments thereto, and we know exactly where we stand. If the Panamanians reject a reservation, then I do not think there is anything in international law that invalidates the treaties and we are right back where we started from with respect to the issue of the cemeteries and, unfortunately, with respect to a number of other issues, such as those addressed by the so-called DeConcini reservation.

Again, I do not claim to be a lawyer. I am a geologist, a former aviator, and now a U.S. Senator. But I do think I have some access to logic and there is a difference between a reservation and an amendment. A reservation binds only the United States. An amendment, if agreed to by plebiscite, will bind both parties.

Mr. CLARK. If the Senator will yield, I do not understand the reasoning of the Senator in saying that these reservations are passed will bind only us. Does that mean that——

Mr. SCHMITT. I think, Senator, that that is supported in international law.

Mr. CLARK. Is that the Senator's interpretation, then?

Mr. SCHMITT. My interpretation of the reservation is that it binds only the parties attached to the treaties until some other process binds the other country. I see no reason why Panama can be bound by a reservation—DECONCINI, SCHMITT, or otherwise—unless they go through the constitutional process of a plebiscite.

Mr. CLARK. It is quite true that whether we are talking about a reservation or amendment, at some point, it has to be accepted by the other party or it does not become binding on either side.

Mr. SCHMITT. Absolutely correct.

Mr. CLARK. Once that occurs, it is binding on both sides. We cannot make a one-sided agreement in a treaty. The whole idea of the treaty process is that each of us will agree to all of the amendments and all of the reservations or the treaty will not stand.

I agree that there may be a difference of opinion among Panamanians in terms

of their own interpretation of the laws, but whether an amendment has to go the plebiscite route or a reservation has to go the plebiscite route, that is not something we can dictate, obviously. Of course, the Senator is as entitled to interpret Panamanian laws as I am. I do not know whether it has to go to a plebiscite or not. My feeling is that, certainly, if an amendment is passed, a plebiscite would be required for an amendment of this kind, which is totally new.

It seems to me if that were the case, the Senator's chances of having his amendment implemented would probably be lessened, in view of the fact that it would have to stand the test of a vote of the majority of Panamanians. The reservation, assuming it did not have to go the plebiscite route—and that is not the Senator's assumption, it is my assumption—it seems to me it is certainly not going to be any problem for the Panamanian Government to accept. So if we are concerned about this cemetery, whether or not, in fact, these rights will be preserved, it seems to me, if anything, the chances are greater under a reservation than that it would be acceptable in a plebiscite. Although I frankly doubt that it would be defeated under either process, at least it would call into question the whole issue of another plebiscite.

Let me conclude by saying that I read here for the record a protocol of exchange signed at Washington on December 18, 1951, for the convention with New Zealand for the avoidance of double taxation. This was entered into force in 1951. I read the reservation only to make one point: That, in fact, this has to be done jointly. It is not just binding on one party:

The text of the said reservation was communicated by the Government of the United States of America to the Government of New Zealand. The Government of New Zealand has accepted the said reservation. Accordingly, it is understood by the two Governments that the convention aforesaid, upon entry into force in accordance with its provisions, is modified in accordance with the said reservation, so that, in effect, paragraph (4) of Article IX of the convention aforesaid is deemed to be deleted.

In other words, we cannot, in any agreement, dictate to the other party what is going to be binding on the two of us. All reservations, all amendments, must be acknowledged by both sides, or the treaty, in my judgment, would never go into effect. It would have no standing in international law.

Mr. President, I ask unanimous consent to have printed in the RECORD the protocol of exchange just referred to.

There being no objection, the protocol of exchange was ordered to be printed in the RECORD, as follows:

PROTOCOL OF EXCHANGE SIGNED AT WASHINGTON ON DECEMBER 18, 1951, FOR THE CONVENTION WITH NEW ZEALAND FOR THE AVOIDANCE OF DOUBLE TAXATION ENTERED INTO FORCE, 1951

The undersigned, Dean Acheson, Secretary of State of the United States of America, and Carl Berendsen, Ambassador Extraordinary and Plenipotentiary of New Zealand to the United States of America, being duly authorized thereto by their respective Governments, have met for the purpose of exchanging the instruments of ratification by their respective Governments of the convention between the United States of America and New Zealand for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income, signed at Washington on March 16, 1948, and, the respective instruments of ratification of the convention aforesaid having been compared and found to be in due form, the exchange took place this day.

As recited in the ratification on the part of the United States of America, the Senate of the United States of America, in its resolution of September 17, 1951, advising and consenting to the ratification of the convention aforesaid, expressed a certain reservation with respect thereto, as follows:

"The Government of the United States of America does not accept paragraph (4) of Article IX of the convention, relating to the profits or remuneration of public entertainers."

The text of the said reservation was communicated by the Government of the United States of America to the Government of New Zealand. The Government of New Zealand has accepted the said reservation. Accordingly, it is understood by the two Governments that the convention aforesaid, upon entry into force in accordance with its provisions, is modified in accordance with the said reservation, so that, in effect, paragraph (4) of Article IX of the convention aforesaid is deemed to be deleted.

In witness whereof, the respective Plenipotentiaries have signed the present Protocol of Exchange.

Done in duplicate at Washington this eighteenth day of December, 1951.

For the Government of the United States of America: Dean Acheson.

For the Government of New Zealand: Carl Berendsen.

Mr. CLARK. Mr. President, I am sorry for having been so long in my answer.

Mr. SCHMITT. That is fine. I think it is a very important issue, because we are not only talking about the moral obligation and of the American dead, but we are talking about the issue of reservations and amendments.

I just say, knowing the New Zealand people as I do, but not knowing the constitutional processes well enough to know exactly what may have occurred, I would suspect that the reservation to the protocol just ordered printed in the RECORD was consistent with their constitutional processes, without any question.

The issue here is what are Panama's constitutional processes? I think, with respect to reservations, everybody right now feels very strongly there is a question about what the process is. But there is no question about the amendment process. That is exactly why I am proposing for this very critical issue, at least critical for many people, that we have an amendment so we know exactly what is required in order to protect these cemeteries and the dead contained therein.

A plebiscite is what we need. We are going to end up, I am sure, feeling very uncertain about any other process that General Torrijos may propose for agreeing to or not agreeing to the reservations that have been entered into, on this, by the U.S. Senate.

I would also submit that there is a major difference between the Randolph reservation and the amendment that I have offered. The Randolph reservation only goes to the issue of having negotiations. It does not require an agreement. Whereas, the amendment to the treaty itself that I am proposing will require, because it is part of the treaty, the reaching of an agreement. That agreement, of course, will result when and if the Panamanians, through a plebiscite, ratify the changes to the treaties that we feel are necessary here in the U.S. Senate.

Mr. President, I think that it is clear that this amendment, and the issue raised about the differences between reservations and amendments, not only goes to the heart of the problem with the cemeteries, but goes to heart of the problem of the treaties in their entirety.

The reservations offered by Senator DECONCINI were thought to have been, a few weeks ago, binding on Panama as well as on the United States. However, we have seen considerable disagreement arise as to whether that is so.

I, personally, because of the constitutional issue in Panama and the question of international law on the differences between reservations and amendments, never felt that we could be assured that reservations to these treaties would be binding on the Government of Panama. In particular, even if one head of state agreed to a reservation, without going through the constitutional process in Panama, it would be subject to being denied or revoked by any future head of state.

I think the people of this country, certainly many Members of this body, would feel much better if the reservations and the amendments to this treaty were submitted to the Panamanian people according to their constitutional processes before these treaties enter into force.

Of course, I would be remiss if I did not remind my colleagues that I think the bilateral treaty process is out of date and that we should not be entering into these treaties for much more fundamental reasons than just the questions before us here today. But that is not the issue. The issue is the treaty before us and how we can have a good treaty, a treaty that will protect legitimate U.S. interests as well as hemispheric interests.

I think it is very important that on the particular issue of cemeteries, as well as many other issues, that we amend the treaties rather than depending on reservations which, I repeat, under international law as I understand it, bind only one country until the constitutional processes of the other country have, in fact, accepted such a reservation. Whereas, an amendment binds both parties, or the treaty is not in force.

Mr. President, I reserve the remainder of my time and, if there are no further comments, I suggest the absence of a quorum.

The PRESIDING OFFICER. We remind the Senator that there is no agreement for division of time.

Mr. SCHMITT. I thank the Chair.

I was under the impression that the time was divided equally, but I will still suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. CLARK. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL 1:25 P.M.

Mr. CLARK. Mr. President, I ask unanimous consent that the Senate stand in recess until 1:25 p.m. today, at which time the Senator from New Mexico will be recognized for 2½ minutes to summarize his arguments on the pending amendment; that there then be 2½ minutes for the managers of the treaties; that in accordance with the previous unanimous-consent agreement, there be a vote in relation to the pending amendment at 1:30 p.m.; and that the Senator from Alabama (Mr. ALLEN) then be recognized to call up his amendment.

There being no objection, at 12:54 p.m. the Senate recessed until 1:25 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer (Mr. RIBICOFF).

The PRESIDING OFFICER. Who yields time?

Mr. SCHMITT. Mr. President, we are scheduled to vote on amendment No. 97 at 1:30. Before that vote, I would just say once again that this amendment, the so-called cemeteries amendment, would change the body of the treaty so that the cemeteries in the Canal Zone, specifically Mt. Hope and Corozal, would be dealt with by treaty rather than by some future and uncertain negotiations.

Amendment No. 97 would amend four articles of the treaty so that this would be accomplished, and also so that the provisions added by the amendment would be in force in perpetuity.

I think, Mr. President, that the technical aspects of these amendments are not as critical, though I would submit they are properly drafted, as the moral aspects of the amendment, which represents a continued moral commitment by the Government of the United States and its people to those individuals who, in the past, in their service either in the Armed Forces or in the civil portions of the Government, have assisted in the operation and defense of the canal.

The PRESIDING OFFICER (Mr. INOUYE). The Senator's time has expired.

Mr. SARBANES. I yield the Senator 30 seconds of my time to complete his statement.

Mr. SCHMITT. I appreciate the Senator's courtesy. I have completed my statement, but I certainly would urge my colleagues to put into the form of an amendment the resolution of the issue of the cemeteries in the Canal Zone. A reservation is not sufficient, in my mind; a reservation binds only the United States to the treaties. An amendment would, when properly ratified by the Panamanian people, bind both parties.

I thank the Senator from Maryland for his courtesy.

Mr. SARBANES. Mr. President, I rise in opposition to the amendment. This matter was dealt with fully and, in fact, in great detail by the reservation added to the permanent Neutrality Treaty, which passed the Senate by a vote of 96 to 1. That reservation sketched out in great detail how we would proceed. It was a reservation which ran to some 2½ pages, and addressed the matter fully. It was carefully worked out in terms of dealing with this problem, both in terms of people who wish to bring back the remains of their loved ones to this country, where the Government undertook to pay for it, and in terms of requiring administration by the American Battle Monuments Commission, which is a commission which handles comparable arrangements all over the world, with respect to our honored dead and their burial in foreign lands.

It is our view, of course, that that reservation, which has permanent application, more than adequately deals with the problem and is, in fact, a better and more constructive way in which to do so.

The PRESIDING OFFICER. All time has expired.

Mr. SCHMITT. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. SARBANES. Mr. President, I move to table the amendment of the Senator from New Mexico and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Maryland. The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Indiana (Mr. BAYH), the Senator from Iowa (Mr. CULVER), the Senator from Missouri (Mr. EAGLETON), the Senator from Louisiana (Mr. LONG), the Senator from Alabama (Mr. SPARKMAN), and the Senator from Georgia (Mr. TALMADGE) are necessarily absent.

I further announce that, if present and voting, the Senator from Iowa (Mr. CULVER) would vote "yea."

Mr. STEVENS. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Oklahoma (Mr. BARTLETT), the Senator from Oregon (Mr. PACKWOOD), and the Senator from Illinois (Mr. PERCY) are necessarily absent.

The result was announced—yeas 55, nays 34, as follows:

[Rollcall Vote No. 97 Ex.]

So the motion to lay Amendment No. 97 on the table was agreed to.

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. CHURCH. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HANSEN. Mr. President, I wish to make a few remarks with regard to the deplorable treatment my distinguished colleague Senator DECONCINI has been receiving in the press lately. I am especially angry after reading this morning's editorial in the Washington Post which I believe, stops just barely short of being libelous at the very least, it smacks of defamation of character.

I am appalled at the blindness of those who publicly castigate the junior Senator from Arizona in their assertions this entire "reservation" mess is his doing. The Washington Post editorial refers to the "humbling of the highest office in the land" in the administration's dealing with the Senator in trying to extricate itself from the situation.

I say the administration got itself into this situation and the administration is going to have to get itself out—if it possibly can at this point. The leadership, the administration, including the State Department, and the President himself are entirely responsible for every word in these treaties. Nothing, absolutely nothing has been added without their express approval and subsequent loud support.

This situation arose through the incompetence of those pushing ratification of the treaties, at any price, and their insensitivities to the feelings of both the American people and the citizens of the Republic of Panama. I really believe these treaties are beyond salvation at this point. This whole process has done more to alienate the people of both countries than all the years of unrest. To lay the blame on the honest and sincere intentions of one Senator, whose view, I might add, was shared by 74 other Senators, 74, is reprehensible and beneath

the dignity of those who claim they represent responsible journalism.

I cannot stand by while the media attempts to extricate the administration from one of its worst foreign policy blunders of the last 15 months. The administration knew full well what would be the reaction from the Panamanian Government upon the adoption of the DeConcini reservation, yet it ignored all the signs. Whether the administration managed this through poor advisers, bad information or ineptness is uncertain. I suspect it was a combination of all three. The most generous thing I can say at this point is that the administration completely bungled the whole operation on its own. For the Washington Post, or any other supposedly responsible form of media to suggest it was the doings of one Senator is outrageous. I am really disgusted.

The PRESIDING OFFICER. The Chair recognizes the Senator from Idaho.

Mr. McCLURE. Mr. President, I ask unanimous consent that, as in legislative session, I may introduce a concurrent resolution and make some remarks thereon.

The PRESIDING OFFICER. Without objection, it is so ordered.

## SENATE CONCURRENT RESOLUTION 79—SUBMISSION OF A CONCURRENT RESOLUTION DISAPPROVING PROPOSED FIREARMS REGULATIONS

Mr. McCLURE (for himself, Mr. STEVENS, Mr. DOLE, Mr. MARK O. HATFIELD, Mr. THURMOND, Mr. GARN, Mr. LAXALT, Mr. GRIFFIN, Mr. TOWER, Mr. HANSEN, and Mr. DOMENICI) submitted the following concurrent resolution, which was referred to the Committee on Finance:

SENATE CONCURRENT RESOLUTION 79

Whereas, the Bureau of Alcohol, Tobacco and Firearms of the Department of the Treasury, has proposed regulations which, although called "quantity reporting of firearms disposition," would constitute centralized Federal registration of firearms; and

Whereas, the Congress has specifically rejected Federal gun registration and centralized recordkeeping in the 1968 Gun Control Act and on repeated occasions since then; and

Whereas, there has been no claim that the Bureau of Alcohol, Tobacco and Firearms has been unable to trace firearms successfully under the present tracing system; and

Whereas, the increased paperwork, computerization, and cost of manufacture would be overburdensome to the taxpayer and the consumer; and

Whereas, the proposed regulations are an attempt to accomplish by regulation what Congress has refused to authorize by legislation;

Therefore, be it

Resolved by the United States Senate (the House of Representatives concurring) that the Bureau of Alcohol, Tobacco and Firearms regulations proposed by the Department of the Treasury in the March 21, 1978, *Federal Register*, requiring the reporting of all firearms transactions in federally licensed Commerce to be centrally maintained by the Federal Government, the placing of additional serial numbers on all firearms, and the implementation of certain other proposed changes, exceed powers conferred on that Department by the Congress, and that the proposed regulations be withdrawn.

Mr. McCLURE. Mr. President, since firearms control first became an issue before Congress, and throughout the legislative history of the Gun Control Act of 1968, Congress has specifically and repeatedly rejected the idea of national gun registration. Despite this clear legislative record, the Bureau of Alcohol, Tobacco and Firearms of the Treasury Department is now attempting through bureaucratic edict to impose a Federal gun registration scheme. The regulations proposed by BATF are not merely unauthorized by existing law, they are demonstrably in direct contradiction to the legislative intent of Congress.

This blatant attempt to usurp congressional authority demonstrates once again that certain governmental officials consider themselves to be above the law.

Those who favor various gun control proposals are perfectly free to advocate their position, to introduce legislation or a constitutional amendment and work for its passage, but nothing in the Constitution that I am aware of gives gun control advocates the right to pass laws by decree.

To emphasize once again that Congress will not permit any agency of the Federal Government to act lawlessly or unconstitutionally I am today joining with Congressman JOHN ASHBROOK in introducing a concurrent resolution disapproving the proposed regulations of the Treasury Department.

I am joined in the sponsorship of this concurrent resolution in this body by Senators STEVENS, DOLE, MARK O. HATFIELD, GARN, THURMOND, LAXALT, GRIFFIN, TOWER, HANSEN, and DOMENICI.

For the information of my colleagues, I ask that there be printed in the RECORD a detailed study of the legislative history of gun registration proposals prepared by James Featherstone, formerly Deputy Assistant Secretary in charge of enforcement at the Treasury Department, and a brief factsheet prepared by the National Rifle Association.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE TREASURY DEPARTMENT—IN DISREGARD OF CONGRESSIONAL REJECTION OF THE CONCEPT—PROPOSES GUN REGISTRATION

On March 21, 1978, an as yet unnominated and unconfirmed Assistant Secretary of the Treasury approved a notice of rulemaking proposing that:

1. Licensed manufacturers and licensed importers of firearms put a unique serial number on each firearm imported into or manufactured in the United States. The unique serial number would identify the firearm as to: importer or manufacturer, importation or production year, the firearm model and caliber or gauge, and the serialized numerals of the model.

2. Each licensed manufacturer submit to the Bureau of Alcohol, Tobacco and Firearms a quarterly report of firearms manufactured listing all the firearms manufactured and identifying each with a unique serial number.

3. Each licensed manufacturer, licensed importer, and licensed dealer submit to the Bureau of Alcohol, Tobacco and Firearms a quarterly report of firearms dispositions showing data on the description and disposition of each firearm and information about the mode of transportation to another licensee, including date transported and name and address of the carrier. Reports of dispositions to non-licensees would include the date of disposition and firearm description but not the name and address of the non-licensee.

The regulations approved by the Assistant Secretary purport to be issued in accordance with power delegated by the Congress to the Secretary of the Treasury by Section 926 of the Gun Control Act of 1968, which authorizes the Secretary to issue regulations he deems reasonably necessary to carry out the provisions of the Act. The Act, in Section 923(g), requires each licensed importer, manufacturer, and dealer to maintain records of importation, production, shipment, receipt, sale, or other disposition of firearms and ammunition. The importers, manufacturers, dealers, and collectors are required to make such records available for inspection at all reasonable times and to submit to the Secretary such reports and information with respect to such records and the contents thereof as he shall by regulation prescribe. The Secretary is authorized to enter during business hours the premises of any importer, manufacturer, dealer or collector to inspect the records and documents required to be kept and any firearms stored at the premises.

The reports required by the proposed regulations would amount to transferring copies of records now required to be kept by licensees at their business premises, for centralized computerization in Washington. The centralized register would contain a record of every firearm manufactured in the United States and its subsequent receipt and disposition by licensees. The proposed regulations stop short of requiring that non-licensed recipients be identified by name and address. Nonetheless, the scheme proposed by the regulations amounts to a centralized registry of firearms in the United States and the names and addresses of non-licensee purchasers can easily be obtained by telephone by the Government. If the Treasury is permitted to issue this regulation, it can be reasonably anticipated that another regulation, requiring identification of unlicensed purchasers by name and address, will be forthcoming.

It has not been demonstrated that the regulations proposed on March 21, 1978, are reasonably necessary to carry out the provisions of the Act. The stated purpose of the regulations is to improve the tracing of firearms used in crimes and to enable the Bureau of Alcohol, Tobacco and Firearms to put resources more effectively into problem areas. It is also claimed that the data reported would reveal any "unusual flow" of firearms and aid in identifying dealers who are illegally diverting and selling firearms.

The Treasury is just as capable of tracing firearms with the records where they are now, in the hands of the dealers, as it would be were the records centralized. There has been no claim that the Bureau of Alcohol, Tobacco and Firearms has been unable to trace firearms successfully under the present system. In fact, the BATF has often pointed with pride to its tracing capabilities. Further, dealers who are illegally diverting and selling firearms are most readily identified by proper investigation and intelligence coverage of the criminal element. Moreover, Treasury has not explained what is meant by the term "unusual flow" of firearms and what relation it might have to enforcement of the Gun Control Act.

The action of the Treasury Department exceeds the powers conferred on it by Congress. It was clearly the Congressional intent that the records required to be kept by the licensees be maintained at their places of

business. That is why the Secretary was given the right to enter their business premises and inspect such records. The right conferred on the Secretary to require reports and information with respect to the records certainly did not contemplate the discretion to transfer their entire contents to Washington for computerization. That would be inconsistent with the intent of Congress that the purchaser record his transaction not with the Government, but with the licensee who would maintain the record. The Treasury Department is then given the authority to go to the licensee for information when the need arises. The prior Assistant Secretary responsible for enforcement at the Treasury Department refused to centralize the record keeping system without Congressional authority.

REJECTION BY CONGRESS OF CENTRALIZED GOVERNMENTAL REGISTRATION DURING CONSIDERATION OF THE 1968 ACT

The legislative history of the Gun Control Act of 1968 reflects that Congress has consistently rejected the concept of centralized registration of firearms with the Federal Government.

On July 19, 1968, Representative McClory of Illinois introduced an amendment making it a crime to possess an unregistered handgun. (1094 Cong. Rec. Vol. 114, Part 17, p. 22248.) The proposal required that a licensed firearms dealer obtain a completed registration application from a purchaser and that the dealer file it with the Secretary of the Treasury at the time of sale. If the purchase was not made from a licensed dealer, the purchaser was required to apply to the Secretary for registration. Those already in possession of handguns were required under the proposal to register their guns. The registration application required the name, address, date and place of birth and social security number of the applicant. The firearm was identified by name of manufacturer, caliber or gauge, model, type, and serial number. Also required were the date and place of sale, the name and address of the transferor, and his dealer's license number or registration number.

After extensive debate, the McClory registration amendment was defeated by a vote of 168 to 89. (p. 22267)

The House also defeated by a vote of 172 to 68 an amendment by Representative Bingham that would have extended the McClory registration proposal to rifles and shotguns. (p. 22266)

On July 23, 1968, Representative McClory introduced an amendment making it unlawful for anyone to sell or otherwise transfer a firearm or ammunition unless the purchaser or transferee exhibits a permit issued by a State or a valid federal gun license. (p. 22745) The proposal empowered a licensed dealer to issue the license. The application identified the person by fingerprints or photograph and required the applicant to make a written denial of such things as: convictions, narcotics addiction, mental incompetence, and alcoholism. This statement and fingerprints or photograph were to be forwarded to the Secretary with the applicant's physical description and address.

The McClory licensing proposal was defeated by a vote of 179 to 84. (p. 22747)

On September 17, 1968, Senator Tydings offered an amendment providing for the registration of handguns, rifles, and shotguns. (1098 Cong. Rec. Vol. 114, Part 21, p. 27149–50) It was in substance the same registration plan as McClory's coupled with the Bingham amendment. The Tydings amendment also provided for a licensing scheme similar to that introduced by Representative McClory. The Tydings amendment was defeated by the Senate by a vote of 55 to 31. (p. 27421)

Senator Jackson proposed an amendment which would have denied federal firearms dealers licenses to persons whose place of business is in a state which does not: require registration of firearms, deny ownership and possession of firearms to certain classes of persons, provide a central state registry of the make, model or serial number, and other identifying characteristics of firearms, provide information on the identification and address of the owner of the firearm and provide for transmittal of the information in the central state registry to the National Crime Information Center of the FBI. (p. 27422)

The Jackson proposal was defeated 48 to 35. (p. 27427)

Senator Brooke introduced an amendment requiring registration at both the local and federal level and the establishment of a firearms inventory in the Treasury Department. The registration information would identify the purchaser by name, age, address, and social security number. It would also identify the firearm by manufacturer, caliber or gauge, model and type, and serial number. (p. 27428–9) Senator Brooke's proposal was defeated by a vote of 53 to 31. (p. 27456)

Senator Tydings on September 18, 1968, proposed an amendment making it unlawful to sell a firearm to anyone unless the purchaser exhibits a valid federal gun license or a valid permit issued by a state whose permit system has been approved by the Secretary. (p. 27457–8) The amendment was rejected by a vote of 49 to 35. (p. 27460)

Senator Hruska summed up Congressional action on October 9, 1968, as follows:

"Mr. President, I might say further that the real issue, which was properly and justifiably denied in this body as well as in the other body, was that of federal registration or licensing of guns and gun owners. That issue this body met four square. There were four attempts and four variations of that effort, and each one of them was decisively turned down, as it should have been.

In the House of Representatives, that concept was turned down by a ratio of almost 2 to 1. I think that fairly and squarely reflects the sentiment of the American people. They are not ready for that type of Federal regulation and control. If anything is to be done in that direction, it should be by the municipalities and the States which are capable of enforcement of that kind of law." (1100 Cong. Rec. Vol. 114, Part 23, 90th Cong. 2nd Ses., p. 30184)

REJECTION BY CONGRESS OF CENTRALIZED GOVERNMENTAL REGISTRATION SINCE PASSAGE OF THE 1968 ACT

Over the past ten years since the enactment of the Gun Control Act, the Congress has continued to speak out strongly against firearms registration whenever the issue has been raised. During debate of the Bayh gun control bill in 1972, several attempts to offer federal registration schemes failed.

1. On August 9, 1972, the Senate rejected the Brooke amendment to establish a National Firearms Registry by a vote of 53 to 31.

2. On August 9, 1972, the Senate rejected by a 75 to 16 margin the Stevenson amendment to require federal registration of handguns.

3. On August 9, 1972, the Senate rejected by a margin of 78 to 11 a Kennedy amendment to require federal registration and licensing of all firearms and their owners. Senator Kennedy tried again that day to require registration of handguns only. Senator McClellan offered an amendment to table Senator Kennedy's motion. Senator McClellan's amendment passed 68 to 21.

Several years later Congress continued to reject registration.

4. On February 17, 1976, the House Judiciary Committee voted 18 to 13 to reject the McClory amendment to H.R. 11193. It would have required states to register handguns.

5. On February 17, 1976, the House Judiciary Committee rejected by a vote of 18 to 13 the Drinan/Edwards amendment to require a national handgun registration scheme.

6. On February 18, 1976, the House Judiciary Committee rejected by a vote of 20 to 10 the Hughes amendment to authorize LEAA funds for states to register all handguns.

7. On February 18, 1976, the House Judiciary Committee rejected, on a tie vote of 15, the Russo amendment to require state registration of handguns.

8. On March 2, 1976, the House Judiciary Committee voted 22 to 10 to add an amendment to H.R. 11193, the Conyers Bill. This amendment would retain Congressional veto over the Treasury Department's proposed regulations on firearms.

Other examples of Congressional intent:

On May 14, 1975, Senator Ribicoff proposed a motion to table Senator McClure's amendment to prohibit the Agency for Consumer Advocacy from dealing with any aspect of firearms or ammunition. It was defeated by a vote of 67 to 27. On July 18, 1975, Senator Kennedy proposed an amendment to weaken the Moss-McClure amendment prohibiting the Consumer Product Safety Commission from regulating or dealing with any aspect of firearms or ammunition. Kennedy's amendment failed 75 to 11.

It is obvious from the above that the Treasury Department was unwilling to submit legislation to Congress to compel centralized registration with the Government of guns or people, knowing that Congress had consistently rejected such schemes in the past and would likely do so now. Treasury decided, therefore, to ignore the limits placed upon it by Congress and seek to accomplish, by regulation, what it could not accomplish by legislation, thereby attemting to usurp Congressional prerogatives.

---

NRA FACT SHEET—TREASURY DEPARTMENT PROPOSED FIREARMS REGULATIONS

The U.S. Department of the Treasury has published regulations (March 21 Federal Register) to establish a national computerized central firearms registration system.

The regulations, if allowed to go into effect, would require all transactions of all firearms within existing Federally licensed commerce to be reported quarterly to the Bureau of Alcohol, Tobacco and Firearms. Reporting would cover all dealer sales to individual citizens, as well as all transactions between manufacturers, importers, exporters, wholesalers, jobbers, distributors and dealers.

Based on BATF estimates of the 5.2-million new firearms in commerce in fiscal year 1977 and BATF claims that an average of four transactions occur before a dealer sale to an individual citizen occurs, the reporting requirements would conservatively total at least 25-million separate computer entries.

When used firearms are included in the equation, the number of firearms transactions which would be computerized would total between 35 and 40 million.

The system would require 688,000 quarterly reports yearly from 172,000 holders of Federal Firearms Licenses. BATF estimates that the paperwork costs to dealers would be $8-million yearly.

The Treasury Department claims that the startup cost of this massive system would run about $5-million, and, according to Assistant Secretary Richard Davis, funding would neither have to be appropriated nor authorized by Congress, but would be simply "redirected" from existing BATF funding.

However, that $5-million estimate does not begin to jibe with past BATF firearms registration cost estimates. BATF Director Rex Davis has previously estimated a national handgun registration system would call for a $35 to $100 million startup cost, followed

by $20-million per year in operational costs. This proposed registration by regulation would cover all firearms—rifles, shotguns, and handguns.

In both the March 16 Congressional and public briefing on the proposals, Richard Davis, Assistant Secretary of the Treasury declared that the regulations would give BATF authority to call in and computerize all existing Federal form 4473's (which list the name and address of each firearms purchaser) which have been filled out by individual firearms buyers since enactment of the 1968 Gun Control Act. Secretary Davis qualified that declaration in the Congressional briefing by saying that such an action today would be "politically unrealistic."

Assistant Secretary Davis's predecessor, David R. MacDonald, told Congress during 1975 House Judiciary Committee hearings that Treasury should not act to centralize existing dealer records without Congressional authority. Also in 1975, BATF estimated they could trace a firearm in 27 minutes under the existing recordkeeping system if it is a "priority". There can be no justification for the proposed centralization other than expansion of bureaucratic authority and a desire to in fact register firearms.

Although Treasury says the reporting requirements do not include the names and addresses of individual private firearms purchasers, officials maintain they can easily obtain such information under the proposed regulations with a telephone call from BATF to the dealer making such a sale.

The regulations would also order institution of a new "unique" system of identifying firearms with a common 14 digit serial code. With this serial number, which would be required for all firearms manufactured after the regulations are placed into effect, the BATF could computerize information as to make, model, barrel length, caliber and individual number of all firearms. With this information, the Treasury Department could locate the purchasers of any firearms or category of firearm it might declare prohibited in the future. BATF estimates that the cost to consumers would be $5 million for retooling.

Other provisions in the regulations include redefinition of import and export regulations (a detailed summary of this provision will follow), and a requirement that all firearms lost or stolen while in Federally licensed commerce be reported within 24 hours of discovery. Failure to record or report such loss or theft to the satisfaction of BATF would be a felony, punishable by 5 years in prison, and a $5,000 fine. In many instances, the failure to report a theft of a firearm could exact a far harsher penalty on a dealer than on the thief.

There are literally no provisions of these regulations which can be supported by the National Rifle Association, its membership and affiliates.

During the debate of the 1968 Gun Control Act, the issue of national gun registration was raised and soundly defeated by better than a 2 to 1 margin. Since that time, Congress has rejected all national gun registration schemes which have been proposed. Clearly, Congress has refused to give the firearms control bureaucracy this authority.

This proposed regulation—whether called registration or "reporting"—amounts to the same thing: centralized national firearms registration. It is the very clear policy of the National Rifle Association that we are unalterably opposed to firearms registration at any level of government.

Mr. STEVENS. Will the Senator yield?

Mr. McCLURE. I am happy to yield to the Senator from Alaska who is a cosponsor of the resolution.

Mr. STEVENS. Mr. President, as the Senator from Idaho stated, during the last decade, Congress has consistently and systematically rejected any attempt to initiate a system of national registration of firearms. I think both the House and Senate have made it quite clear that national firearms registration is unacceptable.

After extensive debate on four attempts to enact such a scheme, Senator HRUSKA made the following statement on October 9, 1968:

Mr. President, I might say further that the real issue, which was properly and justifiably denied in this body as well as in the other body, was that of Federal registration or licensing of guns and gun owners. That issue this body met four square. There were four attempts and four variations of that effort, and each one of them was decisively turned down, as it should have been. In the House of Representatives that concept was turned down by a ratio of almost 2 to 1. I think that fairly and squarely reflects the sentiment of the American people. They are not ready for that type of Federal regulation and control. If anything is to be done in that direction, it should be by the municipalities and the States, which are capable of enforcement of that kind of law.

Since that time, Federal registration schemes have been offered in several forms and again, have failed. At least four amendments were offered to the so-called Bayh gun control bill in 1972 which would have required national registration of either handguns or all firearms. Each amendment failed.

During House Judiciary hearings, the committee four times rejected amendments which would have initiated registration schemes. I do not think there can be any question as to the feelings of Congress.

Yet, in total disregard of this legislative history, the Bureau of Alcohol, Tobacco and Firearms has proposed regulations which would mandate the collection and computerizations of firearms records presently kept by licensed dealers. Although the proposed regulations stop short of requiring that nonlicensed recipients be identified by name and address, the centralized register would contain a record of every firearm manufactured in the United States, identified by the proposed new "unique" serial number, and its subsequent receipt and disposition by licensees.

These regulations are allegedly authorized under the authority of the Gun Control Act of 1968, section 926. This section authorizes the Secretary to issue regulations he deems reasonably necessary to carry out the provisions of the act.

Section 923(g) requires each licensed importer, manufacturer, and dealer to maintain records of importation, production, shipment, receipt, sale or other disposition of firearms and ammunition. The importers, manufacturers, dealers, and collectors are required to make such records available for inspection at all reasonable times and to submit to the Secretary such reports and information with respect to such records and the contents thereof as regulations shall prescribe. The Secretary is authorized to enter during business hours the premises of any importer, manufacturer, or collector to inspect the records and documents required to be kept and any firearms stored at the premises.

That legislation does not contemplate a centralized computer information system. It sets up a system whereby records are to be maintained, not by the Federal Government, but by licensees in their places of business. In fact, the prior Assistant Secretary responsible for enforcement at Treasury refused to centralize the recordkeeping system without congressional authority. The Bureau of Alcohol, Tobacco and Firearms has far exceeded their authority in attempting to force these regulations on the American people and on Congress.

Further, the Bureau has not offered any reason to believe that these regulations and the expense and paperwork they would entail are necessary. The stated purpose of the regulations is to improve the tracing of firearms used in crime and to enable the BATF to put resources into problem areas. But, in the past, the Bureau has pointed with pride to their present tracing capabilities. There is no reason given to spend $5 to $7 million of taxpayer money, in addition to the costs of complying with these regulations by Americans, to institute a new system particularly in light of congressional opposition to do so.

In a day and age when Americans everywhere are deploring the computerization of our society and growing Federal intrusion into all aspects of our lives, I just do not think it makes sense to spend millions of dollars to mandate further computerization and further Federal intrusion when there is not justifiable need to do so.

The concentration of power in the Federal Government has spawned a new elite of policymakers and regulatory agency officials. Many of these fulfill Justice Louis Brandeis' prophecy a half century ago that "The greatest dangers to liberty lurk in insidious encroachment by men of zeal, well meaning but without understanding."

Mr. MARK O. HATFIELD. Will the Senator yield?

Mr. McCLURE. I yield to the Senator from Oregon.

Mr. MARK O. HATFIELD. Mr. President, I commend the Senator from Idaho for his action here today and his perception of this action on the part of the agency.

I would like to take a moment to point out that the agency's regulations are rather insidious because they do very obviously move the agency very close, if not to, actually, circumvent legislation so close it is very hard to distinguished.

Simply stated, it is this: That each manufacturer of such gun will place on that gun a unique serial number. That number then is further followed through by a wholesaler, from the wholesaler to the retailer.

Now, it stops at that point as far as Washington demanding those records and that tracing of that gun from manufacturer to retailer. But, bear in mind, that when each retailer sells that item to a customer, he, the retailer, must retain

the record of that gun by number and to whom it is sold.

So we have moved it right up to the point of where we actually then would have gun registration by merely having the Washington agency at some time in the future, if not stop here, commanding or demanding from that retailer the gun sales by number and by name.

So I feel that the Congress, and the Congress solely, should make this determination by legislative action, which it has failed to do in the past, but which it could do at any time enough votes were garnered for it in the future, that it is up to the Congress and not an agency to try to circumvent the very action Congress denied in the past.

Mr. McCLURE. I thank the Senator from Oregon.

I think it is worth pointing out that Congress not only did not provide such a section of the law, did not provide for such a feature in the law, they specifically refused to take that step.

So the administrative agency is attempting to do that which Congress has specifically refused to do.

Mr. DOLE. Will the Senator yield?

Mr. McCLURE. I yield to my colleague from Kansas.

Mr. DOLE. First, I thank the distinguished Senator from Idaho for being alert to an effort by indirection to do something that is not authorized by the legislation. Also, I wish to thank my distinguished colleague from Oregon who called this to my attention as recently as yesterday.

I believe that the statements made by the distinguished Senator from Alaska and the distinguished Senator from Idaho and the distinguished Senator from Oregon clearly spell out the dangers. I suggest that this resolution is very timely and I am very pleased to be a cosponsor of it.

Mr. President, as an original cosponsor of this joint resolution, I want to express my great concern about the new proposed regulations issued by the Bureau of Alcohol, Tobacco and Firearms. These regulations have the potential to be the first step toward national gun registration.

These regulations would make fundamental changes in the system of firearms registration by dealers that Congress has created in the past. The BATF regulations would create a central list of every firearm sold to a dealer. The officials in Washington would have started a system which could be converted to extend beyond the dealers to the citizens who own the guns. I am certain that when Congress has passed gun control legislation in the past, it did not intend to give BATF the authority to begin creation of a nationwide gun control system.

The regulations would make another major expansion in Federal gun regulation. Each and every firearm would be required to have a unique serial number. The BATF claims that this is necessary to trace stolen weapons. Yet, the BATF has always prided itself in its ability to find the source of stolen firearms used in the commission of a crime without this unique number.

The potential infringement of constitutional rights that could occur in the future from use of unique serial numbers is clear. Again, the regulations have the potential to be used in ways that Congress has not authorized. The potential risks that implementation of these regulations would entail are not justified by any improvements in crime fighting capability, real or imagined by the BATF.

The most disturbing implication of these regulations is the disregard for the power of Congress that the BATF apparently has. The basis for proposing this joint resolution is simply that the Treasury Department and BATF do not have the statutory authority to enact these regulations. These proposed regulations so clearly exceed the authority of the BATF that such a joint resolution should not be needed.

Unfortunately, if this resolution is not passed, these regulations will automatically go into effect. The BATF and Treasury would be showing the proper respect for Congress if they were to voluntarily withdraw these regulations until Congress could adequately study the proposal. However, given the attitude of this administration, such voluntary restraint is unlikely. Therefore, I want to assure the gun owners of America that I will continue to oppose this unjustified attempt to extend Federal gun control powers.

Mr. McCLURE. Mr. President, I ask unanimous consent that Senators TOWER and DOMENICI be added as cosponsors to the concurrent resolution.

The PRESIDING OFFICER. Without objection, it is so ordered.

## THE PANAMA CANAL TREATY

The Senate continued with the consideration of the treaty.

The PRESIDING OFFICER. Under the previous order, the Chair recognizes the Senator from Alabama (Mr. ALLEN).

Mr. ALLEN. Mr. President, inasmuch as the amendment that I have to offer would not be in order until we have gone through the articles, I wonder if we might have the Chair call the articles, inasmuch as my amendment is to article II, so it would be in order.

ARTICLE XI

The PRESIDING OFFICER. Are there further amendments to article X?

If not, the clerk will report article XI.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that reading of the article be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The article is as follows:

ARTICLE XI

PROVISIONS FOR THE TRANSITION PERIOD

The Republic of Panama shall reassume plenary jurisdiction over the former Canal Zone upon entry into force of this Treaty and in accordance with its terms.

1. In order to provide for an orderly transition to the full application of the jurisdictional arrangements established by this Treaty and related agreements, the provisions of this Article shall become applicable upon the date this Treaty enters into force, and shall remain in effect for thirty calendar months. The authority granted in this Article to the United States of America for this transition period shall supplement, and is not intended to limit, the full application and effect of the rights and authority granted to the United States of America elsewhere in this Treaty and in related agreements.

2. During this transition period, the criminal and civil laws of the United States of America shall apply concurrently with those of the Republic of Panama in certain of the areas and installations made available for the use of the United States of America pursuant to this Treaty, in accordance with the following provisions:

(a) The Republic of Panama permits the authorities of the United States of America to have the primary right to exercise criminal jurisdiction over United States citizen employees of the Panama Canal Commission and their dependents, and members of the United States Forces and civilian component and their dependents, in the following cases:

(i) for any offense committed during the transition period within such areas and installations, and

(ii) for any offense committed prior to that period in the former Canal Zone.

The Republic of Panama shall have the primary right to exercise jurisdiction over all other offenses committed by such persons, except as otherwise provided in this Treaty and related agreements or as may be otherwise agreed.

(b) Either Party may waive its primary right to exercise jurisdiction in a specific case or category of cases.

3. The United States of America shall retain the right to exercise jurisdiction in criminal cases relating to offenses committed prior to the entry into force of this Treaty in violation of the laws applicable in the former Canal Zone.

4. For the transition period, the United States of America shall retain police authority and maintain a police force in the aforementioned areas and installations. In such areas, the police authorities of the United States of America may take into custody any person not subject to their primary jurisdiction if such person is believed to have committed or to be committing an offense against applicable laws or regulations, and shall promptly transfer custody to the police authorities of the Republic of Panama. The United States of America and the Republic of Panama shall establish joint police patrols in agreed areas. Any arrests conducted by a joint patrol shall be the responsibility of the patrol member or members representing the Party having primary jurisdiction over the person or persons arrested.

5. The courts of the United States of America and related personnel, functioning in the former Canal Zone immediately prior to the entry into force of this Treaty, may continue to function during the transition period for the judicial enforcement of the jurisdiction to be exercised by the United States of America in accordance with this Article.

6. In civil cases, the civilian courts of the United States of America in the Republic of Panama shall have no jurisdiction over new cases of a private civil nature, but shall retain full jurisdiction during the transition period to dispose of any civil cases, including admiralty cases, already instituted and pending before the courts prior to the entry into force of this Treaty.

7. The laws, regulations ,and administrative authority of the United States of America applicable in the former Canal Zone immediately prior to the entry into force of this Treaty shall, to the extent not inconsistent with this Treaty and related agreements,

continue in force for the purpose of the exercise by the United States of America of law enforcement and judicial jurisdiction only during the transition period. The United States of America may amend, repeal or otherwise change such laws, regulations and administrative authority. The two Parties shall consult concerning procedural and substantive matters relative to the implementation of this Article, including the disposition of cases pending at the end of the transition period and, in this respect, may enter into appropriate agreements by an exchange of notes or other instrument.

8. During this transition period, the United States of America may continue to incarcerate individuals in the areas and installations made available for the use of the United States of America by the Republic of Panama pursuant to this Treaty and related agreements, or to transfer them to penal facilities in the United States of America to serve their sentences.

ARTICLE XII

The PRESIDING OFFICER. Are there amendments to article XI? If not, the clerk will report article XII.

Mr. ALLEN. Mr. President, I ask unanimous consent that reading of the article be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The article is as follows:

ARTICLE XII

A SEA-LEVEL CANAL OR A THIRD LANE OF LOCKS

1. The United States of America and the Republic of Panama recognize that a sea-level canal may be important for international navigation in the future. Consequently, during the duration of this Treaty, both Parties commit themselves to study jointly the feasibility of a sea-level canal in the Republic of Panama, and in the event they determine that such a waterway is necessary, they shall negotiate terms, agreeable to both Parties, for its construction.

2. The United States of America and the Republic of Panama agree on the following:

(a) No new interoceanic canal shall be constructed in the territory of the Republic of Panama during the duration of this Treaty, except in accordance with the provisions of this Treaty, or as the two Parties may otherwise agree; and

(b) During the duration of this Treaty, the United States of America shall not negotiate with third States for the right to construct an interoceanic canal on any other route in the Western Hemisphere, except as the two Parties may otherwise agree.

3. The Republic of Panama grants to the United States of America the right to add a third lane of locks to the existing Panama Canal. This right may be exercised at any time during the duration of this Treaty, provided that the United States of America has delivered to the Republic of Panama copies of the plans for such construction.

4. In the event the United States of America exercises the right granted in paragraph 3 above, it may use for that purpose, in addition to the areas otherwise made available to the United States of America pursuant to this Treaty, such other areas as the two Parties may agree upon. The terms and conditions applicable to Canal operating areas made available by the Republic of Panama for the use of the United States of America pursuant to Article III of this Treaty shall apply in a similar manner to such additional areas.

5. In the construction of the aforesaid works, the United States of America shall not use nuclear excavation techniques without the previous consent of the Republic of Panama.

ARTICLE XIII

The PRESIDING OFFICER. Are there amendments to article XII? It not, the clerk will report article XIII.

Mr. ALLEN. Mr. President, I ask unanimous consent that reading of the article be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The article is as follows:

ARTICLE XIII

PROPERTY TRANSFER AND ECONOMIC PARTICIPATION BY THE REPUBLIC OF PANAMA

1. Upon termination of this Treaty, the Republic of Panama shall assume total responsibility for the management, operation, and maintenance of the Panama Canal, which shall be turned over in operating condition and free of liens and debts except as the two Parties may otherwise agree.

2. The United States of America transfers, without charge, to the Republic of Panama all right, title and interest the United States of America may have with respect to all real property, including non-removable improvements thereon, as set forth below:

(a) Upon the entry into force of this Treaty, the Panama Railroad and such property that was located in the former Canal Zone but that is not within the land and water areas the use of which is made available to the United States of America pursuant to this Treaty. However, it is agreed that the transfer on such date shall not include buildings and other facilities, except housing, the use of which is retained by the United States of America pursuant to this Treaty and related agreements, outside such areas;

(b) Such property located in an area or a portion thereof at such time as the use by the United States of America of such area or portion thereof ceases pursuant to agreement between the two Parties.

(c) Housing units made available for occupancy by members of the Armed Forces of the Republic of Panama in accordance with paragraph 5(b) of Annex B to the Agreement in Implementation of Article IV of this Treaty at such time as such units are made available to the Republic of Panama.

(d) Upon termination of this Treaty, all real property, and non-removable improvements that were used by the United States of America for the purposes of this Treaty and related agreements, and equipment related to the management, operation and maintenance of the Canal remaining in the Republic of Panama.

3. The Republic of Panama agrees to hold the United States of America harmless with respect to any claims which may be made by third parties relating to rights, title and interest in such property.

4. The Republic of Panama shall receive, in addition, from the Panama Canal Commission a just and equitable return on the national resources which it has dedicated to the efficient management, operation, maintenance, protection and defense of the Panama Canal, in accordance with the following:

(a) An annual amount to be paid out of Canal operating revenues computed at a rate of thirty hundredths of a United States dollar ($0.30) per Panama Canal net ton, or its equivalency, for each vessel transiting the Canal, after the entry into force of this Treaty, for which tolls are charged. The rate of thirty hundredths of a United States dollar ($0.30) per Panama Canal net ton, or its equivalency, will be adjusted to reflect changes in the United States wholesale price index for total manufactured goods during biennial periods. The first adjustment shall take place five years after entry into force of this Treaty, taking into account the changes that occurred in such price index during the preceding two years. Thereafter successive adjustments shall take place at the end of each biennial period. If the United States of America should decide that another indexing method is preferable, such method shall be proposed to the Republic of Panama and applied if mutually agreed.

(b) A fixed annuity of ten million United States dollars ($10,000,000) to be paid out of Canal operating revenues. This amount shall constitute a fixed expense of the Panama Canal Commission.

(c) An annual amount of up to ten million United States dollars ($10,000,000) per year, to be paid out of Canal operating revenues to the extent that such revenues exceed expenditures of the Panama Canal Commission including amounts paid pursuant to this Treaty. In the event Canal operating revenues in any year do not produce a surplus sufficient to cover this payment, the unpaid balance shall be paid from operating surpluses in future years in a manner to be mutually agreed.

ARTICLE XIV

The PRESIDING OFFICER. Are there amendments to article XII? If not, the clerk will report article XIV.

Mr. ALLEN. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The article is as follows:

ARTICLE XIV

SETTLEMENT OF DISPUTES

In the event that any question should arise between the Parties concerning the interpretation of this Treaty or related agreements, they shall make every effort to resolve the matter through consultation in the appropriate committees established pursuant to this Treaty and related agreements, or, if appropriate, through diplomatic channels. In the event the Parties are unable to resolve a particular matter through such means, they may, in appropriate cases, agree to submit the matter to conciliation, mediation, arbitration, or such other procedure for the peaceful settlement of the dispute as they may mutually deem appropriate.

The PRESIDING OFFICER. The Senator from Alabama is recognized.

Mr. ALLEN. Mr. President, we have gone through all the articles, so that an amendment now will be in order to any of the articles in the treaty. Is that correct?

The PRESIDING OFFICER. The Senator is correct.

AMENDMENT 101

Mr. ALLEN. That being the case, Mr. President, on behalf of the distinguished Senator from South Carolina (Mr. THURMOND), the distinguished Senator from North Carolina (Mr. HELMS), and myself, I call up amendment No. 101 and ask that it be stated.

The PRESIDING OFFICER (Mr. CANNON). The amendment will be stated.

The legislative clerk read as follows:

The Senator from Alabama (Mr. ALLEN), for himself, Mr. THURMOND, and Mr. HELMS, proposes an amendment numbered 101:

Amend Article II of the treaty by striking the period at the end of Article II, section 1, substituting a semicolon, and adding the following: "*Provided, however*, That within such six-months period the people of Panama shall have approved this Treaty in a national plebiscite called by the Panamanian Government for the purpose of ascertaining the Panamanian national will on the question of approval or disapproval of this Treaty.

Mr. ALLEN. Mr. President, this is an amendment to article II, which is the appropriate place to offer this amendment, calling for a plebiscite in Panama on this treaty. This would carry with it the other treaty, without so stating, because neither treaty can go into effect until both are put into operation.

Article II provides:

This Treaty shall enter into force, simultaneously with the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal, 6 calendar months from the date of the exchange of the instruments of ratification.

This amendment would merely add this language to the provision stating the effective date of the treaty. It goes into effect, along with the Neutrality Treaty, 6 months from the date of the exchange of the instruments of ratification, which would be the exchange between the two heads of state. But the amendment adds this proviso:

*Provided, however,* That within such six-months period the people of Panama shall have approved this Treaty in a national plebiscite called by the Panamanian Government for the purpose of ascertaining the Panamanian national will on the question of approval or disapproval of this Treaty.

Mr. President, if we examine the dealings with the Panamanian people, starting with the treaty of 1903, which has been under attack in the Senate by proponents of the treaties, we will see readily that we are in fact approaching another 1903 treaty situation. The 1903 treaty with Panama, it has been averred time and time again on the floor, took advantage of the Panamanians.

We dealt with a revolutionary government in entering into this treaty. The people of Panama were not consulted, and that is true, even though the treaty providing for the Panama Canal was received with wide acclaim by the people of Panama. Yet, the people of Panama were not called upon to pass upon the treaty, and the treaty was made merely with the revolutionary government of Panama.

Today we have the same situation. We are dealing not with the people of Panama in the absence of this amendment. We are dealing with a revolutionary government in Panama, not chosen by the people, never voted into office by the people, holding office as a result of a coup d'etat at gunpoint in Panama; and without this amendment, we will be dealing with the dictator of Panama only. We will have no compact with the Panamanian people. We will have a compact between the U.S. Government, acting under its constitutional processes, and the dictator of Panama, because there is no indication whatsoever that the dictator has any intention to submit this treaty to the people of Panama.

Do we want to go through the next 22 years, the duration of the Panama Canal Treaty, with the charge made by Panamanians dissatisfied with the treaty that "You dealt with the dictator of Panama and you did not give the people of Panama the opportunity to express their opinion on this treaty"?

It has been said that there already has been a plebiscite. Well, that plebiscite took place before the treaties were submitted to the U.S. Senate—certainly before there was action on them—and there has been a vast change in the treaties, a change that has caused riots and demonstrations in Panama, showing the strong opposition of the people in Panama to the treaties as presently shaped in the Senate.

In effect, Mr. President, there has been no plebiscite on this treaty. There was tremendous approval of the first treaty. It was approved by a vote of 2 to 1, but since then the situation has changed. The very groups who supported the treaty before are in strong opposition to the treaty now, because they feel that the reservations which were added in the Senate are an impact on their national dignity and their national sovereignty. They are willing to forego the benefits of these treaties rather than have their national sovereignty impinged upon.

So if we just deal with the dictator and allow him to accept the treaties as finally acted upon in the Senate, and if the dictator accepts them without submitting them to the people, it will forever be averred that we took advantage of the Panamanians again, that we have another 1903 treaty situation again. With all the complaints and all the criticism that have been leveled against the 1903 treaty, it certainly would lead me to feel that the Senate does not want to be a party to such a situation again.

Suppose we submit these treaties to Panama. The dictator accepts them. The Panamanian people riot. The Panamanian people say, "This is something that the United States, the gringos from the north, have forced on the Panamanian people." That criticism could be voiced time and time again, as they have guerrilla attacks, as they have violence, and as they have sabotage in Panama.

Would not they have a good case when they say, "Well, we never passed on these treaties, we never agreed to them, this was a compact between the United States and dictator Torrijos," who did not represent the Panamanian people?

Why does he fear to submit the treaties to the people of Panama? Why, he knows the people of Panama would reject these treaties. That is why. So why should we force these treaties on the Panamanian people?

Let us require that they say that they want to accept and to agree to these treaties. What is wrong with that? If they want the treaties and the U.S. Senate is willing to submit them to Panama, let them so state in a plebiscite, in a referendum called for that purpose. It would be far better if they do not want the treaties to let them say so and then let us go back to the negotiating table and see if a treaty acceptable to the American people and acceptable to the Panamanian people can be agreed upon.

Mr. President, we are in a strange situation here in the Senate. These treaties have been negotiated, they have been shaped here in the U.S. Senate as the Senate has the constitutional right and duty to do, but yet, in my judgment, they do not please either the American people or the Panamanian people.

Would not this be a great safety valve to insert in this treaty that it does not become effective unless within this 6-month period before which the treaties go into force a plebiscite be called in Panama to determine the wishes of the Panamanian people? I would hope that the Senate would be able to profit by the mistakes of the past. The 1903 treaty was handled poorly by the American Government, because they should have required that the Panamanian people pass on that treaty. But yet we are faced with almost an identical situation to the 1903 treaty situation. Can those Senators then who have been so critical of the action of the U.S. Government in 1903 dealing with the revolutionary government of Panama not see the similarity, the analogy of the 1903 situation and the 1903 action by our Government to the action that they are now suggesting that the Senate take dealing with a revolutionary government without the approval of the Panamanian people? That is exactly the scenario of 1903.

The proponents of the treaties are critical of what happened in 1903. Yet they are putting in motion a scenario remarkably similar to the 1903 situation.

In the next 22 years, during the life of this Panama Canal Treaty before the canal is turned over to Panama absolutely, we are going to hear it proclaimed a thousand times in Panama, "We are not satisfied with this treaty, it was not submitted to us, we want a better deal, and to force that better deal we are going to riot, we are going to demonstrate, we are going to take every means possible to show our disapproval of these treaties."

Why do we risk that, Mr. President? Why is it not the better part of wisdom to say to the Panamanian people, "Very well, we will ascertain your wishes; if these treaties are not satisfactory with you, we will not ask that you have these treaties forced upon you."

So that, Mr. President, is the purpose of this amendment, to provide and to assure that our compact is not just with the Panamanian dictator but that it is with the people of Panama. And that is important.

Mr. President, throughout this entire debate the proponents of these treaties have tried in every way possible to keep the Panamanian people from being allowed to pass on these treaties. Is that a fair statement? The proponents of these treaties have tried in every way possible while they have been under debate in the Senate for over 2 months—they have been pending for some 6 months—to assure that these treaties will not be submitted to the Panamanian people for action, that we will deal only with the dictator of Panama and not with the people of Panama, because every single amendment that has been offered to the treaty has been rejected here on the floor, except for the two so-called leadership amendments that left loopholes big enough for a truck to be driven through.

They are the only two amendments that have been agreed to by the leadership and, of course, the leadership controls a heavy majority of the Members of the Senate on these votes.

But every time an amendment was offered one argument that would be made against it is do not accept this amendment because if you do, it will require another plebiscite in Panama. What is wrong with that? Why should not the people of Panama be consulted? Why should not these treaties be satisfactory with the Panamanian people before they go into effect?

The leadership had not thought so. They thought we should deal just with the dictator and, therefore, not allow any amendments to the treaties other than these that were agreed to by dictator Torrijos.

Mr. CURTIS. Mr. President, will the distinguished Senator yield?

Mr. ALLEN. I am delighted to yield to the distinguished Senator from Nebraska (Mr. CURTIS).

Mr. CURTIS. Is it not true that the Constitution of Panama grants to the people through a plebiscite a direct role in the ratification of the treaties?

Mr. ALLEN. That is my understanding, yes. I think it is very dangerous since these treaties have been changed that they be not submitted again to the Panamanian people. Otherwise, they might rule these reservations unconstitutional under their law.

Mr. CURTIS. Just as we in our Constitution have vested in the U.S. Senate a role in treaty making, the constitution of Panama gives the people a direct role; is that correct?

Mr. ALLEN. Yes, that is correct. In other words, the people down there occupy the role, in effect, of the U.S. Senate here on this end of the line.

Mr. CURTIS. That being the case, the distinguished Senator from Alabama has offered an amendment which is far different than just a proposal that here is something the people ought to vote on.

Mr. ALLEN. That is right.

Mr. CURTIS. It is a proposal requiring that the constitutional processes in Panama be followed.

Mr. ALLEN. That is correct.

Mr. CURTIS. Is that correct?

Mr. ALLEN. Yes.

Mr. CURTIS. In other words, if there is a change in the treaty of any kind made by the U.S. Senate, and the treaty goes back to Panama, then to conform to their constitution it must be dealt with by both the executive and the people directly; is that correct?

Mr. ALLEN. That is my understanding of their constitutional provisions; yes, sir.

Mr. CURTIS. We then are in the same position if we offered a treaty to another country, and after it was transmitted to them they made changes, and it came back to the United States as a different agreement.

Mr. ALLEN. Yes.

Mr. CURTIS. Then it would be incumbent upon our executive to submit it to the Senate for consideration, would it not?

Mr. ALLEN. That is my understanding, yes.

Mr. CURTIS. I think the distinguished Senator's point is well taken. Oftentimes you hear the proposal made, "Well, let the people vote on it," and it may have merit, the idea of letting the people decide or, "Let us find out what the people want." That is worthy.

But this is far different, it is more than that. It is true it is submitting to the will of the people of Panama, but it also is a necessary step in the operation of their constitutional government; is that correct?

Mr. ALLEN. That is correct, yes.

Mr. CURTIS. I commend the distinguished Senator for his amendment; and while he has graciously yielded to me, I want to commend the distinguished Senator for his scholarship, for his in-depth study of the law, the Constitution, and for his faithful attendance and his diligent, unwavering participation in these deliberations.

Mr. ALLEN. I thank the Senator.

Mr. CURTIS. It has been most outstanding. He has displayed a strength of character and a strength of mind and a brilliance that are most unusual and extraordinary. It is rather disappointing that his proposals, as well as the proposals of many other people, are usually tabled by the lash of the proponents and absentee individuals who never hear what is being proposed, to deny the right of the Senate to vote on the merits of a proposal.

But, in spite of all that, the Senator has performed his duty in a conscientious and very exemplary way, and I am sure he has earned a place in history as one of the greatest of the U.S. Senators.

Mr. ALLEN. I thank the distinguished Senator for his very kind and, I must say, undeserved remarks. I appreciate the fine contribution he has made in pointing out the defects in these treaties, how they will not be to the best interests of the people of the United States from an economic standpoint and from a military standpoint as well.

Mr. President, the distinguished Senator from Nebraska spoke of the fact that the leadership has been able to defeat every amendment other than the two leadership amendments, and so they have.

The leadership is responsible, Mr. President—the leadership and the administration together are responsible—for every single word in this treaty. Having an overwhelming majority of the Members of the Senate following their recommendations and their lead, they have had the power of life and death over any amendment.

If amendments adding reservations to the resolution of ratification were accepted—and several were—they had to meet the approval of the leadership and of the administration or they would not have any chance of passing. So if we find ourselves in the Senate today in something of an impasse, if we find ourselves on the horns of a dilemma, over the fact that in the Neutrality or the Defense Treaty, which the Senate agreed to some 3 weeks ago in order to obtain passage or approval—which would be a better word—in order to obtain approval by the Senate of the first treaty, it was necessary, they found, at the last moment to obtain additional votes for the treaty, and in order to get those they agreed with certain Senators in the Senate that they would accept the DeConcini amendment.

Now, the dictator and the President exchanged letters on March 15, the day before the vote in the Senate. The dictator was raising a question about the fact that he had heard that reservations were being considered, and he was fearful of the meaning of these reservations. These letters are in the record of the Congress and Senate action, and the President assured him that nothing would be agreed upon that would interfere with the spirit of the agreement that he and the dictator had reached.

But when the smoke of battle had cleared away, the dictator objected strenuously, I might say violently, to the DeConcini amendment which had been used to gain enough votes to pass the treaty, and the Panamanians thought so poorly of the DeConcini amendment that already they have started to try to undercut this amendment in the U.N., at the bar of world opinion, and they are seeking to declare the provisions of this amendment illegal, unenforceable, even before the treaties have both been agreed to here in the Senate.

The DeConcini amendment has caused such consternation in Panama that if the dictator accepts the treaty with the DeConcini amendment, public opinion is so strong there that it is going to cause, in my judgment, the overthrow of dictator Torrijos. That would not be an undesirable happening in the view of the Senator from Alabama if it called for or it caused democratic forces to get back in control of the Government of Panama. But I would hate to see the dictator turned out of office because he has worked out a very fine treaty from the standpoint of Panama with the American negotiators, and through action of the U.S. Senate.

There is only one provision that has been added to these treaties that has not met with the approval of Mr. Torrijos, just one. The administration slipped up just one time. They beat down everything else, but they made the mistake of accepting the DeConcini amendment in order to pass the treaty. That is what it took, and they took a calculated risk that the dictator could go ahead and accept the treaty with that provision in it, and now they find out they cannot in light of the adverse public opinion in Panama.

But this was not just a DeConcini amendment. It had to become a leadership approved amendment, or it never would have passed, because not one single word has been added to this treaty without the approval of the administration and the leadership.

So now the administration is going to have, over the weekend, to try to resolve this dilemma that they find themselves in. Panama seems to be requiring that this DeConcini amendment be diluted or be weakened, or to have it said that it

has no force and effect, or not the force and effect that it was thought to have and was stated to have during the debate, but that it means something else.

That is the problem that the administration has, stated frankly and baldly. How can they appease the Panamanians without incurring the ire of Senators who would not have voted for the treaty without the DeConcini amendment? That is the problem they have.

They have the votes. They could get any amendment passed that they want passed, but will it mean anything, and will it have the effect that they think it might have? I suggest that it will not.

The first treaty is gone. We cannot bring it up again; it is already agreed to. It would take unanimous consent to bring it back up, to work on it again, and I doubt if unanimous consent would be obtained.

Then, in trying to cut the ground out from under the DeConcini amendment with respect to this treaty, how can that be done? By adding language trying to knock out the provision in the other treaty? That is not going to work, either, because this treaty that we are on now expires at the very time the DeConcini amendment goes into effect. Come the dawn of the next century, this Panama Canal Treaty is through; it is dead; it has served its purpose; and we then proceed on to the other treaty, where the DeConcini amendment is embodied.

Why did not the supporters of the treaty see the deadly danger in the DeConcini amendment? Why did they not? The DeConcini amendment, every single word of it, was weighed, it was held in a balance, it was studied, it was looked at minutely, its effect pondered and considered, under study by the State Department, presented to the President himself, and studied, I assume, by the leadership.

Well, they fell victim, it would seem to the Senator from Alabama, to their own reasoning with regard to procedure on a treaty.

They reasoned that no amendments must be allowed, because to amend the treaty—when I say amendments, I am talking about amendments to the treaty—no amendments to the treaty should be allowed, because to do so would require another plebiscite.

"But we can allow almost anything to come in as a reservation, because that will not require another plebiscite, and the dictator can accept it and that will be the end of it." Thus they reasoned; but it did not work out that way. They reasoned wrongly, because the reservation is so worded that it must become a part of the notes of ratification between the heads of state, and it will be written right into the final agreement between the two heads of state.

"Well," they say, "the DeConcini amendment is not too far wrong, not too far different from the leadership amendment." And they thought, well, it was not much worse than the leadership amendment. Both of them give us the unilateral right to move to keep the canal open. But the leadership amendment—and as I say, it had loopholes in it, loopholes big enough to drive a truck through—the leadership amendment, supposedly providing for unilateral action on the part of the United States to defend the canal, had a paragraph in it—and I am sure the leadership would not have put that in if they had been drafting the amendment, because the amendment did not really show any originality; it merely took the memorandum between the President and the dictator and used that word for word, transferring it over to the treaty itself in the form of the leadership amendment.

But that memorandum between the dictator and the President had three clauses inserted in it by the Panamanians—I assume by the dictator, inasmuch as it was an agreement between the President and the dictator—that gave him protection, and the DeConcini amendment did not have these three protective clauses that the Panamanian dictator inserted in the memorandum with the President which later became the leadership amendment.

Because the leadership amendment, based on the memorandum, provided that in asserting our right to intervene and defend the canal, we would not interfere with the internal affairs of Panama, we would not interfere with their territory, and we would not interfere with their independence. Those three safeguards were given the Panamanians in the leadership amendment, but not in the DeConcini amendment. That is where the Panamanians feel that their national dignity is being besmirched and their sovereignty being questioned.

The amendment got by the scrutiny of all of the proponents who bother to look at it, the State Department, the President, and the managers of the treaty, and they just embraced it. When they found that "with this amendment we are going to win the treaty fight" they all promptly embraced it.

But it did not have the safeguards in it for the Panamanians that the leadership amendment had. That is the impasse that we have.

Would it be right, would it be fair to the Senators who based their vote for the treaty on the full strength DeConcini amendment, to now seek to water down that amendment, and to say that it does not mean what it meant when it was accepted, and what the legislative history shows that it meant? They have tried to amend the legislative history by a different line of talk about the DeConcini amendment. That is not going to work, because, as Senators know and as the public knows, once a provision is written into a law, and once that law passes, you cannot think up something three weeks later and come in and say, "Look, this is what we meant when we passed this law or this amendment; we meant something else."

What counts is, what did the Senate mean at that particular time as to the meaning of that particular provision? The door is closed to having legislative history to show we did not mean what we said we meant when we passed the DeConcini amendment.

Nor can they, by amending the present treaty, do away with the provisions of the DeConcini amendment, because, as I have stated, the Panama Canal Treaty expires at the very time the DeConcini amendment takes up.

Mr. President, this will probably be the last amendment offered to the treaty. We have gone through all of the articles and now we are going back, as the rules provide, to seek to amend any of the articles that we so desire. This is an amendment to article II, which would assure us that this is a compact that we have with the Panamanian people, and that this treaty will not forever be the subject of division, criticism, the charge that we have dealt unfairly with the Panamanian people—as is the case with the 1903 treaty. Let us avoid the pitfalls of the 1903 treaty, which has been under such attack here by the proponents of the treaty. Let us not make those same mistakes. The Senate, 20 years from now, will be saying, "Why did not the Senate, in the year 1978, have a safeguard providing for a plebiscite in Panama?"

As the distinguished Senator from Nebraska (Mr. CURTIS) pointed out, the people of Panama, in regard to action on the treaty, occupy the same place that the Senate has in giving their advice and consent to a treaty. They have held, as has been pointed out here on the floor by the distinguished Senator from Alaska (Mr. STEVENS) just the other day in connection with his amendment, that the Panamanian Constitution provides that anything that has not been approved by the people as to a treaty is unconstitutional in Panama.

Once we let these treaties out of our hands, we are going to see a concentrated effort by Panama to knock out the DeConcini amendment, to say it is unconstitutional, because it was not in the treaty at the time of the plebiscite.

Of course, the plebiscite was called by the dictator prematurely because he knew that the U.S. Senate had the constitutional duty of giving advice and consent with respect to the treaty, and that the form that advice takes is in the form of amendments. He knew there was a likelihood that the treaty would be amended, yet he calls for a plebiscite on the spot. One-third of the people voted against it even then, while everybody seemed to be for it. Now everybody seems to be against it, and it would not stand a shadow of a chance of passing in Panama.

Let us get to the bottom of it. If, in fact, they are for it, let them say so; if they are against it, let them say so.

Also, let us comply with the Panamanian Constitution. There is no assurance Torrijos will comply with it. There is every indication he will not. If we would have a valid treaty, one that they cannot nullify in part, we need to see that the constitutional processes of Panama are followed.

This amendment would solve several questions:

Will the constitutional processes of Panama be followed?

The answer to that would be yes, with the amendment. The answer would be no, in all likelihood, without it.

Will this amendment assure that if the treaty is agreed to, it will be an agree-

ment not just with the dictator but with the people of Panama?

Yes. The amendment will assure that. The treaty without the amendment will not assure that.

Again, Mr. President, I say if we do find ourselves here in the Senate at an impasse, shall we please the Panamanians by undercutting DECONCINI, or will we displease the Senators who voted for the treaty with the DeConcini amendment to be accepted—and it was accepted? How far can we go in pleasing the Panamanians without displeasing the Senators who constitute the balance of power on this issue? That is the quandary.

I am still of the opinion that an act of statesmanship on the part of the President would be to recall these treaties before a final vote on next Tuesday.

Admit that the treaties have been allowed to get into a position where any action would be subject to criticism. After all, Mr. President, these treaties were billed as a great good neighbor act. "If we do not do this, they are going to have riots in Panama, they are going to have demonstrations, they are going to have sabotage, possibly."

But, Mr. President, it is rather strange that on the eve of giving them this great good neighbor gesture, giving them the canal, we find that they do not want the canal under the conditions that the Senate has attached to this gift, that infringement be allowed upon the sovereignty of Panama.

Strange as it may seem, the good neighbor gesture would not be to approve the treaties and send them down to Panama, a dissatisfied recipient, an unhappy recipient. The good neighbor act would be for the President to recall these treaties, send them back to the negotiating table, and see if the negotiators can come up with treaties which meet with the approval of the American people and the Panamanian people as well.

If the President does not act in this statesmanlike fashion—and I sincerely believe that would be the best way out of this dilemma—the next best thing would be to either defeat the treaties outright, and let them go back to the negotiating table, or allow them to go through with a plebiscite amendment attached to see if these treaties really meet with the approval of the Panamanian people.

Mr. President, when these treaties first came before the Senate, the President sent them up in the order of the Panama Canal Treaty first and the Neutrality or Defense Treaty second. That was the logical order of presentation, for should we not first decide whether we were going to give the canal away before we decide how we are going to defend it in the year 2000?

Well, the leadership, as is their right, shifted this order of consideration so that we would consider first the Neutrality Treaty. They thought nobody much would object to a Neutrality Treaty. But the opponents of the treaties, or I might state those who have tried to strengthen these treaties, saw it differently. They saw the Neutrality Treaty as part and parcel of the overall question, "Shall we give the canal away?" As a result, 32 votes were cast against that treaty, just two short of the required number to defeat the treaty.

I warned at the time, Mr. President, that this action of reversing the order of the treaties, considering the Neutrality Treaty first, was going to cause many Senators to be deprived of the right to vote for the Neutrality Treaty, because I predicted that, if they took up the Panama Canal Treaty first and that was agreed to, then the Neutrality Treaty would be approved almost by acclamation. If you witnessed, there were some 86 cosponsors of the so-called leadership amendments; not that we thought it accomplished a great deal, but because they were so highly touted, so highly praised as solving some of the problems. They changed the Neutrality Treaty from a treaty that must be defeated in the Senate, according to their own words, to a treaty that was so good that you could not have any more amendments to it. That is what this leadership amendment was supposed to do. But 32 Senators had to vote against the Neutrality Treaty because it is part and parcel of the Panama Canal transfer, shall I say.

I felt so strongly that we ought to consider the Panama Canal Treaty first that I offered a motion seeking to reverse the order that the leadership had set for these amendments, requiring the Panama Canal Treaty to come up first, followed by the Neutrality Treaty, in the proper chronological sequence. That received only 30 votes. The leadership was able to defeat it. The Senate defeated it, on the recommendation of the leadership, of course.

I predicted then that that action of reversing the order of consideration of the treaties, considering the Neutrality Treaty first, would add at least 1 week to the time necessary for the consideration of these treaties. Well, that was correct, except that, instead of reducing it 1 week, I believe doing it the other way would have reduced it 3 weeks, easily, because the Panama Canal Treaty, I daresay, at that time would have been approved and then Senators would have flocked to vote for the Neutrality Treaty. It would not have been necessary to accept the DeConcini reservation in order to pass the Neutrality Treaty. There would have been over 90 votes cast for it.

So, everywhere along the line, it has not been the opponents of these treaties that have caused the confusion. All we have caused is that there be legitimate debate and that there be a fair consideration of the points made by the opponents with respect to their desire to shape these treaties to the best interests of the American people, to shape these treaties in a way to give the United States the strongest defense rights in the canal and the Canal Zone.

(Mr. MOYNIHAN assumed the chair.)

Mr. ALLEN. Then every single word that has been added to the treaties has had the approval of the administration and now, at this late hour, we do not know whether the administration is going to lean toward pleasing the Panamanians and offending the Senators or pleasing the Senators and offending the Panamanians. That remains to be seen.

Mr. President, I understand that today will be the last day on which we can offer amendments to the treaty. Starting Monday, the vehicle before the Senate will not be the treaty but a resolution of ratification of the treaty, which, in itself, is amendable—not to offer amendments to the treaty, but to offer amendments to the resolution of ratification, or reservations to the resolution of ratification. So there doubtless will be reservations added.

I believe the leadership, though, is going to be cognizant of the fact that a reservation, while not rising to the dignity of an amendment to the treaty, does pose some real problems and does have a meaning. That a reservation does have a meaning, I feel, was not fully understood in the debate up to this time. I believe it is understood now and I believe that the administration is going to be a little more cautious in accepting reservations.

Mr. President, I should like to comment just briefly on a provision that has been called to my attention in the implementing legislation in connection with the treaties. You know, the treaty has certain provisions about the American citizens who are employees down on the canal and some 3,000 employees, either for the Panama Canal Company or the Canal Zone government. The treaty says that, in the first 5 years, the Panama Canal Commission, which is a U.S. Commission and is going to take over from the Panama Canal Company to operate the canal, the treaty mandates that the Commission get rid of at least 20 percent of the U.S. employees down there. Get rid of 20 percent of them—that is an American Commission, and we are supposed to have control over the canal for the next 22 years.

The treaty puts four Panamanians on the Commission and five Americans, and does not require any Senate confirmation of them. It mandates that we have to get rid of 20 percent of the American employees—I say American employees. Possibly, I should say U.S. citizen employees, because I guess, in a broader sense, we are all Americans in this hemisphere. We have to get rid of 20 percent of the U.S. citizen employees and—listen to this: This treaty that is supposed to provide for our control of the canal for 22 years says there cannot be any more U.S. citizens employed on the canal unless they have some special skill that the Panamanians do not have. How many would that be? Half a dozen?

So they are going to weed out the U.S. citizens working on the canal, some 2,000 or 3,000 of them, and not going to allow any more to be employed. This is an American Commission, mandated by the treaty.

Now, they said, well, do not amend the treaty; do not add that little trivia in there. I tried to knock out that provision, guaranteeing every U.S. citizen a right to continue to work there until they reach retirement age, until they retire voluntarily, or until they are discharged

for cause. They said, oh, no, we do not need that amendment, and they voted it down, saying, handle that in the enabling legislation.

I want to point out one of the provisions here, just to show how these treaties and the enabling legislation are stacked against the U.S. citizen.

Section 410, on page 58 of the implementing legislation, has this strange provision: It says that any Panamanian who is working on the canal down there when these treaties go into effect, he can immigrate to the United States without regard to quota or any other restricting provision.

He can just set sail for the United States. "Here I am."

Also, any Panamanian who is retired down there after 15 years of service is given special immigrant status and can move to the United States.

Now, why is that necessary? Why is it necessary to offer, shall I say, asylum, offer political asylum to Panamanians working on the canal, or Panamanians who have retired after working on the canal 15 years, and give them a right to enter the United States regardless of the quota system?

Is Torrijos all that bad? When we wipe out the Canal Zone and turn the zone and the government over to Torrijos, are his mercies so tender that the Panamanians themselves are going to want to flee?

Read the enabling legislation. They provide for, in effect, a getaway of the Panamanians working on the canal. Just consider that for a moment.

I hope, Mr. President, that we will keep faith with the Panamanian people, as well as the American people. Let us give them a right to say whether they approve of this treaty or not. Let us see that the constitutional processes of Panama are followed in order that we will have a valid treaty. Let us remove from future relations with Panama, and with the world, the possibility that Panama will say, "Well, this is an agreement worked out with the dictator, we don't feel bound by it, we want the canal now. Oh, we agreed, the dictator agreed to this. Well, we don't accept that and besides Torrijos is no longer with us."

That may well be the statement down in Panama after not too long a time after these treaties are accepted by Torrijos without submitting them to the people.

Let us not have another 1903 specter before us and before before us and before the country and before the world.

Why are the proponents of the treaties so critical of the conditions under which the 1903 Treaty was agreed to? Why can they not see that we have an analogous situation here?

Mr. President, I hope the amendment will be agreed to.

I yield the floor.

Mr. MATSUNAGA addressed the Chair.

The PRESIDING OFFICER. The Senator from Hawaii.

Mr. MATSUNAGA. Mr. President, last November I had the great privilege to accompany the distinguished majority leader (Mr. ROBERT C. BYRD), the Senator from West Virginia, and five other Senators on a study mission to the Republic of Panama for the purpose of assessing the merits of the proposed Panama Canal treaties. That experience firmly convinced me that the ratification of the new treaties would be in the best interest of the United States.

On my return from that trip, I pledged that I would do all that I could to inform Americans of the need for the new treaties, as well as of the actual provisions of the treaties now before the Senate and why they should be supported. Carrying out this pledge, I have spoken before a number of citizens' groups in Hawaii and elsewhere.

I would like at this time to submit the text of a speech on this subject which I delivered in Honolulu before the Hawaii World Trade Association on March 30, 1978, and ask unanimous consent that it be printed in the RECORD at this point.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

THE PANAMA CANAL TREATY: TO RATIFY OR NOT TO RATIFY?

Honorary Consul General of Panama, Mrs. Armenia Adams de White, President Jerry Chang, members of the Hawaii World Trade Association, and friends: Aloha!

After fourteen years of service in the House of Representatives, I come before you today as one who has had the great privilege of serving his first fourteen months in the United States Senate.

There's a big difference between the two legislative bodies. In the area of foreign policy, for example, the names of the two committees are different. Until the recent reorganization in the House, its Committee was always called the Committee on Foreign Affairs, while in the Senate, its Committee has always been called the Committee on Foreign Relations. Somebody asked Alben Barkley, who was Vice President under Harry Truman why this was so. Barkley's response was that most House members are younger, so they can have affairs; but by the time they get to the Senate, they're only capable of having relations.

This afternoon I wish to address myself to an important and complex foreign relations, foreign affairs, or foreign policy matter—the Panama Canal Treaty: The question being to ratify or not to ratify.

As you know, there are two Treaties which have already been signed by the Heads of State of both Panama and the United States. One of the Treaties, the so-called Neutrality Treaty, was ratified by the Senate by a vote of 68 yeas to 32 nays on March 16. You know, of course, that all treaties must be ratified by a two-thirds majority vote. The second Treaty is expected to be voted on in the next few weeks.

I voted for ratification of the Neutrality Treaty, and intend to vote to ratify the second so-called Panama Canal Treaty. I will do so because I think it would be disastrous for both Panama and the United States if the treaties were not ratified. I would like to share with you today the reasoning behind my position.

We must bear in mind, first and foremost, that the Canal is worthless to us unless it can be kept in operation and we are able to use it.

The question then arises: In the event that the U.S. Senate rejects the Panama Canal Treaty, and hostilities between Panama and the United States should ensue, could we adequately defend the Canal and keep it in use?

In search of an answer, I went to Panama four months ago with the Senate Majority Leader, Senator Robert C. Byrd, and five other Senators. While I was there, I inspected the Canal. I took a helicopter tour of the Canal Zone, and I visited a remote island province of Panama, I talked with Americans who live in the Canal Zone and with those who live in Panama proper, with American military and business leaders, with Panamanian leaders, including General Omar Torrijos and President Demetrio Lakas, and with Panamanians who voted for, and Panamanians who voted against the Treaties in their plebiscite of last October.

My first-hand observation of the situation in Panama convinced me that General George Brown, Chairman of the Joint Chiefs of Staff, was right when he said that in the event of hostilities between the United States and Panama, we could not adequately defend the Canal and keep it in use, even with a hundred thousand troops. General Brown, of course, was speaking in the realistic expectation of guerrilla type hostilities.

As a former infantry officer, while helicopting over the Canal and viewing the dense tropical jungle extending for miles, right up to the Canal on both sides, I came to the unavoidable conclusion that any determined band of guerrillas could keep the Canal completely shut down over extended periods of time and render it useless in the event of an emergency.

I was convinced, as were the other visiting Senators, that the operation of the Canal would be indefensible in the event of armed conflict between our country and Panama, as distinguished, of course, from hostilities between any other nation and the combined defense forces of Panama and the United States. The man-made freshwater lakes that supply the Canal's water, its complex lock system, and the locks' electric power supply are just too, too vulnerable.

Incidentally, you may be interested and amazed as I was, to know that there is not a single drop of salt water in the Panama Canal. It is operated by the use of fresh water from two lakes, Lake Gatun and Lake Madden. Fifty-one million gallons of fresh water pour into the Pacific or the Atlantic from these two lakes every time a ship sails through the Canal.

A single breach in the Lake Gatun Dam, the Canal's major water source, would close down the Canal for as long as two years, the time it would take rainfall to refill the lake. The sinking of a ship in the lock system—which would be technically easy to accomplish—would bring Canal operations to a halt for a long period of time.

We are living in a world where terrorism runs rampant. It won't take much terrorism to close the Panama Canal. Justifiably, shipowners themselves would refuse to sail their ships through the Canal so long as a real threat to their safety prevailed.

The new Treaties are the best guarantee—in fact, the only guarantee—we have to avoid hostilities and to keep the Canal open for our unobstructed use.

Every businessman in Hawaii should be aware of how the closing of the Panama Canal affect U.S. trade. Every American should know that such closing would adversely affect his or her daily living and the security of this country.

Because the new, bigger ships, including supertankers carrying Alaskan petroleum to Gulf or East Coast refineries, cannot fit into the Canal, the Canal is becoming less crucial to our trade with the passage of time. However, in 1976 sixteen percent of American trade went through the Canal. By comparison, the percentage of U.S. intercoastal trade passing through the Canal in 1924 was as much as 50 percent. Similarly, while 1,265 U.S. military vessels went through the Canal in 1949, in 1976 only 85 made the same journey.

The Canal plays a significant role in business in our State, as you may know. However, it is becoming less important with each

passing year. Sixteen years ago, ten percent of Hawaii's trade went through the Canal. In 1976, this figure had dropped to 4.3%, or 729,000 long tons of a total of 16.7 million long tons of cargo which sent through Hawaii's harbors, that year.

So while the Panama Canal is not as essential as it used to be to United States trade, including that of Hawaii, the United States still needs the use of the Canal, especially in the event of an emergency. And there is every reason to expect that we will continue to have its unobstructed use—if we ratify the Treaties.

There is a further and perhaps even more compelling reason for ratification of the Treaties: Ratification would set right what is unquestionably an ugly chapter in American history. An examination of the events leading up to the signing of the 1903 Treaty, under which we now operate the Canal supports this judgment.

Up until 1903, Panama was a province of Colombia. The United States had sought a Treaty to construct the Canal with Colombia, the country that owned the land. The Treaty was negotiated with the help of a Frenchman, Philippe Bunau-Varilla, who was the chief engineer for the French company that had gone bankrupt trying to build the Canal. But the Colombian Senate refused to approve it.

Bunau-Varilla, who stood to gain $40 million under the rejected treaty, then talked the United States into sponsoring a Panamanian Revolution against Colombia, in exchange for the right to build and operate the Canal.

Bunau-Varilla, the Frenchman, planned the revolution, literally wrote the original Panama Canal Treaty of 1903, and even signed the Treaty for Panama on November 18, 1903, all before the official Panamanian delegation arrived in Washington to begin negotiations. What is even more incredible is that no Panamanian had even seen the Treaty before it was signed by the Frenchman and our own Secretary of State.

Theodore Roosevelt, who was then President, and who dispatched American warships to Panama in support of Bunau-Varilla, took credit for success of the revolution and extended official American recognition of the new nation of Panama within three days after the revolution. The hastily drawn Treaty was signed by Secretary of State John Hay for the United States on November 18, 1903, only 15 days after the revolution.

Before signing, Secretary of State Hay observed that the Treaty was "Vastly advantageous to the United States, and we must confess, not so advantageous to Panama," but upon the urging of Bunau-Varilla and under the instructions of President Roosevelt signed it. Here's what Bunau-Varilla told Secretary of State Hay just before the Treaty was signed: "For two years you have had difficulties in negotiating the Canal Treaty with the Colombians. Remember that [at that time] the Panamanians were still Colombians. You have now before you a Frenchman. . . . Do it now!"

Bunau-Varilla made one thing certain—that included in the new Treaty, just as it was in the proposed treaty rejected by Colombia, was a provision for the payment of $40 million by the United States to the French for equipment and materials used in the unsuccessful digging of the Canal by the French.

You can easily appreciate why the Panamanians disliked the Treaty from its very beginning. In 1936 and 1955, the Panamanians pleaded for minor changes in the Treaty for their benefit, and the United States readily consented. In 1958, riots broke out in Panama when nationalists attempted to raise the Panamanian flag over the Canal. Several Panamanians were killed in the incident.

In 1963, in an effort to calm the situation, we began flying both our flag and the Panamanian flag over the Canal Zone. But more riots ensued. Finally, in 1964, after 20 Panamanians and four Americans were killed in an incident, we consented to renegotiate the Treaty to cool the situation. That renegotiation took thirteen years, and was supported by the two Democratic and two Republican Presidents who served during that period.

In trying to decide whether or not to support the newly negotiated Treaties, we must try to understand the Panamanians' point of view. In our dialogue with the Panamanians in November of last year, we visiting Americans were told that what they want most is to regain their "national dignity". They openly expressed their hurt feelings over the fact that a foreign country has complete control over their greatest national resource and primary means of transportation through their country.

The United States operates the Canal and controls a strip of land ten miles wide that runs completely across the middle of Panama, dividing that country in two. The Panamanians feel that only with the return of the Canal Zone to their control will they be able to express genuine pride in their country, and walk with dignity as citizens of the Republic of Panama.

That's why they rioted in 1959 and 1964. That's why they pushed so hard for renegotiation of the Treaty of 1903. That's why they voted to ratify the new Treaties so overwhelmingly in last fall's plebiscite.

In fact, all of Latin America resents the old 1903 Treaty. Ratifying the new Treaties would be a major step indeed in improving our international relationships in our own hemisphere.

Let us now take a brief but close look at the objections which have been raised against the Treaties.

The opponents of the Treaties have said, "We bought [the Canal] and paid for it. It's ours just as much as the Louisiana Purchase and Alaska are ours." They call the Canal "our sovereign territory."

The truth of the matter is that we don't own the Canal. We never did. We are only leaseholders, highly-privileged as we may be.

The 1903 Treaty, under which we currently operate, says we are given the "use" of the Canal Zone. It doesn't say we own it. It, in fact, states that "the sovereignty of such territory [is] vested in the Republic of Panama". The United States is only given authority as "if it were the sovereign". The language of the 1903 Treaty makes it unmistakeably clear that the United States is not the sovereign; Panama is.

For the use of the Canal and Canal Zone we have been paying an annual rental fee to Panama. Until 1935, the fee was $250,000 a year. For sixteen years thereafter we paid $1.9 million annually. We now pay $2.3 million a year, which is less than 1.4 percent of the total tolls of $165 million collected last year.

Evidence in other areas points to our own recognition that we do not own the Canal. For one thing, under our Federal Constitution, any person born on American soil is automatically an American citizen, regardless of parentage. However, a person born of non-American parents within the Canal Zone is not a citizen of the United States. You will recall that when Hawaii was still a Territory, a person born of alien parents in Hawaii automatically became a United States citizen. This is not the case in the Canal Zone.

In addition, the Canal Zone's ports are considered foreign ports for postal-mail purposes, and goods shipped from the United States to the Canal Zone are considered a part of foreign trade.

Opponents of the Treaties are saying the Treaties propose a "give away" of the Canal. We certainly cannot give away something that is not ours!

The opponents of the Treaties have also argued that they should not be ratified because they were signed by General Torrijos—a "tinhorn dictator".

General Torrijos may be a dictator—but he certainly is not a stereotypical dictator. He has the unmistakeable support of his people, and walks among them even without bodyguards or arms. I know because I was with him on a couple of his walks. And he does not use terror and torture to govern.

In fact, after signing the pending Treaties, he sought and obtained by a two-thirds majority vote, their ratification by his people through a plebiscite, watched over by United Nations observers.

Panamanians may not enjoy the same civil rights we Americans do. But their government under Torrijos does not systematically deny them their rights.

It is important to look, not only at Torrijos' failings, but at his accomplishments—not only at what he has not done, but what he has done.

As a "tinhorn dictator", Torrijos has done exceedingly well by his people. Since he came to power in 1968, he has doubled the number of schools. He has improved marketing facilities for small farmers, and built hydroelectric plants. He has institutionalized a low-cost housing program for poor in both urban and rural areas.

And he plans to do more. Under a provision of the second treaty we promise $50 million in foreign military sales credits to Panama over the next ten years. General Torrijos told our delegation of Senators that he does not plan to spend this money for weapons. He'll use it to send promising young Panamanians to college and to make them bilingual and trilingual so they can take over the complex operations of the Canal in the year 2000. He plans to buy helicopters and train pilots in each province of Panama to provide emergency medical aid.

Critics of the Treaties have floated the rumor that General Torrijos is a communist and that he plans to lead his country to communism.

I have been unable to find any truth in that rumor. When I was in Panama, I spoke to a cross-section of American residents and Panamanians. None of them believed Torrijos is a communist—not even his political rivals.

The President of Panama, Texas-educated Demetrio Lakas, who talks and acts like a Texan, is well-known for his anti-communist position. When asked about Torrijos, he said he was sure Torrijos was not a communist and he would be willing to stake his life on it. Sen. Barry Goldwater, one of the staunchest opponents of the Treaties, has repeatedly stated that he knows Torrijos is not a communist.

During one of our conferences, last November, General Torrijos was asked whether he might turn the Canal over to Cuba or Russia once the Treaties were ratified. His response was that he didn't want to see "Panamanian waters infested by communist sharks."

At another time, he told us he had strong feelings about the issue. "If I tried to lead my people to communism", he said, "they would throw me out, and if, despite my leadership, the people espoused communism, I would leave this country!"

Consider this fact, too, that under Torrijos' leadership Panama has not even recognized the Soviet Union or the People's Republic of China. No diplomatic relations exist between Panama and the two foremost communist nations. The undeniable truth is that the United States maintains friendlier relations with the Soviet Union and Communist China than does Panama.

Despite the controversy over the Treaties, my trip to Panama convinced me that the people of Panama are fond of Americans, and they tend to follow our leadership. In fact, most of Panama's leaders today, including General Torrijos, are American educated.

Having said this about communism and the people's leanings in Panama, I don't want to leave the impression that there is absolutely no danger of a communist takeover. There is.

I believe that a negative vote by the United States Senate on the pending Panama Canal Treaty would be the greatest possible boost for communism in Panama. The enormous frustration that the Panamanians would feel would help the communists convince them that the United States is an imperialist nation, bent on exploiting weaker nations.

Rights now the communists in Panama are the primary opponents working against the ratification of the Treaties. Their one issue will disappear after both Treaties are ratified. Our voting down the Panama Canal Treaty would give the Panamanian communists new life.

Let me turn now to another argument frequently raised against the Treaties—the lack of human rights in Panama. Basically, this issue is not relevant to the Treaties, except in the use of the Treaties in win concessions from Torrijos, which we have.

During our final meeting with Torrijos in Panama last November, we urged him to repeal the law that permits detention, without due process of law, of persons accused of committing any crime, political or otherwise. He said he would discuss the matter with his advisory council, and only a few weeks later he announced the law's repeal. He also promised to allow more freedom for the Panamanian press. In fact, shortly before the plebiscite last fall censorship of the press decreased significantly, a trend that has continued over the past months. Torrijos also assured us he would allow political exiles to return home after the Treaties have been ratified. I believe he will keep those promises, too.

These are major concessions. He made them because he wants us to approve the Treaties. In fact, he even said that he would be willing to resign from his present leadership position if such action would help in getting the United States Senate to ratify the Treaties.

It should be noted, too, that Amnesty International, the organization which recently won the Nobel Peace Prize for its human rights work, was not sufficiently concerned about the human rights situation in Panama to mount an effort there. There were more human rights problems in other Latin American countries. Amnesty International found few-prisoner violations in their investigation in Panama.

Amnesty International did find political exile violations. But, as I mentioned earlier, General Torrijos promised Senator Byrd and the other visiting Senators that he would allow those exiles to return to Panama after the Treaties have been ratified.

Another criticism lodged against the Treaties is that we will pay the Panamanians millions of American taxpayer's dollars to take the Canal off our hands. This is just not so.

During the period that we continue to operate the Canal, toll rates will be increased to make up for the added payments. We may be paying additional sums for the maintenance of military bases if we continue to maintain them in Panama—just as we do in Greece, Spain, Turkey, and the Philippines. In fact, we haven't paid Panama a cent for the use of our fourteen military bases there in 74 years.

We will be setting up a package of loans, loan guarantees, and credits for Panama. But most of these will promote trade and investment by American companies there, and the loans will be paid back to the United States government.

The one legitimate question raised against the Canal Treaties as originally signed was a military one. That question was: Does the United States have a right to intervene militarily if the neutrality of the Canal is at any time threatened? To clarify the language of the Neutrality Treaty, President Carter and General Torrijos agreed to a "Statement of Understanding" that the United States will indeed have that right, along with the right to have its warships and auxiliary vessels "go to the head of the line" in an emergency. This Statement of Understanding was incorporated into the Neutrality Treaty by an amendment offered by the leadership of the Senate.

To clarify the matter beyond any doubt, the Senate adopted amendments to the ratification resolution, in the form of reservations and understandings, which specifically repose in the United States the right to "use military force in Panama" after the year 2000, if necessary to keep the Canal open and neutral. By this action, the Senate eliminated the one and only legitimate argument against the Panama Canal Treaties.

There is no denying that there is something in us as a nation that wants to stand up and say, "We've had enough. We're not going to be pushed around by anyone any more! Let's have no more Vietnams!"

We want to take pride in the greatness and strength of our country—indeed, the greatest and strongest in the world.

But in introspection, we must remember that above all greatness and strength is the will to do that which is right.

We may not be ecstatic over the proposed Panama Canal Treaties. But we need to bear in mind that we can either ratify the Treaties, and guarantee our right to use the Canal, or we can vote them down and thereby virtually guarantee open warfare in the Canal Zone and the shutting down of the Canal.

We may not like the choice between these two alternatives. But they are the only alternatives.

I am not saying that the existing Treaty of 1903 is not valid. It is. But we must recognize that it smells of long-dead colonialism.

Since we signed and ratified that Treaty, many changes have occurred in the world. We must change with the times or pay the consequences.

To summarize:

First and foremost, we need to keep the Canal open.

Second, in our own best interest, we need to be concerned about how other nations see us. We need to be on good terms with the people of Panama, and we need to get going on a new Good-Neighbor Policy in Latin America.

Third, and even more importantly, we need to be concerned about how we see our own selves.

This great country of ours was born of a revolution for the right to self-determination. We have fought for other peoples' right to self-determination. Let us not deny that same right to the Panamanians; let us try to understand their yearning for self-determination and national dignity.

The understanding which is demanded of us now is the spirit of liberty that was once described by Judge Learned Hand as follows:

"The spirit of liberty is the spirit which is not too sure that it is right; the spirit of liberty is the spirit which seeks to understand the mind of other men and women; the spirit of liberty is the spirit which weighs their interests alongside its own . . ."

I ask for your support of the Panama Canal Treaty, so that we who proudly call ourselves Americans may prove to the world that we are indeed dedicated to the true spirit of liberty.

Thank you very much.

Mr. MATSUNAGA. Now, speaking on the amendment offered by the distinguished Senator from Alabama (Mr. ALLEN), I wonder what the Senator from Alabama would say if the Panamanians themselves would offer an amendment, the amendment just changing "Panama" to "the United States," which could read:

*Provided, however,* that within such 6-month period the people of the United States shall have approved this treaty in a national plebiscite called by the United States Government for the purpose of ascertaining the American national will on the question of approval or disapproval of the treaty.

We would not hear the end of it, that here is a tinhorn dictator imposing upon us a requirement that the people should approve the treaty in a plebiscite contrary to the Constitution of the United States.

Mr. ALLEN. Will the Senator yield at that point? I will be glad to answer it.

Mr. MATSUNAGA. I am happy to yield just briefly because the Senator spoke for over an hour.

Mr. ALLEN. It will be only 30 seconds.

The Panamanian Constitution requires a plebiscite. Ours does not.

All this would do would be to require that Panama complies with its own Constitution and that we do have a compact with the Panamanian people rather than with the dictator.

Mr. MATSUNAGA. Exactly. Exactly. And in accordance with article 274 of the Panamanian Constitution, the people of Panama did have the opportunity to vote for ratification of the treaties on October 23, 1977.

Let me, for the RECORD, read the article of the Panamanian Constitution. article 274, which says:

Treaties which are concluded by the Executive with respect to the existing canal, the zone adjacent thereto, and the defense of the canal, as well as to the construction of a new canal at sea level, or a third row of locks, must be submitted to a national plebiscite.

In accordance with that article of the Panamanian Constitution, the people of Panama went to the polls on October 23, 1974, and during the 6 weeks preceding the vote, all restrictions on political activities were lifted and a vigorous public debate of the issue took place.

The opposition was given free rein to express its views and made the most of the opportunity, under the tinhorn dictator, so to speak, an opportunity which seldom is given even declared democracies.

For several weeks, there was more antitreaty than protreaty material in the Panamanian media.

During the last week of the campaign, however, the government effected some reduction in the amount of anti-treaty material, or the media, to be honest about the matter.

Now, the results of that plebiscite, announced on October 28, showed 66.1 percent voting to ratify, 32 percent voting not to ratify, and only 1.9 percent of the ballots were voided. Of those eligible to participate, 95 percent actually did so.

Mr. ALLEN. Mr. President, will the Senator yield?

Mr. MATSUNAGA. I yield.

Mr. ALLEN. I ask the Senator one question: Have not the treaties been changed materially since that plebiscite?

Mr. MATSUNAGA. I am glad the Senator from Alabama asked that question, because the Senator knows that the treaties have not been changed substantially to necessitate another plebiscite.

As it has been repeatedly pointed out on this floor, the leadership amendment is the only amendment which was adopted to the treaty—that is, the Neutrality Treaty—and that leadership amendment merely incorporated into the treaty a statement of understanding between President Carter and maximum leader Torrijos, which had been put before the people of Panama even before the plebiscite was held.

As a matter of fact, I was privileged to see the tape of the broadcast which General Torrijos made, in which General Torrijos said to another to read that statement of understanding to the people, so that the people will know what it is all about and will know that this is part of the treaty and the understanding of what is included in the treaty.

According to all legal scholars we have had opine on the subject of the inclusion of that statement in the treaty, we have had practically unanimous agreement that the statement put forth as an amendment by the leadership does not in any way substantially change the treaty.

Returning to the legal effects of the inclusion of the joint statement, we have the opinion of the legal adviser to the Department of State. He said that in his view, on the basis of examination of available source materials and consultations with authorities available to them:

> We have reached the conclusion with respect to the October statement that another plebiscite would not be necessitated by insertion of the October statement into the Neutrality Treaty.

Further:

> We have been advised by the Panamanian Government and Panamanian legal authorities that they have reached the same conclusion.

So that the plebiscite which the Senator from Alabama calls for in his amendment is one which already has been held and one in which, by a better than two-thirds majority, the people of Panama indicated approval of the treaties.

Mr. ALLEN. Mr. President, will the Senator yield for a question?

Mr. MATSUNAGA. I yield.

Mr. ALLEN. This will be the last question. I appreciate the courtesy of the distinguished Senator in yielding.

I wonder whether the Senator named the counsel for the State Department who came up with that opinion. I ask if he is the same counsel who advised as to the acceptance of the DeConcini amendment on the floor.

Mr. MATSUNAGA. No. I am informed that he is not.

Mr. ALLEN. I am glad to hear that.

Mr. MATSUNAGA. Of course, the Senator from Alabama has implied that he would be forcing this treaty upon the people of Panama without a plebiscite. The truth of the matter is that unless we leave it to the people of Panama, themselves, as to how they should proceed to ratify the treaty, we are then forcing upon the people of Panama what we think is best for them.

We ratify the treaties in accordance with the provision of our Constitution. We would resent it if the Panamanians would say to us that we should ratify the treaties not by provisions of our Constitution but by plebiscite held among the people of the United States.

Likewise, we definitely are not to dictate, by treaty or otherwise, how the Panamanians should proceed to accept a treaty signed by their leaders.

As I have indicated, Mr. President, the treaties before us today have been ratified in accordance with the constitution of the Republic of Panama, by plebiscite.

I point out, further, that at the invitation of the Panamanian Government, the United Nations and 20 United States and Latin American universities sent representatives to Panama to observe the conduct of the plebiscite. Eric Sy, Under Secretary General and Legal Counsel, headed the United Nations team and subsequently submitted a report which contained the following comments:

> Thanks to the full cooperation and logistical support of the Panamanian authorities, the special representative and his team were able to perform their functions in the best conditions and in total independence. It is the feeling of the special representative that the plebiscite was extremely well prepared and took place in an atmosphere of calm and in accordance with the usual democratic standards.
>
> The special representative and his team covered as many areas and plebiscite stations as was humanly possible. They also witnessed preplebiscite campaigning and vote counting. Except for minor anomalies observed in some polling stations, which were often corrected on the spot, the special representative has come to the conclusion that the plebiscite of 23 October, 1977, took place in a normal way and that it was an example in democracy.

Probably the most significant aspect of the plebiscite was that of those who voted, 32 percent voted against the ratification of the treaties. This would seem to indicate that the claim on the part of opponents of the treaty that Panama is run by a tin-horn dictator may not be altogether true. Despite the presence of General Torrijos, 32 percent of those who voted did vote contrary to the wishes of the so-called dictator of Panama.

Mr. President, I ask unanimous consent to have printed in the RECORD an article on the Panama plebiscite written by Dr. Donald G. Herzberg, dean of Georgetown University's Graduate School, and Dr. Timothy S. Healy, president of the university.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARTICLE ON PANAMA PLEBISCITE

(By Donald G. Herzberg and Timothy S. Healy)

On Sunday, October 23rd, at the invitation of the Government of Panama, we were official observers at a referendum held to measure popular support for the proposed Treaties with the United States on the ownership and operation of the Panama Canal. Our fellow-observers were the rectors and presidents of 20 Latin and North American universities. Deans and other senior officials from the National University of Panama were assigned to us as guides.

In our best judgment the vote that Sunday was a fair one. The electorate was large but defined, the ballot was secret and access to the polls was adequately controlled. There was both good order and good humor throughout the process. One of the unexpected signs of honesty was that the two-to-one endorsement of the Treaties (which would be a landslide in the U.S.) was less than had been predicted by both the friends and the enemies of the Panamanian regime.

The one-third negative vote, however, ought not to be read as showing any national division at all about the Canal. After talking with hundreds of Panamanians in the Capitol, its suburbs and in the countryside, all of us were convinced that while the vote indicated several varieties of political dissent, there is still near national unanimity that the time has come for Panama to begin taking responsibility for the Canal. That conclusion was hardly surprising. Other things we learned were more so.

Panamanians have a sense of urgency about these Treaties which is totally lacking in the United States and which has not been adequately reflected in our press. The Treaties have been in the process of negotiation for some 14 years. The object of all that talk is, moreover, a source of enormous national pride in Panama. To anyone who looks at it the Canal is awesome; and the pair of us gaped as we realized that the great clockwork locks were built in 1913 with no expectation of planned obsolescence. But this engineering wonder surprises Panamanians every bit as much as it does us. They show it off with pride and obvious pleasure. They resent that in 60 years only two Panamanians have been found qualified as pilots and take exception to the Canal Company's notion that it would take 14 years to train one. But these were details. Panamanians are aware of the international importance of the Canal. They are proud of it and care for it. We met no one who did not speak of it as a national trust well worth the keeping that it takes.

The Canal Zone is a wholly different matter. It cuts a foreign swathe, from ocean to ocean, from north to south, some ten miles wide across the country. Were we to have a similar zone in the United States, it would run 1100 miles from Duluth to Galveston and slice a band 64 miles wide through seven states.

"La Zona" is really a little U.S.A. It claims more scout troops and P.T.A.'s than any parallel stretch at home. Some of its civilian population boasts that they have never set foot on Panamanian soil. The Panamanians distinguish sharply between military and civilian Zonians. With Latin grace they concede to the former the warrior's tribute of isolation, pampering, PXs and some splendor. It is against the civilians that the rancor is felt. It is staggering to pass from the deep and crowded slums on one side of Central Avenue to the suburban fronts of the Chase Manhattan Bank, the UMCA and the Provident Loan Society on the other side, with their fresh paint, awnings and deep lawns. When the high school students who led the attack on the Canal Zone in 1964 set out, all they had to do to enter the enemy's territory was cross a street and scale a fence. Panama doesn't expect both sides of the street to be the same. It does want both sides to be Panamanian.

Another surprise was that everybody who spoke to us about the much agitated defense aspects of the Treaties was reassuringly realistic. The United States is acknowledged to be a great power and expected to act like one. Any threat to the Canal would auto-

matically provoke our intervention—and this is as understood as it is expected. Panamanians know well that there is no possibility of their defending either the Canal or themselves against a serious attack. The presence of Uncle Sam on the other end of a hotline is thus a reassurance and not a threat. Panamanians would not, indeed, much object to serving as a southern distant early warning system. One university dean remarked to us, "every now and then the little birds can warn the rhinoceros."

Panamanians are constantly reminded that the other nations of Latin America need the Canal as much as we do. Nobody gains if world trade is chased around Cape Horn. The government which did this would find both North and South America united against it. Panama is well aware of the pressures it will feel to guarantee the neutrality which both halves of the Hemisphere expect and demand of the owners of the Canal.

Every Panamanian schoolboy knows that the Canal depends not on the endless salt flow from either ocean but upon fresh water, agua dulce, in which alone the great locks can work. The fresh water can be shut off at the will of any Panamanian government. We found, however, in all our conversations with both ordinary people and with politicians, almost no posturing, no threats, no rattling of sabers or spigots. The appeal Panama makes to North America is for fair play. Perhaps it is not for nothing that one of our major exports to Panama was baseball. Again, and again, we heard the plea that the United States play the treaty game fairly and according to the best American rules. Panama has had the experience of dealing with northern bullies before and hardly cherishes the memory. One United States Senator facetiously spoke of our having "stolen the Canal fair and square." Latin Americans hear clearly the word "steal." We were repeatedly asked why in this one instance the United States could not be true to the best in our own history and tradition.

These questions took on added bite for both of us when they were presented in terms of President Carter's stand on human rights. At first our guard was up; but we soon found we were dealing not with sarcasm but with a real grasp of the reach of the President's dream. One astute Latin politician asserted that President Carter was so far out in front on this issue that the Washington establishment would try either to tame him or destroy him. When we asked which he thought would happen, he remarked, "Your new President does not seem to me to be the kind of man who tames easily." This was only one of the exchanges in which we saw how deeply the President's stand on human rights has reached and touched the hearts of many in Latin America.

In a surprisingly relaxed and salty exchange with the group of observers General Torrijos, the head of the Panamanian government also spoke of the United States and human rights. He said that he hoped the North Americans would hear, behind the vote of the Panamanian people, the voice of 300 million Latin Americans. Through these Treaties he clearly feels he is dealing with the growth of a symbolic relationship and an understanding that will set the tone of North-South American conversations for years to come. For many Panamanians more is at stake in these documents than the issue of who owns the Canal or even than the righting of an historic wrong.

As each voter dropped his sealed ballot in the box he was handed a large campaign-type button. It showed two young Panamanians scaling the chain-like fence that surrounds the Zone. It was meant to remind Panamanians of the assault and the deaths of 1964. It ought also to speak to North Americans. We have built too many walls in Latin America. We would do well to remember Robert Frost:

"Before I built a wall I'd ask to know
What I was walling in or walling out
And to whom I was like to give offense.
Something there is that doesn't love a wall . . ."

Mr. MATSUNAGA. Mr. President, there is no question that the amendment is one which runs contrary to our concept of democracy and against our concept of two free states dealing with each other that one should dictate to the other how and when the treaties should be ratified.

Mr. President, no thinking American would ask that we impose upon another nation what we ourselves would never have other nations impose upon us. For this reason, I urge the defeat of the amendment.

I move to table the amendment.

I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is not a sufficient second.

Mr. ALLEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. MATSUNAGA. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MATSUNAGA. Mr. President, I withdraw my motion to table at this time and I ask unanimous consent that the Senator from Alabama (Mr. ALLEN) may be allowed to proceed for 10 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MATSUNAGA. Mr. President, I also ask unanimous consent that I be recognized after the Senator from Alabama has had his 10 minutes for the purpose of making a motion to table.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLEN. I thank the distinguished Senator from Hawaii for making this request.

Of course, under the rules any time an amendment is pending any Senator getting recognition may move to table. It is also customary that that motion be withheld if another Senator wishes to make brief remarks with respect to the pending question. I do appreciate his courtesy in withholding his motion to table in order that I might make brief comments on some of the points made by him.

In the first place, he used the expression as though it had been the expression of some of us opposing the treaties in referring to dictator Torrijos as a tinhorn dictator. The Senator from Alabama has never referred to dictator Torrijos as a tinhorn dictator because he believes he is a very powerful dictator and a very able dictator, for that matter, one who did work out a most beneficial treaty for his government and for Panama with the American negotiators, and further his will has pretty well prevailed here in the U.S. Senate except the one slipup on the part of the managers of the bill wherein the DeConcini amendment was accepted which was contrary, of course, to Mr. Torrijos' wishes.

Further, the distinguished Senator spoke about the regularity with which the plebiscite back in October was held. No one is questioning that the plebiscite was handled properly. But that is not the point. The point is that the treaties have been changed tremendously since that time.

The apparent view of the people of Panama has changed with respect to the treaty. That is the reason a new plebiscite is needed.

Not only that, but the distinguished Senator spoke of our imposing a requirement on Panama that was not provided for by them, or words to that effect. But we are not imposing something on them that is not part of their regular constitutional process. Their Constitution says treaties must be approved by the people in a plebiscite.

The point I am making is their court has held that anything that has not been approved by plebiscite with respect to a treaty is unconstitutional. Therefore, they may be in position of claiming that these reservations are unconstitutional under their law, and that would provide for a further difference of opinion between our two countries.

I also read the opinion of the counsel for the State Department saying that another plebiscite is not necessary. Well, what did you expect the counsel for the State Department to say if he expected to hold his job? I just wonder if this was the same employee or same counsel to the State Department who gave advice to the administration on taking the DeConcini reservation.

If his opinion is no better on the DeConcini amendment, which has caused such a furor here in the Senate and in Panama, I would not expect too much of his opinion on whether a plebiscite is necessary in Panama.

We are not imposing, under this provision, something strange or foreign to the Panamanian people. That is part of their Constitution.

The only point is that we want to see that their constitutional processes are followed so that we will have a valid treaty.

We are not imposing somthing new or foreign on them but merely requiring that their constitutional processes be followed. That is all the amendment would do. It does not impose any great burden on the people, and it would give us a compact with the Panamanian people where, without that, all we have is a compact with the Panamanian dictator.

I hope the Senate will vote against the apparent motion to table the amendment.

I yield the floor, Mr. President.

Mr. MATSUNAGA. Mr. President, I move to table the amendment. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is not a sufficient second.

Mr. ALLEN. I suggest the absence of a quorum.

Mr. MATSUNAGA. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BUMPERS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

Mr. MATSUNAGA. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BUMPERS. I ask for the yeas and nays.

Mr. MATSUNAGA. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Hawaii to lay on the table the amendment of the Senator from Alabama. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Indiana (Mr. BAYH), the Senator from Missouri (Mr. EAGLETON), the Senator from Louisiana (Mr. LONG), the Senator from Alabama (Mr. SPARKMAN), and the Senator from New Jersey (Mr. WILLIAMS) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Oklahoma (Mr. BARTLETT), the Senator from New Mexico (Mr. DOMENICI), the Senator from Michigan (Mr. GRIFFIN), the Senator from Oregon (Mr. PACKWOOD), and the Senator from North Dakota (Mr. YOUNG) are necessarily absent.

I further announce that, if present and voting, the Senator from New Mexico (Mr. DOMENICI), would vote "nay."

The result was announced—yeas 59, nays 29, as follows:

[Rollcall Vote No. 98 Ex.]

YEAS—59

| | | |
|---|---|---|
| Anderson | Hatfield, | McIntyre |
| Bellmon | Mark O. | Metzenbaum |
| Bentsen | Hatfield, | Morgan |
| Biden | Paul G. | Moynihan |
| Bumpers | Hathaway | Muskie |
| Byrd, Robert C. | Hayakawa | Nelson |
| Cannon | Heinz | Pearson |
| Case | Hodges | Pell |
| Chafee | Hollings | Percy |
| Chiles | Huddleston | Proxmire |
| Church | Humphrey | Ribicoff |
| Clark | Inouye | Riegle |
| Cranston | Jackson | Sarbanes |
| Culver | Javits | Sasser |
| Danforth | Johnston | Stafford |
| DeConcini | Kennedy | Stevenson |
| Durkin | Leahy | Stone |
| Glenn | Magnuson | Talmadge |
| Gravel | Mathias | Weicker |
| Hart | Matsunaga | |
| Haskell | McGovern | |

NOT VOTING—12

| | | |
|---|---|---|
| Abourezk | Domenici | Packwood |
| Baker | Eagleton | Sparkman |
| Bartlett | Griffin | Williams |
| Bayh | Long | Young |

So the motion to lay amendment No. 101 on the table was agreed to.

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the motion to lay on the table was agreed to.

Mr. CLARK. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. LEAHY. Mr. President, I hope that last vote would show that the Senate of the United States recognizes the sovereignty of Panama.

The PRESIDING OFFICER. Will the Senator please suspend? The Senate is not in order. Will the Senators who are conversing retire to the cloakroom?

The Senator from Vermont.

Mr. LEAHY. I thank the Chair.

Mr. President, that last vote, as I mentioned, shows that the Senate realizes the sovereignty of Panama. We realize the fact that they, alone, are masters of their own internal actions, their own laws, their own politics, their own mechanics involving treaties, or any other activity within Panama.

I hope that the people of Panama, of the sovereign country of Panama, realize that.

I mention this, Mr. President, because I wish to speak for just a few minutes regarding my friend and colleague from Arizona (Mr. DECONCINI).

As the Senate knows, I strongly and totally support both Panama Canal treaties. I have spoken out on behalf of them. I have engaged in the debate which has gone on here, and I have supported them both here and in my own State of Vermont. I have spelled out my reasons: The fact that these treaties will guarantee the neutrality that we wish to see in the Panama Canal, protecting U.S. interests and world interests, and they are matters of long overdue justice.

I have expressed different concerns from those of Mr. DECONCINI. I have expressed areas of concern where, if we look into the record, we can find where Mr. DECONCINI and I might differ. But, Mr. President, I am extremely concerned about the nature of some of the editorial attacks on Senator DECONCINI. I am extremely concerned by some of the attacks I have heard around the country regarding Senator DECONCINI.

Disagreement with his amendment—or any amendment that I might have introduced to any matter on the floor, or amendments introduced by any of the 100 Senators—is perfectly all right. It is within the nature of a body such as this. It is within the nature of the debate which is going on around the country. I do not think anyone would ask that such debate or disagreement regarding an amendment of any of us should be cut off.

But, Mr. President, I will not stand here and accept, in any way, an attack on Senator DECONCINI'S character. I will not accept, in any way, an attack on Senator DECONCINI'S integrity. I will not accept, in any way, an attack on Senator DECONCINI'S ability. These attacks are completely unwarranted.

I have known Senator DECONCINI for a number of years. We both served as prosecutors within our States. I know him to be completely honest. I know him to be a man of total and the highest integrity. I know that he is a man who has the highest motives of patriotism and has, as we all do, ultimately only concerns for the United States.

I know that he is active in this matter from his own conscience. That is a position which is not going to be changed by personal attack. Neither Senator DECONCINI nor, I would hope, any Member of the Senate would ever draw back from a position of conscience or a position about which he feels strongly because of a personal attack. I know I would not. I know the distinguished Presiding Officer would not. I know that none of us would.

So, Mr. President, I am saying there are those who disagree with Senator DECONCINI on the matter of his amendment. They can present their arguments, present them pro and con, and debate the issues. It is perfectly legitimate for anyone else in the country, and all of us will be affected by these treaties, to debate the issues on the basis of merit. We are either for it or against it, but debate it on the merits. Do not use personal attacks on a man of character, a man of integrity, who is trying to do his best. I know him all too well and that is not the way to go, because I know he would not be intimidated.

Mr. CHURCH. Will the Senator yield?

Mr. LEAHY. Certainly.

Mr. CHURCH. I commend the Senator from Vermont for his statement. I associate myself with everything he has said. The Senate is a place which not only welcomes, but cherishes diversity of opinion. It is also a place where the motivation of any Senator is never subject to question. We all believe in one another in terms of our common desire to serve the best interests of the country.

I also am acquainted with Senator DECONCINI. I know that his effort was motivated by his own strong sense of patriotism. Whatever difference I might have with any proposal he might make, or, for that matter, any difference I might have with any proposal which might be made by the Senator from Vermont, goes to the merits of the subject, and has nothing whatever to do with the motivation of the Senator offering an amendment.

I believe what the Senator from Vermont has said needs great emphasis in this Chamber. I am happy to join with him. I compliment him for his statement.

Mr. GOLDWATER. Will the Senator yield?

Mr. LEAHY. I yield to the distinguished Senator from Arizona.

Mr. GOLDWATER. Mr. President, I thank the distinguished Senator from Vermont for what he has just said about my junior colleague. I wholeheartedly concur in every word he has said.

I became so incensed this morning on reading the editorial in the Washington Post that I wrote a letter, not necessarily in defense of Senator DECONCINI, but objecting to the Washing-

ton Post—and I will include the New York Times—taking it upon themselves to censure any Member of this body for using what in their mind is their best judgment.

I have known Senator DECONCINI all of his life. Although I am a Republican, I have worked in politics with his father and his brothers, and I have great respect for them.

For the Washington Post and the New York Times to make the allegations they have made against this man today has me disturbed.

I am the first one on this floor who will defend the freedom of the press.

I long ago learned that you do not argue with newspapers; they own the typewriters. I shall defend the freedom of the press, but I am not going to defend the freedom of an editor to write what he well pleases about a Member of this body or, as far as that goes, about any other American when they are doing what they think is right.

I am opposed to this treaty, very strongly opposed. I should welcome the condition that I find the proponents in, but I do not like my junior colleague being beleaguered, especially when the President of the United States, who wants his treaty, I guess, more than he wants a good peanut crop, knew all about this and was ready to give in and did give in.

With all due respect to the Committee on Foreign Relations, I think they must have known the implications of this reservation. When I went to Panama, that was my reason for going; I was disturbed about the ambiguities found in the defense section.

As the Senators might recall, I related one day the extreme difference in the interpretation of the word, "intervention" in Spanish and in English. "Intervention" in Spanish is a very strong, powerful word. It implies that if you have the power of intervening, you have the power of going into the home, going into the business, of making arrests; while, in this country, intervention is something that, well, frankly, we engage in at almost every minute of every day and do it in a delightful way. That is not the way they look at it.

I visited with General Torrijos about this and I thought from his answers that he would welcome the help of the United States in any defense of the canal at any time. I shall not belabor this point of view.

I do want to thank my friend from Vermont for bringing this matter up. I hope the press, particularly the two papers I have mentioned, will realize that their hand in the foreign policy of the United States is confined to reporting it. God knows the trouble we would be in had we ever followed the advice of either paper.

Mr. LEAHY. Mr. President, I shall be happy to yield the floor in just a moment.

I have mentioned, Mr. President, that it is not my intention here to debate the merits of the DeConcini amendment, so-called; nor is it my intention to single out any particular newspaper. I do not do that, and I did not do that in my earlier comments. My only purpose was to say that if there were those who feel that Senator DECONCINI is acting out of anything other than a history of the highest integrity, acting out of anything but the most sincere motives for his country, they are wrong.

I also wanted only to say that, from whatever source attacks might come against Senator DECONCINI—and I name no particular paper, I name no particular person, I name no particular source—I would say only this: They are terribly misguided if they make them as personal attacks. I know Senator DECONCINI far too well to think that any of those attacks are warranted. As I say, he is a man of the highest integrity and most complete honesty, a man who is patriotic and dedicated to his country. Let us continue the debate on the merits of the amendment itself. Let us continue the debate on the merits of the treaties themselves. Let us not get sidetracked against personal attacks that are unwarranted and unjustified.

Mr. President, I yield back the floor.

(Mr. BENTSEN assumed the chair.)

Mr. HANSEN. Mr. President, earlier today, I took occasion to comment on the editorial that appeared in this morning's Washington Post. I shall refer in greater depth to that in just a moment, but first, I would be derelict if I did not join with others in expressing my appreciation to our good friend, the junior Senator from Vermont, for his expressions of appreciation and the high regard which we all share for the junior Senator from Arizona. I think we are overlooking a very important point, and it is a point that I made earlier this afternoon.

I deeply resent the editorial in the Washington Post for an entirely different reason than has been pointed out. It seems to me that the myopic writer of this editorial failed completely to understand the situation on the Senate floor. Let me relate, as I recall it, essentially what happened.

The administration and the President knew that it was going to be an extremely close voting situation here on the Senate floor. There was never any doubt that whichever side won would win by a very narrow margin. It was also well known, following the return of the junior Senator from Arizona, after having made the trip to Panama, I understand at his own expense, that he had misgivings about the ability of the United States to take such actions as it deemed necessary in order to insure the operation and the neutrality of the Panama Canal. This is all history. The President of the United States knew it and the people in the State Department knew it, and the leadership on the floor of the U.S. Senate, as well, knew it. No one can charge the junior Senator from Arizona with any duplicity or any mischievous intent in popping up at the last minute with an amendment. He called his shots well ahead of time.

For some very good reasons, as I shall point out, the administration, the State Department, the President of the United States agreed to accept, the DeConcini resolution. They did not like it. The State Department, if I may put words into their mouth, I would suspect was rather horrified that the junior Senator from Arizona would be offering the resolution he did. But when it got right down to the bottom line, each of these groups and individuals to which I have referred accepted it. The administration accepted it, the President did—and, of course, that, for most of us, is synonymous with the administration—as did the State Department, as did the leadership here on the floor. That included people on both sides of the aisle as it did my leader, the minority leader (Mr. BAKER), and the majority leader, the Honorable ROBERT C. BYRD.

It was for one very good reason. It was crucially important that this treaty have the support of the Senator from Arizona (Mr. DECONCINI) or they might not be able to pass the first treaty. That is exactly why it was accepted.

It is because of my knowledge and a very general knowledge among all of us here as to what happened, that I resent the Washington Post coming out, as it has done here, trying to say the mischief and the whims of Senator DENNIS DECONCINI imply for this crucially important treaty between the nations of Panama and the United States.

Let me quote what the Post says:

> Whether Mr. DeConcini can comprehend the dimensions of the mischief he has wrought is not altogether clear from his own observations.

In the first place, I wish that some of the editorial writers for the Washington Post were as perceptive as is Senator DECONCINI. He knew perfectly well what his concerns were. He was disturbed that we might not have the right, if the need should arise, to move in and take such action with the military as would be required to keep the canal open and to keep it operating. He was disturbed.

Many of us are disturbed, because, among other things, I know, as the distinguished occupant of the chair right now knows, that we are bringing oil from Alaska, and because we have said, among other things, that we cannot send any of that oil to Japan, and what moves to the east coast, for the most part, has to come through the Panama Canal. Those of us who can look back over a longer span of time know full well the important role that the canal played in World War II and in the Korean conflict by enabling ships to go from one ocean to the other.

In my office yesterday, from my State of Wyoming, was a good friend of mine, a former member of the U.S. Navy, who was on one of the islands in the Pacific Ocean. For 15 days, they had no support at all and it was only when they were able to get some shipments of supplies through the Panama Canal that they got relief there.

He lost a brother later on in the Korean conflict.

It is concerns of these kinds that impel me to support Senator DECONCINI, and I know that it is concerns of these kinds that motivated Senator DECONCINI to take the action he did.

I am fed up that having been apprised so long in advance as Senator

DECONCINI apprised the administration, apprised the State Department, apprised the leadership on this floor of his concerns, the Washington Post takes it upon itself to act like he is a bad boy. They just do not know what they are talking about.

The President signed off. He did not like it. I will grant that he did not like it. But I said a few weeks ago; "You can't have it both ways. You can't tell us on the one hand that we have the right to move in militarily, to intervene"—those were the words he used—"to take whatever actions as are necessary to secure the operation and the neutrality of the Panama Canal".

We cannot have that assurance on the one hand and then we cannot turn around on the other, as now the President of the United States and others are attempting to do, to placate Panama and say "cool it boys, forget it, we really don't mean that," and we are engaged in a very fine ploy here with words, trying to say words really do not mean what we understand them to mean.

There have been references about the Panamanians and the difficulties in interpretations between the Spanish and the English. One of the persons in Panama who has spoken out on this issue happens to be a very distinguished businessman down there. I understand he has a degree from Dartmouth University. I suspect that he understands pretty well what the English language means. He has read a lot on it. He has spoken a lot of it. These debates taking place on the Senate floor have been heard down there and no one need try to tell me, or Senator DECONCINI, either one, that our friends in Panama do not understand what we are talking about or do not understand what he was talking about.

He was just as honest and forthright and perceptive and frank as anyone could be in pointing out his concerns and drawing a bottom line and saying, as he did to the President of the United States and the people in the State Department and the leadership on this floor, exactly what he wanted.

Anyone who has read the debate or who has heard it, and I have not heard all of it, but I have heard enough to know one thing, there was no doubt in the minds of anyone as to what Senator DECONCINI meant.

So I am disturbed and I took the Washington Post to task. Now, I have been around here for 11 years and I have not yet seen my name in print in the Washington Post. I do not expect to now, and I am not concerned about that.

What does interest me, though, is that a Post that is accorded the wide readability and sometimes credibility that some people ascribe to the Post should take the bad shot at Senator DECONCINI they have here.

I appreciate what the Senator from Vermont (Mr. LEAHY) said in pointing out that by this last vote we know we do not want them to have a plebiscite down there. It is all perfectly clear that we do not mean to intervene in Panama.

I say that is not exactly right. I say that because I would like to read, if I may, a summary. I would like to read what this amendment says.

If I am not mistaken, I think this is the language that was added at the end of the resolution of ratification, and this is a summary of it:

subject to the condition, to be included in the instrument of ratification of the Treaty to be exchanged with the Republic of Panama, that, notwithstanding the provisions of Article V—

Prohibiting any troops, other than those of Panama, in that country after the year 2000,

or any other provision of the Treaty, if the Canal is closed, or its operations are interfered with, the United States of America and the Republic of Panama shall each independently have the right to take such steps as it deems necessary, in accordance with its constitutional processes, including the use of military force in Panama.

Let me repeat that, Mr. President:

Including use of military force in Panama, to reopen the canal or restore its operations, as the case may be.

Now, that is not precisely the language that is in the DeConcini amendment because it has been summarized and the unnecessary words have been deleted. But this was contained in the legislative notice that comes from Senator TOWER telling, essentially, what an amendment does.

Mr. President, I ask unanimous consent that the amendment as it was adopted by the Senate of the United States—and there were 75 of us, as I recall, who voted for it—be printed in the RECORD at this point in order that there can be no doubt in the minds of anybody as to what Senator DECONCINI meant.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

Before the period at the end of the resolution of ratification, insert the following: "subject to the condition, to be included in the instrument of ratification of the Treaty to be exchanged with the Republic of Panama, that, notwithstanding the provisions of Article V or any other provision of the Treaty, if the Canal is closed, or its operations are interfered with, the United States of America and the Republic of Panama shall each independently have the right to take such steps as it deems necessary, in accordance with its constitutional processes, including the use of military force in Panama, to reopen the Canal or restore the operations of the Canal, as the case may be".

Mr. HANSEN. Now, we can describe or try to explain what intervention means in all of the ways we want to.

I think the important point is to read the language of the DeConcini amendment to the resolution of ratification and use those words to understand what he meant.

I have done that and I think every Member of the Senate has done that, and they were well aware—they were well aware—and they were assured in great measure, at least about three-quarters of them, as to what that meant.

Given the understanding, given that assurance, armed with the sure and secure knowledge that the United States would have the right after the year 2000, if need be, to move militarily, that first treaty passed.

I state that as an undeniable fact. I challenge the leadership here, I challenge the President, I challenge the State Department, in fact I would challenge the world, to prove on this floor that, absent that amendment to the resolution of ratification, that vote would have turned out as it did.

If there be any doubt as to our trying to fine tune what words do not mean, when we know what they do mean, let someone come forward and strike the whole thing to say that we shall not intervene, if they want to bring the treaty back up again. Try that one on for size, and I think we will find out very clearly what the Members of the U.S. Senate feel.

I know one thing. I know that the Senator from Arizona was concerned, he was disturbed, and he went to all of the right people and told them long ahead of time what he intended to do, and the President of the United States and the people in the State Department knew at least 2 weeks—at least 2 weeks—before we voted on that issue what the reaction was going to be in Panama. They had gotten the word.

As a consequence, Mr. President, I am disturbed. At least, as far as I know, no one has come forward yet. Maybe there have been, because I have not been here all day. But I am not aware—at least I should say it that way—I am not aware of the President of the United States rallying to the defense of a man who is wrongly accused, the junior Senator from Arizona, to defend him when he deserves defense, because the President of the United States knew, as he has to know, what the reaction was going to be in Panama.

I think it is high time that we observe some of those old western traits that have made Texas and Arizona and other Western States the great place it is and the proud place that people claim allegiance to, by saying a man is a man of his word; and if he finds even his enemy is falsely accused and he knows differently, he will set the record straight.

It is about time that someone set the record straight; because if I have ever seen a loused up record that maligns a man who deserves better, I have seen it today.

I yield to my good friend from Virginia, Senator HARRY F. BYRD, JR.

Mr. HARRY F. BYRD, JR. I thank the Senator from Wyoming.

Mr. President, I think the Senator from Wyoming has made an excellent statement. Senator DECONCINI is being blamed from many sources for the adoption of the DeConcini amendment.

It is correct, is it not, I ask the Senator from Wyoming, that one Senator cannot adopt and amendment? It takes a majority of those present and voting to adopt and amendment.

Mr. HANSEN. That is certainly my understanding.

Mr. HARRY F. BYRD, JR. In this case—I have the rollcall before me—

75 Members of the Senate voted for the DeConcini amendment. Included in that 75 were the majority leader of the Senate, the minority leader of the Senate, the chairman of the Foreign Relations Committee, and the ranking Republican member of the Foreign Relations Committee.

Mr. HANSEN. And at the bottom of the totem pole, the senior Senator from Wyoming, I say to my good friend.

Mr. HARRY F. BYRD, JR. And even below the senior Senator from Wyoming is the senior Senator from Virginia.

I am pleased to have voted for the DeConcini amendment. I rise only to point out that while Senator DECONCINI is getting so much blame, he alone could not adopt this amendment. It was adopted by a vote of 75 Members of the Senate, including the leadership of the Senate on both sides of the aisle, including virtually every member of the Foreign Relations Committee, I believe, except one. I am sorry, two: Senator MCGOVERN and Senator CLARK. All the other members of the Foreign Relations Committee voted in favor of the amendment.

So 75 Members of the Senate must have thought it was a very good amendment. They must have thought it had merit. They must have thought there was good reason for voting for the amendment. Otherwise, those 75 would not have cast an affirmative vote.

I thank the Senator from Wyoming for his contribution.

Mr. HARRY F. BYRD, JR. subsequently said: A short while ago I made an error which I would like to correct. Inadvertently, in commenting on the 75 Members of the Senate who voted for the DeConcini amendment, I said that all but two members of the Committee on Foreign Relations supported it.

Well, in looking at the rollcall vote I was too quick in my glance. I was looking only at the Democratic side. Two Democrats opposed the DeConcini amendment as members of the Committee on Foreign Relations, but three Republicans also voted against the DeConcini amendment: Senator CASE, the ranking Republican; Senator GRIFFIN and Senator JAVITS on the Republican side; Senator CLARK and Senator MCGOVERN on the Democratic side.

I regret having glanced too quickly at the rollcall vote, and I wanted to immediately correct the erroneous statement that I made.

(Conclusion of subsequent statement.)

Mr. HANSEN. I thank my good friend from Virginia for his very perceptive and fair comments.

I yield the floor.

Mr. ROBERT C. BYRD. Mr. President, the Panama Canal Treaty has been a difficult issue for Senators, as was the Neutrality Treaty. There has been a considerable division of opinion within the country, and great attention has been focused on the Senate during our lengthy—our very lengthy—consideration of the two treaties.

I believe that all Senators have taken their responsibilities seriously. As I said on the day the vote occurred on the neutrality treaty, those who were opposed to the neutrality treaty as well as those who supported the neutrality treaty sought in their consciences to find the truth. Every Senator, when he cast that vote, whether he was an opponent or a proponent of the treaty, found that he, having searched his conscience and weighed the evidence had reached a judgment that was the right judgment.

So each side, those opposed to the treaty and those supporting it, was working for what it thought was the best interests of the United States and thought that it had reached the conclusion that was in the best interests of our country and our country's continuing good relations throughout the world. As I indicated on that occasion, those decisions that were reached respectively by the two sides were not in accord. Senators took their responsibilities seriously, and they are taking their responsibilities seriously today, in trying to assure that the second treaty also reflects the best interests of the United States.

One of those who have taken a particularly active role in this regard, attempting to guarantee that the treaties do protect U.S. interests, while at the same time recognizing the legitimate need for a new treaty relationship with Panama, is the junior Senator from Arizona (Mr. DECONCINI). For his efforts, the Senator from Arizona, who I believe has acted in good faith and with the best of intentions, has been subjected in recent days to considerable criticism in the press.

I am not here to find fault with anybody. I am not here to criticize anybody today. I am like the man who was on his deathbed and who was asked whether or not he was ready to accept the Lord and renounce the devil, and he said that he was not in any position to antagonize anybody.

[Laughter].

I am in much the same position. I do not find fault with the editorials of any newspapers. I have had the same newspapers at times in the past take me out behind the woodshed and lay the heavy wood on me, and perhaps for good reason—at least, in their viewpoint. They have that right. I thought I was right on that occasion; they thought I was wrong. They wrote their editorials, and they may write them again at some point. I am not one to say that those editorials did not have any impact on me whatsoever. They may have had.

So I am not here to criticize anybody or any part of the media. I am just saying that those things happen to all of us. The media differ with all of us from time to time, and I recognize their right to do so.

I speak as a strong proponent of these treaties. I am convinced that the treaties do serve the interests of both the United States and Panama, and I want to see those treaties ratified. But I do not believe that the editorial criticism of Mr. DECONCINI is justified. He has to vote according to his lights. He has to vote according to his conscience. Each of us has the same responsibility. Each of us takes the oath of office, upon entering the office, to defend and protect the Constitution. Each of us has to go back before the voters of our States. One day I will have to face mine, as each Senator will have to face his, if he asks to be reelected.

Each of us has to weigh the evidence. I cannot weigh the evidence from the standpoint of another Senator. I do not know what his viewpoint is. I do not know what standard he applies in approaching his vote on a matter; how much weight he gives to this or to that or to something else. I do know, as I have stated before, that there is no political mileage in voting for these treaties.

I know that the majority of people who have written me from West Virginia are opposed to the treaties. But I continue to think that the majority of the people in West Virginia expect me, after weighing all the evidence at hand, to vote for what I think is in the best interests of the United States. I believe most of them would agree that I probably have more information concerning the treaties, the history of the treaties, and the committee reports, as well as the testimony of administration officials, the Joint Chiefs of Staff, and the leaders of our Defense Department, than they—the people—have. In the final analysis, I think that even though they may not agree with me on a given vote, they still expect me to vote for what I think is in the best interests of the United States.

I think every other Senator has to approach his decision from his own point of view and keeping in mind his own constituency which may differ in some respects from my constituency.

So I am not going to be critical of any Senator and I am not going to look behind his reasons, and I hope that I will be accorded the same respect and courtesy when I cast a vote. I think that Senator DECONCINI did what he thought was in the best interest of his country. I think what he did he did conscientiously, and he fully apprised the administration, he fully appraised the leadership on this side of the aisle as to what his reservation contained, and I was one of those who voted for the reservation. I did it with some misgivings. I would rather not have had the reservation but, nevertheless, I voted for it. And I would hope that we would all accord to each Senator the respect for his own good judgment and conscience as he views a matter and that we would not engage in further criticism of Mr. DECONCINI or any other Senator on this matter.

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator yield?

Mr. ROBERT C. BYRD. I think he approached the matter seriously. He acted conscientiously as he consistently does in the performance of his duties as a Senator for Arizona. I think he is a very able Senator. He is a Senator with courage, and he is a Senator who has integrity. I happen to know on the basis of some other matters that Senator DECONCINI is a man who carefully thinks things through. Then he makes a decision, and once he makes a decision you do not have to go back to him every day to find out if he is welching on it. I know he is a man who is able to withstand pressures. I knew that before the treaties came up, and I will not go any further into that, but I have great admiration for DENNIS DECONCINI and it is a personal admiration and it may be it is a personal reason that I have become acquainted to this extent with DENNIS DECONCINI.

So I have no hesitancy today to stand here and say what I have said about

Senator DECONCINI, and I say it with pride.

Yes, I yield to the Senator from Virginia.

Mr. HARRY F. BYRD, JR. I thank the Senator from West Virginia. Mr. President, I want to leave the subject temporarily of the Senator from Arizona (Mr. DECONCINI) and make a comment in a broader context, the context of the past 9 weeks of debate in the Senate which began about February 10, or thereabouts, as I recall. Of all the 100 Members of the Senate, none had a more difficult role than did the majority leader. He had probably as difficult a role to play as any majority leader has had to play in the Senate in maybe this century—I do not know—but certainly for a long time. The Senator from Virginia has been tremendously impressed with the skill, the ability, the fairness, and the reasonableness that the Senator from West Virginia has exercised in conducting the business of the Senate over this long period of time.

The leadership, if it had wanted to do so, had many parliamentary weapons that could have been used against the opposition, but not once during that long debate did the leadership do anything except give all the Members of the Senate, regardless of their views on the treaties, a full opportunity to present their views at whatever length each Senator thought desirable and necessary.

So as this debate begins to come to a close—there are 2 more days yet, of course, before the final vote will be taken—I did want to express the admiration of one Senator for the able majority leader and the very exemplary way that he has handled a very, very difficult matter in the Senate of the United States.

Mr. ROBERT C. BYRD. Mr. President, the distinguished Senator from Virginia makes me very humble in his words, and I am extremely grateful for his overly generous characterizations of my efforts and my work, and it is appreciated. I thank him.

Mr. ALLEN. Mr. President, will the Senator yield an additional moment?

Mr. ROBERT C. BYRD. I yield the floor.

Mr. ALLEN. Before he yields the floor, before he takes up another matter, may I ask the distinguished majority leader to yield to me on the same subject?

Mr. ROBERT C. BYRD. I yield.

Mr. ALLEN. Mr. President, I, too, commend the distinguished majority leader for his fairness, his unfailing courtesy, and consideration for all Senators and certainly particularly with reference to those of us who have opposed his position on these treaties. He has treated the opposition with the utmost fairness, with unfailing courtesy and with great leniency, I will say, and though we have differed on our views on the treaties I respect him as the majority leader and I respect him for allowing us every right to present our case. I know not how the vote will come on Tuesday, but I will say to the distinguished majority leader he has given us every possible break in presenting our case not only to the Senate but to the entire country. We are satisfied with the treatment we have received, I say to the distinguished majority leader.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished Senator from Alabama. The Senator from Alabama as always has waged a very honorable, upright, and resourceful battle. I have only the utmost respect for him and Senator HELMS, Senator HATCH, Senator BYRD of Virginia, Senator EASTLAND, and others, who have opposed the treaties. I always try to put myself in the shoes of those who stand on the opposite side. They have a right to speak, they have a duty to perform, and those who oppose today may be the very ones who tomorrow will support the leadership in a matter. So as we wage these battles from day to day, as far as I am concerned, they are never personal; they are always done as each Senator sees best in the good interests of our own country. We cannot all see alike. We do have to have our differences, but I respect those who differ with me. I expect them to accord me the same treatment.

I have found it to be so true so often, may I say to my good friend from Alabama, that those who oppose today may be the very ones tomorrow to whom the leadership will have to look for some help. It reminds me of a quotation which I should like to state at this point, if I can recall it:

> Fame is a vapor, popularity an accident, riches take wings. Those who cheer today may curse tomorrow. Only one thing endures—character.

I believe that that perhaps is the credo of the Senate.

The Senate has endured since 1789, and the character of the Senate, I believe, is such that it is the foundation of stone of our constitutional system, and for that Senate to have character that will endure through all of the storms, passions, and emotions of time, we who make up that Senate must always realize that the Senate is larger than the sum total of its parts.

If the Senate is going to have character those who make up its membership from decade to decade, from century to century, are going to have to demonstrate the same kind of character in their dealings with each other, first of all. Unless we do that we will not best serve the Senate or the Nation.

Mr. ALLEN. I thank the Senator.

Mr. HELMS. Mr. President, if the majority leader will yield, I think the Senator from West Virginia knows I concur in what my friend from Alabama and my friend from Virginia said about him. I might add that as I go around North Carolina I boast that we have three North Carolinians in the Senate, one of them being the distinguished majority leader.

I will say further to my friend from West Virginia not only is he a fair man, he is an enjoyable man with whom to work. I assert the privilege of saying, even though we differ, and differ strongly, on this issue, that he has been entirely fair to all of us.

Mr. ROBERT C. BYRD. I thank the Senator for his very, very charitable remarks.

I am going to yield the floor, but I thank all Senators who have come to the defense of our colleague today, whether we agree with him or not. As I say, I was not happy to vote for the reservation, but I voted for it. In any event, I think we have to accord Senator DECONCINI the same good faith each of us claims for himself.

Mr. HATCH. Mr. President, I wrote a letter to the Washington Post, but first I would like to associate myself with the remarks of the distinguished majority leader, the distinguished Senator from Virginia, the distinguished Senator from North Carolina, the distinguished Senator from Alabama, and also the distinguished Senator from Wyoming who made such a spirited defense of Senator DECONCINI.

The letter I wrote is as follows, and I just want to have it in the RECORD at this point:

EDITORIAL BOARD,
*Washington Post,*
*Washington, D.C.*

GENTLEMEN: I must confess that I tremendously enjoy reading your excellent newspaper. This is in spite of the fact that quite often we disagree on many principles, issues and procedures.

You probably will never print this letter, but your editorial of April 13, 1978, entitled "The Whims of Dennis DeConcini," was one of the most vicious, irresponsible, and demeaning editorials I have ever read. If, as commonly comes through your pages, you truly believe in liberal principles and fairness, the person or persons who wrote the editorial ought to be seriously reprimanded.

I am a Republican freshman Senator who cannot sit idly by and see an excellent fellow freshman Senator improperly maligned. Dennis DeConcini has been one of the most active, dedicated, fair and moderate Senators in the United States Senate. He is respected on both sides of the floor. His work in the Judiciary Committee has been energetic and responsible. He has been fighting for a better and more qualified federal judiciary. His other committee work has also been impressive. Senator DeConcini is, without question, one of the most ethical, decent, fine men in the Senate. He has intellectual capacities equal to many of those you have previously glorified on the editorial pages of your newspaper.

Responsible journalism mandates that people be treated with fairness and decency. For the most part, your newspaper realizes that responsibility. However, the above mentioned editorial falls woefully short of these high standards which I have come to expect of your great newspaper. I think Senator DeConcini and the United States Senate deserve an apology.

Very truly yours,

ORRIN G. HATCH.

Then I add a P.S.:

P.S.—Incidentally, how could a supposedly responsible major newspaper in effect delegate its power, in a matter as sweeping as this, to a lightweight editorial writer whom serious editorialists should regard as an institutional embarrassment? . . . Whether your editorial writer can comprehend the dimensions of the mischief he has wrought is not altogether clear from his own observations. There are some signs he realizes that he appears, to some of your readers, as well as fellow editorialists, ludicrous and irresponsible and hopelessly out of his depth. Finally, how was it, the historians may ask, that the treaties, with their immense diplomatic and political freight, came to hinge on the ill-informed whims of an apparently freshman editorialist of no previous renown, of no known international awareness, of little experience of any kind beyond minor editorial posts in Washington?

O. G. H.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Chair recognizes the Senator from South Dakota and expresses his appreciation for the patience with which he has sought recognition for the last 45 minutes.

Mr. McGOVERN. I thank the Chair.

I might say, Mr. President, I have actually been here for a couple of hours trying to make a statement on the Panama Canal issue.

I want to make clear that I am not here today to comment on the moral character of the junior Senator from Arizona. It does not seem to me that is a debatable matter. There is not a single Member of the Senate whose character I would challenge or debate on this floor.

I am also not here to comment on the editorial judgment of the Washington Post. I think every reader can make his own judgment on that issue.

But it does strike me as interesting and, perhaps, all too typical of the debate on the Panama Canal issues that we have devoted most of the afternoon—at least during the time I have been here—to discussing those two personal matters, the editorial judgment of the Post and the moral integrity of Senator DECONCINI.

The distinguished majority leader made a humorous observation here a while ago about which we all chuckled, that in his role he could not afford to antagonize anyone, and I suppose none of us wants to needlessly antagonize any Member of the Senate, and that is not my purpose.

But I do have some criticism to offer, and in view of the assurances we have had from numerous Senators about the greatness of the Senate, I assume it will withstand a little critical commentary as well as all the praise we heaped on ourselves this afternoon.

I have expressed before my view that the Senate has been wasting precious time in prolonged and, I think, repetitious debate on these Panama Canal treaties, the same points made over and over again, delaying amendments of all kinds very similar in content; but we have, in effect, been tied up in this endless debate while the really urgent needs of the majority of the American people and, I think, the basic concerns of our constituents have been neglected.

Mr. President, I have expressed before my view that the Senate has been wasting precious weeks of time in prolonged and repetitious debate on these Panama Canal Treaties. We have been tied up pandering to the concerns of a narrow band of extremist opinion, while the urgent needs of the great majority of Americans—inflation, unemployment, energy, health, housing, and others—have been systematically neglected.

For the past several years the Congress has been asserting its right to a bigger role in the crucial decisions of Government. Yet here we are, in the midst of the season for evaluating national priorities through the new budget process, demonstrating that the Senate does not have the self-discipline to set rational priorities in budgeting its own time, let alone the resources of the United States.

Beyond that, it has now become clear that these long and tedious days have been spent in a manner that damages the international interests of the United States.

I was frankly amazed when I was told on March 16 that the administration would not oppose a reservation, attached to the Neutrality Treaty, proclaiming a unilateral American right after the year 2000 to use military force in Panama, without regard to the wishes of Panama or the circumstances, to reopen or restore operations of the canal. I thought it was just as much a "killer amendment" as many of the others we had already voted down, in the knowledge that adoption here would necessarily cause rejection of the treaties in Panama. It plainly raised the question which is most sensitive of all to a country that is concerned about its own sovereignty and independence. No self-respecting nation in the world could fail to resist a provision which, regardless of the purpose, gave another country the right to make a unilateral decision to send in troops.

But the reservation was adopted anyway, as if to make certain that the purpose of the treaties is to humiliate Panama rather than to demonstrate the fairness of the United States as a great power.

As related point, I wonder who among the supporters of this amendment is going to feel comfortable in the future protesting, say, the Soviet military presence in Eastern European countries as a violation of those nations' rights to independence and self-determination. Does anyone see a connection between what we condemn, quite properly, in Soviet behavior, and what we are demanding in Panama for ourselves? Certainly the circumstances are different. But I think the principle is similar.

I must say, however, that this amendment is not without precedent in our own diplomatic history. Indeed, it bears an uncanny resemblance to an amendment sponsored in connection with the grant of independence to Cuba in 1901. Senator Orville Platt of Connecticut was successful in writing in a provision that Cuba's government had to consent:

> . . . that the United States may exercise the right to intervene for the preservation of Cuban independence, (and) the maintenance of a government adequate for the protection of life, property, and individual liberty.

As long ago as 1934, however, our national leadership recognized that such a bald assertion of the power of intervention was inappropriate for the United States. It was a sign of the growing maturity of the United States when President Roosevelt abrogated the Platt amendment some 44 years ago.

In short recognized that a unilateral right of intervention is not consistent with the principles of national independence and self-determination for which the United States professes to stand.

Yet even at this late date, we apparently still feel a compulsion to show that our great Nation can, indeed, push a little country around. Never mind the fairly recent discovery that this is an interdependent world, and that the United States is dependent upon many smaller, emerging nations for commodities upon which our own prosperity depends. Never mind the widening recognition that the political contest between the Soviet system and our own centers in the smaller nations around the world that have—without exception—identified with Panama's cause. Those simple precepts of enlightened self-interest have been cast to the wind, all so we can throw out our chests and proclaim that the big stick is still in operation.

From the standpoint of our international posture, it seems to me that the Senate has undone in a couple of months' time much good accomplished by 13 years of diligent negotiation.

The original treaties would have greatly strengthened the United States in the eyes of Panama and throughout the hemisphere. They declared that the United States had become a mature, self-confident society. They affirmed and secured our identification with the cause of nationalism which is the most compelling single force in the world today.

But the Senate has been trying its best to announce that none of that is true. Instead the Senate has been using these hapless treaties as a vehicle for working off frustrations over the Vietnam debacle. They have been further used as a background for ventilating exaggerated and mean-spirited assaults upon a neighboring government which has been a dependable friend of the United States. The government and people of Panama have been insulted almost daily.

The United States has been depicted as a fearful, insecure—if not paranoid—nation shuddering at the prospect of yielding any symbol of its domination.

We do not know whether the Neutrality Treaty as it now stands can be accepted by our partner in these negotiations. Mr. Torrijos has been berated here in the Senate as an iron-fisted dictator. In reality he is in trouble in Panama, because of this change in the treaty. What kind of accomplishment is it if we succeed in generating a government in Panama that takes a much harder line toward the United States—one more in keeping with the emerging popular sentiment there?

I suspect that my Senators who voted for this reservation did so in reliance upon the administration's faulty intelligence concerning the probable reaction in Panama. Now we know better. And while we cannot admire the administration's handling of this matter, we can at least act on the basis of the more reliable information we have acquired so painfully through hindsight.

Beyond that, I have some hope that the events of the past several days will have a sobering influence on the Senate. Everyone recognizes that these treaties pose hard political choices. It is also true that the problem is easier for some of us than for others, who must face the electorate this fall. No politicians with any sense wants to offend any of his constituents—even the biggest crank—in an election year. But some risk does, after all, go with the job. As we contemplate the precarious condition of these treaties now, perhaps we will take more of our inspiration from colleagues like the Senator from New Hampshire (Mr. MCINTYRE), who made a courageous speech on political intolerance just a few weeks ago, or the junior Senator from Montana (Mr.

HATFIELD), or the senior Senator from Colorado (Mr. HASKELL), or the junior Senator from Maine (Mr. HATHAWAY), or Mr. BIDEN of Delaware, or Mr. PERCY of Illinois, or Mr. CLARK of Iowa, and others who have made the hard choice to vote their convictions and to accept an immediate political risk. In place of profiles in political panic or opportunism, we just may see more profiles in courage such as those.

That, at least, is my hope as we move into the last few days of debate on these contentious matters. For it is the only way now that they can be properly resolved.

So let us no longer treat these amendments and abuses as harmless hazing. Let us understand now that we are dealing with a real impact on our future.

It is my hope as we move into the last days of debate on these matters that we will think as carefully as we can and as soberly as possible about the standing of our country in the eyes of the world, that we will remember as we did 200 years ago that we are pledged to pay decent respect to the opinions of mankind.

I do not think it is just an accident that every government in Latin America, without exception, was here for the signing of these treaties to manifest their support for the treaties. Most of those governments are friendly to the United States. Most of them want to cooperate with us. They respect the institutions of constitutional government in this country. I would hope that we would live up to their expectations, and, more important than that, to live up to the ideals that we ourselves possess.

STUDY MISSION TO LATIN AMERICA

Mr. President, on another related note, I had the opportunity last December to make a study mission to Central America, especially to Panama, Costa Rica, Peru, and Venezuela. I was accompanied on that trip by Mr. Jeffrey Smith, of my staff, and Barry Sklar, the head of the Latin American Affairs Division at the Library of Congress, one of the Nation's best informed men in this field.

We concentrated all of our efforts over a period of some 2 weeks' time trying to evaluate the impact of the treaties not only on Panama but on the neighboring countries to which I have referred.

In these final days of debate before we vote on the Panama Canal Treaty, I feel it is appropriate to discuss the findings of my recent visit in December 1977 to four Latin American countries as they pertain to the canal issue. The issue, of course, dominated the discussions in Panama, but significantly the presidents of Costa Rica, Peru and Venezuela spoke of the bearing the Senate's decision will have on the future of U.S. relations with the nations of Latin America and the Caribbean. Discussions with the presidents as well as with ranking government officials in each of these countries reinforced my belief that the issue of the Panama Canal treaties is more than a bilateral one between the United States and Panama. It is also an issue which affects our relationship with Latin America and the rest of the developing world.

I think any Senator who has discussed these issues with the leaders of other developing countries recognizes that there is enormous respect for our negotiators and our Government in bringing these treaties about, and great hopes that the Senate will do its part in ratifying them.

My meetings with the great patriarchs of Latin American democracy—Jose (Pepe) Figueres in Costa Rica, Romulo Betancourt in Venezuela, and Luis Munoz Marin in Puerto Rico—convinced me that we now have the opportunity to show our neighbors that the United States has shed the last vestiges of colonialism in this hemisphere and truly believes in the principle of the self-determination of peoples.

I might say on this point, Mr. President, that one of the phrases which was used by General Brown, the former chairman of the Joint Chiefs of Staff and who has now been taken ill, which impressed me very much in his testimony, was his statement that as an American and as chairman of the Joint Chiefs of Staff, the top military officer in our Government, he supported these treaties principally because he wanted to see the United States put an end to any vestige or semblance of colonialism in Latin America.

I think he said that as a military man because he realizes that it will enhance our security, that it will improve our assured access to this Panama Canal if we have a friendly political climate surrounding that canal.

That is the testimony found every place I went on this Latin American tour.

I would like to highlight the findings related to the Panama Canal called from my draft of the trip report which I will submit to the Senate Foreign Relations Committee. I request that the full text of the draft of the Panama chapter of the trip report and those sections of the chapters on Costa Rica, Peru, and Venezuela which pertain to the Panama Canal be printed at the end of my statement so that my colleagues can get the full benefit of my discussions with the Latin American leaders.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. McGOVERN. These comments on my visit to Panama should be understood as reflections based on my study mission rather than as my analysis of the issues involved in the treaties themselves. These are my observations based on discussions with the people most directly involved with this crucial issue.

Three days of discussions with Gen. Omar Torrijos, Canal Zone officials, including high-ranking military officers, and U.S. businessmen demonstrated to me that Senate ratification of the Panama Canal Treaty is in the best interests of the United States.

Much controversy has centered around Panamanian chief of government Gen. Omar Torrijos and the nature of his politics. After a full day with the general and his Foreign Minister, Gonzalez Revilla, as well as some time with other Panamanians and Americans, I have gained a certain perspective on this aspect of the issue. General Torrijos acknowledged that shortly after taking power in 1968, certain excesses took place, but since 1972 there has been constitutional government of a kind when a national assembly of 505 community representatives approved a new constitution and elected the President and Vice President of the country for 6-year terms.

The past few months have brought important political changes to Panama. After a moratorium of 9 years, the political parties are being allowed to reactivate themselves and hopefully the next election for the national assembly will see full participation. Just in the weeks before my arrival, the Torrijos government dropped the restrictions on freedom of assembly and freedom of expression. I feel that the fact that leaders of two opposition parties freely met with me to express critical opinions of the political situation and the government is a real indication that General Torrijos is moving in the right direction.

At separate meetings, leaders of the Panamanista Party and the Christian Democrats voiced strong suspicion and distrust of the government's recent political moves. These leaders argued that the opening toward democracy was not genuine and that it was directly tied to the Senate's consideration of the canal treaties. One of the leaders told me that this period is being termed by the opposition as "the little summer of liberty" and was designed to impress visiting U.S. officials and Senators. The opposition leaders felt that the political opening had not gone far enough and they expressed the view that political parties still felt restricted as far as freedom of expression and the press were concerned. On human rights, even the opposition leaders confirmed that there were no political prisoners in Panama and that there is an absence of violence and torture which is prevalent in other Latin American countries.

These opposition leaders felt that the larger than expected negative vote in the October 1977 referendum was an indication of dissatisfaction and lack of faith in the Torrijos government. On the treaties themselves, the opposition leaders felt that the terms favored the United States over Panama. They were especially critical of the Neutrality Treaty which they felt gave the United States the right to intervene forever. General Torrijos later told me that he believed the larger than expected negative vote was because many Panamanians do not want to wait until the year 2000 for full control. Many people in Panama feel that he has conceded too much to the United States.

The opposition leaders did not give too much weight to my arguments that Senate rejection of the treaties could result in a negative turn by the Torrijos government and that treaty ratification would permit the government to turn its efforts toward improvement of the economic situation. The argument that international considerations were part of the issue also did not seem to move the opposition leaders. After coming away from meetings with the political leaders, one has to have basic sympathy for their plight. I feel, however, that their grievances against the Torrijos government

have interfered with their judgment as to what is best for the Panamanian people. They see the economic benefit which would come to Panama with the acceptance of the treaties as a factor which would perpetuate the Torrijos government in power. On the other hand, discussions I had with Archbishop Marcos McGrath and U.S. officials in Panama left me with positive feelings that the government's opening toward more democratic rule would continue with ratification of the canal treaties.

During meetings with Canal Zone labor officials and other U.S. citizens of the zone, concerns were expressed over the treaties and the authoritarian nature of the Panamanian Government. Rather than voice objection to the terms of the treaties, the labor officials were concerned with the retirement provisions in the treaties and the implementing legislation being drafted. They want a liberal retirement policy but feel that the Department of Army, fearing a mass exodus of U.S. labor, wants a stricter policy.

It was evident after my discussions with Canal Zone residents that many of them feel insecure with the new arrangements provided in the treaties. It was obvious that there is distrust on both sides. General Torrijos told me that the Americans in the zone were absolutely essential to the continued efficient operation of the canal. He is going to need the support and cooperation of the present Canal Zone work force. The Canal Zone workers and residents deserve understanding. Even though negotiations have been going on for 13 years, the pending changeover seems to have come too fast for the majority of Zonians. They feel they are going from security to insecurity. As Archbishop McGrath expressed it, one must appreciate the feeling of the Zonians but the necessity for the treaties is the greater reality. "You can't hold history back," he told me.

The day I spent with General Torrijos at his home at Farallon and then in a small village in Cocle Province gave me a great opportunity to get to know and understand the Panamanian leader. He impressed me as a sensitive leader who, although a military officer, demonstrated a capacity for civilian leadership as well. I was impressed by comments from some, including experienced U.S. officials, that Omar Torrijos is genuinely concerned about his people and has been personally distraught over the effect of the poor economic situation on the average Panamanian citizen.

General Torrijos jested about the political labels that people place on him and he spoke seriously about his relationship with Cuba. From what I saw and heard during my stay, ideological labels simply cannot be applied to the General. He is a pragmatist implementing those measures best suitable for his country. His Cuban policy is an example.

In response to a question from a Panamanian television reporter, General Torrijos expressed admiration for what the Cubans had accomplished in the field of health care and education for the masses. He felt, however, that these gains were made at high social costs, and he would like to incorporate the best aspects of the Cuban system without incurring those "social costs." He felt that the Cuban system was not suited to the culture of Panama. One informed observer of Panamanian politics felt that the General's trip to Cuba in January 1976 turned him away from Marxism-Leninism. General Torrijos, during our discussion, was quick to point out that some of the reforms he had instituted in the fields of education and health were undertaken before his visit to Cuba. He was especially praiseworthy of those aspects of the Cuban system which benefited ordinary people. He noted that at the time of day we were talking all Cuban children had eaten a good breakfast and lunch while many children in Panama had not.

International politics did not dominate our conversations because General Torrijos was anxious to talk about both the accomplishments and problems of his government. He has brought the rural areas into the life of the nation and has worked to extend social reforms in education, health care, and other social services to all parts of the country. He mentioned infrastructure improvements such as expansion of the road system and electrical capacity. In 9 years school capacity has doubled, there are nine grades instead of six, and there are schools where previously none existed. The number of teachers has more than tripled during his government. In the health area, the Panamanian Government is attempting to provide every rural community with a nurse or paramedic.

General Torrijos took me by helicopter to see some of these accomplishments in the tiny agricultural cooperative of Coclesito in Cocle Province. Some enjoyable hours were spent there talking to students involved in work-study projects and to villagers and technicians involved in cattle and buffalo raising. In this village they are working to increase the ratio of cattle to hectare of land and also to increase the productivity of the land for raising grain, beans, yucca, corn, and other crops.

It was a treat to talk to the enthusiastic schoolchildren about the work-study system. In addition to academic subjects the students learn how to grow crops and make their own clothes. The school in Coclesito is one of 135 of its type established thus far. Eventually the government wants to make this a national system of education with 500 work-study schools.

I was impressed as to how articulate and knowledgeable the students and workers in the village were, especially on the Panama Canal issue. They and General Torrijos carried on a lively dialog to their questions regarding the chances for Senate ratification. During our talks at Coclesito, General Torrijos made an interesting comment on the use he planned to make of the $50 million military assistance package that would come to Panama as part of the arrangement. He told me that he is going to provide helicopter service in the provinces for transporting medicines and the sick. He noted during this discussion that Panama's present budget for defense is 10 percent of the national total, while the share for education is 30 percent.

My 3-day visit to Panama left me with many impressions but perhaps one of the most vivid was the realization that the solution of Panama's economic problems is so closely tied to the ratification of the treaties. I reached this conclusion after talking to Panamanian and U.S. officials as well as U.S. businessmen. The uncertainty over the question of ratification by the Senate has caused international and domestic investors to hold back the capital necessary to get the nation back on its feet. The national treasury is in bad shape and the national bank has no funds for financing other than short-term projects. The economy has been at a standstill for several years, not only because of the tenuous treaty situation but also because of the worldwide recession, the world price of oil, and the continuing problem of international commodity-pricing policies. The Minister of the Presidency spoke to me about the poor economic situation exacerbated by high unemployment. The Minister said that investors from the United States, Europe, and Japan have expressed willingness to invest once the treaty issue is resolved. The investment climate will be strengthened when the treaty settlement gives the international bankers confidence that the United States will be working closely with Panama. One high-ranking free enterprise-oriented Panamanian official related this period of uncertainty to a possible worsening political situation. He felt that if this situation remained unresolved for a long period of time, an opportunity would be presented for demagogs to turn the economic condition to political advantage.

Frankly, I left Panama with the strong impression that time is indeed running out for the Panamanian economy and that Senate ratification of the treaties this spring is not only desirable but imperative. General Torrijos said that:

> Until that time, we could make a soft landing; after that there is no more fuel.

I am strongly convinced that failure to ratify the treaties would seriously affect the economic future of Panama and have serious political repercussions.

There was much discussion during my visit of the possible effects of rejection on Panama's political life, on U.S. relations with Panama, and on United States-Latin American relations. On the bilateral level, frustrations are building so that responsible officials warn of angry and emotional reaction against the U.S. presence and ultimately the Canal Zone. The ugly prospect of bloody fighting between U.S. military and Panamanian civilians is not too remote. General Torrijos is a friend of the United States and wants to continue being one. I believe observers close to the scene who feel that his future economic policies will be moderate and compatible with the interests of U.S. business. Investment opportunities for U.S. citizens will be enhanced.

Politically, instead of utilizing a great opportunity to encourage General Torrijos to continue on the path toward opening Panama to democracy, the possibility was raised that he could react against the opposition. The General certainly has demonstrated in these past months that he is open and flexible to construc-

tive suggestions from his friends in the United States regarding the political system.

On the international relations side, the United States has the opportunity to enhance its prestige in Latin America and the developing world. Senate rejection would place our best friends in Latin America—those who have defended the United States on the treaty issue against critics in their countries—in great jeopardy. I say this with all the conviction of one who has spoken to these courageous Latin American leaders.

In Costa Rica, President Daniel Oduber himself initiated discussion of the Panama Canal question at our luncheon meeting. Oduber told me that if the Senate rejects the treaties, "I'm afraid that I will be literally stoned." He has gone so far out on the limb in support of the new treaties that he felt his leadership capability would be undercut by Senate treaty rejection. Our best friends in Latin America would have to desert us if they are to survive, according to the Costa Rican President.

During my memorable meeting with one of the fathers of Latin American democracy, Pepe Figueres, the former Costa Rican President, used the word "catastrophic" to describe the impact of Senate rejection of the treaties. Like Oduber, Figueres felt that Senate rejection would jeopardize the influence of friends of the United States.

The Panama Canal issue figured prominently in my discussions with Peruvian leaders and the press. It is interesting how the Peruvians view the issue on two distinct levels. On the international plane, they are in full support of the treaties because of the Latin American consensus and because they are in the best interests of close United States-Latin American relations. President Morales said that rejection would present serious difficulties for the United States in several countries.

On the domestic side, the Peruvians are concerned because their economy is directly affected by toll charges and other factors influencing the operation of the canal. A significant portion of Peru's foreign trade flows through the canal. The foreign minister hopes that a system of consultation could be established between Panama and the west coast countries regarding tolls and other matters.

Venezuelan President Carlos Andres Perez and his Foreign Minister were extremely supportive of the treaties. President Perez initiated discussion of the issue in our private meeting and said that Senate rejection would be a "catastrophe" and would cause violent reaction in Latin America. President Perez feared sabotage and possible U.S. retaliation which would have a negative reaction from the international community and would only benefit our Communist rivals. Former Venezuelan President Romulo Betancourt, the architect of Venezuela's vibrant democratic system, said that the Senate's approval would strengthen the position of the United States in the hemisphere. On the other hand, he saw great security problems for the United States in Latin America if the treaties were rejected.

Conversations with these close friends of the United States convinced me that Senate rejection of the Panama Canal treaties would be a severe blow to the progressive forces in Latin America which have stood with us. The only beneficiaries of defeat of the treaties would be the Communists and antidemocratic forces.

My study mission to Latin America reinforced my view that there is no alternative to ratification of this treaty. Developments in Panama support this thesis and our best friends in Latin America feel this way.

I hope that my colleagues noted that the Harris poll taken last week showed the American public in favor of the treaty. I feel I have presented evidence today warranting the Senate's support of the new treaty arrangement with Panama.

EXHIBIT 1

DRAFT REPORT OF STUDY MISSION TO PANAMA

PANAMA

(Revision by Senator McGovern, April 1)

My three days (December 3–6) of discussions with Panamanian leaders, Canal Zone officials and residents, United States officials, including high-ranking military officers, and United States businessmen served to reinforce my belief that Senate ratification of the Panama Canal treaties is in the best interests of the United States. I am convinced that the United States and Panamanian negotiators have worked out an arrangement that is fair to both nations. Our rights of passage and defense are guaranteed and our standing in the world and in Latin America will be strengthened.

In this section of the report are reflections on my visit to Panama as they relate to the Senate's consideration of the Panama Canal treaties. It is not intended that these few pages be interpreted as my analysis of the issues involved in the treaties; rather, they should be read as observations based on discussions with the people most directly involved with this crucial matter.

The issue of the Panama Canal treaties is more than a bilateral problem between the United States and the Republic of Panama. It is an issue which affects our relationship with Latin America as well as with the entire developing world. We now have the opportunity to show these nations that the United States has shed the last vestiges of colonialism in the Western Hemisphere and truly believes in the principle of the self-determination of peoples.

Aside from the major provisions of the treaties themselves, much controversy has centered around Panamanian chief of government General Omar Torrijos and the nature of his politics. Meetings with opposition political leaders, Panamanian government officials, including a full day with General Torrijos and Foreign Minister Gonzalez Revilla, as well as individual Panamanians and Americans, enabled me to gain a perspective on this aspect of the issue.

General Torrijos emerged as the dominant figure in Panama through his leadership in a National Guard coup on October 10, 1968, against Arnulfo Arias, whose presidential term began ten days earlier. General Torrijos, who now is also Commander of the National Guard, told me that the ruling elite had placed the National Guard in the position of assuring that the opposition candidate would not win the election. It had always disturbed him that the army was used by politicians for their own personal gains. He and other Guard officers felt they were being ordered to act against the will of the Panamanian people. They moved against Arnulfo Arias because he began to take vengeance against his opponents and terror was beginning to sweep the country.

General Torrijos acknowledged that he ruled at first by force, jailing and exiling those who opposed his changes. Constitutional government of a kind was restored in 1972 through the election of a National Assembly of 505 Community Representatives that approved a new constitution and elected the president and vice president of the country for six-year terms. In October, 1972, the Assembly also vested special executive powers in General Torrijos, among which were those giving him the authority to appoint Cabinet Ministers and to conduct foreign affairs. The judicial branch is comprised of a nine-member Supreme Court.

Since the coup of 1968 until a few months ago, a moratorium on political party activity had been in effect. Today the parties are being allowed to reactivate themselves—hopefully this will lead to full participation in the next election for the National Assembly. General Torrijos told me that he now realizes it is not feasible to abolish political parties by decree. He cited examples of the Peronista movement in Argentina and the Aprista movement in Peru. The General, however, did not think the political parties will be successful since they lack popular support. Party meetings are not well attended and Panamanian people despise the old political leaders. General Torrijos asserted that "the people do not want to go back to the old system".

In the weeks before my arrival, the Torrijos Government took major steps to create a more open political system. In addition to reactivation of the political parties, restrictions on freedom of assembly and freedom of expression were dropped. The fact that leaders of two opposition parties freely met with me to express their critical opinions of the political situation and the government is an indication that General Torrijos is moving in the right direction.

At separate meetings with leaders of the Panamanista Party and the Christian Democratic Party, however, strong suspicion and distrust of recent government moves were voiced. These leaders adamantly contended that the opening toward democracy was not genuine and was directly tied with the United States Senate's consideration of the Panama Canal treaties. One of the leaders stated that this period is being termed "the little summer of liberty" which began with the September 7, 1977, treaty signing in Washington. That event was designed to impress visiting American officials such as Assistant Secretary of State for Inter-American Affairs Terence Todman, Senate Majority leader Robert Byrd, and many Congressional visitors. Once the treaty is confirmed, it is felt that General Torrijos will once again adopt a repressive stance against the political parties.

The opposition leaders explained that the political opening has not gone far enough. They want popularly elected officials rather than the system which provides for National Assembly election of the president and vice president. One of the party leaders told me that the National Assembly had no power and he cast doubt on the party's participation in the National Assembly election even if General Torrijos permits it. One leader contended that the political parties still felt restricted as far as free expression was concerned. Opposition opinion was not printed in the government-controlled press. It was noted that government intimidation was responsible for the low attendance at a political meeting in Chiriqui Province.

These opposition leaders found fault with the treaties under consideration for several reasons and gave their interpretations of the results of the October, 1977, referendum held in Panama when one-third of the electorate voted against the treaties. They felt that the larger than expected negative vote was an indication of dissatisfaction and lack of faith in the Torrijos Government. The of-

ficial high voter turnout of ninety-five percent was a sign that the referendum results were fraudulent since Panamanians never before went to the polls in those numbers.

Their opposition to the treaties was also based on the feeling that the treaties favored the United States and were not in the best interests of Panama. It was felt that the treaties did not reflect Panamanian opinion because the political groups were not consulted on its provisions during the negotiation process. The belief was also expressed that the treaties represented a regression from the draft treaties negotiated in 1967 and earlier attempts to reach an agreement.

The leaders were especially critical of the neutrality treaty which they felt gave the United States the right to intervene forever. I expressed the opinion that the neutrality treaty was similar to the type of mutual defenese treaties which the United States maintains with other friendly nations. I also expressed the fact that without the type of provisions contained in the neutrality treaty, the treaties would not have any hope of passing the United States Senate.

General Torrijos, in a later conversation, told me that he believed the larger than expected negative vote was because many Panamanians do not want to wait until the year 2000 for full control. Many people in Panama feel that too much has been conceded to the United States. General Torrijos said the people must realize that he had to be realistic—without concessions, the Senate would never approve the treaties.

The opposition leaders did not seem to accept my statement that Senate rejection of the treaties could result in a negative turn by the Torrijos Government, or my hope to the contrary that successful conclusion of the treaty issue would then permit the government to turn its efforts to the improvement of the economic situation and continued improvement of the political situation. Neither did these democratic leaders in Latin America, who have risked so much by siding with the United States on the Panama Canal issue, seem to accept my caution that the international as well as the domestic considerations of the issue should be weighed.

One has to have basic sympathy for the plight of these political parties, basically inactive for the past nine years, and with their leaders in exile. It seems to me, however, that their grievances against the Torrijos Government have interfered with their judgment as to what is best for the Panamanian people. They see the economic assistance which would come to Panama as a result of the treaties as a factor that would perpetuate the Torrijos Government in power. The positive results of such assistance for the Panamanian people seem lost on these leaders. On the other hand, discussions with Archbishop Marcos McGrath and others, including United States officials in Panama, left me with positive feelings that the government's opening toward more democratic rule would continue with ratification of the Canal treaties

On the question of human rights, the political party leaders confirmed that there were no political prisoners in Panama. There is an absence of violence and torture which is all too prevalent in many other Latin American nations.

Archbishop McGrath, in response to my question regarding charges of anti-Semitism voiced by political opposition outside the country, explained that Panama's 6,000 persons of the Jewish faith enjoy complete religious freedom and Rabbi Klepfisz is on very good terms with General Torrijos. The Archbishop added that at least one of the Torrijos children attended the Jewish Day School in Panama, one of the top schools in the country.

Concerns over the treaties and the authoritarian nature of the Panamanian Government were also expressed during meetings with Canal Zone labor officials, as well as by other United States citizens in the Zone. Labor officials did not voice objection to the treaties as they related to the overall arrangement between the United States and Panama. Their major concerns, rather, were with the treaties' retirement provisions and the implementing legislation. They feel the Department of State favors a more liberal retirement policy, which they have been advocating, while the Department of Army favors a less beneficial retirement plan. The officials contend the Army fears that a liberal retirement policy would result in early mass resignations once the treaties and the implementing legislation are approved. They feel the Army wants to keep as much of the labor force intact as possible, while the State Department wants to reduce the amount of United States labor in the operation of the Canal as soon as possible. The labor leaders spoke of the loyalty of the Panamanian workers who came to work and guaranteed the operation of the Canal even during the bloody riots and confrontation in 1964. A large percentage of the Canal Zone work force is Panamanian, many of them born in the Zone. Organized labor feels an obligation to assure these workers fair treatment after the treaties go into force.

My discussions with Canal Zone residents left me with the impression that many of them feel very insecure with the new treaty arrangements. Talks with others, including General Torrijos and Canal Zone officials, convinced me that distrust is one of the major problems on both sides. General Torrijos, in answer to my direct question, responded that Americans in the Canal Zone were absolutely essential and necessary for the continued efficient operation of the Canal. He expressed frustration that the Zonians have been negative to his assurances of a more humane life under the treaties, with the possibility of full ownership of their homes which they do not have now. General Torrijos stated that the Canal had to remain efficient; therefore, he is going to need the full support and cooperation of the present Canal Zone work force, including both the Americans and Panamanians.

The Canal Zone workers and residents also deserve our understanding. Panamanian control undoubtedly means some basic changes in the system. Even though treaty negotiations have been going on between the United States and Panama for the past thirteen years, the pending changeover still seems to have come too quickly for the majority of Zonians. They feel that they are going from security to insecurity. As Archbishop McGrath expressed it, one must appreciate the feelings of the Zonians, but the necessity for the treaties is the greater reality. "You can't hold history back," he told me. I was heartened to hear expressions of faith in the Torrijos Government by close observers of the situation.

I had the opportunity to hear General Torrijos' point of view and to get to know him when I spent one entire day with him at his home at Farallon—near the Rio Hato military base—and at the small village of Coclesito, about fifty miles west of the Canal in Cocle Province. Omar Torrijos impressed me as a humane and sensitive leader who is concerned about the Panamanian people. He characterized his rule as a dictatorship of fondness and love for the people, especially the poor. This affection for the people was clearly evident during our stay in Coclesito. He related easily to the children who constantly surrounded him and followed us on a six kilometer walk on a jungle road, and to the older people of the village whom he greeted during our walk through this rural community. The General is a military leader but he also demonstrates a capacity for popular civilian leadership as well.

General Torrijos wants to make the government serve his people. One experienced United States official noted that the General spent more time with his people than any other national leader he has seen. Others told me that he is personally and emotionally torn by the effects of high unemployment on individual Panamanian families. General Torrijos is concerned with the negative effects of the current economic situation on the populace. He told me that his government was not indifferent to the suffering of the people. The Panamanian leader also said that he was not destined to be head of the nation—he was going to be chief of government only as long as the people want him to lead. If the referendum had been defeated in October, he would have stepped down.

At Farallon General Torrijos jested about the political labels that have been placed on him—from fascist to communist. He described himself as a little to the left of John F. Kennedy. From what I gathered during my three days in Panama, ideological labels simply cannot be applied to him. He is a pragmatist, incorporating into the Panamanian system those measures which he feels would be best for his country. According to General Torrijos, Panamanians of the extreme left and right live off the nation's problems, not the solutions. He said that "living off the problems is a full time job here", an expression he used several times during the day.

General Torrijos addressed himself to the question of his relationship with Fidel Castro and Cuba, especially as it relates to the type of system he wants for Panama. In response to the raising of the issue by a Panamanian television reporter, the General expressed his admiration for President Castro and what he has done in Cuba, particularly in the fields of health care and education for the masses. He underlined, however, that these gains were made at very high social costs, citing regimentation and overworking of the people. It seems that he would like to incorporate the best aspects of the Cuban system without incurring the "social costs". He felt that the system instituted by President Castro might be best for Cuba but was not suited to the culture of Panama. One informed observer of Panamanian politics thought that General Torrijos' trip to Cuba in June, 1976, turned him away from Marxism-Leninism. The General pointed out that some of the reforms he instituted in the fields of education and health were undertaken before his Cuban trip. His visit, however, reinforced his ideas to extend social reforms. He praised those aspects of the Cuban system which benefited ordinary people and he noted that at the time of day we were discussing this issue, all Cuban children had eaten a good breakfast and lunch, while many Panamanian children had not.

General Torrijos was critical of United States policy toward Cuba, saying that the economic and technological isolation of Cuba was an injustice worthy of Idi Amin. He said you cannot have xenophobia in technology; it is out of character for the United States who is known throughout the world as a great nation that helps others.

The Panamanian leader spoke of the shame that there are tractors in Cuba which are not in working condition, sugar mills which are not working efficiently, and the possibility of a tropical sugar disease, when the United States could be doing things to help. He agreed with me that President Castro would become more flexible when the United States begins to deal with him. He also agreed with me, and I made this point at my press conference in Panama, that situations improve as leaders begin to talk to each other. The General cited Sadat and Begin.

General Torrijos mentioned that President Carter recently sent a message to Fidel Castro urging removal of Cuban troops from Africa

as a test of good will for relations with the United States. I expressed my belief that we should be dealing with those issues on two different levels—with Africa on one level and with Cuba on another. On Cuba we should address those matters that were present before the African situation—property rights, reunification of families, and the release of prisoners. United States policy in Africa is a different issue.

International politics was not allowed to dominate our conversation since General Torrijos was anxious to talk about both the accomplishments and problems of his government. One of the major accomplishments has been to bring rural areas into the life of the nation. In the opinion of many observers, General Torrijos has done more for the countryside than any previous Panamanian leader. Great energies have been expended in making social reforms in education, health care, and other social services available to all parts of the country. Infrastructure improvements have been made, such as expansion of the road system and electrical capacity. School capacity has doubled under the nine years of the Torrijos Government; no Panamanian child is without school. The number of grades has been increased from six to nine, and there are schools where there previously were none. General Torrijos told me of his long walks to school as a child and how friends drowned while crossing rivers. Now schools are no further than a thirty minute bus ride in rural areas where there used to be few schools; in urban areas, they are no further than a five cent fare. When the General came to power there were only 7,000 teachers—now there are 25,000.

In the health area, the Torrijos Government is trying to provide every rural community with a nurse or paramedic. The nursing school is producing about one hundred nurses per year, many of them from rural communities.

The government's efforts in the tiny pueblo of Coclesito epitomized what they would like to do nationwide in the rural communities. In this agricultural cooperative, experimental work is being done in cattle and buffalo raising and increasing productivity of the land for raising grain, beans, yucca, corn, tomatoes and lettuce. General Torrijos was proud of the village's success with buffalos brought in from Trinidad and Tobago six years ago—the beginning buffalo population of twenty-one has now risen to forty-one. The buffaloes are used as beasts of burden and as providers of milk and cheese.

The cooperative has had much success with increasing the ratio of cattle to hectare of land. In this area, three head of cattle can be raised on one hectare of land, whereas in other regions of the country, only one head can be adequately raised on a hectare.

The National Guard first came into this area when Coclesito was devastated by floods in 1970. They began a type of rural electrification program as various government agencies undertook projects.

General Torrijos asked some of the school children and one of the teachers to explain the village's school system to me. Four hundred students are enrolled from preschool to ninth grade in work-study programs similar to the Cuban system. In addition to academic subjects, the students learn how to grow crops and make their own clothes. One of the students told of a typical school day which is to rise at 5:30, eat breakfast, and then go to the farm for agricultural work before beginning classes. After lunch the students continue their academic work until 5:30, then study after dinner until 9:30. Students come from other parts of the country to participate in this program. This school is one of 135 established in Panama—eventually there will be 500 of these work-study schools. The government wants to make this a national system of education.

The General asked the teacher about foreign language courses and she replied that students learn the dialects spoken in the region instead. He was a bit taken back by this response, saying he thought it was necessary for Panamanians to learn foreign languages. The teacher retorted that it was more important for them to learn the languages of the people in the region with whom they work.

I was very impressed as to how articulate and knowledgeable the students and workers of the village were. Those who spoke about cattle and buffalo raising demonstrated considerable technical knowledge. It was a delight to see how well versed they were on the Panama Canal issue and to listen to conversations on that topic between them and General Torrijos. With great concern, they asked me about my assessment of the chances for Senate ratification of the treaties, and were happy to hear my positive response. According to the General, television sets had been installed in the village so that the people could watch the treaty signing from Washington.

In one of his asides on the treaty during our talks in Coclesito, General Torrijos noted that much has been said about the $50 million military assistance package which would come to Panama over the next ten years as part of the arrangement. The military assistance would be used to attack underdevelopment and illiteracy. Helicopter service would be provided in the provinces for transporting medicines and the sick. One hundred helicopter pilots would be trained to perform this mission—the training alone would cost $5 million. The General stated during this discussion that Panama's present budget for defense is ten percent of the national total, while the share for education is thirty percent.

Although General Torrijos is proud of the accomplishments of his government, he is the first to admit that the nation has serious economic problems. One of the greatest problems is dealing with the cities. What particularly impressed me after talking with Panamanian and United States officials and businessmen is how closely tied the ratification of the Panama Canal treaties is to the solution of these problems. The uncertainty created by the question of Senate ratification, with the accompanying talk of ugly and violent reaction and references to a Vietnam type situation, have caused international and domestic investors to hold back the capital necessary to get the nation back on its feet economically. General Torrijos believed that the talk of crisis and a new Vietnam have killed the impulse of private investors to take a chance on Panama until the issue is resolved. The national treasury is in bad shape, while the National Bank has no funds to finance any project for any length of time. The Panamanian economy has been at a standstill for several years because of the tenuous treaty situation, as well as the worldwide recession, the world price of oil, and the continuing problem of international commodity pricing policies.

This situation was underlined for me by the Minister of the Presidency, Fernando Manfredo, at a breakfast meeting. The Minister cited figures showing that the country has experienced no economic growth in the past several years. From 1970 to 1973 the average GNP growth was 7.2 percent; the level of unemployment was about five percent. Since 1975 the growth figure has been frozen. The official unemployment figure is between ten and twelve percent, reaching twenty percent in urban centers. People in the 18–25 years age range are most seriously affected. University-educated people are willing to take on the most menial jobs at the minimum salary in order to gain employment. At Farallon, General Torrijos had referred to the paralyzed economy and the suffering of people as its result.

Minister Manfredo told me that the government has been in touch with investors from the United States, Europe and Japan who have expressed in writing a willingness to invest once the treaty issue is resolved. The level of foreign investment in 1973 was larger than it is today. General Torrijos had spoken of many projects in which outside bankers are ready to invest if they know that Panama's future will be a stable one. One observer mentioned a convention center project which is ready to go if OPIC (Overseas Private Investment Corporation) would guarantee the loan. This project alone would employ 1,000 people. Other projects concerned road building, housing, and Panama's copper resource.

Non-Panamanian observers close to the business community believe that settlement of the Canal issue would contribute to a feeling of confidence on the part of international bankers. Settlement will give them confidence that the United States will be working closely with Panama, thus strengthening the investment climate.

Panamanian officials believe that once the treaty issue is resolved the economy will improve, not only because of the investment situation but also because they will then have control of port facilities for trade. Panama's major port facilities are in the Canal Zone. Because of present port costs, imports are very high and export possibilities are not exploited. Minister Manfredo referred to a cement plant that is competitive with those of other nations; however, its bags have a charge of thirty-five cents added on because of port costs. Under Panamanian operation, the cost of the port will be reduced and Panama will then be more competitive in international trade.

Politically this period of uncertainty could do lasting harm, according to one high-ranking free enterprise-oriented official who said, "This worsening economic condition has served to ripen the possibility of pressures from non-capitalistic sectors to improve the lot of the masses at the expense of a sound free market system. Such a situation, if left unresolved over time, presents an opportunity for demagogues with opportunistic approaches to seize hold of this economic condition and turn it to their political advantage. Most specifically, it is an ideal circumstance for a communist government with ambitions for worldwide revolution to gain a definitive and strategic entry on the American continent."

Another factor complicating the economic picture and which is also tied into the treaty issue is Panama's sugar situation. Under the International Sugar Agreement signed in Geneva, for 1978 Panama was allotted 90,000 tons, which is considerably below its export capability. In the past two years, Panama has invested heavily in sugar production to create more jobs.

General Torrijos told me that Panama will produce as much as it can because many people can then be employed. As a result, Panama has an export capability of 250,000 tons. The United States and other nations such as Cuba, Japan, Australia, England and Brazil are working at Geneva to have additional allocations made to Panama from the emergency pool created for those countries that have capabilities beyond their allocation. The problem, however, is that the solution is not imminent. The result of experimentation on the conversion of sugar to alcohol, for which the Brazilians are providing technical assistance, also is not close at hand, nor is an international pricing agreement. The stark reality is that sugar is beginning to be harvested now. At the end of the harvest—in four months—20,000 sugar workers will be flooding Panama City and other urban centers looking for employment.

This situation, as well as the depressed state of the Panamanian economy which is

largely due to the uncertainty over the Canal treaty issue, has exacerbated the pressure on the Torrijos Government. Frankly, I left Panama with the strong feeling that time is indeed running out for Panamanian economy and that Senate ratification of the treaties this spring is not only desirable but imperative. General Torrijos said that "until that time, we could make a soft landing; after that there is no more fuel". I am strongly convinced that further delay—or worse, failure to ratify the treaties—would seriously affect the economic future of Panama and have serious political repercussions.

During my three days in Panama, there was much discussion surrounding the possible effects of rejection or delay on Panama's political life, on United States relations with Panama, and on United States-Latin American relations. The negative repercussions are clearly not in the best interests of our country.

On the bilateral level, frustrations are building to the point after all these years of trying to work out an equitable arrangement, that responsible officials, both United States and Panamanian, warn of angry and emotional reaction on the part of the Panamanian populace against the United States Embassy, United States business and, ultimately, the Canal Zone. In such a situation, the ugly prospect of bloody fighting between United States military and Panamanian civilians is not too remote. United States "control" in a hostile environment is a situation to be avoided.

General Torrijos is a friend of the United States and wants to continue being one. Observers close to the scene believe that his future economic policies will be moderate and compatible with the interests of United States business. Investment opportunities for United States citizens will be enhanced. The General realizes that one-half of Panama's trade is with the United States, major international investment is from the United States, and the economy in general is closely tied to ours. Many government officials feel close to this country and many of General Torrijos' Ministers send their children to our schools.

Politically, instead of utilizing a great opportunity to encourage General Torrijos to continue on the path toward opening Panama to democracy, the possibility was raised that he could react against the opposition, or even ally himself with anti-democratic elements in the country. Recent experience has demonstrated that General Torrijos is open and flexible to constructive suggestions regarding the political situation from his friends in the United States. He acknowledged during our Farallon discussions that some recent political moves were precipitated by talks he had with Senator Robert Byrd.

On the international relations side, the United States has the opportunity to enhance its prestige in Latin America and the developing world. Senate rejection would place our best friends in Latin America—those who have defended the United States on the treaty issue against critics in their countries—in great jeopardy. The defeat of the treaties is going to grossly affect the courageous democratic leaders throughout this Hemisphere. Violent reaction against United States business, cultural representatives, and other symbols of our presence in Latin America is certainly possible.

There was no doubt in my mind upon leaving Panama that Senate confirmation of the Canal treaties is overwhelmingly in the best interests of all concerned—above all, the United States.

COSTA RICA

(Draft of Section on the Panama Canal)

To a person, and this could be said of all the officials with whom I spoke on this four country mission, there was unflagging support for the Panama Canal treaties, with some officials voicing concern over the negative repercussions that would result if the Senate rejected a new arrangement. The Panama Canal issue was the principal subject initiated by Costa Rican President Oduber and Foreign Minister Gonzalo Facio at our luncheon meetings.

If the Senate rejects the treaties, President Oduber said he would be attacked by the left wing in his country. He said, "I'm afraid that I will be literally stoned. There is no way the left wing forces can be contained if the Senate rejects the treaties." President Oduber had gone so far out on the limb in support of the new treaties that he felt his leadership capability would be undercut by Senate treaty rejection. He felt that our best friends in Latin America would have to desert us if they are to survive; it would be difficult to support the United States if the treaties were rejected.

During my memorable meeting with one of the fathers of Latin American democracy, Jose Pepe Figueres, the former President used the word "catastrophic" to describe the impact of Senate rejection of the treaties. He voiced the opinion that it was in the United States' best interests to approve the treaties. Treaty ratification would end colonial rule in the Hemisphere and give the United States the opportunity to come out and stand for something that would give the people moral encouragement. Don Pepe remarked in a serious tone, "It would be disastrous for the Western Hemisphere and the world if this catastrophe occurs in the Senate." Similar to President Oduber's warning, Don Pepe felt that Senate rejection would jeopardize the influence of friends of the United States. On the other hand, Senate passage would strengthen the hand of the United States in Latin America. In answer to a question from Ambassador Weissman, the former President replied that no country in the world would support the United States in the event of trouble over the Panama Canal if the treaties were not approved.

All the presidential candidates with whom I spoke were unanimous in their concern over the pending Senate action. Conversations with these close friends of the United States convinced me that Senate rejection would be a severe blow to the progressive forces in Latin America that have stood with us. The only beneficiaries of the treaties' defeat would be the communists and anti-democratic forces.

A final note on the Panama Canal issue: I was honored to deliver a speech on United States-Latin American relations at a Costa Rican government-sponsored forum on "Development and Democracy" at the beautiful and historic National Theater in San Jose. The most enthusiastic audience reaction came after my remarks strongly supporting Senate ratification of the treaties.

PERU

(Draft of Section on the Panama Canal)

The Panama Canal issue figured prominently in my discussions with Peruvian leaders and the press. It was, in fact, the first topic of conversation initiated by Foreign Minister de la Puente and was dealt with at the start of my meeting with President Morales. The Peruvians view the Panama Canal issue on two distinct levels. On the international plane, they fully support the treaties because of Latin American consensus and also because they feel the treaties are in the best interests of close United States-Latin American relations. President Morales felt that Senate rejection would present serious difficulties for the United States in several countries. Foreign Minister de la Puente explained that a successful conclusion to the Panama Canal issue would be interpreted as a positive sign in Latin America, whereas if the treaties are not ratified another set of problems wil be opened up involving Panama and all of Latin America.

On the domestic level, the Peruvians are concerned about the Panama Canal because their economy is directly affected by toll charges and other factors influencing Canal operation. A significant portion of Peru's foreign trade flows through the Canal, as does the trade of its West Coast South American neighbors, Ecuador and Chile. Foreign Minister de la Puente expressed the hope that a system of consultation could be established between Panama and the West Coast countries in order for issues to be worked out equitably and fairly. For example, procedures could be arranged so there would be discussion over toll increases.

An interesting and different perspective on the Panama Canal issue was given by the APRA leaders. In response to my question, they answered emphatically that their party advocated many years ago that the Panama Canal should be Latin Americanized or internationalized. This is still the party's position. APRA leaders stated they are as much against Panama having full control as they were against full control by the United States. They feel that control of this vital international link is more dangerous in the hands of a small power than in the hands of a larger nation. APRA leaders also expressed concern over problems related to a possible war or dispute with Panama, underscoring this as a theoretical and highly unlikely occurrence. The Aprístas would like to see the formation of an OAS commission to act as a guarantor of Canal internationalization. They referred to a recent statement on this concept by party leader Haya de la Torre.

The APRA leaders respectfully heard my arguments against their idea but they felt that eventually the world would adopt the policy of internationalization of all international straits and waterways.

VENEZUELA

(Draft of Section on the Panama Canal)

Venezuelan leaders, especially President Perez and Foreign Minister Consalvi, were extremely supportive of the treaties negotiated between Panama and the United States. In private conversations, President Perez initiated discussion of the Canal treaties, saying that Senate rejection would be a "catastrophe" which would cause violent reaction in Latin America. He feared sabotage would result from treaty rejection and that ensuing events—possible United States occupation of Panama and the negative reaction from the international community—would only benefit our communist rivals.

President Perez revealed that Venezuela played a major role in influencing General Torrijos to take a more moderate international posture, and in so doing he was able to gain the unified support of the Latin American nations. The Venezuelan President shared the feelings I had about General Torrijos after my meeting with him. He felt the Panamanian leader has great respect and feeling for his people, and that the human rights situation was improving under his leadership. President Perez demonstrated an extraordinary interest in the development of the Panama Canal debate in the United States and mentioned that he receives regular reports on the issue.

Although some Venezuelan congressional leaders expressed skepticism regarding General Torrijos' political style, it did not diminish their support for the Canal treaties. Former President Betancourt said the Canal not only dissects Panama but also Latin America. Senate approval would strengthen the position of the United States in the Hemisphere. On the other hand, he saw great security problems for the United States and Latin America if the treaties were rejected or if ideas such as internationalization of the Canal under the United Nations were implemented.

Official concern for the treaties has had a strong effect upon the Venezuelan people who are conversant with the issue. The

treaties were the principal subjects of several newspaper interviews that I held, as well as one of the main topics of a popular television talk show on which I appeared.

The PRESIDING OFFICER (Mr. MATSUNAGA). The Senator from Virginia.

Mr. HARRY F. BYRD, JR. Mr. President, I yield to the Senator from Utah (Mr. HATCH).

Mr. HATCH. Mr. President, I would like to share with my colleagues some very important news this afternoon. As Senators will recall, the Circuit Court of Appeals for the District of Columbia recently ruled in the case of Edwards against Carter that the President of the United States has the authority to dispose of the Panama Canal by a self-executing treaty, thereby bypassing the House of Representatives. The decision was based on a 2-to-1 majority, the lone dissenter being Judge George McKinnon who wrote a 79-page dissent. Today, representatives of the Washington legal Foundation, who are representing 60 Congressmen in the suit, informed me that Chief Justice Warren Berger of the Supreme Court has referred the appellants' application for an injunction to the full court pending a petition for a writ of certiorari.

This is highly significant, of course, because it means that Chief Justice Burger, instead of rejecting the application for the injunction, has now put the matter before all the members of the Supreme Court. This, in turn, will prepare the way for the Court's consideration of this important constitutional issue on its merits. I consider this to be most encouraging news, Mr. President, and am pleased to learn that this important case against the abuse of the President's treatymaking power is now gaining the attention of our highest Court.

As I have repeatedly stated on this floor, there are no precedents, in my judgment, after studying the matter for many months, which would authorize the President of the United States to transfer the Panama Canal to the Republic of Panama without the concurrence of both Houses of Congress. I am extremely confident that the Supreme Court will agree once it has had an opportunity to study the matter.

I certainly urge and encourage that they do agree, because I think it is a matter of great importance, involving the separation of powers and an extension, in violation of the Constitution, of article IV, section 3, clause 2 of the Constitution by the President of the United States. So I think this is good news. I hope that we will have a result from the Court soon, and I am confident that the Supreme Court will agree with the contentions that we have made here on the floor of the U.S. Senate.

I am very grateful to my dear friend from Virginia, who yielded to me this very brief time.

Mr. HARRY F. BYRD, JR. I am delighted to have yielded.

Mr. President, the Carter administration has maintained that the proposed Panama Canal treaties provide the United States with adequate bases, facilities, and rights to defend the Panama Canal.

I believe, however, that these treaties are grossly inadequate in that regard. By withdrawing all U.S. military forces from Panama and surrendering to Panama control over all military bases by the year 2000, the United States would be relinquishing the capability to adequately defend the Canal.

Even before the year 2000, the treaties would require the United States to get out of many of the military facilities established to defend the canal and would also terminate the protective buffer of the Canal Zone.

So that my colleagues may have the benefit of seeing just how extensive U.S. military facilities in the Canal Zone are at present, and also how the proposed treaties would affect the future status of those facilities, I ask unanimous consent that a chart listing these facilities and their status be printed in the RECORD at this point.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

U.S. MILITARY FACILITIES IN THE CANAL ZONE AND THEIR STATUS UNDER THE PROPOSED TREATIES

[D/S—Defensite; M/C—Area of military construction]

| U.S. facilities/area (service) and current use | Status under new Canal treaty | Remarks |
|---|---|---|
| **PACIFIC SIDE** | | |
| Fort Amador (Army): | | |
| Bde headquarters | Panama [1] | Relocate to Fort Clayton. |
| Troop area | do [1] | Relocate to Fort Clayton/Corozal. |
| Family housing | M/C [2] | |
| Community facilities | M/C [2] | |
| Fort Grant (Army): Spt activities | Panama [1] | Limited facility use retained. |
| Fort Clayton (Army): | | |
| Troop area | D/S | |
| Tropic test headquarters | D/S | |
| Service support facilities | D/S | |
| Family housing | D/S | |
| Training area | M/C [2] | Slightly reduced size. |
| Curundu (Army): | | |
| DOD civilian housing | M/C | |
| Contractor housing | M/C [2] | |
| Curundu Heights military housing | M/C [3] | Quarters for Panamanian military. |
| Military housing (BOQ) | M/C | |
| Pacific Area Depot | M/C [3] | Phased relocation to defense site. |
| Inter-American Geodetic Survey Headquarters. | M/C [3] | Relocation to defense sites. |
| USAF Antenna Field | M/C [3] | Relocation to Howard AFB. |
| Corozal (Army): | | |
| Engineer and industrial facilities | D/S | |
| Troop housing and facilities | D/S | |
| Former antenna field | Panama [1] | |
| Albrook Army Airfield, East (Army): Aviation Bn operational and maintenance facilities. | Panama [1] military Helo and commercial development. | Relocation to Howard AFB (interim to Albrook West) |
| Quarry Heights: Headquarters SOUTHCOM; FAA microwave; military communications; family housing. | M/C | Location combined board, post reduced in size. |
| U.S. Naval Station, Panama (Amador) (Navy): U.S. Naval Station Headquarters; USN Communications Station, Balboa Headquarters; housing. | M/C | |
| Albrook Air Force Station (West) (Air Force): 1978th Comm., Gp; Inter American Air Force Academy; long range radar, family housing; Headquarters USAFSO. | D/S | |
| Howard Air Force Base (Air Force): Headquarters USAFSO; Howard Airfield; 24th Composite Wng; family housing fuel storage; ammunition storage; | D/S | Curundu antenna field relocates from Curundu; Permanent relocation site 210th Avn Bn |
| Fort Kobbe (Army): Tactical Bde Headquarters; training areas; troop facilities. | D/S | Slightly reduced. |
| Rodman/Cocoli/Farfan (Navy): USN Station (piers and Spt Facilities); USN radio receiving facility; family housing; marine barracks; small craft instruction and training team. | D/S | |
| Empire Range (Army): Training area; firing ranges | M/C | Small sections Panama T-Day. |
| Balboa West Air-to-Ground Gunnery Range (Air Force): Aircraft firing and bomb range. | M/C [2] | Transfer to Panama when alternate range is privided to U.S. Government. |
| Arrijan Tank Farm (Navy): Military fuel storage. | D/S | |
| Summit (Navy): USN Comm Station Balboa Transmitting Facility. | M/C | |
| Cerro Tigre/Cerro Pelado (Army): former ammo storage area. | Panama [1] | Rail ammunition transfer point retained as M/C. |
| **ATLANTIC SIDE** | | |
| Fort Davis (Army): Atlantic Spt Facs; ITT Cable and Transisthmian Microwave SCN radio/TV; troop facilities. | D/S | |
| Fort Gulick (Army): USA School of the Americas (USARSA); troop facilities; dispensary and dental facilities; family housing; ammunition storage. | M/C [4] | USARSA only 5 yr except as agreed; company size area to Panama in 3 yr; family housing, ammunition storage and community service areas retained as M/C. [3] |
| Coco Solo South (Army): Family housing | M/C [3] | |
| France Field (Army): Family housing | M/C [4] | |
| Fort Sherman (Army): Jungle Opns Training Center; Fort Sherman Air Strip; troop housing; training area. | D/S | |
| Fort Sherman Training Area (Army): Jungle training area. | M/C | Slightly reduced. |
| Fort Randolph: None (former coast artillery location). | Panama [1] | |
| Galeta Island (Navy): Communications facility. | D/S | |
| Semaphore (Air Force): Air Traffic Cntl | D/S | |
| Gatun Tank Farm (Navy): Military fuel storage. | D/S | |
| Isthmian Pipeline (Navy): Military fuel pipeline between Atlantic/Pacific | D/S | Possible joint use by Panama if agreed by U.S. Navy. |
| Gamboa (Army): Tropic test facility | Panama [1] | Subject to separate negotiations. |

[1] Transfer to Panama Treaty Day.
[2] Transfer sometime during treaty.
[3] Transfer to Panama in 3 yr.
[4] Transfer to Panama in 5 yr.

Note: Unless otherwise noted, post treaty status remains unchanged until Dec. 31, 1999.

Mr. HARRY F. BYRD, JR. Mr. President, on another subject, although it is not necessary to do so, I ask unanimous consent that I might be permitted to speak as if in legislative session.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE RISKS OF U.S. RHODESIAN POLICY

Mr. HARRY F. BYRD, JR. Mr. President, as Secretary of State Vance visits Rhodesia and Russia this week, this Senator would like to express the hope that he will take a realistic rather than an emotional approach to the agreement worked out by Rhodesian Prime Minister Ian Smith and the three moderate black leaders of that nation.

That agreement would bring about by the end of this year black majority rule in Rhodesia.

But the State Department, following the leadership of our extremist Ambassador to the United Nations, Andrew Young, is demanding that Marxist-oriented, terrorist guerrillas based in countries adjacent to Rhodesia be brought into the new Rhodesian Government. These guerrilla forces have been supplied with arms by the Soviet Union.

The Communist-backed rebels also have support in the United Nations. The U.N. Security Council, with Britain and the United States abstaining, voted recently to reject the Salisbury settlement, thus giving further international encouragement to the guerrillas.

A "no" vote by the U.S. representative—which I urged both to the President and the Secretary of State—would have killed this mischievous resolution.

Given this set of circumstances, Rhodesia could be the next African country to fall into Communist hands.

Most Americans do not realize the degree of Soviet and Cuban penetration in Africa.

As chairman of the Intelligence Subcommittee of the Senate Armed Services Committee, I conducted a hearing this week where detailed presentations were made by American intelligence experts.

The Deputy Director of the Central Intelligence Agency stated categorically that there is a determined and unprecedented campaign to expand Russian and Cuban influence throughout central and southern Africa.

The fact is there are Communist military personnel, mostly Russian and Cuban, in 18 African countries.

Cuba has nearly 40,000 military personnel in Africa; and Russian military equipment has been flown into Ethiopia and Angola faster than the local forces can utilize it.

Russian fighter aircraft have been sent to Ethiopia and Russian tank deliveries to that country exceed 400. Soviet military aid commitments to Ethiopia approach $1 billion.

In Angola, tons of Russian military hardware are on the docks at Luanda, and Soviet or Cuban advisers are found at every level of government.

Elsewhere in Africa, Soviet equipment has been delivered to various so-called liberation movements and self-styled revolutionary regimes, with either Russians or Cubans training the recipients in its use.

Two nations friendly to the United States, Rhodesia and South Africa, are surrounded by nations which have within their borders Russian and Cuban military personnel.

It is unfortunate that the State Department permits Andrew Young to call the shots in regard to African policy. He was an able Congressman from Georgia and was highly regarded by his colleagues in the Congress.

But as Ambassador to the United Nations he has done little to reflect credit on the United States. The latest denunciation of him came just 2 weeks ago from an unlikely source, former Prime Minister Harold Wilson of Great Britain.

The former Prime Minister, a Socialist, in commenting on Ambassador Young's Rhodesian policy said:

> What is particularly dangerous is Young's repeated assertions which can only be read as meaning that any Rhodesian settlement without bloodshed and massacres won't count.

These are strong words by the former British Prime Minister. But such an appraisal of Mr. Young's activities appears to be accurate.

The United States, in my judgment, is playing into the hands of the Communists—as well as courting bloodshed—by refusing to accept the agreement worked out by Prime Minister Smith and the three moderate black leaders of Rhodesia.

Hopefully, Secretary Vance during his African trip will see the folly of Ambassador Young's position in demanding that Marxist-oriented, terrorist guerrillas be brought into the new Rhodesian Government.

The present U.S. policy serves only to encourage the guerrilla forces, and enhance their hopes for eventual dominance, by continuing to insist that these Communist-backed forces be included in the government.

---

## CHARTING A COURSE FOR THE NAVY

Mr. MATHIAS. Mr. President, the making of public policy involves choosing between alternatives. The choices on the major issues are often not easy ones. I appreciate the dilemma faced by President Carter in preparing his fiscal year 1979 Defense Budget. The national defense must be assured at an acceptable cost given many competing demands. I have been one who has argued long and hard in the past that if we do not have a strong economy at home, if the needs of our people are not met, then the very foundation of our real national security is threatened.

It is from this perspective then that I must announce my very real reservations about President Carter's proposals for the U.S. Navy both in his fiscal year 1979 budget and in the administration's just released 5-year shipbuilding plan. These proposals, which are subject to congressional modification, threaten to undercut the U.S. security.

The Chief of Naval Operations, Adm. James Holloway, has been quoted in the past as saying that the Navy needs a 600-ship fleet if it is to do the tasks assigned it in the 1980's. At present, we have 459 ships. In his fiscal year 1978 budget President Ford recommended a 5-year shipbuilding plan running from 1978 through 1982 and calling for 156 new ships and modernization of 20 existing vessels. This program would have brought us within range of what the Navy has indicated would be an acceptable number of vessels.

On February 2, 1978, Secretary of Defense Harold Brown issued the Department of Defense's annual report. In it he said that "a 600-ship active navy is not feasible in the next decade." The administration recommended funding for 15 ships in fiscal year 1979. This is a major reduction in President Ford's 5-year shipbuilding plan which called for 29 ships in fiscal year 1979. The Carter budget does not include funding for another carrier. It drops funding for the surface effect ships (SES). It cuts back funding for a nuclear-powered strike cruiser using the aegis system. It reduces the Navy's request for F–14's, substituting a few F–18's which the Navy did not request. Finally, the administration recommends taking a massive slice out of the Navy Reserve; cutting it by 35,000. All of these raise serious questions.

Ten days ago the Carter administration had some more unwelcome news for the U.S. Navy. The new 5-year shipbuilding plan was announced and it looks very different from that of President Ford. Instead of 156 new ships in 5-years the Carter administration proposes only 70. Instead of 20 refitted ships in 5 years the Carter administration proposes. 13. Instead of a fleet of over 600 ships we are told that this program will "allow us to maintain a fleet of at least 500 ships through the turn of the century."

What has changed in a year that would warrant such a different perception of what U.S. national security requires? Not very much that bodes well for the United States.

Gen. George Brown, Chairman of the Joint Chiefs of Staff, in his report entitled "United States Military Posture for FY 1979," says that:

> The Soviet Navy enjoys numerical advantage over U.S. naval forces in principal surface combatants (4:3) and especially in general purpose submarines (3:1). Moreover, Soviet surface naval units are generally more heavily armed than their U.S. counterparts.

He goes on to say very clearly and precisely—

> The U.S. Navy's greatest problem is too few surface combatants to perform all its missions simultaneously.

I am going to ask that General Brown's entire statement entitled "Naval Forces" be included in the RECORD because it is a good summary of the strength and weaknesses of the U.S. Navy.

What we must not forget is the context in which our Navy will have to operate in coming decades. Not only are the Soviets improving their naval capabilities but their interest in promoting mischief far from their borders also seems

to be increasing. We have all been disturbed by Soviet willingness to take risks in Africa. It is not impossible that they will be looking elsewhere for opportunities. Secretary of Defense Brown admits that "We cannot rule out the possibility that, as in 1973, the Soviets would consider sending forces (to the Middle East) to attempt to change the outcome of a renewed conflict." Increased Soviet activity in the Middle East would strike at the very core of our national security. Today the United States imports close to 50 percent of its petroleum needs. Approximately, 35 percent of our crude oil imports in 1977 came from the countries bordering the Persian Gulf. We have a lifeline which can be easily threatened.

We should be mindful of other possible problem areas as well. The President is quite right to focus on NATO. I am not sure, however, that enough attention is being given to NATO's flanks. Clearly, both in the Mediterranean and in the Baltic, the U.S. Navy has a role to play. As we withdraw from Korea, and indeed as our whole role in Asia is reviewed, the need for a strong Navy will increase in order to maintain our Pacific interests.

I see no adequate justification for curtailing this Nation's shipbuilding program in the manner the President is recommending. I would be the first to admit that in the past Navy programs have suffered from cost overruns and delays. I can appreciate that these problems may take some time to iron out, and doing so should be the focus of considerable administration effort. I cannot agree, however, that the President's proposals are the best way to insure the national security of the United States.

Once, during World War II, while I was serving as a "deck ape" on an amphibious command ship, we were steaming proudly on a northerly course through the South China Sea at the head of a great fleet of ships arrayed in parallel columns, with battle ensigns flying. Our ship, which began life as a merchantman hull, had been transformed by spit and polish, gray paint and millions of dollars worth of Navy gadgets. Its vitals were, however, still the same old merchant marine boilers. As we crested the swells of the China Sea, we "lost our load," our steam escaped, and we wallowed in the troughs while the fleet steamed on toward the horizon. It was not funny, but it happens when a ship gets old.

We must not run the risk that our sailors go to sea with less than they need to defend their country. I intend to work in the Appropriations Committee to insure that prudent revisions in the President's budget be made which will insure that this country has a strong Navy in the 1980's and beyond.

I ask unanimous consent that Gen. George Brown's statement "Naval Forces" included in his report entitled "United States Military Posture for FY 1979" be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NAVAL FORCES

The present combat capabilities of Soviet naval forces can substantially influence Western naval operations in many key areas, and could dominate the initial stages of certain types of conflicts. Soviets surface ships, however, are considered particularly vulnerable to concerted Western air or submarine attack.

The Soviet Navy enjoys numerical advantage over US naval forces in principal surface combatants (4:3) and especially in general purpose submarines (3:1). Moreover, Soviet surface naval units are generally more heavily armed than their US counterparts. The United States has ASW capabilities superior to the Soviet Union's, reflected in the SSN 688 LOS ANGELES class which is the finest ASW platform in existence today; Sound Surveillance System (SOSUS); and land-based P-3 aircraft.

The US Navy enjoys a clear superiority in power projection capabilities, particularly as represented by aircraft carriers and US Marine amphibious forces. The United States possesses an advantage in mobility of naval forces typified by the nuclear powered task groups and high performance underway replenishment capabilities. The development of the HARPOON and TOMAHAWK medium and long-range antiship missiles, and the AEGIS air defense weapon system will improve the US Navy surface warfare capabilities provided the shipbuilding program continues to provide modern platforms, such as the guided missile destroyer (DDG-47) and the nuclear guided missile cruiser (CGN-42), in which to put these capabilities to sea.

The US Navy's greatest problem is too few surface combatants to perform all its missions simultaneously. The Soviet Union is, and has been, actively engaged in a major surface fleet modernization program. At present, US fleet modernization programs are being curtailed. Shipbuilding programs initiated a few years ago have been substantially reduced. These are disturbing trends considering the long lead times necessary to bring ship programs from early stages of development and design to full combat capability.

While the US Navy's capability to project and sustain sea-based power and the quality of its attack submarine force are superior to the Soviet Union's, current US capability to control the essential sea lanes, versus the Soviet Navy's capability to deny the use of these lanes, is more difficult to assess. In the event of a major conflict, by concentrating its effort and exploiting allied capability, the US could prevail in most situations, but both US and allied shipping would probably suffer serious losses in the early stages.

## S. 2867—TO REPEAL ACREAGE LIMITATIONS AND RESIDENCY REQUIREMENTS ON FARMS THAT RECEIVE WATER FROM FEDERAL RECLAMATION PROJECTS

Mr. MATHIAS. Mr. President, I joined with the distinguished Senator from Arizone (Mr. GOLDWATER) on Monday in introducing S. 2867, a bill to repeal acreage limitations and residency requirements on farms that receive water from Federal reclamation projects. The Department of Interior has announced intentions to draw up enforcing regulations for a long-ignored 1902 act that forces owners of more than 160 acres to sell the excess land or lose the water that makes farming possible. That act also prohibits nonresident owners from receiving any water.

These water projects have created an agricultural miracle in the Western United States. Economies of scale and technological advances have turned the arid land served by that water into one of the world's most productive farming areas. It would be absurd to destroy that structure by basing water policies on the principles of an antiquated law.

Agriculture is one of our most successful and important industries. It is a national industry with a major impact on the American economy. It is the best factor in our bid for exports and trade. The time is past when inefficiency need be accommodated. In most parts of this country single family farms are the most efficient production units, but even single families can manage over 500 acres with high productivity. In those parts of the West, where farms take advantage of economies of scale and corporate investments, our national interest lies in protecting those advantages. The families in Baltimore and Cumberland that feel the effects of increasing food prices would soon know of the wrong-headed economic decision if the administration goes ahead with its plans to enforce that law. Maryland and Massachusetts and Michigan would soon recognize a common interest.

The entire American economy has become dependent upon the productivity of our farms. Water and the efficiently sized farm unit are critical factors in that productivity for the Western farmer. The Bureau of Reclamation estimates that the value of all crops produced in 1976 with the aid of those water projects is $4.3 billion. The Department of Interior estimates that the net increase in business activity, total wages, and employment attributable to reclamation projects was over $12 billion in that same year. The very highest estimate of the total cost to the Federal Government of the reclamation projects calculated over the life of the projects amounts to $11 billion. Under any circumstances, the same year. The very highest estimate of moderate food prices, jobs, and international trade proves the wisdom of allowing water to be used as efficiently as possible.

I urge the Senate to join with Senator GOLDWATER and me in repealing the act that so tempts the administration to experiment in agricultural economics.

## THE PANAMA CANAL TREATY

The Senate continued with the consideration of the treaty.

Mr. LUGAR was recognized.

Mr. LUGAR. Mr. President, earlier, the distinguished Senator from South Dakota (Mr. MCGOVERN) has given an important statement of summary of his views on the Panama Canal Treaty debate. I should not presume to respond to all of what he has had to say. But I would simply comment that throughout his remarks he has mentioned that the people of Panama, in fact, the Government of Panama, might have felt insulted during many days of that debate by in-

sinuations that were made about that government, about affairs in Panama.

Certainly, that has not been the intent of those who are opposed to these treaties. As a matter of fact, it seems to me that many of us who are opposed to the treaties are very much in favor of a good number of things that might help the people of Panama to boost their economy, bring about greater stability of political institutions and, certainly, a much happier relationship with the United States of America in the years to come.

The difference of opinion, it seems to me, comes over whether this particular treaty, the route our negotiators have taken, was the most appropriate and the most propitious way of bringing about stronger friendship and, indeed, a stronger economy in Panama.

Clearly, those of us who are opposed have on occasion had opportunities to talk to Ambassadors Linowitz and Bunker, and we have appreciated those opportunities during the negotiations to express our viewpoints of where we might have headed.

I, for one, suggested that the emphasis needed to be on the economic issue, because only in the event that the Panama Canal became a more profitable venture would significant revenues ever accrue to the people of Panama, would significant changes ever be made in the health and welfare of people who might be served by that government.

I still feel that would have been a superior route to follow and, indeed, Ambassadors Linowitz and Bunker did not disagree with the importance of that point of view.

However, the gist of the treaty that is now in front of us has dealt with other measures as more important, questions of sovereignty and, indeed, of ownership, quite apart from how well the operation might prosper, regardless of sovereignty and ownership consideration that might be involved.

As a matter of fact, the economic issues have been subordinated and there is severe difference of opinion as to whether, in fact, the canal will even make a profit and be self-sustaining, although much evidence has been given both ways.

It just seems to me that the American public watching this debate, and it has been an important one, I believe, in terms of both its length as well as what has been said, the American public is still not convinced that, in a practical way, the United States of America will prosper in the event these treaties are finally ratified and, indeed, the people of Panama have felt a sense of hurt and harm as the discussion has proceeded.

It might have been the better course, as a matter of fact, to have come forward in a different way with an economic treaty and after some consensus in the American public had been found.

But what we are left now with, I think, is a severe question as to whether the American people will finally find at least some wisdom in these treaties and, indeed, there is substantial evidence that despite many weeks of debate the American public is now very skeptical, indeed, and wonders how two-thirds of the Senate could be of such a contrary view.

It just seems to me important to state that the people of the United States are not acting in a paranoid or an insecure manner, these words having been used by the Senator from South Dakota (Mr. McGOVERN). I see no evidence of paranoia or insecurity.

I do see evidence that many people in the United States of America simply feel that there is no particularly good reason for the giving up of property, a substantial property value created in the construction of the canal, unless there is sufficient quid pro quo for doing so unless there are substantial reasons for the United States, either in foreign or economic policy, to make that type of transfer.

Those clearly have not been demonstrated. As a matter of fact, if peace was our objective, by the time we come to the conclusion of these treaties, peace appears to be as illusory in Panama at the conclusion as it was at the beginning.

Indeed, I will submit as a prediction for history that until it is apparent that the canal is a profitable operation, that flows of money are going to go to the people of Panama, that the education and welfare of those people are likely to be upgraded, there will be substantial unrest, and it will continue quite apart from the arrangements and quite apart from the transition.

I make these comments simply to reply to the Senator from South Dakota, for whom I have great respect. There are many who will agree with his position and many who will agree with mine and those of us who have opposed the treaties. We do so simply because we believe the United States of America must prosper. The Government of Panama and the people of Panama, hopefully, should prosper. We believe, as a matter of fact, that we can still do better, and many of us hope that we shall still have that opportunity.

The treaties have not been ratified as yet. It is still a possibility, it seems to me, that down the pike we could come to arrangements that would be more satisfactory for our two nations.

Mr. President, I yield the floor.

Mr. MATSUNAGA. Mr. President, I ask unanimous consent that I may proceed as in legislative session.

The PRESIDING OFFICER (Mr. SARBANES). Is there objection? The Chair hears none, and it is so ordered.

## HAWAII MOURNS PASSING OF "MR. LABOR," ELMO SAMSON

Mr. MATSUNAGA. Mr. President, the working people of Hawaii lost one of their strongest champions a few days before Easter when labor leader Elmo "Sammy" Samson succumbed to a heart attack.

I was privileged to be a longtime personal and close friend of "Sammy" Samson, who was officially named "Mr. Labor" by the Hawaii State Federation of Labor in 1972. His untimely death, at age 62, brought to a close one of the most remarkable chapters in the history of the labor movement in Hawaii and he left behind not only a grieving family but a host of sorrowing friends, like myself, whose lives he had enriched.

A self-made man, Elmo Samson rose out of the depths of poverty and despair to become one of the most highly respected and beloved figures in the island State. He devoted his life to the welfare of the workingman, particularly those who used to be called "common laborers." Compelled by circumstances to drop out of school after the ninth grade, he rose to lead Hawaii's construction laborers and gain for them a new dignity, improved wages, and better working conditions. The fact that construction workers in Hawaii and the Pacific area today enjoy a more equitable share of the fruits of democracy is due in large measure to the sacrifices made by Elmo Samson and his family in the 1950's.

In those days, he could not even afford a car as he traveled around the island of Oahu, talking and listening to his fellow construction workers. As he struggled, with only a handful of helpers and without pay, to organize what is now Laborers Local Union 368, his dutiful wife, Stella, and their nine children were at times forced to seek assistance at the local welfare office.

The fledgling union was at the bottom of the totem pole in its early contract negotiations. But in 1960, an industry-wide agreement was signed and Elmo Samson personally made sure that the term "common laborer" was deleted from that and all future contracts. Today, construction laborers in Hawaii are classified as "Labor 1," "Labor 2," and so forth. During these busy years, he served as one of the founding vice presidents of the Hawaii State Federation of Labor and as president of the Hawaii Building and Construction Trades Council. At a testimonial dinner in his honor in 1972, Hawaii's late Gov. John A. Burns said:

> This is only the second dinner I have attended honoring a labor leader. The other was for Jack Hall.

Elmo Samson shared with Jack Hall, the world-famous organizer of Hawaii's International Longshoremen's and Warehousemen's Union, a profound love for his fellowmen and a deep belief in the dignity of honest labor and working people which was undiminished at the time of his death. In recent years, he also lent his name, his time, and effort to the Aloha United Way, the Special Olympics, and the International Guiding Eyes Corp., and organization which trains guide dogs for the blind.

The 3,500 members of Laborers Union Local 368, of the International Laborers Union have lost not only their great leader, but also their founder and father, and by his unexpected passing Elmo Samson leaves a vacuum which will be most difficult, if not impossible, to fill.

Mr. President, although I did attend Elmo Samson's funeral only 10 days ago in Hawaii, the inner pain which one must endure over the loss of a dear friend prompts me to pay this additional tribute to his memory, in the hope that those

who are within hearing distance of my voice and readers of the CONGRESSIONAL RECORD will be inspired to do good by the life-story of Elmo Samson.

Hawaii is a better place, because Elmo Samson lived there. We whose lives were enriched by knowing him owe a debt of gratitude to his widow, Stella; his sons, Norman, Stanley, Wayne, and Steven; his daughters, Janet, Marilyn, Charlotte, and Velma; and his grandson, Randy, for having unselfishly permitted us to share the love and care of a super human being.

## MESSAGES FROM THE HOUSE

ENROLLED BILL AND JOINT RESOLUTION SIGNED

At 10:19 a.m., a message from the House of Representatives delivered by Mr. Berry, one of its reading clerks, announced that the Speaker has signed the following enrolled bill and joint resolution:

H.R. 9179. An act to amend the Foreign Assistance Act of 1961 with respect to the activities of the Overseas Private Investment Corporation.

H.J. Res. 578. A joint resolution authorizing the President to proclaim the third week of May of 1978 and 1979 as "National Architectural Barrier Awareness Week."

The enrolled bill and joint resolution were subsequently signed by the President pro tempore.

---

At 1:25 a.m., a message from the House of Representatives delivered by Mr. Berry, announced that the House has passed the following bill and joint resolution, in which it requests the concurrence of the Senate:

H.R. 3161. An act to amend title 5, United States Code, to improve the basic work-week of firefighting personnel of executive agencies, and for other purposes; and

H.J. Res. 770. A joint resolution to authorize and request the President to issue a proclamation designating April 18, 1978, as "Education Day, U.S.A.".

ENROLLED BILLS SIGNED

At 3:40 p.m., a message from the House of Representatives delivered by Mr. Hackney, announced that the Speaker has signed the following enrolled bills:

H.R. 4979. An act to direct the Secretary of the Interior to convey certain public and acquired lands in the State of Nevada to the county of Mineral, Nev.

H.R. 6693. An act to promote the healthy development of children who would benefit from adoption by facilitating their placement in adoptive homes, to extend and improve the provisions of the Child Abuse Prevention and Treatment Act, and for other purposes.

The enrolled bills were subsequently signed by the President pro tempore.

---

At 6 p.m., a message from the House of Representatives announced that the House agrees to the amendments of the Senate to the bill (H.R. 7744) to amend the acts of August 11, 1888, and March 2, 1919, pertaining to carrying out projects for improvements or rivers and harbors by contract or otherwise, and for other purposes.

## HOUSE BILL REFERRED

The following bill was read twice by its title and referred as indicated:

H.R. 3161. An act to amend title 5, United States Code, to improve the basic work-week of firefighting personnel of executive agencies, and for other purposes; to the Committee on Governmental Affairs.

## COMMUNICATIONS

The PRESIDING OFFICER laid before the Senate the following communications, together with accompanying reports, documents, and papers, which were referred as indicated:

EC-3333. A communication from the Secretary of Commerce, transmitting a draft of proposed legislation to amend the Fishery Conservation and Management Act of 1976 to include the Northern Mariana Islands; to the Committee on Commerce, Science, and Transportation and the Committee on Foreign Relations, jointly, by unanimous consent request.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that a communication from the Secretary of Commerce, relative to amending the Fishery Conservation and Management Act of 1976 to include the Northern Mariana Islands, be referred jointly to the Committee on Commerce, Science, and Transportation and the Committee on Foreign Relations.

The PRESIDING OFFICER. Without objection, it is so ordered.

EC-3334. A communication from the Director, Office of Management and Budget, Executive Office of the President, transmitting, pursuant to law, a cumulative report on rescissions and deferrals, April 1978; to the Committee on Appropriations and the Committee on the Budget, jointly, pursuant to order of January 30, 1975.

EC-3335. A communication from the Administrator, Rural Electrification Administration, Department of Agriculture, reporting, pursuant to law, approval of an REA insured loan in the amount of $3,100,000 to L. & O. Power Cooperative, of Rock Rapids, Iowa; to the Committee on Appropriations.

EC-3336. A confidential communication from the Director, Defense Security Assistance Agency, reporting, pursuant to law, concerning the Department of the Air Force's proposed Letter of Offer for Defense Articles estimated to cost in excess of $25 million; to the Committee on Armed Services.

EC-3337. A communication from the Deputy Assistant Secretary of Defense (Installations and Housing), reporting, pursuant to law, on 14 construction projects to be undertaken by the Air National Guard; to the Committee on Armed Services.

EC-3338. A communication from the Chairman, Interstate Commerce Commission, transmitting, pursuant to law, the 91st annual report of the Interstate Commerce Commission; to the Committee on Commerce, Science, and Transportation.

EC-3339. A communication from the Under Secretary of Energy, transmitting, pursuant to law, a report on the Barnwell nuclear fuels plant applicability study, April 1978; to the Committee on Energy and Natural Resources.

EC-3340. A communication from the Assistant Secretary of the Interior, transmitting, pursuant to law, the annual report on the anthracite mine water control and mine sealing and filling program; to the Committee on Energy and Natural Resources.

EC-3341. A communication from the Under Secretary of the Interior, transmitting a draft of proposed legislation to modify the authority of the Government comptrollers for Guam and the Virgin Islands, and for other purposes; to the Committee on Energy and Natural Resources.

EC-3342. A communication from the Chairman, Nuclear Regulatory Commission, transmitting, pursuant to law, the 11th report on abnormal occurrences at licensed nuclear facilities; to the Committee on Environment and Public Works.

EC-3343. A communication from the Acting Chairman, Nuclear Regulatory Commission, transmitting, pursuant to law, a report entitled "Plan for Research To Improve the Safety of Light-Water Nuclear Power Plants," April 12, 1978; to the Committee on Environment and Public Works.

EC-3344. A communication from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting, pursuant to law, international agreements other than treaties entered into by the United States within 60 days after the execution thereof; to the Committee on Foreign Relations.

EC-3345. A communication from the Chairman, Occupational Safety and Health Review Commission, transmitting, pursuant to law, a report relating to compliance with the Sunshine Act; to the Committee on Governmental Affairs.

EC-3346. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Crop Forecasting by Satellite: Progress and Problems," April 7, 1978; to the Committee on Governmental Affairs.

EC-3347. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Questionable Need for Some Department of Labor Training Programs," April 10, 1978; to the Committee on Governmental Affairs.

EC-3348. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Timeliness and Completeness of FBI Responses to Requests Under Freedom of Information and Privacy Acts Have Improved," April 10, 1978; to the Committee on Governmental Affairs.

EC-3349. A secret communication from the Comptroller General of the United States, transmitting, pursuant to law, a report on the major issues of the Status of the Navy's CAPTOR ocean warfare mining system; to the Committee on Governmental Affairs.

EC-3350. A secret communication from the Comptroller General of the United States, transmitting, pursuant to law, a report on the major issues of the Maverick/Close air support weapon systems program; to the Committee on Governmental Affairs.

EC-3351. A secret communication from the Comptroller General of the United States, transmitting, pursuant to law, a report on measures which should be taken by the Department of Defense to improve the readiness of tactical nuclear weapons stored in Europe as well as the physical security safeguards to prevent the theft, capture, and unauthorized use of these weapons; to the Committee on Governmental Affairs.

EC-3352. A communication from the Deputy Assistant Secretary of the Interior, transmitting, pursuant to law, a report of a new personal data system; to the Committee on Governmental Affairs.

EC-3353. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "The Department of Defense's Continued Failure to Charge for Using Government-Owned Plant and Equipment for Foreign Military Sales Costs Millions," April 11, 1978; to the Committee on Governmental Affairs.

EC-3354. A communication from the Chairman, National Transportation Safety Board, transmitting, pursuant to law, a re-

port relating to requirements of the Sunshine Act; to the Committee on Governmental Affairs.

EC–3355. A communication from the Deputy Assistant Secretary of Defense (Administration), transmitting, pursuant to law, a Defense Audit Service proposed new system of records identified as DAS 01, entitled "Defense Audit Service Management Information System (DAS/MIS)"; to the Committee on Governmental Affairs.

EC–3356. A communication from the Chairman, National Commission for Manpower Policy, transmitting reports on "The Need to Disaggregate the Full Employment Goal," "The Effects of Increases in Imports on Domestic Employment," and "The Transformation of the Urban Economic Base"; to the Committee on Human Resources.

EC–3357. A communication from the Secretary of Health, Education, and Welfare, transmitting, pursuant to law, a report of the Department of Health, Education, and Welfare for fiscal year 1977 on activities related to the Rehabilitation Act of 1973, as amended; to the Committee on Human Resources.

EC–3358. A communication from the Director, Office of Health Policy, Research, and Statistics, Public Health Service, Department of Health, Education, and Welfare, transmitting, for the information of the Senate, a document entitled "Hospital Cost Containment: Selected Notes for Future Policy"; to the Committee on Human Resources.

EC–3359. A communication from the Chief, Division of Bankruptcy, Administrative Office of the U.S. Courts, transmitting, pursuant to law, a document entitled "Tables of Bankruptcy Statistics for Statistical Year 1976"; to the Committee on the Judiciary.

EC–3360. A communication from the council, National Railroad Passenger Corporation, transmitting, pursuant to law, a report relating to compliance with the Freedom of Information Act for calendar year 1977; to the Committee on the Judiciary.

EC–3361. A communication from the Assistant Administrator, Office of Planning and Management, Law Enforcement Assistance Administration, Department of Justice, transmitting, pursuant to law, the ninth annual report of the Law Enforcement Assistance Administration; to the Committee on the Judiciary.

## PETITIONS

The PRESIDING OFFICER laid before the Senate the following petitions, which were referred as indicated:

POM–586. A resolution adopted by the Legislature of the State of Hawaii; to the Committee on Banking, Housing, and Urban Affairs:

"SENATE RESOLUTION No. 275

"Whereas, the National Flood Insurance Act of 1968 defines 'base flood' as the flood having a one-percent chance of being equaled or exceeded in any given year, and utilizes this definition in determining 'areas of special flood hazard' or 'coastal high hazard areas'; and

"Whereas, in order for communities to qualify for subsidized federal flood insurance under this Act, local governments must impose specific development restrictions and requirements for construction in locations designated as areas of special flood hazard or coastal high hazard areas; and

"Whereas, the 1973 Flood Disaster Protection Act effectively mandates community participation in the National Flood Insurance Program by denying flood relief funds from non-participating communities; and

"Whereas, it can reasonably be anticipated that the effect of new codes and ordinances which conform to these federal requirements will be to the economic detriment of the community at large, particularly in communities such as Hawaii where affected areas constitute a significant portion of populated and developable land; and

"Whereas, the State of Hawaii, plagued by spiraling housing costs and an absence of great amounts of developable land, can ill afford to restrict the availability of reasonably priced housing and opportunities for economic development by the application of unreasonable building limitations; and

"Whereas, the legislature of the State of Hawaii recognizes that the intent of these restrictions is to minimize the loss of life and property due to flood, storm surf or tsunami; and

"Whereas, the legislature of the State of Hawaii feels that the 100 year base flood zone constitutes an overly stringent standard by which to measure the likelihood of damaging or catastrophic floods; and

"Whereas, increasingly sophisticated early warning systems have significantly reduced the hazards of loss of life or personal injury from storm surf and tsunami in the State of Hawaii; and

"Whereas, a fifty year standard would more realistically represent the economic life of structures, reduce pressure of urbanization on agricultural and conservation lands, and reduce the detrimental effects of building restrictions while adequately protecting and preserving the intent of the Flood Insurance Act requirements; now, therefore,

"Be it resolved by the Senate of the Ninth Legislature of the State of Hawaii, Regular Session of 1978, that the Congress of the United States is respectfully requested to reduce the one hundred year base flood of the National Flood Insurance Act to fifty years; and

"Be it further resolved that certified copies of this Resolution be transmitted to the President of the Senate of the United States; the Speaker of the House of Representatives of the United States; The Honorable Daniel K. Inouye, U.S. Senator; The Honorable Spark M. Matsunaga, U.S. Senator; The Honorable Daniel Akaka, U.S. Representative; The Honorable Cec Heftel, U.S. Representative; the Honorable George R. Ariyoshi, Governor, State of Hawaii; the Council of Housing and Construction Industry; and the Hawaii Advisory Committee for National Flood Insurance."

---

POM–587. A joint resolution adopted by the legislature of the State of Ohio; to the Committee on Environment and Public Works:

"HOUSE JOINT RESOLUTION No. 57

*"Be it resolved by the General Assembly of the State of Ohio:*

"Whereas, There are sixteen service plazas on the 241-mile-long-Ohio Turnpike which provide fuel and food to the traveling public and also contain Tourist Information Centers and shops wherein souvenirs and other appropriate items may be purchased by the traveling public, which service plazas were constructed and located on said turnpike prior to its opening to traffic on October 1, 1955, and prior to the creation of the Inter-State Highway System in 1956, and all subsequent development along the highway has occurred with these plazas in active service;

"Whereas, Pursuant to section 5537.21 of the Revised Code, said service plazas, which are now operated and maintained by the Ohio Turnpike Commission through strictly controlled contracts with concessionaires, will come under the control of and be a valuable asset of the State of Ohio and can in like manner provide significant service and produce substantial revenue for the State when the conditions of Section 5537.21 of the Revised Code have been fulfilled and the Ohio Turnpike becomes free of tolls. Conversely the removal or destruction of said service plazas would be a wanton and wasteful act which would result in the displacement of hundreds of jobs, the need to construct replacement facilities away from the road and possibly additional, otherwise unnecessary interchanges, all of which would ill comport with the pressing need of the State of Ohio for revenue, and the nation's need to husband its resources and conserve energy; and

"Whereas, Section 111 of Title 23 of the United States Code requires that the Secretary of Transportation refrain from entering into any agreement whereby any commercial establishment would be constructed or located on an interstate highway and said section has been administratively interpreted so as to deny other states, in some instances, the right to continue pre-existing service plazas on routes designated as interstate routes even though the intent of Congress may well be contrary to such administrative interpretation; and

"Whereas, It is therefore of great importance that Congress make known its intent with clarity and express itself definitely as permitting the retention of service plazas on roads now a part of the interstate system which were constructed prior to and existing at the time of the enactment of Section 111 of Title 23 of the United States Code so as to avoid the senseless waste which would otherwise result; therefore be it

*"Resolved,* That the members of the 112th General Assembly, in adopting this resolution, memorialize the Congress of the United States to amend Section 111 of Title 23 of the United States Code so as to provide clearly that publicly owned or controlled service plazas constructed and in existence prior to the enactment of said section may be retained on interstate highways or highways becoming a part of the interstate system without jeopardizing or precluding the use of federal funds in the improvement or reconstruction thereof; and be it further

*"Resolved,* That the Clerk of the House transmit duly authenticated copies of this resolution to the Speaker of the United States House of Represenatives; to the President of the United States Senate, and to the members of Ohio's Congressional Delegation."

---

POM–588. A resolution adopted by the Legislature of Guam; to the Committee on Finance:

"RESOLUTION No. 270

"Be it resolved by the Legislature of the Territory of Guam:

"Whereas, the United States Congress is currently considering several bills which would provide tax credit for families who pay tuition for education; and

"Whereas, specifically, these bills are referred to as Senate Bill No. 2142, House of Representatives Bill No. 9332 and House of Representatives Bill No. 9442, and need support from all quarters in order to pass; and

"Whereas, on February 23, 1978, the Senate Finance Committee reported out with a favorable recommendation House of Representatives Bill No. 3946 with amendments which incorporate the objectives of Senate Bill No. 2142, House of Representatives Bill No. 9332 and House of Representatives Bill No. 9442; and

"Whereas, Guam residents whose students are attending non-public schools pay high fees for tuition on all educational levels—primary, secondary and University; and

"Whereas, the laws passed in the United States as a result of these aforementioned bills would benefit most families on Guam; and

"Whereas, implementation of these laws would greatly improve the chances of attaining educational equity for all; now, therefore, be it

"Resolved, that the Fourteenth Guam Legislature, on behalf of the peopleof Guam, respectfully requests the United States Congress to, after due consideration, enact said legislation; and be it further

"Resolved, that the Fourteenth Guam Legislature, on behalf of the people of Guam, respectfully requests the United States Congress to take the mose expedient action possible on House of Representatives Bill No. 3946, as amended; and be it further

"Resolved, that the Speaker certify to and the Legislative Secretary attest the adoption hereof and that copies of the same be transmitted to the President of the United States; to the Speaker of the U.S. House of Representatives; to the President Pro Tempore of the U.S. Senate; to Congressman Antonio B. Won Pat and to the Governor of Guam."

---

POM-589. A resolution adopted by the Legislature of the State of New York; to the Committee on Human Resources:

SENATE LEGISLATIVE RESOLUTION No. 168

"Whereas, the plight of the elderly has been recognized and alleviated by several packages of legislation whose source was this Legislative Body; and

"Whereas, under existing Federal law, Title 6 of the Older Americans Act, the resources available to supply the homebound elderly are severely limited so that present care is constrained to assistance to the homebound elderly in shopping and food preparation only; and

"Whereas, The existing Federal program in the Bronx, New York (Project RAIN) is attempting to serve the needs of more than fifty homebound elderly above that Project's federally-funded allowance; and

"Whereas, H.R. 6337, The Federal, often referred to "meals-on-wheels", legislation would afford the homebound elderly previously prepared, nutritionally balanced, full meals delivered directly to their homes instead of mere assistance in food preparation; and

"Whereas, The House Subcommittee on Labor and Education has already recognized this great need of the homebound elderly by sending H.R. 6337 to the full House Committee on Labor and Education, where it now reposes; now, therefore, be it

"Resolved, That this Legislative Body respectfully urges the House Committee on Labor and Education to favorably report H.R. 6337 to the floor of the House of Representatives and memorializes the Congress of the United States to pass this legislation; and be it further

"Resolved, That copies of this resolution, suitably engrossed, be transmitted to the House Committee on Labor and Education, to the Speaker of the House of Representatives of the United States, to the President Pro Tempore of the Senate of the United States and to each Member of the Congress of the United States from the State of New York."

---

POM-590. A resolution adopted by the Westchester County Board of Legislators, White Plains, N.Y., relating to the cost of college education; to the Committee on Finance.

POM-591. A resolution adopted by the Westchester County Board of Legislators, White Plains, N.Y., relating to the cost of college education; to the Committee on Finance.

## REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. METZENBAUM, from the Committee on the Judiciary:

Special report—Citizens and Shareholders Rights and Remedies (Rept. No. 95-737).

By Mr. JACKSON, from the Committee on Energy and Natural Resources, without amendment:

S. Res. 429. A resolution to disapprove Energy Action DOE Numbered 1 (Rept. No. 95-738).

## INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. DOLE (for himself, Mr. DOMENICI, Mr. CURTIS, Mr. YOUNG, Mr. BELLMON, Mr. SCHMITT, Mr. MCCLURE, Mr. PEARSON, Mr. WALLOP, Mr. TOWER, and Mr. ZORINSKY):

S. 2905. A bill to increase the target prices for the 1978 through 1981 crops of wheat; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. RIBICOFF (by request):

S. 2906. A bill to establish the position of Administrator, Economics, Statistics, and Cooperatives Service, Department of Agriculture at the Executive Level V; to the Committee on Governmental Affairs.

By Mr. CRANSTON (by request):

S. 2907. A bill to provide for the development and implementation of State programs for youth camp safety and health; to the Committee on Human Resources.

By Mr. JAVITS (for himself, Mr. KENNEDY, Mr. PELL, Mr. RANDOLPH, Mr. STAFFORD, Mr. RIEGLE, Mr. BAYH, Mr. CASE, Mr. CLARK, Mr. ABOUREZK, Mr. INOUYE, Mr. WILLIAMS, and Mr. HATHAWAY):

S. 2908. A bill to amend the Public Health Service Act to extend programs relating to venereal disease, and for other purposes; to the Committee on Human Resources.

By Mr. HASKELL:

S. 2909. A bill to authorize the Department of Commerce to retain title to and jurisdiction over a certain tract of land at the National Bureau of Standards site at Boulder, Colorado, to authorize the construction of certain facilities thereon, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. KENNEDY (for himself, Mr. WILLIAMS, Mr. JAVITS, and Mr. HATHAWAY):

S. 2910. A bill to establish a program for developing networks of community-based services to prevent initial and repeat pregnancies among adolescents, to provide care to pregnant adolescents, and to help adolescents become productive independent contributors to family and community life; to the Committee on Human Resources.

By Mr. CANNON (for himself and Mr. LAXALT):

S. 2911. A bill to facilitate the coordination of programs for the protection, management, and control of wild free-roaming horses and burros, and other resources, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. CLARK:

S. 2912. A bill to strengthen the economy of the United States through improved loan rates and target prices for producers of wheat, feed grains, and upland cotton; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. HASKELL (for himself and Mr. HANSEN):

S. 2913. A bill to amend section 317(c)(1) of the Federal Land Policy and Management Act of 1976 to conform the interest rate therein to the yield on certain tax exempt bonds, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. HASKELL (for himself and Mr. HANSEN) (by request):

S. 2914. A bill to amend section 317(c)(1) of the Federal Land Policy and Management Act of 1976 to conform the interest rate therein to the yield on certain U.S. obligations, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. HATHAWAY (for himself, Mr. WILLIAMS, Mr. HATCH, Mr. JAVITS, and Mr. RIEGLE):

S. 2915. A bill to amend the Alcohol and Drug Abuse Education Act to extend the authorization of appropriations for carrying out the provisions of such Act, and for other purposes; to the Committee on Human Resources.

By Mr. HATHAWAY (for himself, Mr. WILLIAMS, Mr. HATCH, Mr. JAVITS, Mr. CRANSTON, and Mr. RIEGLE):

S. 2916. A bill to amend the Drug Abuse Office and Treatment Act of 1972 to extend the programs of assistance under that act for drug abuse prevention, education, treatment, and rehabilitation, and for other purposes; to the Committee on Human Resources.

By Mr. DOMENICI (for himself and Mr. SCHMITT):

S. 2917. A bill to amend the Internal Revenue Code of 1954 to provide tax incentives for investment in small corporations doing research in the area of energy development and conservation; to the Committee on Finance.

By Mr. DOLE:

S. 2918. A bill to permit marketing orders to include provisions concerning marketing promotion, including paid advertisement, of raisins and distribution among handlers of the pro rata costs of such promotion; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. PROXMIRE (for himself, Mr. STONE, Mr. CHILES and Mr. MATHIAS) (by request):

S. 2919. A bill to encourage broader utilization of the condominium form of homeownership, to provide minimum national standards for disclcsure and consumer protection for condominium purchasers and owners and tenants in condominium conversions, to encourage States to establish similar standards, to correct abusive use of long-term leasing of recreation and other condominium-related facilities, and for other purposes; to the Committee on Banking, Housing, and Urban Affairs.

## STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. DOLE (for himself, Mr. DOMENICI, Mr. CURTIS, Mr. YOUNG, Mr. BELLMON, Mr. SCHMITT, Mr. MCCLURE, Mr. PEARSON, Mr. WALLOP, Mr. TOWER, and Mr. ZORINSKY):

S. 2905. A bill to increase the target prices for the 1978 through 1981 crops of wheat; to the Committee on Agriculture, Nutrition, and Forestry.

WHEAT TARGET PRICES

● Mr. DOLE. Mr. President, action in the House of Representatives last evening killed the Emergency Agricultural Act of 1978, passed by the Senate last week. The farmers of this Nation needed that bill. But it was killed by distortion by the Carter administration. The threat of veto by the President caused many Members of the House to vote against this bill.

Now, Mr. President, I am introducing a bill, the provision of which was stated by Secretary Bergland as the only thing that President Carter would approve as improvements to farm legislation this year. The bill is a simple one. It raises the target price for wheat to $3.50 per bushel, up from the $3 per bushel presently in law—$3.05 if crop is less than 1.8 billion bushels.

Since this was the top target price level and the only change Secretary Bergland could get approved, I want to make sure the farmers of this Nation get the benefit of this increase.

I shall ask the Senate Agriculture, Nutrition, and Forestry Committee to act promptly to report this bill at our executive session on April 19, and would hope we could have prompt action on the floor.●

---

By Mr. RIBICOFF (by request):

S. 2906. A bill to establish the position of Administrator, Economics, Statistics, and Cooperatives Service, Department of Agriculture at the Executive Level V; to the Committee on Governmental Affairs.

● Mr. RIBICOFF. Mr. President, at the request of the Secretary of Agriculture, I am introducing legislation to establish the position of Administrator, Economics, Statistics, and Cooperatives Service, Department of Agriculture, at Level V of the Executive Schedule.

The Secretary of Agriculture advises that a new Economics, Statistics, and Cooperatives Service has been established in the Department by merging various related activities. The Secretary advises further that the new Service will carry out programs which are extremely important to the Department, producers, and consumers.

I ask unanimous consent that the bill and the accompanying statement of purpose and need for the legislation be printed in the RECORD.

There being no objection, the bill and the statement were ordered to be printed in the RECORD, as follows:

S. 2906

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 5316 of title 5 of the United States Code is amended by adding at the end thereof the following new paragraph (144) as follows:

"(144) Administrator, Economics, Statistics, and Cooperatives Service, Department of Agriculture."

---

WASHINGTON, D.C.
*March 9, 1978.*

Hon. WALTER F. MONDALE,
*President of the Senate,*
*Washington, D.C.*

DEAR MR. PRESIDENT: Enclosed for the consideration of the Congress is a draft bill "To establish the position of Administrator, Economics, Statistics, and Cooperatives Service, Department of Agriculture at Executive Level V."

The Department recommends enactment of the draft bill.

A new Economics, Statistics, and Cooperatives Service has been established in the Department under the supervision of the Director of Economics, Policy Analysis and Budget by merging the activities of the Economic Research Service, Statistical Reporting Service, Farmer Cooperative Service, and the Economic Management Support Center. This Service will have responsibility for conducting economic research and service work relating to agricultural production, marketing and distribution; statistical reporting and service work, including crop and livestock estimates, statistical coordination and improvements, and marketing surveys; and research and service work relating to the economic and marketing aspects of farmer cooperatives.

The Economics, Statistics, and Cooperatives Service will carry out programs which are extremely important to the Department, as well as to producers and consumers. Implementation of these programs requires careful and sensitive administration. The responsibilities of the Service are comparable to those of other Departmental agencies whose Administrators are paid at Level V of the Executive Schedule.

Therefore, we recommend establishment of the position of Administrator of the Economics, Statistics, and Cooperatives Service at Executive Level V.

An identical letter has been sent to the Speaker of the House.

The Office of Management and Budget advises that there is no objection to the presentation of the proposed legislation from the standpoint of the Administration's program.

Sincerely,

BOB BERGLAND,
*Secretary.*●

---

By Mr. CRANSTON (by request):

S. 2907. A bill to provide for the development and implementation of State programs for youth camp safety and health; to the Committee on Human Resources.

YOUTH CAMP SAFETY AND HEALTH ACT OF 1978

● Mr. CRANSTON. Mr. President, today I am introducing, at the request of the administration, S. 2907, the proposed Youth Camp Safety and Health Act of 1978. I ask unanimous consent that the letter of transmittal of April 3, 1978, from Joseph A. Califano, Jr., Secretary of Health, Education, and Welfare, and the bill be printed in the RECORD.

There being no objection, the bill and the letter were ordered to be printed in the RECORD, as follows:

S. 2907

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "Youth Camp Safety and Health Act of 1978."

STATEMENT OF PURPOSE

SEC. 2. It is the purpose of this Act to protect and safeguard the health and well-being of young persons in youth camps, by providing for the development of model standards for the safe operation of such camps, and to provide Federal grants, technical assistance, and leadership to the States in developing and implementing safety and health programs for youth camps, thereby providing assurance to parents and interested citizens that youth camps meet minimum safety and health standards. It is the intent of Congress that the States assume responsibility for the implementation and enforcement of effective youth camp safety and health standards and regulations.

DEFINITIONS

SEC. 3. As used in this Act—

(1) "Youth camp" means any day camp, primitive or outpost camp, residential camp, travel camp, trip camp, or short-term group camp whether on public or private land, which is designed to be attended by 10 or more campers at the same time who are under 18 years of age. The terms include any program promoted or advertised as a youth camp and shall also include programs conducted on sites or facilities primarily designed for other purposes such as schools, playgrounds, resorts, wilderness areas, and government lands.

(2) "Day camp" means a camp operated for any part (but less than 24 hours) of the day for at least 5 days during a 2-week period. The term does not include day care centers as defined or licensed by the appropriate State agency.

(3) "Primitive or outpost camp" means a portion of the permanent premises of a camp or other site at which the basic needs of camp operations, such as places of abode, water supply systems, and permanent toilet and cooking facilities, are not usually provided.

(4) "Residential camp" means a camp operating on a permanent site at which the same campers remain for a period of at least 96 consecutive hours.

(5) "Travel camp" means a camp which provides care for not less than a 48-hour period and which uses motorized transportation to move campers as a group from one site to another.

(6) "Trip camp" means a camp which provides care for not less than a 24-hour period and which supervises campers as they travel, either on foot or by a transportation mode permitting individual guidance of a vehicle or animal from one location to another.

(7) "Short-term group camp" means a camp which provides care for more than a 24-hour period but less than a 96-hour period for troops, clubs, or groups of campers sponsored by an organization or person.

(8) The term "Secretary" means the Secretary of Health, Education, and Welfare.

(9) The term "State" includes each of the several States, the District of Columbia, Puerto Rico, American Samoa, Guam, the Virgin Islands, and the Commonwealth of the Northern Mariana Islands.

YOUTH CAMP SAFETY AND HEALTH STANDARDS

SEC. 4. (a) The Secretary, after consultation with—

(1) appropriate State officials, and

(2) representatives of appropriate public and private organizations

shall, within one year after the enactment of this Act, develop model standards for youth camps directed toward assuring that such camps are operated in a manner which protects the health and safety of the campers and related to matters such as, qualifications for director and staff; ratio of staff to campers; sanitation and public health; personal health, first aid, and medical services; food handling and group feeding; water supply and waste disposal; water activity safety, including swimming and boating equipment and practices; vehicle condition and operation; building and site design; and condition of equipment facilities and density of their use. In developing such standards, the Secretary shall consider existing Federal guidelines, State and local regulations and standards, and standards developed by private organizations, applicable to youth camp safety and health and shall also consider the experience of State, local, and private agencies and organizations in implementing such regulations and standards, and such other information as may be available.

(b) The Secretary shall, within 30 days after development of the standards referred to in subsection (a), publish these standards in the Federal Register. The published standards may be revised from time to time as determined by the Secretary.

ASSISTANCE TO STATES

SEC. 5. (a) The Secretary may provide grants or technical assistance to any State planning to develop a comprehensive youth camp safety and health program. These grants or technical assistance may be used for the purpose of—

(1) coordinating existing education and enforcement activities relating to youth camp safety and health;

(2) creating or designating an appropriate State agency which will be responsible for administration of a youth camp safety and health program;

(3) developing and implementing safety and health programs directed toward specific camping activities such as, aquatics, water skiing, arts and crafts, archery, horseback riding, mountaineering, white-water canoeing and rafting, caving, and proper use of firearms;

(4) developing and conducting seminars and other short term training courses for State youth camp safety and health personnel and for camp health, safety, and supervisory personnel;

(5) designing and implementing procedures and systems for reporting of illnesses or injuries in youth camps within a State's jurisdiction and the keeping of State records of such reports; and

(6) developing programs to monitor compliance with State standards and regulations applicable to youth camp safety and health.

(b) The amount of any grant provided under this section shall not exceed 50 per centum of the costs incurred by the State to carry out the activities referred to in subsection (a). Federal funds made available under this section for any period will be used so as to supplement the level of State funds that would otherwise be made available for the activities described in this section, and will in no event replace such funds.

YOUTH CAMP SAFETY AND HEALTH PLANS

SEC. 6. (a) Any State desiring to authorize youth camps in that State to advertise compliance with the Federal model youth camp safety and health standards, shall submit to the Secretary a plan which provides—

(1) for the creation or designation of a State agency to be the principal agency in the State responsible for administration of its youth camp safety and health program;

(2) for State-supervised inspections of youth camps and certification of those camps found to be in compliance with the model youth camp safety and health standards developed pursuant to section 4;

(3) that camps certified as being in compliance with those standards will be authorized to advertise that fact through the use of the statement "This camp has been certified by (the appropriate State agency) as meeting the model Federal Youth Camp Safety and Health Standards.";

(4) that any camp not so certified will be prohibited, with penalties sufficient to assure compliance, from advertising or otherwise implying that it meets such standards; and

(5) that the State agency will make such reports and provide such information to the Secretary as he determines to be necessary to carry out his duties under this Act.

(b) The Secretary shall approve a plan submitted by a State if he finds that it meets the requirements set forth in subsection (a).

FAILURE TO COMPLY WITH STATE PLAN

SEC. 7. In the case of any State plan approved under section 6, if the Secretary, after reasonable notice and opportunity for a hearing to the State agency responsible for administering such plan, finds that the plan has been changed so as not to be in compliance with the provisions set forth in section 6(a) or that in the administration of the plan there has been a failure to comply substantially with any provision required by section 6(a) to be included in such plan, the Secretary shall suspend approval of the plan until he is satisfied there is no longer any such failure to comply, and shall so notify the State agency.

PENALTIES

SEC. 8. Whoever, being an officer, director, agent, or employee of a youth camp located in a State which does not have a plan approved pursuant to section 6 and who uses or causes to be used any advertisement or statement which indicates that such camp is in compliance with the model Federal youth camp safety and health standards is guilty of a misdemeanor, and upon conviction thereof, shall be fined not more than $1,000.

ADMINISTRATION

SEC. 9. The Secretary shall prepare and submit to the President for transmittal to the Congress after the close of the second and fifth fiscal years for which this Act is in effect a comprehensive report on the administration of this Act, including any changes which are planned in the model youth camp safety and health standards.

AUTHORIZATION

SEC. 10. There are authorized to be appropriated to carry out the provisions of this Act $2,000,000 for the fiscal year ending September 30, 1979, and $2,000,000 for each of the five succeeding fiscal years.

---

APRIL 3, 1978.

Hon. WALTER F. MONDALE,
*President of the Senate,*
*Washington, D.C.*

DEAR MR. PRESIDENT: Enclosed for the consideration of the Congress is a draft bill "To provide for the development and implementation of State programs for youth camp safety and health". The draft bill is intended to assure that Federal leadership will be provided to the States through the development of safety and health standards and the provision of grants and technical assistance, to assist them in developing programs which can provide assurance that youth camps meet minimum safety and health standards. The States, however, are to retain full responsibility for the implementation and enforcement of effective safety and health regulations.

The draft bill charges the Secretary of Health, Education, and Welfare with responsibility for developing model youth camp safety and health standards. In carrying this out, he must first consult with State officials and representatives of other concerned public and private agencies. Thereafter, but within one year of enactment of the draft bill, he must develop the standards and within the following 30 days, publish them in the Federal Register. These standards are models for the use of the States and have no regulatory effect until their adoption by one or more States.

The Secretary may also make grants and provide technical assistance to States for purposes such as developing new State programs for assuring youth camp safety and health and coordinating existing activities, developing and conducting training programs for State and camp personnel, designing systems for camps to use in reporting accidents or injuries and procedures for the States to follow in keeping records of these reports for later State and Federal use, and for creating or designating a State agency to implement the State's youth camp safety and health programs and, specifically, monitoring the compliance of individual camps with the State's standards. Grants can be made for no more than 50 percent of the cost of the activity, and are not to replace State money which would otherwise be available for these purposes.

If a State wishes to enable camps within its boundaries to advertise compliance with the model Federal safety and health standards, it must first have an approved State plan. The plan must provide for State supervised inspections of camps and for prohibiting a camp from advertising its compliance with the Federal standards unless it is appropriately certified by the State agency. The plan must also specify sanctions sufficient to deter uncertified camps from advertising that they meet the model Federal standards.

The Secretary is directed to report to the Congress on the administration of the Act after the second and fifth years of the program, and to include a statement of any changes which he is planning to make in the model standards.

The bill would authorize $2 million for carrying out the Act in fiscal year 1979, and a like amount for each of five fiscal years thereafter.

We urge the Congress to favorably consider this draft bill.

We are advised by the Office of Management and Budget that there is no objection to the submission of this legislation from the standpoint of the Administration's program.

Sincerely,

JOSEPH A. CALIFANO, Jr.,
*Secretary.*

---

By Mr. JAVITS (for himself, Mr. KENNEDY, Mr. PELL, Mr. RANDOLPH, Mr. STAFFORD, Mr. RIEGLE, Mr. BAYH, Mr. CASE, Mr. CLARK, Mr. ABOUREZK, Mr. INOUYE, Mr. WILLIAMS, and Mr. HATHAWAY):

S. 2908. A bill to amend the Public Health Service Act to extend programs relating to venereal disease, and for other purposes; to the Committee on Human Resources.

VENEREAL DISEASE PREVENTION AND CONTROL ACT AMENDMENTS OF 1978

● Mr. JAVITS. Mr. President, I introduce today, together with my colleagues, Senators KENNEDY, PELL, RANDOLPH, STAFFORD, RIEGLE, BAYH, CASE, CLARK, ABOUREZK, INOUYE, WILLIAMS, and HATHAWAY, the Venereal Disease Prevention and Control Act Amendments of 1978 which would renew and expand the Nation's capability to deal with epidemic venereal disease. The Venereal Disease Prevention and Control Act of 1972, which I authored, marked the beginning of an expanded national effort against sexually transmissible diseases, and the Venereal Disease Prevention and Control Amendments of 1976 continued and strengthened that program.

The Federal effort against VD, in partnership with State and local programs, has been notably successful. Syphilis is now under control. New cases of syphilis occurring each year have been reduced to a manageable level, permitting more intensive efforts to achieve even greater reductions. Just this past year, for the first time since 1962, the reported incidence of gonorrhea was actually reduced.

Despite these benchmarks of progress, future VD control program efforts are hampered by the low priority often given VD as a public health menace and the dependence of VD programs on fluctuating National, State, and local support. It must be stressed, however, that in the case of VD control, unlike many other

disease control programs, there can be demonstrated a direct relationship between funding increases and incidence decrease. In addition, no public health effort in modern times demonstrates more dramatically, and more repeatedly than venereal disease control the results of failure to follow through on a successful program.

It is precisely in this period of declining incidence that programs must be maintained at full strength if we are to maintain control of, and hope to eradicate, venereal disease in this country. We must take great caution not to repeat the mistakes of the past, when on the heels of advances such as those we are now witnessing, we allowed our VD prevention and control capabilities to grow weak and feeble. For example, by 1963, after a period of decreased Federal support, gonorrhea in New York City had increased 104 percent over the 1955 low.

The bill we introduce today reauthorizes the Venereal Disease Prevention and Control Act for 3 years and, based on the past 6 years of program experience, targets renewed efforts to deal with the continuing national epidemic of veneral disease.

The bill includes the following provisions:

Continued emphasis on a broadened scope of venereal diseases.

Mandates an increase of venereal disease prevention and control epidemiologists, who are so desperately needed in communities throughout the Nation.

Improves the clinical management capabilities nationwide and particularly in high volume, public VD and related service clinics

Expands the project grant programs under which mass screening, case followup, contact tracing, disease surveillance, and intervention are carried out.

Expands capabilities to refine VD prevention and control technologies to build new, better targeted, more efficient, and effective techniques.

Extends and improves VD preventive education.

Substantially increases funding of venereal disease programs to levels of $60 million for fiscal year 1979, $68 million for fiscal year 1980, and $78 million for fiscal year 1981.

The bill specifically addresses several problems in the existing venereal disease prevention and control program:

First, existing law contains two authorities to fund VD grants—one for training, demonstration, research, information, and education programs, and another from grants to States for VD prevention and control programs. Unfortunately, the only funding to date has been for State-operated VD prevention and control programs.

Public awareness through education is a most potent technique for coping with epidemic VD in America. Therefore, the bill merges these two funding authorities into one, obligating 5 percent of all funds appropriated for VD in any fiscal year for programs of information, education, research, and demonstration. This effectively mandates the funding of these programs which are essential to the overall effort of VD prevention and control.

Second, a persistent problem in the VD program has been poor clinical patient management, including misdiagnosis, underdiagnosis, and therapeutic inadequacy, which is exacerbated by the increased complexity of the more than 20 venereal diseases now known. The bill directs attention to this problem by including a provision for "professional training and clinical skills improvement activities" to be funded through project grants. In so doing, the need programmatically to target and intervene on the increasingly worsening problem of poor clinical management through strong programs of professional education and training is emphasized as a key component of the total VD program.

Third, the number of Public Health Service advisers, venereal disease epidemiologists, who are employed and trained by the Center for Disease Control to work with and advise State personnel in VD prevention and control programs, has been drastically reduced by OMB from a former high of 725 advisers in 1973 (immediately after enactment of my legislation) to a current level of 425. The need and demand from the States for these experts far exceeds the present number, and my bill requires that a permanent corps of 850 public health advisers be maintained. I feel strongly that the role of these advisers is central to further advances in combating venereal disease.

Fourth, the bill repeals a provision in the existing law which permits the Secretary of Health, Education, and Welfare to transfer funds appropriated for VD for use in other disease control programs. The singular and categorical intent of this section of the Public Health Service Act is to authorize nationwide VD prevention and control activities and none other. We cannot afford to lose funds authorized for this public health problem to be used in other areas.

Finally, as I indicated earlier, the bill substantially increases the funding authorities to carry out the expanded mandates of the bill.

Two Federal agencies, the Center for Disease Control (CDC) and the National Institute of Allergy and Infectious Diseases (NIAID), are responsible for venereal disease programs and research. The principal concerns of CDC, which has been involved in VD control for many decades, are case-finding, case followup, contact tracing, interstate coordination and referral of epidemiologic data, professional and public VD education, operational and methodologic research, and VD screening. Syphilis, which was of primary concern to this Nation, was the control focus. Elaborate and well conceived epidemiologic models were developed and control efforts were successfully executed. As a result of case followup, widespread serologic screening and chemoprophylaxis, late symptomatic syphilis is virtually unheard of today.

The principal concern of NIAID is biomedical research. We must keep in mind that ultimately, perhaps many years from now, the permanent solutions to epidemic venereal disease will be in the form of vaccines. As such, biomedical research building toward such solutions must be seen as an integral component of a national effort to combat epidemic venereal disease. The National Institute of Allergy and Infectious Diseases, the primary focus for governmentally supported biomedical VD research in America, only expends roughly $5 million annually in this area.

VD remains the most under-researched medical problem in America, despite the fact that more people are affected in more serious ways by VD than by any other infectious disease, and despite the technological and scientific voids that have been illustrated. If one attempts to balance VD incidence and consequence with the NIAID dollar investment in VD biomedical research, one only finds that no such balance exists. A serotest for gonorrhea, curative agents for Herpes Type 2 and CMV, and vaccines for any of the venereal diseases must become realities and requires that NIAID invest considerably more than the insufficient sum of $5 million annually, and substantially depart from the current snail's pace VD research program.

Finally, I would like to raise one additional issue. In our country today there exists a most disturbing trend toward greatly increased adolescent pregnancy. But what is equally distressing although less publicized, is an unfortunate corollary—teenage venereal disease. The figures are shocking and sad. In 1976 it was estimated that 2.7 million teenagers between the ages of 15 and 19 were infected with venereal disease. That is, one out of every eight youths between 15 and 19 had VD. The hardship and tragedy of "children having children" is all the more tragic when some of these teenagers are becoming pathologically sterile or giving birth to congenitally infected syphilitic babies. As these diseases spread to younger and younger victims, VD programs, particularly those of education and information, are all the more crucial.

It is ironic that the American people have become alarmed (and justifiably so) by an outbreak of Legionnaire's disease, or measles, or Russian flu, but not by 10 million cases of VD, or by 100,000 women under 30 becoming sterile, or by 7,000 infant deaths as a consequence of herpes and group B streptococcal infection. The reason is that: this epidemic feeds on silence and social stigma. The solutions, however, are complex.

Despite the sheer enormity of the VD problem confronting us, despite technical difficulties and technological voids, and despite VD's singular unpopularity as an issue around which constituencies might otherwise rally, the progress enabled by the Venereal Disease Prevention and Control Acts of 1972 and 1976 has been notable. These real and significant advances notwithstanding, we must reaffirm our resolve to go beyond present successes. I look forward to a day when the harsh realities of epidemic VD are history. I firmly believe that the legislation introduced today will bring that day closer than it has ever been in the past. ●

By Mr. HASKELL:

S. 2909. A bill to authorize the Department of Commerce to retain title to and jurisdiction over a certain tract of land at the National Bureau of Standards site at Boulder, Colo., to authorize the construction of certain facilities thereon, and for other purposes; to the Committee on Commerce, Science, and Transportation.

● Mr. HASKELL. Mr. President, today I am introducing a bill designed to clarify and rectify a matter of great concern to the community of Boulder, Colo.

The city of Boulder, in 1950, donated approximately 200 acres of land to the U.S. Government. This land was purchased through the efforts of the Boulder Chamber of Commerce specifically for the purposes of providing a location for the National Bureau of Standards (NBS). Much to the benefit of Boulder and the scientific community at large, the NBS headquarters was constructed on the donated tract of land.

The National Oceanic and Atmospheric Administration (NOAA) and its predecessor agency the Environmental Science Services Administration (ESSA), has operated out of the NBS building since 1966. As the scope of NOAA's programs increased, so did its need for additional office and lab space. This situation eventually made it necessary for NOAA to lease office space out of eight separate buildings scattered throughout the Boulder area at a cost to the taxpayers of roughly $1 million a year.

To compound the problem even further, the General Services Administration, in 1974, surveyed the NBS land and determined that part of the land was not being used for program purposes. Accordingly, the General Services Administration declared 30 acres of this land surplus and subject to public disposal. The city of Boulder donated this land to the Federal Government in order to attract the NBS as a member of Boulder's growing scientific community, not to be auctioned off by the Government to private parties at a profit. Clearly, if this action is allowed to take place, it would be directly against the good intentions of the community that originally donated the land.

The legislation I am introducing today would address these problems without adding any additional tax burdens to the taxpayer. This bill would authorize the Department of Commerce, under which both the NBS and NOAA operate, to retain title to and jurisdiction over the Boulder site and also allow it to enter into a lease-purchase arrangement with a private contractor to provide for the construction of this needed facility. The funds that normally would have been expended for rent could be applied toward the lease of the facility. Under the terms of this lease-purchase provision, the title to this lab complex would pass on to the Government within 30 years. Instead of endlessly using limited revenues to cover rental payments, the lease-purchase authorized by this bill will provide for the Government's acquiring equity in the facility since a portion of the rental payment will go toward the purchase of the facility. The advantages of centralizing these facilities are numerous: It would increase the effectiveness of NOAA's operations by providing a building specifically for research programs, assist in maintaining the necessary security, and reduce the amount of duplicate facilities. Also, because of the vast distances between the various NOAA facilities, a shuttle bus system was established to carry mail, material, and personnel between the buildings. This system, although necessary under the present circumstances, contributes to air pollution and wasted time.

The Governor of Colorado, the mayor of Boulder, the Boulder Chamber of Commerce, and the communities involved support this legislation. It represents a logical approach to enhancing the important services that NOAA provides while at the same time protecting the interests of the local community, all without increasing the cost to the taxpayers.●

---

By Mr. KENNEDY (for himself, Mr. WILLIAMS, Mr. JAVITS, and Mr. HATHAWAY):

S. 2910. A bill to establish a program for developing networks of community-based services to prevent initial and repeat pregnancies among adolescents, to provide care to pregnant adolescents, and to help adolescents become productive independent contributors to family and community life; to the Committee on Human Resources.

ADOLESCENT HEALTH, SERVICES, AND PREGNANCY PREVENTION AND CARE ACT OF 1978

Mr. KENNEDY. Mr. President, I am pleased to introduce today, on behalf of the administration, a bill that begins to address, in a comprehensive manner, the complex problems of teenage pregnancy. This proposal—"The Adolescent Health, Services and Pregnancy Prevention and Care Act of 1978"—has the strong support of President Carter and Secretary Califano. Cosponsoring this bill with me are my friends and distinguished colleagues Senators WILLIAMS, HATHAWAY, and JAVITS.

The problems of teenage pregnancy and adolescent sexuality are multifaceted and have serious health, social, moral, and economic implications, and they affect not only the immediate health of the mother and child but their whole future. In the United States today there are over 21 million young people between the ages of 15 and 19, and 11 million are sexually active. Over 1,000,000 young girls become pregnant each year and over 600,000 have live births.

On a national level, we have long been aware of the complexity of this problem. We attempted to address this issue 2 years ago when Senator BAYH and I introduced bills to provide support, counseling, and services for these teenagers. Unfortunately, many believed the legislation was not warranted and no action was taken. I believe we can wait no longer to develop a comprehensive program that can effectively improve the status quo for these young girls, and we should act now.

Mr. President, we hear statistics every day on many, many issues; however, the statistics on this particular issue are so alarming that I think they should be reemphasized today. They begin to describe the magnitude of the problem. There are 11 million sexually active adolescents—two out of five women and two out of three males between the ages of 15 and 19. In 1975, approximately 1,000,000 women under age 20 became pregnant—about 80 percent of these women were unmarried—and most of these pregnancies were unplanned. There were over 600,000 live births. Because of the more widespread use of birth control there was a decline—from 1966 to 1975—in the number of births to women over 20 by 14.4 percent. The decline for adolescents, however, was only 5 percent. This decline for adolescents, however, masks the difference between older and younger adolescents. The number of births to 18- and 19-year-olds decreased by 18 percent but the number for the 15- to 17-year-olds increased by 22 percent and even more alarming the births for those 14 and under increased by 56 percent.

There are many health hazards for the young mother and her child. There is a higher rate of toxemia and anemia for the mother. Young girls begin prenatal care later in their pregnancies than women 20 to 29. Only 46 percent of the pregnant 15- to 17-year-olds begin prenatal care in the first trimester while 81 percent of those between 25 to 29 start prenatal care in these crucial early months. Approximately 30 percent of adolescent pregnancies are terminated by induced abortions. However, adolescents are more likely to have abortions later in their gestational period and therefore expose themselves to additional risks.

Adolescent mothers are more likely to have a child with low birth weight than other women. Low birth weight is associated with many health problems in both infants and children including sudden infant death syndrome, cerebral palsy, epilepsy, mental retardation, and other birth defects.

Many of these young mothers are still children themselves, scarcely able to cope with childbearing and childrearing, which is a significant challenge even to the mature adult. Being so young themselves, many of these mothers have little appreciation of the general requirements of parenthood, as well as of the specific practices required to bring up and care for a young baby. As a consequence, many of the children of school-aged parents suffer from this lack of knowledge by their mothers. Many of them find their way into foster homes, and some, unfortunately, join that group of children who are neglected and even abused.

Here is certainly an area in which appropriate and timely counseling of the mother could result in significant improvement of the welfare of the child as well as the happiness of the family unit. In addition, the heavy burden of a young infant or child in the house makes it extremely difficult for the mother to continue her education, to find fruitful employment, and to lead an otherwise normal existence. The problems associated with child rearing are important because over 90 percent of teenage mothers keep their babies.

The bill that I am introducing today is designed to assist in preventing initial and repeat adolescent pregnancies; to assist adolescents who are already pregnant in order to assure them adequate health care and support services, to enable them to remain in school, and to help them become productive, independent contributors to family and community life; and to assist young parents who have, and desire to keep, their babies.

The Alan Guttmacher Institute has published an excellent booklet dealing with this serious problem, "Eleven Million Teenagers: What Can Be Done About the Epidemic of Adolescent Pregnancies in the United States." The Guttmacher Institute, Mr. President, is the research division of the Planned Parenthood Federation of America. Planned Parenthood has taken a long and active interest in this serious issue. They have done some of the best work in this country in the area of family planning and adolescent sexuality. After dealing with the many problems associated with adolescent sexuality the booklet offers some suggestions for a national program to deal with this issue. Many of their suggestions have been incorporated in this bill. Daniel Callahan, the well-known ethicist, wrote an excellent article for this publication, and Mr. President, I ask unanimous consent that this article be printed in the RECORD:

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The facts reported in this booklet cannot fail to be unsettling—to those of us who have or will have teenage children, to those of us who as citizens have responsibility for the next generation of adults, and to those of us who have some special professional obligation to do what we can to make ours a more humane society. Nor is it difficult for us as individuals to recapture (if we try) what it was like to be a teenager: easier for some and harder for others, but for everyone a difficult and troubling time of life. Surely the problem of being a teenager will never be solved—the only known antidote is time, which probably is why our most common piece of advice to young people—"Why don't you grow up!"—is the most useless. One of the main difficulties of being a teenager is sex, at once a great discovery, a great mess, a great pleasure, a great frustration, and an all around great muddle. We can't do much about that either, short of repealing the laws of human biology, which for some reason or other choose to introduce us to the subject before we have had a chance to figure out much about anything else.

But if we are never likely to solve for teenagers the problem of being a teenager, much less provide a perfect solution to the turmoil of teenage sex, we can certainly try to make adolescence a bit easier, a bit better, and a bit less troublesome. And clearly, it seems to me, we must try to do something about teenage pregnancy. Whatever other value judgments one may come to about the information assembled here, I doubt that anyone would want to say that it is a good thing that teenagers get pregnant. On that much, agreement can be assumed.

But that is the end of agreement on the subject. Which is no surprise. People differ notoriously on the way children should be raised, on sexual morality, on the role government should play in the lives of the young—in short, on just about everything connected with the subject. While it is perhaps too much to hope that perfect agreement could ever be reached, it is surely in this case worth the effort to see if the problem can at least be sorted out in some rational way.

The way I think it most fruitful to pose the ethical question is this: What obligations do we have toward those teenagers at risk of pregnancy, those who are pregnant, and those who have already given birth to children? Naturally, other obligations come into play also: our obligations toward the moral climate of the country, toward other pressing social needs, with their claims for money and attention, and toward other distressed groups in our population. Those are important obligations as well, but before we can turn attention toward them, we should first ask what, if anything, we owe to the teenagers themselves?

What, to begin at the beginning, is a teenager? A teenager is a person somewhere between a child and an adult, one who has passed some years ago what has been called the "age of reason," but one who is still growing and maturing, still finding his or her way around the world, not altogether in possession of that self he or she will eventually develop with maturity. Most teenagers are minors and dependents. While some leave home early, and some are remarkably self-directing for their age, it is the fact of dependency which looms large. Dependent upon whom? Dependent first upon their families, then upon the institutions which profess to educate them outside of the home or which control the services they might require, then upon the society at large, which provides them with the moral and social culture within which they must make their way. None of these things do they choose. They have no choice about the parents who gave birth to them, no choice about the schools which their parents and the state decide are good for them, and no choice about the nature of the society in which they live. It is strictly a one-way street. Whether teenagers like it or not—and I have yet to find one who is enthused about that state of affairs—it is simply the way things are and probably will always be.

Yet as adults we have to pay a high price for the kind of power we have. For we are thereby morally obliged to seek not our welfare but theirs. They are dependents, and they depend upon *us*. To be sure, they have some freedom. They can and do make choices and, despite what parents or society might like, they can make sexual choices—no way has ever been found to prevent them from so doing. Unfortunately, they do not always make very responsible choices, especially when it comes to as powerful a force as sex. Why should we expect them to? It is hard enough for us as adults to do so, and only after a much longer course of experience than they have had. The most we can do—because we are responsible for the world we live in—is to help them avoid those things we know will hurt them, help to reduce the impact of those acts (even of folly) which they have already done, help them in a word to make it through the teenage years with as little lasting harm as possible.

The facts reported in this brochure make eminently clear that teenage pregnancy is damaging, to the teenagers themselves, to many of those children they give birth to, and to the nation as a whole. What are our moral options?

We can ignore the problem, saying it is theirs and not ours. That course is open only if we are prepared to deny the self-evident reality of their dependency in every other sphere of life. And what about the children some teenagers bear? Are we lightly to dismiss their fate? Speak of dependency!

Or we might want to argue that, even though the problem is grave and sad, we have to think of the moral climate of the country as a whole. If we make sex education and contraceptives and abortion available to teenagers, and if we help those teenagers who decide to give birth to a child, will we not simply create a casual tolerance and permissiveness toward teenage sexual activities which in the long run will only make things worse? While I personally believe our society is too sexually casual, it became that way before we even thought of providing services and sex education and I have seen no evidence that providing education and help *does* make the problem worse.

But let us imagine that might be so. Would we thereby be relieved of our obligation to help those who here and now are damaging or may soon damage themselves? I do not see how we could be. For one thing, we could hardly have any certainty that the situation would not get worse in the future if we simply did nothing, much less that it would improve. We have already tried ignoring the problem, and what has that brought us? More teenage pregnancies. Nor can I see any justification for letting those presently suffering be ignored in the name of some higher good, at some unspecified date in the future, and by means which no one has yet devised. We are very good at victimizing children in the name of either our own private interests or the so-called higher interests of society, but it is not one of our more edifying traits. There are also those who contend that if adequate help is given to those teenagers who decide to bear a child, we will simply be aiding and abetting the problem of world population growth. There is no evidence for that either but, in any case, why should teenagers be sacrificed for the sake of what is the whole world's problem?

I do not think anyone, surely not a parent, could be overjoyed at the prospect of immature teenagers leading an active sexual life, becoming adept users of contraceptives and, contraceptives failing, be knowingly wise about how to get a quick abortion. Many teenagers simply are not emotionally ready for an active sexual life, even where there is no danger of pregnancy. But we have been saying that to teenagers for years, just as our parents said it to us. However wise and correct a perception some teenagers have always ignored it, and more seem to be doing so all the time. That may be unfortunate; but it would simply be compounding the problem to walk away from teenagers when they most need us. Some teenagers will get pregnant, no matter what the attitude of parents or society and no matter how much we try to educate them about the hazards of running that kind of risk.

What we are facing now, however, is an epidemic. Worse still, it is an epidemic about which something can be done but isn't being done. Teenage pregnancy can do through better education and preventive services, be if not altogether avoided, at least reduced, and through better maternity, abortion and social services, be reduced in its personal impact on the teenager who does get pregnant. Some may find one or more of the possible means morally repugnant. Life rarely presents us with perfect choices. If we do not provide teenagers with education and services, we surely now know that many will do great harm to themselves—that is both a present reality and a future prospect which cannot also fail to be morally repugnant. The difference between the two cases is this: the full moral question does not simply come down to the moral convictions and feelings of adults in power, whether as parents, medical professionals, teachers or legislators. That is by no means an irrelevant consideration, for surely adults also have an obligation to live by their own moral standards. But

I think the central question is what do we do for our teenagers in need, our dependent, often still-immature teenagers? At that point it is the value of their lives, not ours, which is critically at stake. Our greater obligation is toward their welfare; our other, and competing, convictions should give way at that point. At the very least, teenagers should have as much knowledge of sex, as many and as good services available, and as many choices open to them, as do adults. Adults hardly have all the knowledge they should have, or all the services they need. But whatever they have at least should be shared equally with teenagers. Like adults, teenage girls can get pregnant, and like adults, teenage boys can impregnate girls. Why then should they remain ignorant, unserved and uncared for?

Mr. KENNEDY. Mr. President, the Joseph P. Kennedy, Jr., Foundation, of which I am president, has been extremely active in assisting to establish and maintain comprehensive adolescent pregnancy care centers. One of the model programs is the Johns Hopkins Center for School-Aged Mothers and Their Infants. These programs have consistently been successful and have achieved high rates for the return of the young mother to school and for preventing subsequent unplanned pregnancies. Among the three key objectives of the bill that I am introducing today is the promotion of innovative, comprehensive, and integrated approaches to the delivery of services, and the bill will provide support for the establishment of those centers. An outline prepared by the Joseph P. Kennedy, Jr., Foundation spells out in detail the essential components in a comprehensive adolescent pregnancy center. I ask unanimous consent that this be printed in the RECORD at this point.

There being no objection, the outline was ordered to be printed in the RECORD, as follows:

ESSENTIAL COMPONENTS IN A COMPREHENSIVE ADOLESCENT PREGNANCY CENTER

Based upon the results of a limited evaluation effort at the Johns Hopkins Center for School Aged Mothers and Their Infants over a two year period and a survey of teenage pregnancy programs in the United States, the following seem to be essential components in a comprehensive adolescent pregnancy center. Further research may indicate that some components are more important than others. We do not believe, however, that any of the following components can be eliminated without degrading the effectiveness of a center.

The concept of pregnancy centers separate from existing programs in obstetrics and well baby care facilities is designed to provide specialized care for pregnant teenagers. Adolescents, because of their physical and socio-emotional immaturity, have specialized needs, and pregnancy only adds additional stress to the pressures and problems that they face. With centers such as the one at Johns Hopkins their needs can be met more successfully since the program is organized by people with an interest in and understanding of the problems of the adolescent.

1. Early Detection of Pregnancy.—

This is achieved by:

(a) Outreach workers from the program maintaining contact with schools, housing projects, hospitals, public health clinics, mental health centers and neighborhood health centers.

(b) Public education including discussions, lectures, TV/newspaper articles aimed at the local community and special groups, e.g., churches.

(c) Good coordination, accessibility and cooperation within the human services network in the community. This results in more effective referral mechanisms.

(d) Removal of barriers to the provision and reception of care. Adolescents need to be able to give consent for their own care, and care should not be denied because of inability to pay or because of ineligibility for medical assistance, etc.

2. Early and Continuing Prenatal Care.—This should include:

(a) Early detection of pregnancy (see above).

(b) Comprehensive health care.

Thorough medical evaluation and observation of the pregnancy.

Screening, diagnosis and treatment of prenatal and postnatal conditions. For the mother this should include medical, socio-emotional, educational/vocational care; for the child this should include physical, developmental and socio-emotional care.

Special referral to clinics for particular medical problems of diabetes, nervous disorders, etc.

(c) Special nutritional support by provision of food supplements for both mothers and infants, e.g., WIC.

(d) Health Related Education.

Management of pregnancy, i.e., physiology of pregnancy and reproduction.

Self-care, including nutrition and risk factors such as drugs, cigarettes, alcohol, etc.

Responsibility of parents.

Self-respect, including choices, moral values, etc.

Parenting, including infant care and child development.

(e) Social service emphasis should attempt to deal with the numerous problems of support, continued education and liaison with other community services and agencies.

3. Obstetrical Services.—Because of the high incidence of complications, e.g., prematurity, etc. these must be high quality services with back-up from a high risk neonatal unit.

4. Long Term Follow-up Services for a Minimum of Two Years.—This is an indispensable component because its quantity and quality directly influence the physical and psychological health of the infant and its parents. These follow-up services should include:

(a) Comprehensive health care for the infant.

Neonatal intensive care (if necessary).

Periodic medical examination.

Immunization.

Evaluation and care by parent.

Diagnosis and screening of such problems as nutritional deficiencies, visual and hearing defects, mental retardation, learning disabilities, and crippling and handicapping conditions.

Appropriate referral to specialized services when necessary, e.g., heart disease clinics.

(b) Comprehensive health care for mother.

(c) Parenting education.

(d) Counseling for parents.

(e) Family planning and sex education (see below).

5. Education with Special Focus on Staying in School and Vocational Training.—Most important because school dropouts and lack of vocation focus is directly related to incidence of repeat pregnancy.

6. Day Care Provided Through Voluntary Assistance and Work Sharing by Mothers and Fathers Themselves.

7. Family Planning and Sex Education with Focus on Moral Values.

8. Housing.—Adequate housing is vital to health and quality of life of parents and infant. This requires good liaison between the program and local housing authorities.

9. Responsibility of Father.—An adolescent pregnancy program should do its utmost to involve the fathers in the program.

10. Advocacy for Child and Parent.

11. Adoption Services.

12. Involvement of Supportive Community.—Many adolescent mothers and fathers are isolated and often socially alienated from their community. The adolescent pregnancy center should seek to involve the adolescent parents in a supportive community.

(a) Through counselling families of the adolescent, parents can be helped to recognize their importance in providing support.

(b) Much can be done through education and consultation to help the congregations of churches and synagogues to play a supportive role in caring for adolescent parents. This may involve providing low cost housing, day care services, respite care or just invitation to the adolescent family to participate in church activities.

13. Staff Training and Education.—The responsibilities of the center should include staff development at all levels. Adolescents are difficult for many people to deal with. A mix of a somewhat authoritarian approach, understanding of their needs and a warm acceptance of them is basic to establishing rapport. Staff members who can serve as role models contribute greatly.

14. Prevention of Adolescent Pregnancy.—Primary and secondary prevention are of utmost importance. The prevention of "repeated" pregnancy in the adolescent must be a major objective of a center program. The center staff should be concerned, however, with primary prevention—through the ripple effect reaching siblings, friends, etc. and through participation (on a consultant basis) in community efforts at prevention.

15. Evaluation.—A systematic evaluation is essential to determine success or failure in terms or numbers served, outcomes (perinatal death, low birth-weight, damaged infants, repeat pregnancy, school dropout, chronic welfare support, etc.)

Pages 6–13 of the Family Development Program submitted to Secretary Califano on March 17, 1977, by a Special Task Force composed of almost 90 noted doctors, ethicists, lawyers and other professionals contains a more detailed explanation of the content and characteristics of a comprehensive adolescent pregnancy center.

Mr. KENNEDY. In the comprehensive program at Johns Hopkins more than 1,400 adolescents have been enrolled over a 4-year period. The average age has been about 15½ with one-third between the ages of 12 and 16. Eighty-five percent of the young mothers were black and 14 percent white. Most are from the lower socioeconomic background which are at higher risk for adverse pregnancy outcomes—with inadequate housing, nutrition, education, and lack of primary medical care. Of these young mothers, although faced with great stress and hardship, 88 percent are in school compared with only 10 percent before the followup program.

Only 11 percent had a repeat pregnancy over the first 19 months. The experience nationally is that about 44 percent of adolescents who have their first child will be pregnant again within 1 year. Hence, the recidivism problem has been largely solved by the center.

More than 90 percent of their babies were evaluated as normal at their first birthday. Nationally, less than 80 percent of babies born to teenage mothers who are evaluated are classified as "normal" at this period. What is even worse is that nationally many babies are never evaluated at this important stage in their development.

These are only a bare handful of examples, but they indicate what the comprehensive program concept can accomplish when it is adequately funded and given the ability to follow up the young mother for 2 years or more.

In addition to Johns Hopkins there are other comprehensive centers including the Brookside Park Family Life Center in Jamaica Plains, a section of Boston. The family life center was established in 1970 by the model cities administration of Boston. In 1975, the family life center moved into a permanent facility. I was pleased to attend the formal opening as was Dr. Julius Richmond, now the Assistant Secretary for Health. It is clear to me that comprehensive adolescent centers like these are successful and more are needed throughout the country.

As I indicated earlier, Mr. President, the bill would also deal with family planning services for teenagers. In general, contraceptive usage has been increasing among teenage women. In 1971, only 18.4 percent of adolescent women consistently used a method of contraception, while in 1976, the figure had increased to 30 percent. However, and most alarming, is the fact that there has also been an increase in the proportion of those who never use contraceptives.

The family planning clinics supported by funds from title X of the Public Health Service Act deliver contraceptive services to many Americans. Frederick Jaffe, president of the Alan Guttmacher Institute, in his testimony before the House Select Committee on Population, spoke of the use of these family planning clinics:

> Between 1969 and 1976, the number of teenagers served by family planning clinics increased 600 percent. The 1976 Johns Hopkins Study found that nearly half of all teenagers who have ever used the pill—44% of whites and 58% of blacks—obtained their first prescription from a family planning clinic rather than a private doctor. This pattern is unprecedented in the U.S. health system, in which fewer than one-fifth of teenagers depend on clinics for health services. In our health system, virtually no one goes to a clinic if an alternative source of services is available to them. Physicians in private practice thus appear to be unable or unwilling to meet the fertility control needs of sexually active teenagers to the same degree that they meet other adolescent health needs, or teenagers may be hesitant to seek contraceptive services from private doctors. As a result, family planning clinics have emerged as the single principal point of entry to medical contraception for sexually active teenagers and have become indispensable to any serious national effort to do something about teenage pregnancy.

It has been argued that family planning clinics do not meet all the special needs of teenagers and we will certainly hear testimony about that; however there is no doubt that they have been effective in delivery of contraceptive care to a large number of teenagers.

Earlier this year, the House Select Committee on Population held 3 days of hearings on adolescent fertility and contraception. In 1975, I chaired a hearing on S. 2538, the National School Age Mother and Child Health Act and S. 2360, the Life Support Centers Act. Senator BAYH was the author of S. 2360, and I introduced S. 2538. From these hearings have come many excellent suggestions. Many of these have been incorporated not only in the bill being introduced today but in the whole initiative on adolescent pregnancy that President Carter announced with the 1979 budget. This includes not only the $60 million authorized in this bill for fiscal year 1979, but also includes other items such as: expanded medicaid coverage for low-income pregnant adolescents, special emphasis on family planning for teenagers, and family planning reimbursement through medicaid and title XX. Most significant is an additional $21 million for research at the National Institute of Child Health and Human Development.

Mr. President, I look forward to hearings on the bill that I am introducing today. I anticipate that the bill will be modified and I encourage the witnesses at the hearings and others to comment fully. One of the areas that we specifically will want to address is the protection of the confidentiality of the patient records. HEW has completed a report which includes the recommendations of the privacy study commission with respect to medical records and are presently drafting a bill which reflects these recommendations. We will study this carefully. Unfortunately, hearings are never able to accommodate all who wish to testify; I do, however, look forward to receiving thoughtful written comments which will then be included in the hearing record.

Mr. President, I ask unanimous consent that the bill, a transmittal letter to the President of the Senate, WALTER MONDALE, and a section-by-section summary be printed at this point in the RECORD.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 2910

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "Adolescent Health, Services, and Pregnancy Prevention and Care Act of 1978".

FINDINGS AND PURPOSES

SEC. 2. (a) The Congress finds that:

(1) Adolescents are at a high risk of unwanted pregnancy;

(2) In 1975, almost one million adolescents became pregnant and nearly 600,000 carried their babies to term;

(3) Pregnancy and childbirth among adolescents, particularly young adolescents, often results in severe adverse health, social, and economic consequences, including: a higher percentage of pregnancy and childbirth complications; a higher incidence of low birth weight babies; a higher frequency of developmental disabilities; higher infant mortality and morbidity; greater likelihood that adolescent marriage will end in divorce; and higher risks of unemployment and welfare dependency;

(4) An adolescent who becomes pregnant once is likely to experience rapid repeat pregnancies and childbearing, with increased risks;

(5) The problems of adolescent pregnancy and parenthood are multiple and complex and are best approached through a variety of integrated and essential services;

(6) Such services, including a wide array of educational and supportive services, often are not available to the adolescents who need them, or are available but fragmented and thus of limited effectivenes in preventing pregnancies and future welfare dependency; and

(7) Federal policy therefore should encourage the development of appropriate health, educational, and social services where they are now lacking or inadequate, and the better coordination of existing services where they are available, in order to prevent unwanted early and repeat pregnancies and to help adolescents become productive independent contributors to family and community life.

(b) It is, therefore, the purpose of this Act:

(1) To establish better linkages among existing programs in order to expand and improve the availability of, and access to, needed comprehensive community services which assist in preventing unwanted initial and repeat pregnancies among adolescents, enable pregnant adolescents to obtain proper care and assist pregnant adolescents and adolescent parents to become productive independent contributors to family and community life;

(2) To expand the availability of community services that are essential to that objective; and

(3) To promote innovative, comprehensive, and integrated approaches to the delivery of such services.

TITLE I—GRANT PROGRAM

AUTHORITY TO MAKE GRANTS

SEC. 101. The Secretary of Health, Education, and Welfare (hereinafter in this Act referred to as "the Secretary") may make grants to public and nonprofit private agencies and organizations to support projects which he determines will help communities coordinate, and establish linkages among, services that will further the purposes of this Act and, where appropriate, will provide, supplement, or improve the quality of such services.

USES OF GRANTS

SEC. 102. (a) Funds provided under this Act may be used by grantees to:

(1) Link services to—

(A) prevent unwanted initial and repeat pregnancies among adolescents; and

(B) assist adolescents who are pregnant or who have already had their babies to obtain proper care, prevent unwanted repeat pregnancies. and become productive and independent contributors to family and community life;

(2) Identify and provide access to other services for adolescents to help prevent unwanted pregnancy and assist adolescents in becoming productive and independent contributors to family and community life;

(3) Supplement services and care not adequate in the community which are essential to the prevention of adolescent pregnancy and to assist adolescents in becoming productive and independent contributors to family and community life;

(4) Plan for the administration and coordination of pregnancy prevention and pregnancy-related services for adolescents which will further the objectives of the Act;

(5) Provide technical assistance to enable other communities to develop successful pregnancy prevention and pregnancy-related programs for adolescents; and

(6) Provide training (but not including institutional training or training and assistance provided by consultants) to providers of services, including skills in multi-disciplinary approaches to pregnancy prevention and pregnancy-related services for adolescents and in the provision of such services.

(b) For purposes of this Act, projects which link services means projects which enable the provision of a comprehensive set of services in a single setting or establish a well-coordinated network of services in a community, including outreach to adolescents, the making available of services in a

convenient manner and in easily accessible locations, and follow-up to assure that the adolescent is receiving appropriate assistance. The services which may be included in such projects include, but are not limited to family planning services, education at the community level concerning sexuality and the responsibilities of parenthood, health, mental health, nutrition, education, vocational, and employment counseling, prenatal and postpartum health care, residential care for pregnant adolescents, and services to enable pregnant adolescents to remain in school or to continue their education.

(c) Grantees may not establish income eligibility requirements for services paid for with funds under this Act, but grantees shall ensure that priority is given to the objective of making such services available to adolescents at risk of initial or repeat pregnancies who are not able to obtain needed assistance through other means.

(d) Grantees may charge fees for services paid for with funds under this Act, but only pursuant to a fee schedule, approved by the Secretary as a part of the application described in section 104, which bases fees charged by the grantee on the income of the service recipients or parents and takes account of the difficulty adolescents face in obtaining resources to pay for services.

(e) Except as provided in this subsection, in no case may a grantee under this Act use in excess of 50 per centum of its grant under this Act in any year to cover any part of the cost of services. The Secretary may grant a waiver of the limitation specified in the preceding sentence in accordance with criteria to be specified in regulations.

PRIORITIES, AMOUNTS, AND DURATION OF GRANTS

SEC. 103. (a) In approving applications for grants under this Act, the Secretary shall give priority to applicants who—

(1) serve an area where there is a high incidence of adolescent pregnancy;

(2) serve an area where the incidence of low income families is high and where the availability of pregnancy related services is low;

(3) show evidence of having the ability to bring together a wide range of needed services in comprehensive single-site projects, or to establish a well integrated network of outreach to, and services for, adolescents at risk of initial or repeat pregnancies;

(4) will utilize, as a base, existing programs and facilities, such as neighborhood and primary health care centers, children and youth centers, maternal and infant health centers, school educational programs, mental health programs, nutrition programs, recreation programs, and other ongoing pregnancy prevention and pregnancy-related services;

(5) make use, to the maximum extent feasible, of other federal, state and local funds, programs, contributions, and other third party reimbursements;

(6) can demonstrate a community commitment to the program by making available to the project nonfederal funds, personnel, and facilities;

(7) have involved the community to be served, including public and private agencies, adolescents and families, in the planning and implementation of the project.

(b) The amount of a grant under this Act shall be determined by the Secretary, based on factors such as the incidence of adolescent pregnancy in the geographic area to be served, and the adequacy of pregnancy prevention and pregnancy-related services in the area to be served.

(c)(1) A grantee may not receive funds under this Act for a period in excess of five years.

(2) The grant may cover not to exceed 70 per centum of the costs of a project assisted under this Act for the first and second years of the project. Subject to paragraph (3), in each year succeeding the second year of the project the amount of the federal grant under this Act shall decrease by no less than ten percent of the amount of the federal grant under this Act in the preceding year.

(3) The Secretary may waive the limitation specified in the preceding paragraph in any year in accordance with criteria to be specified in regulations.

REQUIREMENTS FOR GRANT APPROVAL

SEC. 104. (a) An application for a grant under this Act shall be in such form and contain such information as the Secretary may require, but must include:

(1) an identification of the incidence of adolescent pregnancy and related problems;

(2) a description of the economic conditions and income levels in the geographic area to be served:

(3) a description of existing pregnancy prevention and pregnancy-related services, including where, how, by whom and to whom they are provided, and the extent to which they are coordinated in the geographic area to be served;

(4) a description of the major unmet needs for services for adolescents at risk of initial or repeat pregnancies, the number of adolescents currently served in the area, and the number of adolescents not being served in the area;

(5) a description of certain core services to be included in the project or provided by the grantee, to whom they will be provided, how they will be linked, and their source of funding, to include some, but not necessarily all, of the following:

(A) family planning services;

(B) health and mental counseling;

(C) vocational counseling;

(D) educational services, which supplement regular school programs, to help prevent adolescent pregnancy and to assist pregnant adolescents and adolescent parents to remain in school or to continue their education.

(E) primary and preventive health services including pre- and post-natal care; and

(F) nutritional services, and nutritional information and counseling;

(6) a description of how adolescents needing services other than those provided directly by the grantee will be identified and how access and appropriate referral to those services (such as Medicaid; public assistance; employment services; infant, day and drop-in care services for adolescent parents; and other city, county and State programs related to adolescent pregnancy) will be provided;

(7) a description of any fee schedule to be used for any services provided directly by the grantee and the method by which it was derived;

(8) a description of the grantee's capacity to sustain funding as federal funds are phased down and out;

(9) a description of all the services and activities to be linked, the results expected from the provision of such services and activities, and a description of the procedures to be used for evaluating those results;

(10) a summary of the views of public agencies, providers of services, and the general public in the geographic area to be served, of the proposed use of the grant provided under this Act and a description of procedures used to obtain those views, and, in the case of applicants who propose to coordinate services administered by a State, the written comments of the appropriate State officials responsible for such services;

(11) a description of how the services and activities funded with a grant under this Act would be coordinated with existing related programs in the geographic area to be served by the grantee;

"(12) assurances that the applicant will make every reasonable effort to collect appropriate reimbursement for its costs in providing services to persons who are entitled to have payment made on their behalf for such services under any Federal or other Government program or private insurance program; and

"(13) assurances that the acceptance by any individual of family planning services or family planning or population growth information (including educational materials) provided through financial assistance under this title shall be voluntary and shall not be a prerequisite to eligibility for or receipt of any other service furnished by the applicant."

(b) Each grantee which participates in the program established by this title shall make such reports concerning its use of Federal funds as the Secretary may require. Reports shall include the impact the project has had on reducing the rate of first and repeat pregnancies among adolescents, and the effect on factors usually associated with welfare dependency.

AUTHORIZATION OF APPROPRIATIONS

SEC. 105. For the purpose of carrying out this title, there are authorized to be appropriated $60 million for the fiscal year 1979, and such sums as may be necessary for the fiscal year 1980 and the fiscal year 1981.

TITLE II—IMPROVING COORDINATION OF FEDERAL AND STATE PROGRAMS

SEC. 201. (a) The Secretary shall coordinate Federal policies and programs providing services related to prevention of initial and repeat adolescent pregnancies. Among other things, the Secretary shall:

(1) require that grantees under title I report periodically on Federal programs or policies that interfere with the delivery and coordination of pregnancy prevention and pregnancy-related services to adolescents;

(2) provide technical assistance to assure that coordination by grantees of Federal programs at the local level will be facilitated;

(3) modify program administration, or recommend legislative modifications of programs of the Department of Health, Education, and Welfare that provide pregnancy-related services in order to facilitate their use as a base for delivery of more comprehensive pregnancy prevention and pregnancy-related services to adolescents;

(4) give funding priority, where appropriate, to grantees using single or coordinated grant applications for multiple programs; and

(5) give priority, where appropriate, to providing funding under existing federal programs to projects providing comprehensive pregnancy prevention and pregnancy-related services.

(b) A State using funds provided under title I to improve the delivery of pregnancy prevention and pregnancy-related services throughout the State shall coordinate its activities with programs of local grantees, if any, that are funded under title I.

(c) The Secretary may set aside, in each fiscal year, not to exceed one per centum of the funds appropriated under this Act for evaluation of activities under titles I and II.

---

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
*April 13, 1978.*

HON. WALTER F. MONDALE,
*President of the Senate,*
*Washington, D.C.*

DEAR MR. PRESIDENT: Enclosed, for the consideration of the Congress, is a draft bill, the "Adolescent Health, Service and Pregnancy Prevention and Care Act of 1978."

Recent studies show that the number of adolescent pregnancies and births in this country is increasing. Approximately one million adolescents become pregnant annually, and almost 600,000 give birth. Such pregnancies are often unwanted, and are likely to have adverse health, social, and economic consequences for the individuals

involved. These consequences include a higher incidence of low birth weight infants; a higher percentage of pregnancy and childbirth complications; higher rates of school drop-out, unemployment, welfare dependency, and out-of-wedlock births; and a greater likelihood of an adolescent marriage ending in divorce.

The program which would be authorized by the enclosed draft bill is, therefore, designed to assist in preventing initial and repeat adolescent pregnancies; to assist adolescents who are already pregnant in order to assure them adequate health care and support services, to enable them to remain in school, and to help them become productive independent contributors to family and community life; and to assist young parents who have, and desire to keep, their babies.

The proposal is based upon four principal concepts:

—that the problems of adolescent pregnancy require a range of comprehensive services;

—that the Department of Health, Education, and Welfare should help local projects put existing services together, and supplement them, in order to provide a comprehensive array of needed assistance, either in a single setting or through a network of coordinated services;

—that funding of such projects should focus on preventing unwanted initial and repeat pregnancies, but also should assist adolescents who have their children; and

—that we need to experiment with a variety of innovative approaches to putting services together.

Under title I of the legislation, project grants would be provided to communities to assist them to link services together that are already available in the community but are not well coordinated, and to provide supplemental services related to problems of adolescent pregnancy. These services could include, but would not be limited to, education concerning sexuality and the responsibility of parenting; special education and social services to assist pregnant adolescents to remain in school; family planning services; primary health care; vocational, employment, mental health, nutritional, and other counseling; and residential services to pregnant adolescents.

Under title II, federal and state programs relating to adolescent pregnancy would be coordinated. Additionally, states would be cordinating their programs with the projects of local grantees in their state funded under title I.

The legislation is modeled on a small number of existing projects, including the "Brookside Family Life Center" in Boston, and the "Johns Hopkins Center" in Baltimore.

We urge the Congress to favorably consider this proposal.

We are advised by the Office of Management and Budget that enactment of this draft bill would be in accord with the program of the President.

Sincerely,

JOSEPH A. CALIFANO, Jr.,
*Secretary.*

---

SECTION-BY-SECTION SUMMARY

The first title of the bill would provide the short title of the Act—the "Adolescent Health, Services, and Pregnancy Prevention and Care Act of 1978".

Section 2 of the draft bill would provide the findings of the Congress and purposes of the Act. The objectives are:

1. To establish better linkages among existing programs which assist in preventing initial and repeat pregnancies among adolescents, and which help adolescents who are pregnant or have babies become productive independent contributors to family and community life;

2. To expand the availability of community services where necessary to that objective; and

3. To promote innovative, comprehensive, and integrated approaches to the delivery of such services.

Section 101 of the draft bill would authorize the Secretary to make grants to public and nonprofit private agencies and organizations to support projects which he determines will further the objectives of the Act.

Section 102 specifies the uses which may be made of the funds granted under the Act. Principally, they are to be used to link services together so as to provide a comprehensive set of services in a single setting or establish a well-coordinated network of services in a community. Funds would also be used to provide access to other necessary services and, where necessary, to cover the cost of providing essential services not otherwise available in the community. Finally, funds could be used for planning, technical assistance, and training. Other provisions of this section specify that services funded under the Act could not be provided according to income-related eligibility requirements, although priority would be given to serving those least able to pay for services. Fees could be charged for services, but only pursuant to a fee schedule approved by the Secretary.

Section 103 would specify the priorities the Secretary must consider in awarding applications for funding under the Act. Preference would be given, among other things, to projects (1) in areas with a high incidence of adolescent pregnancy and a concentration of low-income families; (2) which have the ability to bring together a comprehensive array of services; (3) which use as a base existing services and programs; and (4) which have involved the community and can show a community commitment. Section 103 also specifies that funding of a project under the Act could not extend beyond five years, and that the federal share of project costs over those years would decline except where the Secretary grants a waiver of that requirement.

Section 104 would specify the application requirements. Among other things, the application would include (1) a description of the economic conditions and income levels in the geographic area to be served; (2) a description of existing related services in the area; (3) a description of the unmet need for services for adolescents who are pregnant or at risk of becoming pregnant; and (4) a description of the services which will be included in the project; (5) assurances that the project make every reasonable effort to collect reimbursement from third-party payers; and (6) assurances that family planning services would be voluntary.

Section 105 of the draft bill would provide the appropriations authorization for the program. There would be authorized $60 million for the fiscal year 1979, and such sums as may be necessary for the two fiscal years thereafter.

Section 201 of the draft bill would require the Secretary to coordinate Federal programs, and States to coordinate State programs, which are related to adolescent pregnancy. This section would permit the Secretary to set aside for evaluation up to one percent of the annual appropriations.

● Mr. WILLIAMS. Mr. President, it is my pleasure to join my colleague from Massachusetts, Senator KENNEDY, in introducing the Adolescent Health, Services, and Pregnancy Prevention and Care Act of 1978. This measure reflects the desire to help prevent unwanted pregnancies among the adolescent and to assist in providing an array of critical services to teenagers who become pregnant and decide to bear a child.

This $60 million legislative package is designed to assist in establishing a comprehensive network of services for adolescents to accomplish the following objectives: To assist in preventing adolescent pregnancy; to provide needed health and support services to teenagers already pregnant; and to assist these adolescents to become productive independent contributors to family and community life.

While certain services are now available to adolescents, they are limited, uncoordinated, and scattershot at best. This measure is fashioned to assist in providing the needed linkages to existing services, to supplement prevention and care services where they are needed, and overall to improve the coordination of these services.

Title I of the bill authorizes the Secretary of Health, Education, and Welfare to make grants to public and nonprofit private agencies and organizations to help communities coordinate services and to supplement health and social services relating to the problems of pregnancy. The range of services that could be provided include primary health care; family planning services; education concerning sexuality and the responsibility of parenting; special education and social services to assist pregnant adolescents to remain in school; vocational, employment, mental health, nutritional and other counseling; and residential services to pregnant teenagers. This bill would also authorize technical assistance for developing pregnancy prevention and related programs.

Title II of the bill would provide the Secretary with the authority to coordinate all Federal programs relating to adolescent pregnancy and provide technical assistance at the local level. In addition to coordinating Federal and State programs, the Secretary would be required to recommend appropriate legislative modifications of programs within HEW in order to facilitate the delivery of more comprehensive pregnancy prevention and pregnancy-related services to teenagers. Under this initiative. States would be responsible for coordinating their programs with the projects of local grantees that are funded under title I.

Mr. President, the need for this legislation is overwhelming. The number of adolescent pregnancies and resulting births in this country each year is frightening. According to statistics provided by the National Institute of Health Statistics and the Alan Guttmacher Institute, upwards of 11 million adolescents are sexually active, including over 4 million teenage women. Approximately 1 million of these young women become pregnant each year, with about 600,000 actually giving birth to a child. The characteristics of these teenagers are varied and represents all socioeconomic groups. Both the disadvantaged and affluent adolescent are in need of family planning and pregnancy-related services.

While societal patterns in the American family have been distinctly changing over recent years, an extract taken from

a publication of the Guttmacher Institute indicates that 80 percent of the women between the ages of 15 to 19 who became pregnant for the first time were single. An article in Family Planning Perspective gives overview of the growing dimensions of the problem. Between 1960 and 1975, the number of teenage premarital births rose from 2 to 7 percent of all U.S. births. Of these mothers who carry their children to full term, about 93 percent elect to keep their children.

There are many dimensions of the problem of adolescent pregnancy that we do not fully understand, but we do know that early childbearing may effect deleteriously the pregnant teenager as well as her offspring. Teens younger than 17 years of age are faced with the most critical biological and psychological risks. During pregnancy, toxemia, pre-eclampsia and prolonged labor are all more common among teenagers than among women in their twenties. Some of the difficulties can be the direct result of a poor diet or inadequate prenatal care. Others are related to the physical immaturity of the woman. Statistics also illustrate that both the adolescent mother and her baby are at greater risk of death than an older woman. Teenage mothers are also more likely to give birth prematurely, and are twice as likely to have children with developmental disabilities, mental retardation, epilepsy or cerebral palsy. A Johns Hopkins University study shows that children born to girls 16 years of age or less are four times more likely to have an IQ of 70 or below than the general populace, and only one-fifth as many children having IQ's of 110 and above as the general population.

Early pregnancy and birth too often have a negative impact on a teenager's life. Over 75 percent of pregnant teenage women drop out of school; adolescent pregnancy is the major cause of school dropouts for girls. In addition to significant health risks, teenage mothers are often forced to forego job training and other opportunities for economic advancement and all too often turn up on the welfare rolls.

These facts underscore the need to address adolescent pregnancy on two levels. First, we must upgrade and extend the range of compensatory assistance to teenages who become pregnant and decide to bear the infant. Second, we must provide "primary prevention" through expanded services to prevent adolescent pregnancy, allowing these young woman to postpone child bearing until they are prepared to establish a stable homelife for a child.

Scores of teenagers, already pregnant, need to be apprised of the alternatives available to them. The school age mother who gives birth to her child and desires to give that child every opportunity to be a healthy and happy baby needs a host of services to achieve this objective. This bill is designed to address the needs of this segment of the population and to assist in providing viable alternatives for the pregnant teenager. A range of health and social services, including education on parent responsibilities, primary health care services, special education and social services intended to assist pregnant teenagers to remain in school, could be provided under this proposal.

At the present time, there are a number of pilot programs that provide an array of services to the pregnant adolescent and in fact have made remarkable progress in amelio-rating some of the vicious problems that confront these teenagers. The valuable experience gained from programs, such as those at Johns Hopkins University and the Brookline Center in Massachusetts, could greatly assist in aiding these adolescents become productive, independent contributors to family and community life.

The concerns about adolescent childbearing are justifiable. The potential for negative consequences for the teenager, as well as society in general, are so great that this problem can no longer be ignored. For the pregnant teenager, the services to the adolescent need to be expanded and better linked together. For the sexually active teenager, education efforts on sexuality, reproduction, contraception, the effects of early childbearing, and services for teenagers need to be crucially augmented. Enactment of the Adolescent Health, Services, and Pregnancy Prevention Care Act of 1978 would substantially assist in accomplishing these objectives, and I invite my colleagues to join in the consideration of this important youth initiative.●

---

By Mr. CANNON (for himself and Mr. LAXALT):

S. 2911. A bill to facilitate the coordination of programs for the protection, management, and control of wild free-roaming horses and burros, and other resources, and for other purposes; to the Committee on Energy and Natural Resources.

● Mr. CANNON. Mr. President, I introduce today for myself and for my distinguished colleague from Nevada (Mr. LAXALT) a bill to amend the Wild Horse and Burro Protection Act to improve its protection and management functions.

I was a strong supporter of the original legislation to protect the remnant herds of wild horses and continue to believe they represent a significant and visible link to the frontier west and the bold spirit of pioneer days. They also, like any wild animal population, have an intrisic right to our compassion and humanity and a right to their position in nature.

But it has become undeniably clear, Mr. President, that since passage of the original act, the numbers of these animals have grown to the point they represent a threat to meager range resources, to other indigenous wildlife, and, ultimately, to themselves. This wildlife resource frankly deserves more than to be merely protected. Like other forms of wildlife it should be managed. The West is no longer a vast undeveloped area of wide open ranges. There are competing interests on the land and unbridled wild horse increases simply are not good policy.

The proposed legislation defines "excess animals" as those which must be removed or have been removed from an area in order to preserve and maintain the habitat in a suitable condition for continued use, while also maintaining a thriving natural ecological balance and harmonious multiple use relationship in that area." Considerable controversy has developed over what numbers of horses constitute an optimum population level. This bill attempts to establish factors which should be generally applied to determine an acceptable level. Whether this will completely avoid the numbers controversy in improbable but reflects, I believe, an acceptable criteria.

The fact remains that the optimum has already been exceeded in many areas of the West. Horses have been rounded up out of necessity but their continued care and disposal has proved difficult. This legislation attempts to redress the problem by permitting transfer of adopted horses to their owners following a 1-year probation period and assurance that the animals have been humanely treated. The present adoption program has not worked as well as hoped because of reluctance by qualified individuals to assume responsibility for a horse to which they would never have title.

I believe we can provide better management for this resource without impairing the purpose of the original act or the intent of Congress. The bill is not inclusive, perhaps, of other provisions which might prove useful such as a research program on wild horse range requirements or fertility studies. I frankly do not believe the prohibition on the commercial use of horses which are destroyed for lameness, sickness and other appropriate reasons is good policy. With proper safeguards, it seems this resource should be used where it can accomplish some good. However, I believe the bill I am introducing provides a good basis for thorough review of the best means of managing and protecting our remnant wild horse herds.●

---

By Mr. CLARK:

S. 2912. A bill to strengthen the economy of the United States through improved loan rates and target prices for producers of wheat, feed grains, and upland cotton; to the Committee on Agriculture, Nutrition, and Forestry.

AGRICULTURAL ACT OF 1978

● Mr. CLARK. Mr. President, I am today introducing a bill to increase target prices and loan levels for wheat and feed grains, and target prices for cotton. This bill would set loans for wheat for 1978 at $2.50 and target prices at $3.40. It would set 1978 corn loans at $2.20 and corn target prices for 1978 at $2.30. It would set the 1978 target price for cotton at 60 cents a pound.

The bill would amend the 1977 act, and as a result, the target prices would also be increased in 1979 through 1981 by the formula in that act, to cover farmers' increasing costs of production.

Even as I introduce this bill, Mr. President, I am aware that there is risk in coming forward with such a proposal.

Because it is a moderate proposal, it would help farmers much less than many would like. And, frankly, it provides less than I would like. I have worked consistently for price supports high enough so that they cover average production costs. For some farmers, the levels in this bill will still not cover costs.

But the important thing now, in my judgment, is to get Congress moving once again on a bill that will give farmers more help than they have now. It is too late in the planting and planning season to once again propose a stronger diversion program. About all we can do now, and about all that will have any hope of being in place in time to help this year, is a simple, straightforward increase in target prices and loan rates.

Why is this important? There are several reasons: The first and most obvious answer is that the current trend of strengthening prices may not last. As soon as we get our corn in the ground, market prices will depend primarily on the number of acres planted and on crop and weather conditions. These factors are unkown and unknowable just now. If it turns out that natural forces continue to push prices up, then these higher supports will not cost anything and will merely stand as insurance.

But if plantings and weather lead us to expect another good crop and markets fall, will need these increased protections very badly—in fact they may be a matter of life or death for many small farmers.

There is another reason. Increasing supports now will assure foreign customers that the price will not fall below that level. The increase is negligible in terms of any adverse impact on foreign cusomers over the long run. But it could have a positive impact for the short run if it convinces potential foreign buyers that U.S. grain will never be cheaper, and that this is the time to buy. I am told by some members of the trade that some foreign buyers have been waiting for U.S. prices to weaken; some with the intention of buying later. An increase in supports should convince them to buy now.

Increasing supports now could also help hog producers and other livestock producers. As I said time after time, corn that is too cheap can hurt livestock producers just as corn that is too expensive can. It overstimulates the livestock sector, leading to overproduction and lower livestock prices later on. If corn prices were to hold at around $2, or a little more, this could be a serious problem for livestock producers. Increasing the loan rate by some 20 cents for corn would help a little, and could take some of the steam out of the increases in hog and cattle production we are seeing just now.

Mr. President, as I said on the floor of the Senate last Monday, our farmers still face two very real and immediate needs. The first is to reduce the acreage planted for the 1978 crop. The second is for additional price supports and income to offset a very serious cost-price squeeze this year. For many farmers, grain prices are still below cost of production. The administration's recent initiatives to strengthen its set-aside program are a very positive step, in my judgment. The proposal I am introducing today should increase the incentive for farmers to participate in that program, and thus reduce the odds of overproducing again this year. The increased protections in the bill also give a little more protection against price disasters—protections to help farmers cover production costs in the event that good weather does cause overproduction again.

Mr. President, with this bill, we still have a chance to provide farmers with at least some of the additional protections they need this year. I believe that the time has come to put behind us the emotion and the politics that have marked our recent debates on the farm price problem. I hope that we can all work together—the administration, the farmers, and the Congress—to come up very quickly with a proposal that will help.

I do not pretend that this proposal is precisely that one. It is not set in concrete. I intend to talk with the President about it. I am discussing it with Chairman TALMADGE and Chairman FOLEY today. I expect that changes may be made—but I would hope that these changes would be few and that they would be constructive changes designed to help the legislation pass quickly. I hope that we can pass this bill quickly and send it quickly to the President. I believe that if we do send him something—a moderate, helpful bill, even if it is more than he wants now and even if it is less than many farmers want now—it can be signed into law. I intend to do my best to make that happen. I hope my colleagues in the Senate will support me in that endeavor.●

---

By Mr. HASKELL (for himself and Mr. HANSEN):

S. 2913. A bill to amend section 317 (c) (1) of the Federal Land Policy and Management Act of 1976 to conform the interest rate therein to the yield on certain tax exempt bonds, and for other purposes; to the Committee on Energy and Natural Resources.

---

By Mr. HASKELL (for himself and Mr. HANSEN) (by request):

S. 2914. A bill to amend section 317 (c) (1) of the Federal Land Policy and Management Act of 1976 to conform the interest rate therein to the yield on certain U.S. obligations, and for other purposes; to the Committee on Energy and Natural Resources.

● Mr. HASKELL. Mr. President, I introduce today two bills to amend section 317(c) of the Federal Land Policy and Management Act—one measure which the senior Senator from Wyoming, Mr. HANSEN, and I are sponsoring jointly and the other, an administration proposal which we are introducing by request.

The Federal Land Policy and Management Act is a landmark law. For the first time it provides a comprehensive and modern statement of authorities and responsibilities for our Nation's largest land manager, the Bureau of Land Management, which oversees approximately two-thirds of our publicly owned land. As the primary sponsor of this legislation in the Senate, I am pleased to see the Bureau taking pains to implement the law as swiftly as possible. Of course, we always hope for a quicker and smoother implementation process for new laws than can, in fact, occur. But, by and large, I believe the Bureau deserves good marks in its efforts to operate under this new comprehensive and complex statute.

Section 317(c) of the act has, however, not been implemented. This subsection was offered as an amendment during committee markup of the act by Senator HANSEN, and was supported by former Senator Lee Metcalf and me. The Mineral Leasing Act of 1920, as amended by section 317(a) of the Federal Land Policy and Management Act, provides State and local governments with 50 percent of the revenues received by the Federal Government from the leasing of energy minerals on the public lands.

In most circumstances, however, this money comes too late. The communities are required to provide more sewer and water facilities, greater police and fire protection, expanded park lands, new schools, and the other myriad facilities and services necessary to mitigate the adverse impacts of energy development long before that development produces the communities' share of Federal revenues sufficient to pay for the facilities and services. Section 317(c) provides for a loan program to the States and local governments to provide them the "front and money" to construct facilities and provide services in advance of the so-called energy boom. In essence, the State and political subdivisions would be borrowing now against future mineral royalty entitlements.

Unfortunately, as one of the final acts of the Ford administration, a proposal was submitted to the Congress by the Secretary of the Interior to repeal section 317(c). I am, of course, grateful that my colleagues concurred with me that this was simply a bad idea and that no action was taken on the measure.

President Carter, in submitting the fiscal year 1978 budget pledged support for section 317(c) but also made implementation of the program contingent upon the raising of the interest rate which the provision sets at 3 percent. On January 27, 1977, Senator HANSEN, Senator Metcalf, and I wrote Secretary of the Interior Cecil Andrus pledging our support for the raising of the interest rate if that were necessary to assure implementation of section 317(c).

On August 31, 1977, Assistant Secretary of the Interior Guy Martin submitted a draft bill to raise the interest rate. Not only do Senator HANSEN and I believe that the interest rate requested by the administration is too high—above the interest rate normally available to the State and local governments when they borrow money—but we also found numerous other proposed changes to limit the impact loan program's size, scope and, on our minds effectiveness. Although we introduce the administration's bill today, I want to emphasize we

introduce it by request. We do not favor the administration proposal.

Instead we are introducing our own bill which would raise the interest rate to a rate comparable to that now paid by State and local governments when they borrow money and to make other changes suggested by the administration or by other parties which do not reduce the impact loan program or otherwise alter the purposes of section 317(c). Mr. President, the senior Senator from Wyoming, Senator HANSEN, has been the leading proponent of the impact loan program. I am pleased to be able to join him as the sponsor of this bill. In his statement he outlines the provisions of the administration bill with which we disagree and provides for the record the documents of which I have spoken.

The senior Senator from Wyoming and I pledge our best efforts to achieve the early passage of our bill so that the impact loan program can be swiftly implemented. Mr. President, I ask unanimous consent that a March 12, 1978, resolution of the Public Lands Steering Committee of the National Association of Counties expressing support for my bill be printed in the RECORD at this point.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION—SUPPORT FOR MINERAL LEASING ACT LOANS

Whereas, the Federal Mineral Leasing Act was amended by the 94th Congress to provide for federal loans to local communities socially and economically impacted by mineral developments on federal lands;

Whereas, this provision is an important means to provide counties and other local communities with immediate funds for water, sewers, roads, schools, welfare programs, planning and other local facilities and services required where mineral development occurs; and

Whereas, the proposed federal budget includes $40 million to implement this loan program in FY '79 provided Congress enacts legislation for the interest rate on these loans to be established at the market level.

Now, therefore be it resolved by the NACo Public Lands Steering Committee that the Congress is urged to enact both enabling legislation and a regular appropriation to implement the mineral lease loan program for impacted local communities.

Adopted by the Public Lands Steering Committee, March 12, 1978.●

● Mr. HANSEN. Mr. President, the late distinguished Senator from Montana, Mr. Metcalf, the Senator from Colorado, Mr. HASKELL, and myself as sponsors of the mineral revenue sharing section of Public Law 94–579 were pleased to see the administration support this concept in principle.

Early last year we asked Secretary Andrus to seek funding for the loan provisions in section 317(c) of the Federal Land Policy and Management Act. We also asked that guidelines and regulations be written to help the many communities and political subdivisions obtain loans to address the multiple problems that face many of these areas as energy fuels are extracted from the Federal estate, State and private lands. The provision—section 317(c)—permits these communities to borrow against the future return of mineral royalties, and allows these areas access to the dollars needed "up front," when the need is the greatest, before production or extracting the revenue return.

Mr. President, we asked these questions in a letter, which I ask unanimous consent be printed in the RECORD, along with the Secretary's response of February 23, 1977, which indicated support of the concept.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C., *January 27, 1977.*

Hon. CECIL ANDRUS,
*Secretary of the Interior,*
*Department of the Interior,*
*Washington, D.C.*

DEAR MR. SECRETARY: As co-authors of the mineral revenue sharing section of Public Law 94–579, the Federal Land Policy and Management Act, we are writing to urge prompt implementation of the provision authorizing loans to states and subdivisions for impact alleviation projects (Section 317(c)).

This section permits states and political subdivisions to borrow now against future mineral royalty entitlements so that there will be available the necessary "front-end" money to deal with immediate and urgent impact problems. Section 317 also gives state legislatures more flexibility in deciding how this income will be spent.

The legislatures of several states experiencing impact problems are now in session or will be convening soon for limited periods of time. Proposals to allocate the states' 50 per cent share of royalties and to deal generally with energy impact problems will be high-priority concerns during these legislative sessions.

In order for members of these state legislatures to do the best job of applying the provisions of Section 317 to existing and anticipated impact problems in their states, they need to know how the impact loan program will be administered.

We urge you to develop federal guidelines, at the earliest possible date, that would indicate how the loan program would work.

Further, we urge you to recommend to the President that funding for the loan program be included in the revised Executive Budget.

The need for loan provisions is not lessened by increased mineral receipts. These increases are not realized immediately and the impact is being felt now. This is the whole rationale for the loan provision.

We are aware that the previous Administration felt the three percent maximum interest rate was too low. We would be prepared to support a change in the law to allow interest equal to the prime rate paid by the federal government.

With kind regards,

Sincerely,

CLIFFORD P. HANSEN,
LEE METCALF,
FLOYD HASKELL,
*U.S. Senators.*

---

U.S. DEPARTMENT OF THE INTERIOR,
*Washington, D.C., February 23, 1977.*

Hon. CLIFFORD HANSEN,
*U.S. Senate,*
*Washington, D.C.*

DEAR SENATOR HANSEN: Thank you for your letter of January 27 concerning Section 317 of the Federal Land Policy and Management Act of 1976.

I agree with the principle of providing some form of assistance to States and their political subdivisions where activities under the Mineral Leasing Act create unplanned social and economic burdens. The problem is frequently magnified by the long delay in local tax revenue increases after the impacts have occurred.

As you know, the budget submitted by the previous Administration included no funds for Section 317(c) loans and proposed repeal of that subsection. However, implementation of Section 317(c) is currently under consideration by the Department of the Interior and the Office of Management and Budget as part of the process of developing 1978 Budget Amendments to be proposed by President Carter.

Officials of the Department have consulted with representatives of the Western Governors, the National Governors' Conference and local officials concerning Section 317(c) and other forms of impact assistance. These working relationships will be maintained throughout the design and implementation of a program pursuant to Section 317(c).

We will continue to keep you informed as we progress.

Sincerely,

CECIL D. ANDRUS,
*Secretary.*

Mr. HANSEN. On August 31, 1977, the administration sent draft legislation to Congress. I ask unanimous consent that the letter of transmittal be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF THE INTERIOR,
*Washington, D.C., August 31, 1977.*

Hon. WALTER F. MONDALE,
*President of the Senate,*
*Washington, D.C.*

DEAR MR. PRESIDENT: Enclosed is a draft bill "To amend section 317(c)(1) of the Federal Land Policy and Management Act of 1976 to conform the interest rate therein to the yield on certain United States obligations, and for other purposes."

We recommend that this proposal be referred to the appropriate Committee and that it be enacted.

Section 317(c) of the Federal Land Policy and Management Act of 1976 (90 Stat. 2743, 2771; 43 U.S.C. 1701, 1747) generally authorizes the Secretary to make loans to States and their political subdivisions to meet the impacts of development of Federal mineral resources before sufficient State and local revenues are generated by such development to accommodate the impacts. It provides that all loans shall bear interest at a rate not to exceed 3 percent.

This Department has submitted a proposal to repeal Section 317(c) on January 18. However, the new Administration recognizes the States' need for funds to alleviate certain impacts of anticipated Federal mineral development and also recognizes that the money may help to remove certain obstacles to further necessary coal development under a Federal coal leasing program. Therefore, the Department is hereby withdrawing the proposal to repeal Section 317(c) and is submitting the attached bill in lieu thereof.

The interest rate of 3 percent currently provided for in Section 317(c)(1) is substantially below that at which Federal, State and local governments borrow. Thus, loans under Section 317(c)(1) would amount to a windfall to States and their subdivisions. This low interest rate would in effect create a subsidy. The Treasury would borrow that money at the prevailing interest rate, thus incurring a loss of the difference between a rate of interest up to 3 percent and the current cost of borrowing the funds. Any difference between the amount the Treasury would pay for money it is borrowing to make the loans and the 3 percent interest rate to the western States would be borne by the taxpayers of all of the States.

We therefore recommend that Section 317 (c)(1) of the Federal Land Policy and Management Act of 1976 be amended as shown in the attached draft bill to conform the rate of interest on a loan to the current average market yield on outstanding marketable obligations of the United States of comparable maturities during the month preceding issuance of such note and other obligations.

In addition, the draft bill offers other provisions to afford the Secretary control over expenditures. These controls are felt to be necessary for responsible administration of a special purpose Federal loan program.

The bill would limit loans for relief from social and economic impacts resulting from minerals development on the public lands to amounts sufficient to finance construction of basic public facilities, and provision of public services for a reasonable length of time, up to five years. The draft bill would designate States alone as recipients of the loan funds. The Secretary's authority to make loans would extend only until 1988. Loans are to be made for 20 years or less. There are standard provisions for repayment, including a general claim on the States' revenues.

The draft bill also provides that financial assistance under the Act may be used as a matching share. The draft includes provision for modifying terms or refinancing the loan should mineral development not occur as predicted at the time of the loan. There are standard provisions included covering event of default. Assistance provided is to be allocated by States proportionate to the needs of the affected units of local government, with the procedure for so doing subject to the Secretary's approval.

Other provisions include standard requirements for accounting and audit, for equal opportunity, and for deposit of funds collected into the Treasury.

It should be noted that the proposed amendments are structured to fit within the scope of Section 317 as enacted. Implementation of the loan authority given the Secretary by Section 317 as thus amended can solve a number of the problems already evident from rapid development of minerals on Federal lands.

The Office of Management and Budget has advised that there is no objection to the enactment of this draft bill from the standpoint of the Administration's program.

Sincerely,

GUY R. MARTIN,
*Assistant Secretary.*

Mr. HANSEN. Mr. President, the administration's bill although supportive in concept, misses the mark in the opinion of myself and Senator HASKELL.

Because the administration's bill is deficient in a number of areas, Senator HASKELL and I have introduced a bill that addresses the problem.

The areas of disagreement between the administration bill, and the bill sponsored by Senator HASKELL and myself, are as follows:

We oppose the provisions in the administration bill that:

First. Would cut off the loan authority in 1988. We feel the need goes beyond that period.

Second. Would place a 5-year limit on the duration of public services which can be financed by the loans.

Third. Would place a 90-percent limit of loan funds on a given project to be financed by the loans.

Fourth. Would limit the loan maturity to 20 years or two-thirds of the estimated useful existing life of the facilities built by loan funds.

Fifth. Set the interest rates. We refer to the letter of Wyoming Governor Ed Herschler which is printed in the RECORD following.

Sixth. Would use revenue sharing and payments in lieu of tax payments to offset loan defaults.

Mr. President, I ask unanimous consent that a letter from Wyoming Governor Ed Herschler which outlines the need and suggested constructive changes that led to the introduction of the Haskell-Hansen bill be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EXECUTIVE DEPARTMENT,
*Cheyenne, Wyo., October 6, 1977.*

HON. CLIFFORD P. HANSEN,
*U.S. Senate,*
*Washington, D.C.*

DEAR SENATOR HANSEN: I appreciate the opportunity to review your proposed amendment to the Federal Land Policy Management Act, Section 317(c)(1), and provide comments. As you know, this particular provision of the law provides some opportunity to alleviate the socioeconomic impact of energy development in Wyoming. However, there are a number of problems with the original statute, as well as with the proposed amendment, which deserves consideration.

The first concern with the proposed amendment is subparagraph five which specifies "the current average market yield on outstanding market obligations of the United States" as establishing the rate to be charged by the Treasury. This provision fails to recognize the dual market for government obligations; taxable obligations and tax exempt obligations. The State of Wyoming and the local units of government could issue debt instruments in the private market at a tax exempt rate of approximately 4½%. However, the interest rate on ten year federal securities issued today is approximately 7½%. Specifically, U.S. Treasury bills due in 1986 are currently priced at 7.13%; Federal Land Bank notes due in January 1987 are priced at 7.39% and FHDA insured notes due December 1987 are currently priced issued at 7.87%. It would be extremely unfortunate to force state and local governments to pay approximately three additional percentage points above the private market tax-exempt rate in order to take advantage of this loan program. The interest rate to be charged by the United States Treasury should be comparable to the interest rate on tax exempt municipal securities.

The second concern with the proposed amendment is state constitutional provisions which may prohibit state and local governments from utilizing the loan program. Given the constitutional prohibitions on indebtedness by these governments, it is necessary to structure the loan program to avoid such loans from being classified as "debt" under the Wyoming Constitution. Although the courts have not established an absolute "safe harbor" for such loans, it is generally an accepted rule that a revenue bond does not create a debt within the meaning of the constitution. Furthermore, a contingent obligation against the general property and taxing power does not create such a debt. Therefore, I would suggest that subparagraph four of the proposed amendment be altered to include, after the first sentence, the following language: "Provided, however, that loans made pursuant to this subsection shall be secured only by a pledge of the revenues received by the state or the political subdivision pursuant to Section 35 of the Act of February 25, 1920, as amended, and shall not constitute an obligation upon the general property or taxing authority of such unit of government."

My final concern is that the loan provisions not be used by local governments to finance projects which are not within the stated purpose of the Mineral Leasing Act. This concern is apparently shared by some members of the Senate. Furthermore, because the mineral royalties come directly to the state which subsequently distributes them pursuant to state law, it is imperative that future obligations not be incurred without some state participation. For these reasons, I believe that this section should be contain a provision requiring a unit of local government to receive the approval of the Governor prior to receiving a loan under this section.

Your continued efforts to amend Section 317(c)(1) to render it usable is appreciated.

Yours sincerely,

ED HERSCHLER.

Mr. HANSEN. Let me stress that our bill does not authorize massive new authorizations for funding the programs directed to relieving energy impact problems. Instead it provides a mechanism where those funds already allocated may be used when the need is greatest at the start of the energy development cycle and in the form of loans against the sure return of the mineral royalties as previously addressed by Congress.●

---

By Mr. HATHAWAY (for himself, Mr. WILLIAMS, Mr. HATCH, Mr. JAVITS, and Mr. RIEGLE):

S. 2915. A bill to amend the Alcohol and Drug Abuse Education Act to extend the authorization of appropriations for carrying out the provisions of such act. and for other purposes; to the Committee on Human Resources.

ALCOHOL AND DRUG ABUSE EDUCATION AMENDMENTS OF 1978

● Mr. HATHAWAY. Mr. President. It is my pleasure to introduce the Alcohol and Drug Abuse Education Amendments of 1978. This bill would reauthorize the Alcohol and Drug Abuse Education Act for 3 years, give greater flexibility to the Commissioner of Education in establishing model programs, improve the visibility of the Office of Alcohol and Drug Abuse Education, focus additional emphasis on programs in rural areas, and require the Secretary of Health, Education, and Welfare to coordinate the prevention and education efforts among the Office of Education, the National Institute on Drug Abuse, and the National Institute on Alcohol Abuse and Alcoholism. Technical changes are also included.

Since I became chairman of the Subcommittee on Alcoholism and Drug Abuse over 3 years ago, no subject has been declared to be more essential than alcohol and drug abuse education and prevention. The disease of alcoholism now affects 10 million Americans directly, and the incidence is growing. For every alcoholic, another four individuals—family, friends, coworkers—are negatively affected. Alcohol abuse is found in alarming proportions among our Nation's youth. In fact, a 1977 Gallup poll revealed that 34 percent of American teenagers feel that alcoholism or drug abuse comprise the greatest problem facing their generation.

The situation facing us with respect to drug abuse is not a pleasant one either.

Drug abuse continues to be a national problem warranting ongoing effective Federal leadership. We must focus our attention not only on illegal use of narcotics, but on abuse of licit drugs, such as amphetamines, tranquilizers and barbiturates, which are used for nonmedical purposes by an estimated 7 to 8 million Americans. In addition, "poly drug" abuse or the use of more than 1 drug at a time, is of growing concern, especially among our Nation's youth. Finally, we must address the more recent and highly critical problem posed by the use of PCP, or "Angel Dust," a devastating drug and one which is becoming increasingly popular among American teenagers.

That alcoholism and drug abuse pose a serious threat to our Nation's well-being cannot be denied. The effects of these problems are widespread, and the costs to the Nation are substantial. In terms of health care, lost productivity, and so on, alcohol abuse costs our Nation more than $42 billion a year. Drug abuse adds another $10 to $17 billion in economic costs.

It is no wonder then, that cries are heard repeatedly for greater attention to education and prevention. Just 3 weeks ago, the subcommittee held hearings in Bangor, Maine to explore alcoholism and drug abuse among our Nation's youth and to investigate the manner in which school and community-based organizations attempt to approach these problems. Mr. President, I ask unanimous consent that excerpts from the opening statement I made at the Bangor hearing be inserted in the RECORD at this point.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

OPENING STATEMENT OF SENATOR WILLIAM D. HATHAWAY

Today we shall examine the problems of alcoholism and drug abuse among our nation's youth and explore community and school-based programs to alleviate these problems. In addition, we will focus on the needs of other underserved groups, including women, native Americans, and others. Particular attention will be paid to the needs of rural areas.

I am pleased that Senator Hatch is able to be with us here today. Senator Hatch is Ranking Minority Member of the Subcommittee. Senator Hatch and I, and Senator Harrison Williams—the other member of the Subcommittee and Chairman of the parent Human Resources Committee—enjoy working together on these Subcommittee hearings. We've explored some interesting issues in the past, and I expect we'll be hearing some enlightening information this morning.

Probably all of us here are aware of the alcoholism and drug abuse problems in our country, but I wonder how many people in the general population appreciate the nature and extent of these problems. Alcoholism is our nation's 3rd largest health problem in terms of fatalities. But in terms of costs to our society, alcohol abuse is in a class by itself. The disease of alcoholism affects over 10 million Americans. For each of these another 4 individuals—their family, friends and coworkers—are negatively affected. Alcohol abuse is costing our nation more than 42 billion dollars per year in health expenditures, lost productivity and so on. The costs in terms of human tragedy and family disruption are immeasurable.

Alcoholism is a contributing factor to our high divorce rate, to the abuse of children and incidence of battered spouses, and to the number of runaway children. At least 50% of juvenile delinquents have family members with drinking problems. Children of alcoholics—estimated as high as 28 million—run a high risk of becoming alcoholics themselves. At recent Subcommittee hearings on the fetal alcohol syndrome, we heard that children of mothers who drink during pregnancy may be deformed or mentally retarded or may suffer from minimal brain dysfunction.

Alcohol abuse is increasing in alarming proportions among our nation's youth. Last week the New York Times reported a study finding a sharp rise in the use of alcohol at colleges, especially among women. The report further revealed that 2,000 students surveyed at the University of Wisconsin, "more than a quarter suffered blackouts or loss of memory because of alcohol within the previous year" and "11% admitted going to class intoxicated or high."

The picture for drug abuse is no more glamorous. Counting narcotic-related crime, addicts' lost productivity, and treatment and prevention programs, the total cost to the nation has been estimated at between $10 and $17 billion per year. Other drugs, such as amphetamines, tranquilizers and barbiturates are actively used for non-medical purposes by an estimated 7 or 8 million Americans. And so-called "poly-drug" abuse or the abuse of more than 1 drug at the same time, appears to be reaching epidemic proportions, especially among our nation's youth. Abuse of PCP, or "Angel Dust" is reaching alarming proportions in many urban centers as well.

We cannot sit idly by and watch the problems grow. Since its inception, the Subcommittee has recognized the need to mobilize federal, state and local resources to curb the problems associated with alcoholism and drug abuse. We are aware that early intervention maximizes the chances for successful rehabilitation and a productive responsible life.

The Subcommittee has also been aware, since 1970, that prevention and education efforts are essential, especially among young people. Prevention appears to be far more cost-effective than treatment.

The Subcommittee has scheduled these hearings today to explore new strategies and approaches to the old problems. In 1976, when we renewed the Comprehensive Alcohol Act, we placed a statutory priority on programs for women and youth as well as other underserved populations. Today we shall examine whether these programs have made a difference.

A recent National Institute of Drug Abuse study revealed that there is a difference between rural and urban drug abusers and the drugs they abuse. This morning we shall also hear about the special needs of rural populations and how they differ from their urban counterparts.

The Subcommittee is delighted on this occasion to have the benefit of witnesses from all parts of the state, representing policy makers, service providers, educators and the beverage industry. All have devoted a great deal of attention to these issues, and each has much to contribute to today's proceedings.

Finally, I want to take this opportunity to thank those of you who have worked so hard to make this hearing possible.

Mr. HATHAWAY. Mr. President, during the hearing, both Senator HATCH, ranking minority member of the subcommitee, and I gained valuable insight into the nature and extent of the problem as well as the specific needs which must be addressed. We were most fortunate to have the benefit of testimony from educators, policymakers, service providers, and others from all parts of Maine who deal with these problems on a day-to-day basis. It is these individuals who are intimately familiar with the circumstances and needs, and we are very thankful for their contribution.

Of particular significance to us was the fact that witness after witness detailed the need for greater attention to prevention and education efforts. The feeling was well-expressed by John Blatchford, of the Maine Eastern Regional Council on Alcoholism and Drug Abuse, who testified:

What do I suggest to your Subcommittee? I suggest you give high priority to activities relating to education and prevention. National costs will be lower and our citizens better served if alcoholism and drug abuse can be nipped in the bud.

Mr. President, I fully concur with this sentiment so aptly articulated by Mr. Blatchford. Prevention of alcoholism and drug abuse means prevention of untold human suffering, ill health, family disruption and so on. In terms of dollars and cents, prevention can mean significant cost savings. It is clearly far more cost-effective to prevent alcoholism and drug abuse than to provide treatment and rehabilitation.

The next question, then, is how do we prevent alcoholism and drug abuse? What techniques work? Can their effectiveness be measured? Can they be replicated in another setting?

Mr. President, the Alcoholism and Drug Abuse Education amendments which I am introducing today are designed to address these questions. In this regard, the bill provides for model projects to demonstrate the most effective methods and techniques in alcoholism and drug abuse prevention, and to develop exemplary alcoholism and drug abuse prevention programs. At the same time, it requires thorough evaluation of projects that we may be able to determine if, in fact, a particular approach works.

In addition, the bill authorizes continuation and expansion of current Federal alcoholism and drug abuse education efforts. Evidence indicates that the Federal program, so ably directed by Dr. Helen Nowlis, is quite effective. Yet, this effort is severely limited because of totally inadequate appropriations. Of a current $34 million authorization ceiling, the program has received only $2 million per year for a nationwide program of critical importance. Consequently, the administrative decision was made to focus the program on cities where the concentration of students is larger. As a result, rural areas have been denied the attention which they too sorely need. This problem was also highlighted during our field hearing in Maine.

Based on these considerations, the bill I am introducing revises the authorization levels with a view toward increasing appropriations. While the new authorization levels are actually lower than existing levels, they are offered as a realistic assessment of what actually should

be appropriated. In addition, to correct the existing neglect of rural areas, I am including a provision to insure that at least 25 percent of the sums appropriated be used for programs in rural areas. One week from today, the subcommittee will be holding a hearing on this bill. I look forward to exploring these issues further at that time.

Mr. President, at this point I ask unanimous consent that a section-by-section summary of the bill be printed in the RECORD, along with the text of the bill.

There being no objection, the bill and summary were ordered to be printed in the RECORD, as follows:

S. 2915

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "Alcohol and Drug Abuse Education Amendments of 1978".

SEC. 2. Section 2(b) of the Alcohol and Drug Abuse Education Act (20 U.S.C. 1001 (b)) is amended—

(1) by inserting after "encourage" the following: "the prevention of alcohol and drug abuse; to stimulate";

(2) by striking out "curricula on" and inserting in lieu thereof "approaches to";

(3) by striking out "problems of" the first time it appears therein and inserting in lieu thereof "prevention of alcohol and";

(4) by striking out "curricula" the second time it appears therein and inserting in lieu thereof "approaches";

(5) by striking out "curricla materials" and inserting in lieu thereof "successful approaches"; and

(6) by striking out "on drug abuse problems", and inserting in lieu thereof "on alcohol and drug abuse problems".

SEC. 3. (a)(1) Section 3(a) of the Alcohol and Drug Abuse Education Act (20 U.S.C. 1002(a)) is amended—

(A) by inserting after "carryout" a comma and the following: "throughout the nation in rural areas as well as urban areas,";

(B) by striking out "projects" the first time it appears therein and inserting in lieu thereof "programs, including programs of proven effectiveness";

(C) by striking out "projects throughout the nation" and inserting in lieu thereof "programs to develop local capability to meet problems of alcohol and drug abuse";

(D) by inserting at the end thereof the following new sentence:

"The Commissioner shall seek equitable distribution of available resources among the various regions of the country and seek to ensure that the special needs of rural areas are appropriately addressed.".

(2) Section 3 (b) (5) of such Act is amended by inserting "prevention" after "abuse".

(b) Section 3 (d) (1) of the Alcohol and Drug Abuse Education Act (20 U.S.C. 1002 (d)) is amended—

(1) by striking out "and" at the end of clause (C);

(2) by striking the period at the end of clause (D) and inserting in lieu thereof a semicolon and the word "and"; and

(3) by adding at the end thereof the following new clauses:

"(E) provides assurance that the applicant will coordinate its efforts with the appropriate State and local alcohol and drug abuse agencies, and educational agencies and organizations; and

"(F) provides a proposed performance standard to measure, or research procedure to determine, the effectiveness of the program or project for which assistance is sought.".

(c) Section (3) (e) (2) of such Act is amended by striking out "labor and Public Welfare" and inserting in lieu thereof "Human Resources".

Sec. 4. (a) Section 3 of the Alcohol and Drug Abuse Education Act (21 U.S.C. 1002) is amended by redesignating subsections (d) through (f) as subsections (c) through (i) respectively, and by inserting after subsection (c) the following new subsections:

"(d) In addition to the purposes described in subsections (b) and (c), from funds in an amount not to exceed ten per centum of the sums appropriated to carry out this Act, the Commissioner is authorized to make grants to State educational agencies, local educational agencies, institutions of post-secondary education, and other nonprofit agencies and organizations to support projects, including projects of proven effectiveness, to demonstrate the most effective methods and techniques in alcohol and drug abuse prevention, and to develop exemplary alcohol and drug abuse prevention programs. Not less than 25 percent of the funds expended under this subsection shall be used for grants to programs affecting populations in which more than fifty per centum of the population resides in areas which are not urbanized areas as defined by the Bureau of the Census.

"(e) (1) In order to carry out the provisions of this Act, there is established in the Office of Education an Office of Alcohol and Drug Abuse Education (hereafter in this section referred to as the 'Office'). The Office shall be headed by a Director.

"(2) The Director shall report directly to the Commissioner, and shall be compensated at a rate not less than the rate prescribed for GS–16 under section 5332 of title 5 of the United States Code.

"(3) The Office of Education shall provide the Office of Drug Abuse Education with sufficient staff and resources to carry out its responsibilities under this Act.

"(4) In carrying out the provisions of this Act, the Director of such Office shall consult with the Directors of the National Institute on Alcohol Abuse and Alcoholism and the National Institute on Drug Abuse, and shall coordinate the activities of such Office with the activities of such Institutes to the extent feasible.

"(f) The Secretary shall assure cooperation and coordination between the Office of Education (acting through the Office of Alcohol and Drug Abuse Education) and the Alcohol, Drug Abuse and Mental Health Administration (acting through the National Institute on Alcohol Abuse and Alcoholism and the National Institute on Drug Abuse) to identify and implement successful prevention programs and strategies, to identify research and development priorities, and to disseminate the results of such activities.".

(b) Section 3(h)(1) of such Act (as redesignated by subsection (a)) is amended—

(1) by striking out "may" and inserting in lieu thereof "shall"; and

(2) by striking out "not exceeding one percentum" and inserting in lieu thereof "of three percent".

(c)(1) The first sentence of section 3(i) (as redesignated by subsection (a)) is amended by striking out "and", and by inserting before the period at the end thereof a comma and the following: ", $10,000,000 for the fiscal year 1979; $14,000,000 for the fiscal year 1980; and $18,000,000 for the fiscal year 1981".

(2) Subsection 3(i) of such Act (as redesignated by subsection (a)) is amended by inserting "(1)" after the subsection designation and by adding at the end thereof the following new paragraphs:

"(2) Not less than 25 per centum of the amount appropriated for any fiscal year under this subsection shall be used for alcohol and drug abuse education programs and projects in areas that are not urbanized areas as defined by the Bureau of the Census.

"(3) Funds appropriated under this subsection shall remain available for obligation through fiscal year 1981 in order to permit multiple year funding of projects under this Act.".

SEC. 5. Section 8(c) of the Alcohol and Drug Abuse Education Act (20 U.S.C. 1007 (c)) is amended by inserting "the Northern Mariana Islands," immediately after "the Virgin Islands,".

---

SECTION-BY-SECTION SUMMARY

Section 2 amends Section 2(b) of the Alochol and Drug Abuse Education Act by increasing the emphasis on prevention and by expanding the focus of the Act to include "approaches" to the prevention of alcoholism and drug abuse rather than limiting the scope to curricula.

Section 3 amends Section 3 of the Act by requiring that programs be carried out throughout the nation, in both rural and urban areas in an equitable fashion and be designed to develop local capability. In addition, applicants for assistance are required to coordinate their efforts with the appropriate state and local alcoholism and drug abuse agencies and educational agencies and organizations, and include an evaluation component.

Section 4(a) authorizes grants to state and local educational agencies, institutions of post-secondary education and other nonprofit organizations for model projects to demonstrate the most effective methods of alcoholism and drug abuse prevention and to develop exemplary programs. To ensure equitable distribution, at least 25 percent of the funds appropriated for model projects must be used for programs in rural areas.

Section 4(a) also officially establishes the Office of Alcoholism and Drug Abuse Education within the Office of Education, and mandates coordination with respect to prevention efforts among the director of the Office of Alcohol and Drug Abuse Education and the Directors of the National Institute on Alcohol Abuse and Alcoholism and the National Institute on Drug Abuse.

Section 4(b) further amends Section 3 of the Act by requiring the Commissioner of Education to conduct an independent evaluation of the programs assisted under the Act, and increases the authorization of funds to conduct the evaluation.

Section 4(c) provides for a 3 year renewal of the Act, with authorizations of $10 million in fiscal year 1979, $14 for fiscal year 1980, and $18 million for fiscal year 1981. In addition, Section 4(c) requires that at least 25 percent of the sums appropriated be used for programs in rural areas. Finally, this section permits multiple year funding of projects under the Act.

Technical changes are also made.●

● Mr. WILLIAMS. Mr. President, I am happy to join with the able chairman of the Subcommittee on Alcoholism and Drug Abuse (Mr. HATHAWAY) in introducing the Alcohol and Drug Abuse Education Amendments of 1978.

Prior to the passage of this act in 1970, the subcommittee heard much criticism of some of the local drug education programs. These critics said that providing information about drugs and issuing dire warnings against them does not work, and may even arouse young people's interest in trying them. It was obvious that new methods had to be found to help our young people in coping with their problems without resorting to the use of drugs.

By 1974, when this legislation was renewed, it had become apparent that young people were misusing alcohol in larger and larger numbers. Responding to this new information, the Conrgess, in 1974, amended the legislation to include a focus on alcohol abuse.

Faced with the failure of many well-meaning but ineffective "education programs" the Office of Education designed a program which emphasizes people rather than substances. This program is based on the assumption that the most effective way to discourage destructive behavior is to engage the major institutions that influence the development of young people in programs to combat alcoholism and drug addiction, by promoting maximum positive growth and development.

The need to continue and to expand this program is obvious. The use of alcohol and other drugs by our young people has not declined. A recent study conducted on behalf of the National Institute on Alcohol Abuse and Alcoholism, indicates that the proportion of high school students who reported ever having been drunk was 19 percent before 1968 and 45 percent from 1966 to 1975. Studies of fatal automobile accidents also show increases in the frequency of alcohol intoxication among youths 18 to 20 years old and that 60 percent of all persons killed in automobile accidents are teenagers.

There are now estimated to be more than 10 million alcoholics in this Nation, 450,000 of them in their teens. And Dr. Robert DuPont, the Director of the National Institute on Drug Abuse, indicates that the number of heroin addicts may be twice his 1971 estimate—500,000 to 600,000 now compared to 200,000 to 300,000 then.

Greater efforts must be made to help these young people to learn to cope with their problems.

Since the passage of this legislation many communities have shown that with the help and guidance of the Office of Education positive results can be achieved. One of the most outstanding success stories is in Bergenfield, N.J. In Bergenfield the total community has been united to provide a support system for its youth. Two Bergenfield teams have been trained at the Adelphi University National Training Institute—a community team involving the police and a school-based team. Both teams have worked in a most productive manner and have extended their membership to over 300 people in the community and schools. The present philosophy in Bergenfield is to handle most problems in a way that not only prevents crime from occurring but also diverts minor transgressions from the courts and from police action to the schools and to the mental health center. Youngsters picked up for minor indiscretions are, in most cases, referred to the school team for action. The team then tries to assist the youngsters in resolving his or her difficulties. Rarely is a youngster incarcerated. When the police are called in by the school, they act in a supportive, rather than a threatening manner.

With an investment of less than $10,000 of Federal dollars, Bergenfield has become a model for other communities in their endeavors to help youngsters live productive and satisfying lives without resorting to alcohol and drugs.

In Bergenfield, children have learned to regard policemen as friends to whom they can turn for help. In Bergenfield, senior citizens work within the school system, helping to bridge the generation gap and helping children overcome problems of low self-esteem and poor school performance. In Bergenfield, children have challenging outdoor activities. Youngsters act as park leaders, running the parks at night for themselves. No arrests for loitering have occurred during the past 3 years, because such arrests are no longer necessary. In Bergenfield, vandalism remains consistently at a low level, while the rate in other towns steadily increases. In Bergenfield, young people have healthy and happy places to congregate with their friends. In Bergenfield, young people know what help is available to them in the community, whatever their problems. And those who live with alcoholic parents know about self-help groups such as Al-Ateen because they have been told about them in the schools.

Mr. President, the Alcohol and Drug Abuse Education Act is our only legislation primarily designed to reach those millions of young people who may be tempted to abuse drugs and alcohol. By continuing and expanding this effort, we will see success stories like Bergenfield duplicated across the Nation.

The legislation we are introducing today reauthorizes the act for 3 years, gives greater flexibility to the commissioner in establishing model programs, gives greater visibility to the Office of Alcohol and Drug Abuse Education, requires greater emphasis on programs in underserved areas, and requires the Secretary of Health, Education, and Welfare to coordinate the prevention education efforts of the Office of Education, the National Institute on Drug Abuse, and the National Institute on Alcohol Abuse and Alcoholism.●

---

By Mr. HATHAWAY (for himself, Mr. WILLIAMS, Mr. HATCH, Mr. JAVITS, Mr. CRANSTON, and Mr. RIEGLE):

S. 2916. A bill to amend the Drug Abuse Office and Treatment Act of 1972 to extend the programs of assistance under that act for drug abuse prevention, education, treatment, and rehabilitation, and for other purposes; to the Committee on Human Resources.

DRUG AEUSE OFFICE, PREVENTION, AND TREATMENT AMENDMENTS OF 1978

● Mr. HATHAWAY. Mr. President, today I am pleased to introduce the Drug Abuse Office, Prevention, and Treatment amendments of 1978. This bill will extend for 1 year, through September 30, 1979, the authorization for the National Institute on Drug Abuse under the Drug Abuse Office and Treatment Act of 1972, and will place greater emphasis on prevention of drug abuse. I am gratified to be joined in this effort by the distinguished chairman of the Committee on Human Resources (Mr. WILLIAMS), the ranking minority member of the Subcommittee on Alcoholism and Drug Abuse (Mr. HATCH), the ranking minority member of the full committee (Mr. JAVITS), and the majority whip (Mr. CRANSTON).

Drug abuse continues to be a national problem warranting ongoing Federal leadership, attention, and resources. Counting narcotic-related crime, addicts' lost productivity, and treatment and prevention programs, the total cost to the Nation is an estimated $10 to $17 billion annually. Active nonmedical use of other drugs, such as amphetamines, tranquilizers, and barbiturates are estimated on the part of at least 5 percent of the adult population, or among at least 7 to 8 million Americans. So-called "poly-drug" abuse, or use of more than one drug at a time, appears to be reaching epidemic proportions. And the deadly drug PCP, or "Angel Dust," is increasingly becoming a most-favored chemical of abuse, especially among our Nation's youth.

While renewal of the Federal commitment to combat drug abuse is clearly needed, the bill I am introducing today will limit the reauthorization of Federal programs to 1 year. There are two reasons for this.

The primary reason for seeking a 1-year extension of this statute is to insure close congressional scrutiny of the planning and coordinative mechanisms of drug abuse policy at the highest level of the executive branch. Title II of the Drug Abuse Office and Treatment Act, as amended in 1976, provided such a mechanism in the Office of Drug Abuse Policy (ODAP), established within the Executive Office of the President.

As my colleagues will recall, in the President's Reorganization Plan No. 1, presented to Congress on July 15, 1977, the functions of ODAP were proposed to be transferred to the domestic policy staff.

This proposal was of great concern to me and to a number of my colleagues, including the distinguished Chairman of the Committee on Human Resources (Mr. WILLIAMS), the ranking minority member of the Subcommittee on Alcoholism and Drug Abuse (Mr. HATCH), the ranking minority member of the Committee on Human Resources (Mr. JAVITS), as well as to our colleagues on governmental affairs, who had worked with us in establishing ODAP, including that committee's distinguished chairman (Mr. RIBICOFF) and ranking minority member (Mr. PERCY).

On July 26, 1977, I testified before the Committee on Governmental Affairs on this matter, and as further background, I ask unanimous consent that excerpts from my testimony be printed in the RECORD at this point.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

TESTIMONY OF SENATOR WILLIAM D. HATHAWAY

Mr. Chairman, I appreciate having the opportunity to testify before your committee this morning regarding the President's reorganization proposal which was submitted to Congress on July 15 of this year.

I am pleased that this committee has seen fit to hold these hearings, and intends

to scrutinize carefully the President's proposal, as is required by the Reorganization Act of 1977.

As chairman of the Subcommittee on Alcoholism and Drug Abuse, I feel impelled to comment on one particular aspect of the proposal, namely the discontinuation of the Office of Drug Abuse Policy, and the transfer of its functions to a single senior advisor in the White House.

I realize that my questioning this proposal would lead some to conclude that I was simply protecting my own legislative turf and prerogatives. I obviously cannot categorically deny this charge. But at the same time, I believe that the legislative history of ODAP yields an inescapable conclusion that the Congress has clearly written this office and its functions squarely into Federal law, for sound reasons. And this office ought not to be discontinued, abolished, transferred, or whatever, unless we are properly convinced that this change of structure is necessary and beneficial, and not simply cosmetic.

Mr. Chairman, it was only a year and a half ago that I met with you and other distinguished members of your committee in joint conference with the House on the amendments to the Drug Abuse and Treatment Act of 1972. In those deliberations we drafted legislation establishing an Office of Drug Abuse policy within the Executive Office of the President.

In this legislation we stipulated a number of attributes for this office, and went into great detail. We required that the Director and Deputy Director of this office be nominated by the President, subject to the advice and consent of the Senate. This legislation stipulated the employment of other officers and employees, and listed the allowable civil service status of these individuals. Consultants were also to be employed.

The functions of the Director, and the office generally, were set forth in detail. Broadly, his function was to coordinate and evaluate all of the efforts of the various departments and agencies of the Federal Government, and to insure that a coherent Presidential policy emerged. An annual report had to be submitted to Congress.

All of these legislative actions were deemed necessary by us at that time to make sure that these matters received appropriate attention at the highest levels of the White House and to coordinate and rationalize the myriad programs in the drug abuse field.

Prior to our action in this regard, these functions had been undertaken by a task force of the Office of Management and Budget, and the special action Office on Drug Abuse Policy was phased out.

This task force was not subject to Senate confirmation, and therefore not accountable to Congress. We were concerned that without a clear, designated, identifiable individual in the White House itself, the most important issues of Drug Abuse Policy would be ignored or given extremely short shrift.

The notion of Drug Abuse Policy necessarily involves the interaction of a great number of Federal departments.

In treatment and prevention, the Department of Health, Education and Welfare comes to mind first, but the Veterans' Administration is also strongly involved, as is the Department of Defense. The Department of Labor is involved in vocational and rehabilitation programs, and so on.

On the enforcement side, since drug abuse is in many instances also a crime, the Department of Justice is the most clearly identifiable entity. But the Treasury Department and probably others are involved.

Drug abuse is also an international problem, so the State Department is involved. Treaties must be negotiated, and the United Nations is concerned.

Domestically, State and local officials are properly and justifiably concerned with our drug abuse policy, in both enforcement and treatment.

All of these elements make the problem of drug abuse a unique one in our Federal system and point out the need for the structure we established together in the early part of 1976.

President Ford signed this measure into law on March 19, 1976, and since that time ODAP has gotten off to a good start in its extremely difficult and complex task.

President Carter determined to implement this law early on in his administration. He submitted full-funding budget requests of $2 million per year over the next 2 fiscal years.

On March 14 of this year the President issued a memorandum on the activization of ODAP to the Secretaries of State, Treasury, Defense, Labor, HEW, Transportation, the Attorney General, the representative to the U.N., the Director of OMB, the Director of the CIA, and the Administrator of the Veterans' Administration asking for their full cooperation.

In this memorandum, the President set out the role he saw for ODAP:

"The Office of Drug Abuse Policy shall be responsible for carrying out the congressional mandate specified in the law. In addition, and to the maximum extent permitted by law, the Director of ODAP is hereby directed to fulfill the following responsibilities:

"(1) Recommend Government-wide improvements in the organization and management of Federal drug abuse prevention and control functions, and recommend a plan to implement the recommended changes;

"(2) Study and recommend changes in the resource and program priorities among all agencies concerned with drug abuse prevention and control;

"(3) Assume the lead role in studying and proposing changes in the organization and management of Federal drug abuse prevention and control functions, as part of my promise to reorganize and strengthen Government operations; and

"(4) Provide policy direction and coordination among the law enforcement, international and treatment/prevention programs to assure a cohesive and effective strategy that both responds to immediate issues and provides a framework for longer term resolution of problems."

Dr. Peter Bourne was confirmed as the first Director of ODAP in the late spring of this year. Since that time he has assembled an extremely competent and versatile staff, including, among others, the former counsel of the special action Office on Drug Abuse Policy, who also had experience working with the U.N. in Geneva, and the former police chief of Berkeley, California. Presently, the Office has a staff of 10 individuals.

The staff is in place and is prepared to fulfill the mandate established in Public Law 94-237. Already it has turned out a number of sound studies on the problem. But obviously, there is much more yet to be done.

The law and the accompanying reports clearly imply a strong professional staff which will be directly accountable to the Congress and to the Senate in particular. It also mandates that the Director be an individual with the ear of the President who will work solely on these vital problems.

Mr. HATHAWAY. Mr. President, based on these concerns and the concerns of my colleagues, there were a number of meetings with the staff of the President's Reorganization Project, and the Office of Management and Budget in an attempt to ameliorate some of these concerns and to insure that the new policy structure within the White House was responsive to our concerns.

As a result of these discussions, I received a letter from then-Acting Director of the Office of Management and Budget, Mr. James H. McIntyre, Jr., outlining further the new mechanism.

I ask unanimous consent that this letter be printed in the RECORD at this point.

There being no obection, the letter was ordered to be printed in the RECORD, as follows:

EXECUTIVE OFFICE OF THE PRESIDENT, OFFICE OF MANAGEMENT AND BUDGET,
*Washington, D C., September 28, 1977.*

Hon. WILLIAM D. HATHAWAY,
*U.S. Senate,*
*Washington, D.C.*

DEAR SENATOR HATHAWAY: I understand that you are concerned about the disposition of the Office of Drug Abuse Policy (ODAP) in Reorganization Plan No. 1. This letter explains the arrangements we plan to make for handling ODAP functions and answers questions that have been raised about it.

In proposing the abolition of ODAP as a statutory unit, the EOP reorganization group recognized the value of its work and made provision for each of its functions to continue:

ODAP's policy development and coordination functions will be handled within the new policy management system which is to be used for most domestic issues. The basis of the system is the formation of interagency working groups, coordinated by the Domestic Policy Staff, to recommend policy and handle specific problems. The system will link the skills and experience in line agencies with the Presidential perspective in the Executive Office. In the drug abuse area, Domestic Policy Staff members will work with the revitalized Strategy Council on Drug Abuse to make the system a reality. Because of the President's personal commitment to more effective action in the drug abuse area, a White House adviser will continue to provide strong policy guidance.

We anticipate that ODAP's current reorganization work will be completed in January 1978. However, the Office could continue until April 1 if additional time is needed to complete its work. After the Office is terminated, its reorganization responsibilities will be assumed by the President's Reorganization Project, in cooperation with the President's drug and health adviser.

The President's decision on ODAP is in no sense, an attempt to deemphasize drug abuse problems. He has asked Dr. Bourne to take the lead in formulating a comprehensive national drug abuse policy, including planning, enforcement and other critical issues. His August 2, 1977, message to the Congress on drug abuse stressed his continued deep personal concern about the effects of narcotics and the need to act. The President has also assured the Congress that Dr. Bourne will be available to testify as he has been.

In summary, we believe that the new arrangements for carrying out ODAP functions will improve the effectiveness of drug abuse policy development and coordination. The system will place the drug issue in the mainstream of Presidential decision making within the new policy management system and reorganization efforts, thus better integrating it with related concerns. By retaining a visible White House adviser, priority will be given to the issue and coordination will be assured. I hope that you and your colleagues will view the ODAP reorganization in the context of the new arrangements that the President proposes.

Enclosed are answers to commonly asked

questions. If I can provide further information, I will be happy to do so.

Sincerely,

JAMES H. MCINTYRE, Jr.,
*Acting Director.*

Mr. HATHAWAY. Mr. President, it was gratifying to learn that Dr. Bourne would continue to play a dominant role in the coordination of these policies, that he would continue to be available to testify before Congress, and that the administration continued to place greater emphasis on these issues.

At the same time, particularly since ODAP has only recently concluded its work, and this new structure has only been fully implemented as of April 1, I am reluctant, as is Chairman PAUL ROGERS of the House Subcommittee on Health and the Environment, to enter into a multiyear reauthorization of this important statute. Rather, we mutually agreed that Congress ought to pay close attention to this matter, and to consider these issues once again, 1 year from now, in a legislative context. At the hearing of the Subcommittee on Alcoholism and Drug Abuse to take place next Wednesday, I look forward to discussing these matters with Dr. Bourne and the other witnesses, with a view toward highlighting further their importance.

There are other reasons for seeking a 1-year extension. One year from now, we will also have the benefit of the report of the President's Commission on Mental Health, which will include recommendations relating to drug abuse. We will also have the benefit of the Federal Strategy on Drug Abuse, due in June of 1978. Under the leadership of the President and Dr. Bourne, the Strategy Council, first established in 1972 by this statute, has finally been implemented, and is meeting on a regular basis. Its recommendations on an integrated and coordinated Federal policy in this vitally important area should be most helpful to us in our future deliberations.

Mr. President, although the bill I am introducing today basically provides for a simple 1-year extension of the Drug Abuse Office and Treatment Act, other changes are included as well. Of primary importance is the greater focus on prevention. Prevention is far more cost-effective than treatment and rehabilitation. Revisions also include annual reporting requirements, program evaluation mechanisms, and coordination of State drug abuse activities with local drug abuse planning efforts. Finally, the bill mandates a special report on drug abuse in rural areas. The information provided in this report should be useful to the subcommittee when we reconsider the Drug Abuse Act next year.

I ask unanimous consent that a brief section-by-section summary of the bill be printed in the RECORD at this point along with the text of the bill itself.

There being no objection, the bill and analysis were ordered to be printed in the RECORD, as follows:

S. 2916

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "Drug Abuse Office, Prevention, and Treatment Amendments of 1978".

SEC. 2. (a) Section 1 of the Drug Abuse Office and Treatment Act of 1972 is amended by striking "Office" and substituting "Office, Prevention,".

(b) The first sentence of section 409 (a) of such Act is amended (1) by striking out "and" after 1977,", and (2) by inserting after "1978," the following: "and September 30, 1979,".

(c) Section 410 (b) of such Act is amended by adding at the end thereof the following: "For the fiscal year ending September 30, 1979, there is authorized to be appropriated (1) $153,000,000 for grants and contracts under paragraphs (3) and (6) of subsetcion (a) for drug abuse treatment programs, and (2) $24,000,000 for grants and contracts under such subsection for programs and activities (other than for grants and contracts under paragraphs (3) and (6) of subsection (a)).

(d) Section 503 of such Act is amended (1) by striking "and" after "1977"; and (2) by inserting after "1978" the following: "and $7,000,000 for the fiscal year ending September 30, 1979"

SEC. 3. (a) Section 405 (b) of the Drug Abuse Office and Treatment Act of 1972 is amended to read as follows:

"(b) The Secretary shall transmit a report to the President and the Congress with respect to each fiscal year on—

"(1) the health consequences and extent of drug abuse in the United States,

"(2) a description and evaluation of the effectiveness of the drug abuse prevention functions carried through any entity of the Department of Health, Education, and Welfare in the fiscal year for which the report is made,

"(3) a description of the manner in which such functions were carried out, the amount of funds expended, and a description and evaluation of the coordination within the Department of Health, Education, and Welfare in carrying out such functions,

"(4) a description and evaluation of the effectiveness of experimental methods and programs implemented in carrying out such functions, recommendations for implementation of such methods and programs by others in carrying out their drug abuse prevention functions, and a description and evaluation of the effectiveness of the means used to disseminate information respecting such methods and programs, and

"(5) proposals for changes in the drug abuse prevention functions carried out through the Department of Health, Education, and Welfare (including recommendations for legislation).

The report required by this subsection shall be transmitted not later than January 15 of each year.".

(b) Section 405 of such Act is amended by adding at the end thereof a new subsection (c) as follows:

"(c) Within 120 days of the date of enactment of the Drug Abuse Office, Prevention, and Treatment Amendments of 1978, the Secretary shall submit to the Congress a report on the extent and nature of drug abuse in rural areas, the special needs and circumstances which must be addressed in providing drug abuse prevention functions to these areas, and specific recommendations to alleviate drug abuse in rural areas. For purposes of this subsection, 'rural areas' means areas that are non-urbanized areas as defined by the Bureau of the Census.".

(c) Section 502(b)(3) of such Act is amended by striking "control and treatment" and substituting "prevention, control, and treatment".

SEC. 4. Section 303(2) of the Drug Abuse Office and Treatment Act of 1972 is amended by inserting immediately after "used" the following: "and shall include a mechanism to identify, provide for, and evaluate effective drug abuse prevention programs, especially for primary prevention designed to discourage persons from beginning drug abuse with equal attention to the needs of metropolitan areas and areas which are not urbanized areas as defined by the Bureau of the Census".

SEC. 5. (a) Section 409(e)(7) of the Drug Abuse Office and Treatment Act of 1972 is amended to read as follows:

"(7) provide assurance that the State agency will coordinate its planning with local drug abuse planning agencies, and with State and local health planning agencies and educational agencies, as appropriate;".

(b) The first sentence of section 409(e) of such Act is amended by striking "July 15" and substituting "July 31".

SEC. 6. Section 502 of the Marihuana and Health Reporting Act (Public Law 91-296) is amended by striking out "annually" and inserting in lieu thereof "biennially".

---

SECTION-BY-SECTION SUMMARY

Section 1. Short title of bill.

Section 2(a). Amends the Drug Abuse Office and Treatment Act of 1972 by revising the title to read "Drug Abuse Office, Prevention, and Treatment Act of 1972;"

Section (b). Extends the state formula grant program through fiscal year 1979 and retains the authorization level of $45 million;

Subsection (c). Authorizes $177 million for special grants and contracts, with $153 million for treatment programs, and $24 million for prevention, demonstration and other programs; and

Subsection (d). Renews authorization of funds for certain research and development through fiscal year 1979 at the authorization level of $7 million.

Section 3(a). Requires the Secretary of Health, Education and Welfare to transmit an annual report to the President and Congress on drug abuse in the United States, including an evaluation and description of the drug abuse prevention functions carried on by the Department of Health, Education and Welfare;

Section 3(b). Requires a report to Congress on drug abuse in rural areas, including the special needs and circumstances which must be addressed.

Section 4. Amends section 303 of the Act to require the National Drug Abuse Strategy to include a mechanism to identify, provide for and evaluate effective drug abuse prevention programs, especially those designed to discourage persons from beginning drug abuse, with equal attention given to urban and rural areas.

Section 5. Amends Section 409(e)(7) of the Act, relating to the content of state plans, to require the state drug abuse agencies to coordinate their planning with local drug abuse planning agencies and state and local health planning and educational agencies, as appropriate; and changes the due date of state plans from July 15 to July 31.

Section 6. Amends Section 502 of the Marijuana and Health Reporting Act to require a biennial report instead of an annual report.

Other technical amendments are included.●

---

By Mr. DOLE:

S. 2918. A bill to permit marketing orders to include provisions concerning marketing promotion, including paid advertisement, of raisins and distribution among handlers of the pro rata costs of such promotion; to the Committee on Agriculture, Nutrition, and Forestry.

● Mr. DOLE. Mr. President, last month the other body enacted useful legislation to permit amendment of the Fed-

eral marketing order governing raisins to authorize production and marketing research and development projects That bill, H.R. 6782, later became the vehicle of emergency farm legislation which was defeated by the other body yesterday.

The raisin marketing order provisions of H.R. 6782 are not controversial. In a sense, these provisions are the "innocent bystanders" in a controversy focusing on the flexible parity provisions of H.R. 6782—provisions that the Senator from Kansas sponsored and promoted. For this reason, I reintroduce the raisin marketing order provisions in the expectation that it will receive timely and favorable action by this body.

Specifically, this legislation amends section 8 of the Agricultural Marketing Agreement Act of 1937 to permit amendment of the Federal marketing order governing raisins produced in the United States to authorize production and marketing research and development projects, including paid advertising, and to permit handlers to deduct expenditures for brand name raisin advertising from assessments paid by them to finance such projects.

The amendment to the Federal marketing order could not be made until after first, notice and opportunity for a public hearing by the Secretary of Agriculture, and second, approval by two-thirds of the affected producers, or producers of two-thirds of the raisins, in a referendum conducted by the Secretary of Agriculture. In addition, the handlers of not less than 50 percent of the volume of raisins covered by the order must sign a marketing agreement reflecting the terms of the amendment to the order.

This bill would require the Secretary of Agriculture to submit a detailed evaluation report to the Agriculture Committees of Congress within 60 days following the second anniversary of its implementation. The report would include, but not be limited to. information on the issuance or amendment of any affected order, the annual amount of assessments collected, in the aggregate and by size and class of handler, the manner in which the assessments were collected, the amount of direct expenditures credited against the pro rata expense assessments of each handler, and the purpose to which the assessments and direct expenditures were devoted.

Mr. President, this legislation is supported by raisin producers as well as those involved in raisin marketing. To the extent that it facilitates efficient marketing, it conforms to the best interests of consumers. I commend this legislation to my colleagues, and ask for their support.●

---

By Mr. PROXMIRE (for himself, Mr. STONE, Mr. CHILES, and Mr. MATHIAS) (by request):

S. 2919. A bill to encourage broader utilization of the condominium form of homeownership, to provide minimum national standards for disclosure and consumer protection for condominium purchasers and owners and tenants in condominium conversions, to encourage States to establish similar standards, to correct abusive use of long-term leasing of recreation and other condominium-related facilities, and for other purposes; to the Committee on Banking, Housing, and Urban Affairs.

CONDOMINIUM ACT OF 1978

Mr. PROXMIRE. Mr. President, at the request of the administration, I am introducing the Condominium Act of 1978. This bill would establish minimum national standards for disclosure and consumer protection in condominium sales and condominium conversions and would encourage States to establish and enforce similar standards. It is also intended to correct some of the consumer problems which have arisen in connection with long-term leases of recreational and other facilities in certain parts of the country.

In purchasing a condominium, a person acquires ownership of his individual dwelling unit plus an undivided interest in the common elements—lobbies, elevators, grounds, et cetera. The condominium form of ownership has become increasingly popular in recent years, and for good reason. Condominiums offer the tax and other benefits of homeownership, often at a more modest cost than for single family houses. In these days of smaller households, higher energy costs, and rapidly rising housing prices, condominiums provide an attractive option; and they are likely to make up a larger share of the housing market as time goes on.

For these reasons, I have long been concerned about the consumer problems that have arisen in connection with condominiums. In some cases, these problems appear to stem from lack of familiarity with the condominium form of ownership and lack of clear and concise disclosure of pertinent information. In other cases, there appear to be specific abuses and omissions on the part of condominium developers. In either case, I think it would be most unfortunate if condominiums were to get a bad reputation, because of these problems and if that reputation were to limit their marketability.

The legislation I am introducing today represents the administration's effort to remedy some of the problems that have been associated with condominiums. It is similar in many respects to a bill which I sponsored in the last Congress. I have questions about some of the provisions of the administration bill, and particularly about the ramifications of the section dealing with recreation leases. These matters should be explored in detail at such time as the Banking Committee undertakes formal consideration of the proposed legislation.

Mr. President, I ask unanimous consent that the bill and the explanatory material accompanying it be printed in the RECORD at the conclusion of the introductory statements.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibits 1, 2, and 3.)

Mr. STONE. Mr. President, I am pleased to join in introducing the Condominium Act of 1978 on behalf of the administration. The bill was drafted by the Department of Housing and Urban Development (HUD) and would establish minimum national standards for consumer protection and disclosure requirements in the sale of new and converted condominium units.

I have followed the careful development of this bill to insure that it would address, on a national level, the common problems and abuses that have been associated with the sale and ownership of condominiums in the past. The national standards and disclosure provisions in the bill are patterned after the most advanced State condominium statutes, such as Florida's, and the Uniform Condominium Act (UCA) recently adopted by the National Conference of Commissioners on Uniform State Laws. Under the certification mechanism provided by the bill, the Federal minimum standards and disclosure requirements would apply only in States whose laws do not provide substantially equivalent or greater protection.

The bill also addreses problems that are prevalent in Florida with existing long-term leases and contracts which had to be accepted by condominium buyers as a condition of purchase.

Florida is a leader in the condominium form of homeownership, with more than 800,000 people living in over 400,000 condominium apartment units. The number of condominiums increased rapidly during the late 1960's and early 1970's before the State enacted stringent regulations to curb abusive practices. The wide-open market in condominiums enabled a few unscrupulous developers to take advantage of consumers, and senior citizens in particular, by tying the sale of condominium units to the acceptance of oppressive long-term leases which were entered into by the developer with himself while he controlled the condominium association. Typically, these leases would be for the use of a common recreation facility and would run for 99 years. Under the terms of the leases, the condominium unit owners pay all the costs of operating, maintaining, and repairing the facility, and all the taxes; in return for the payment he receives, the developer does nothing. The leases contain automatic rent increase clauses tied to a cost-of-living index which has no relationship to the developers' obligations. Nevertheless, it allows the developer to automatically raise the lease payments by the percentage increase in the cost of living. Since the lease payments are usually secured by a lien on the condominium apartments, owners who cannot afford the escalating lease payments on a recreation facility are exposed to the possibility of loss of their homes.

In the past few years, Florida has enacted strong and effective legislation dealing with condominium abuses. New leases containing escalator clauses are now prohibited. Repeated attempts, however, by the State to nullify escalator clauses in leases entered into before passage of this prohibition have been unsuccessful, because States are prohibited by the U.S. Constitution from impairing contractual obligations. Mr. President, it is clear that the Federal Government has the constitutional authority to deal with this most compelling problem.

The Condominium Act of 1978 would make unenforceable future rent increases called for under certain preexisting long term leases containing automatic escalator clauses which have no relationship to the developers' obligations under the lease. Thus these lease fees would be frozen at their levels on the date of enactment of the bill. Financial hardships would not result from this measure, since developers would continue to receive substantial returns on their investments.

In addition, the bill establishes equitable criteria for the courts to use in determining whether preexisting long term leases are unconscionable. It would enable unit owners, by a two-thirds vote, to challenge certain long term leases in Federal court. Upon a determination that a lease is so oppressive as to be unconscionable, the court could reform or rescind the lease, in whole or in part, to achieve a fair result.

The problem of long term leases tied to condominium sales affects citizens of many States in addition to Florida. Most of the purchasers of Florida condominiums come from other parts of the country, primarily the Northeast and the Midwest, to spend the winter in a second home or to retire in a sunny climate. Unfortunately, in their eagerness to settle in a comfortable environment, many have been victimized by some very sharp sales practices.

If properly regulated to prevent abuses, condominiums can become an affordable alternative to single family homeownership throughout the Nation. I have worked closely with HUD in the development of this bill, as have Senator CHILES and my Florida colleagues in the House of Representatives, who are introducing similar legislation, because I believe that Florida's experience with condominiums can benefit the whole country. The leaders of Florida condominium unit owners as well as the representatives of Florida developers consulted frequently with HUD as this bill was being fashioned. I know that the input they provided was very valuable.

Enactment of this legislation will prevent condominium abuses from occurring in the future and provide a remedy for the most serious problems that have already occurred. The most important lesson we have learned in Florida is that increasing consumer confidence in condominiums promotes condominium sales and benefits buyers and builders alike.

Mr. CHILES. Mr. President, I am extremely pleased to support the Condominium Act of 1978, along with Senators PROXMIRE and STONE. This bill is the product of many months of intense work on the part of the condominium task force at HUD to forge an effective, workable piece of legislation. I offer support for the general thrust of this bill to provide reasonable protection for the condominium buyer with the understanding that the administration's bill is subject to modification and amendment as we move through the legislative process. This bill is written in such a way as to encourage the growth of condominiums in all parts of the country by providing minimum standards for disclosure and consumer protection in new projects as well as in condominium conversions, by encouraging States to enact strong consumer laws of their own, and by correcting the abusive use of long-term recreational facilities.

The Condominium Act of 1978 should receive attention by the Congress both as a remedy for current problems and abuses in the sale of condominium units and as a preventive step to keep such abuses from developing elsewhere. The condominium is such a new form of ownership that very little was known at the Federal level until recently about who lives in them, the reasons for their enormous popularity, and the special problems these new homeowners are facing.

Generally speaking, a condominium project consists of individual units separately owned combined with joint ownership of the common elements of the complex. The common elements may range from lobby, grounds, and meeting rooms to extensive recreational facilities. It is the responsibility of the unit owners, or their owners association, to maintain these common facilities.

Condominiums are attractive to families because they offer many of the advantages of owning the home at an affordable price. Yet, they are also appealing since they offer numerous amenities and fewer responsibilities than the traditional family home. With the continuing upward spiral in prices for conventional homes, the condominium is sure to be increasingly popular among small families, young couples, and older people both as a primary residence and as a retirement or resort home.

RAPID GROWTH BRINGS MANY PROBLEMS

The growth of condominiums has been phenomenal during this decade. According to the Census Bureau's annual housing survey, there were more than 700,000 condominium units in the Nation in 1976 and most of these were built since 1970. Florida, California, New York, Ohio, Michigan, Illinois, and New Jersey experienced the heaviest growth in the early 1970's, but the increasing popularity of condominiums is already bringing dozens of other States into the picture.

In the Northeast region, the number of people living in either condominiums or cooperatives increased by 108 percent to over 250,000 units between 1970 and 1976. The figures are even more dramatic in the South and West, with increases of 266 percent and 363 percent, respectively, during that time period. In 1976, the South and West regions contained over 400,000 condominium owner-occupied units. Therefore, Mr. President, I want to stress to my colleagues that this is not a one-State or single-region concern. Condominium development and the attendant abuses that have come to light are national concerns and are compelling reasons why this legislation should be considered promptly.

HUD's 1975 study revealed some major problems associated with the development, sale, and ownership of condominium housing. These problems have been documented in nearly every State where condominiums represent a significant percentage of the single family housing stock. Advanced State laws have alleviated some of the problems but some glaring loopholes remain, particularly in States which have no significant condomonium buyer protection provisions.

Important information necessary for the buyer to make a rational decision about buying a condominium is often too complicated and difficult for the average person to understand. This bill requires developers to include a full and accurate disclosure statement in language that is simply stated and does not leave out important features about the condominium.

In some instances, construction is of poor quality and purchasers find themselves stuck without reasonable warranty protection. This bill requires that in condominium projects covered by the act, the developer must warrant and guarantee against defective workmanship in any of the units or common elements.

Owners committed by developers to long-term, escalating recreational facility leases will be given the right to seek a judicial determination that such leases represent unconscionable agreements. The bill sets forth certain conditions under which these leases should be found unconscionable. In addition, under specified conditions, payments on leases containing an automatic rent increase clause would be unenforceable in the future.

In some conversions of rental units to condominiums, tenants have not been given sufficient notice or the chance to purchase their apartments from the owner. This legislation requires that landlords give tenants plenty of notice to vacate and the first option to buy. Specific provision is made for disclosure of information about units for sale in a condominium conversion, because of the special circumstances involved in purchasing such a home.

FLORIDA EXPERIENCE HARBINGER OF NATIONAL PROBLEM

The State of Florida has been in the vanguard of the condominium expansion nationwide and I can speak from experience of the consumer nightmares that have been faced by purchasers in my home State. Many of these people are retirees who have moved to Florida for all or part of the year while maintaining their roots in their native States.

Here is one letter I received last year from an elderly condominium owner in Fort Lauderdale that is typical of the serious problem these owners face:

> The Land Lease situation is getting more and more out of hand. Our Land Lease which was $4,200 7 years ago and not obtainable when we purchased our condo has been sold recently for $7,000 and they are now asking $9,000. The monthly lease has gone from $35.00 to $40.85 and January 1, they are billing us for $65.00 which is hiway robbery. In our condo there are 118 apartments, and about 80 of us are asked to pay this exorbitant amount. 90% of us are retired for a number of years and on fixed income. I am 84 years of age and wife is 68 . . .
>
> As is usual we pay the taxes and upkeep on this land which we do not own. The owner has no expense and has practically received the original asking price of $4,200 in rents but still wants $65.00 a month for the next 5 years when it will again be raised.

Another Floridian wrote:

It would be a blessing if you could do something about our $53.70 we have to pay each month on our recreation building. We never use it. We have five 10-story buildings and the developer collects about $50,000 every month on these recreation buildings . . . He can get away with this for 99 years.

Recurring stories about developer misrepresentations, and so-called sweetheart deals in which the developer retains an interest in a management contract with the owners association, and long-term, escalating recreation leases—some for as long as 99 years—are examples of abuses which have been most flagrant but, with the exception of the 99-year lease, they are not confined to Florida.

In such a rapidly growing industry with limited public awareness of the problem, the potential for consumer fraud and abuse is still very strong. Some States have already moved ahead with comprehensive consumer protection and disclosure laws. But, a significant number of States have only minimal requirements, including four of the 10 States with the highest concentrations of condominium housing. Preventive Federal legislation is in order at this time to insure that we do not go through the same array of consumer housing problems in the 1980's that early growth States struggled with in the first part of the 1970's. Let us prove that we have learned from the considerable problems we have already encountered and act now to prevent those problems from recurring.

STATE LEGISLATION URGED

One of the most encouraging features of the Federal legislation we are proposing today is that it complements, rather than substitutes for, effective State law. States that already have similar consumer protection and minimum disclosure statutes in place would be certified by the Secretary of Housing and Urban Development. The Federal standards enumerated in this bill would apply in States that did not have consumer protection laws for condominium purchasers. Thus, States would be encouraged to enact laws of their own patterned after this bill and other State laws with advanced buyer protection provisions. But, in no instance would registration or filing of disclosure statements with the Federal Government be required. There will be no new paperwork emanating from Washington as a result of this law. In fact, the bill takes a positive step in the direction of eliminating duplicate or overlapping paperwork by providing that disclosures filed with the Securities and Exchange Commission are deemed to satisfy the disclosure requirements of this bill.

It is not only the consumer who suffers from the abuses in the condominium industry that have been so widely reported in recent years. Honest developers are tainted by the unfair and deceptive practices of less scrupulous developers and the extensive publicity given to the condominium abuses hurts the entire industry. We saw that happen several years ago when adverse publicity coupled with a major slump in the economy led to disastrous sales performances. With condominium development spreading into new areas of the country, as it surely will, this legislation will be instrumental in maintaining consumer confidence in the condominium form of ownership.

Mr. President, I would be remiss if I did not take this chance to personally thank the condominium owners who, through their homeowners' associations, have fought for years to put an end to the most egregious condominium abuses. Their persistence and dedication to this cause were the motivating forces behind the Condominium Act of 1978.

My appreciation also goes to the HUD Condominium Task Force, chaired by Dr. Charles Field. They had the arduous responsibility of producing a practicable condominium measure to present to Congress. That product, which we are introducing by request today, should be a valuable tool in the construction of urgently needed condominium legislation. The hundreds of thousands of condominium owners of this Nation deserve nothing less.

EXHIBIT 1

S. 2919

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "Condominium Act of 1978".

Sec. 221. Authorization of appropriations.
Sec. 222. Separability.
Sec. 223. Effective date.

TITLE I

FINDINGS AND PURPOSE

SEC. 101. (a) The Congress finds and declares that there is a shortage of adequate and affordable housing throughout the Nation; that utilization of the condominium form of ownership can increase the supply of housing and expand the opportunities for homeownership particularly for low- and moderate-income and elderly persons and families. The Congress further finds that consumer abuses have occurred throughout the Nation in the condominium industry which have caused economic and social hardships for consumers, which threaten the continued use and acceptability of the condominium form of ownership and which interfere with the interstate sale of condominiums and that continuation of these abuses is a national problem requiring Federal action.

(b) It is therefore the purpose of this Act to establish national standards for consumer protection and disclosure together with appropriate enforcement procedures, to encourage States to adopt statutes which will provide substantially equivalent or greater consumer protection, and to correct and prevent continuing abuses including abusive use of long-term leasing of recreation and other condominium-related facilities.

TITLE II

DEFINITIONS

SEC. 201. As used in this Act the term—

(1) "affiliate of a developer" means any person who controls, is controlled by, or is under common control with a developer. A person "controls" a developer if the person (i) is a general partner, officer, director, or employee of the developer, (ii) directly or indirectly or acting in concert with one or more other persons, or through one or more subsidiaries, owns, controls, holds with power to vote, or holds proxies representing, more than 20 per centum of the voting interests of the developer, (iii) controls in any manner the election of a majority of the directors of the developer, or has contributed more than 20 per centum of the capital of the developer. A person "is controlled by" a developer if (i) the developer is a general partner, officer, director, or employee of the person, (ii) directly or indirectly or acting in concert with one or more other persons, or through one or more subsidiaries, owns, controls, holds with power to vote, or holds proxies representing, more than 20 per centum of the voting interests of the person, (iii) controls in any manner the election of a majority of the directors, or (iv) has contributed more than 20 per centum of the capital of the persons;

(2) "agent" means any person who reprements, acts for or on behalf of, or in concert with, a developer in selling or offering to sell any condominium unit in a condominium project, but such term does not include an attorney at law whose representation consists solely of rendering legal services;

(3) "association", "unit owners association" or "owners association" means the organization, whose membership consists exclusively of all the unit owners in the condominium project, which is, or will be, responsible for the operation, administration, and management of the condominium project;

(4) "automatic rent increase clause" means a provision in a lease permitting periodic increases in the fee due under the lease which is effective automatically or at the sole option of the lessor, and which provides that the fee shall increase at some percentage rate or the rate of a recognized index;

(5) "common elements" means all portions of the condominium project, other than the units;

(6) "common expenses" means expenditures made or liabilities incurred by or on behalf of the association, together with any allocations to reserves.

(7) "condominium instruments" means all documents or instruments and amendments thereto creating the condominium project;

(8) "condominium project" means real estate which (i) has portions designated as units for separate ownership and the remaining portions designated for common ownership solely by the owners of those units, each owner having an undivided interest in the common elements, and (ii) is or has been offered for sale or sold, directly or indirectly, through use of any means or instruments of transportation or communication of interstate commerce, or the mails;

(9) "conversion condominium project" means a condominium project containing any building that was, at any time before the first conveyance of a unit to a purchaser, wholly or partially occupied by persons other than purchasers and persons who occupy with the consent of purchasers;

(10) "convey" or "conveyance" means (i) a transfer to a purchaser of legal title in a unit at settlement, other than as security for an obligation or, (ii) the acquisition by a purchaser of a leasehold interest for more than five years;

(11) "developer" means any person who offers to sell or sells his interest in a unit not previously conveyed. Developer also means any successor of such person who offers to sell or sells units in the condominium project and who assumes special developer rights in the project including the right to: add, convert or withdraw real estate from the condominium project; maintain sales offices, management offices and rental units; exercise easements through the common elements for the purpose of making improvements within the condominium; or exercise control of the owners association;

(12) "developer control" means any right, arising under State law, the condominium instruments, the association's bylaws, charter or articles of association or incorporation, or power of attorney or similar agreement, through which the developer may control or direct the unit owners association or its executive board. A developer's right to exercise the voting share allocated to any unit which he owns is not deemed a right of developer control if the voting share allocated to that unit is the same voting share as would be allocated to the same unit were that unit owned by any other unit owner at that time;

(13) "executive board" means the body, regardless of name, designated in the condominium instruments to act on behalf of the association;

(14) "ground lease" means a lease, in a leasehold condominium project, of the real estate on or in which one or more of the units are located, the termination or expiration of which will terminate the condominium project or reduce the number of units in the condominium project;

(15) "interstate commerce" means trade, traffic, transportation, communication, or exchange among the States, or between any foreign country and a State, or any transaction which affects such trade, traffic, transportation, communication or exchange;

(16) "lease" includes any agreement or arrangement containing a unit owner's obligation, individually or collectively, to make payments for a leasehold interest or for other rights to use or possess real estate, not including mortgages or other such agreements for the purchase of real estate;

(17) "leasehold condominium project" means a condominium project in which all or a portion of the real estate is subject to a lease, the termination or expiration of which will terminate the condominium proj ect or reduce the size of the condominium project;

(18) "offer" means any advertisement, inducement, solicitation, or attempt to encourage any person to acquire any interest in a unit, other than as security for an obligation;

(19) "person" means a natural person, corporation, partnership, association, trust, or other entity, or any combination thereof;

(20) "purchaser" means any person other than a developer, who by means of a voluntary transfer acquires a legal or equitable interest in a unit, other than (i) a leasehold interest (including renewal options) of less than five years, or (ii) as security for an obligation;

(21) "real estate" means any leasehold or other estate or interest in, over, or under land, including structures, fixtures, and other improvements and interests which by custom, usage, or law pass with a conveyance of land though not described in the contract of sale or instrument of conveyance. "Real estate" includes parcels with or without upper or lower boundaries, and spaces that may be filled with air or water;

(22) "sale of a condominium unit" means any obligation or arrangement for consideration for conveyance to a purchaser of a condominium unit, excluding options or reservations not binding on the purchaser;

(23) "Secretary" means the Secretary of Housing and Urban Development;

(24) "State" includes several States, the District of Columbia, the Commonwealth of Puerto Rico, and the territories and possessions of the United States;

(25) "termination of developer control" means the date when the developer irrevocably relinquishes all rights of developer control or that date when all rights of developer control cease by operation of law or under the provisions of this Act;

(26) "unit" or "condominium unit" means a portion of the condominium project designated for separate ownership; and

(27) "unit owner" means (i) a developer who owns a unit, (ii) a person to whom ownership of a unit has been conveyed or (iii) a lessee of a unit in a leasehold condominium project whose lease expires simultaneously with any lease the expiration or termination of which will remove the unit from the condominium project. Unit owner does not include a person having an interest in a unit solely as security for an obligation. If title to a unit is held in a land trust, "unit owner" means the beneficiary of the trust.

EXEMPTIONS

SEC. 202. (a) The provisions of this Act shall apply to all condominium projects and units except—

(1) a condominium unit sold or offered for sale by the Federal Government, by any State or local government, or any agency thereof; or

(2) a condominium project in which all units are restricted to nonresidential purposes or uses.

(b) The Secretary may by rules and regulations exempt any condominium projects or condominium units from any of the provisions of this Act, if and to the extent that the Secretary determines it to be necessary or appropriate in the public interest and consistent with the protection of consumers and the purposes intended by the policy and provisions of the Act.

PROHIBITIONS

SEC. 203. (a) It shall be unlawful for any developer or agent in selling or offering to sell any condominium unit in any condominium project—

(1) to employ any device, scheme, or atrifice to defraud; or

(2) to obtain money or property by means of any untrue statement of a material fact or any omission to state a material fact necessary in order to make the statements made not misleading, or

(3) to engage in any transaction, practice, or course of business which operates or would operate as a fraud or deceit upon a purchaser.

(b) Any provisions in any lease or management agreement requiring unit owners or the owners association in any condominium project subject to this Act to reimburse, regardless of the outcome, the developer, his successor, or affiliate of the developer for attorneys' fees and/or money judgments, in a suit between unit owners or the owners association and the developer arising under the lease or agreement, are against public policy and void. It is the express intent of Congress that the provisions of this subsection shall apply to leases or agreements regardless of execution date.

COOLING-OFF PERIOD; RIGHTS OF PURCHASERS

SEC. 204. (a) Prior to conveyance of a condominium unit in a condominium project, the purchaser may elect to rescind any contract or agreement for the sale of the unit at any time during the period ending fifteen days after—

(1) the purchaser and developer have executed the contract, or

(2) the purchaser has been furnished with all information required under section 206, whichever occurs later.

(b) A purchaser may exercise the right to rescind under this section by hand-delivering notice or by mailing notice by prepaid United States mail to the developer or his agent, and the developer or his agent shall refund to the purchaser fully and promptly, without penalty, any deposit or other payment made by the purchaser.

(c) If the purchaser has not received all information required by section 206 by the time of conveyance, the purchaser may not elect to rescind the sale pursuant to this section but shall have the right to receive from the developer an amount equal to ten percent of the purchase price of the unit.

(d) Nothing in this subsection shall prevent purchasers from asserting any rights they may have under section 211. The provisions of section 211(c) shall apply in suits seeking to recover damages in excess of the amount recoverable under section 204(c).

NATIONAL STANDARDS FOR CONSUMER PROTECTION

SEC. 205. (a) In a condominium project subject to this Act, a developer—

(1) shall place any deposit made by a purchaser in connection with a sale of or an offer to sell a condominium unit in trust or escrow in an account designated solely for that purpose, by a licensed title insurance company, an attorney, an independent bonded escrow company, or an institution whose accounts are insured by a governmental agency or instrumentality, until delivered to the developer either at settlement or upon forfeiture by the purchaser, or returned to or otherwise credited to the purchaser;

(2) shall be liable to the owners association or unit owners for all losses suffered by the association or unit owners as a result of a tort or breach of contract committed by the developer or an affiliate of the developer during any period prior to the termination of developer control;

(3) shall establish a unit owners association not later than the time of conveyance of the first unit to a purchaser. The developer shall terminate any right to control the unit owners association not later than (i) sixty days after conveyance of 75 per centum of the units to purchasers, or (ii) five years after the date of the first conveyance of a unit to a purchaser, whichever occurs first. In any event, not later than sixty days after conveyance of 25 per centum of the units to purchasers, they shall be entitled to elect not less than 25 per centum of the members of the executive board of the unit owners association, and not later than sixty days after conveyance of 50 per centum of the units to purchasers, they shall be entitled to elect not less than 33⅓ per centum of the members of the executive board of the unit owners association. In determining the percentage of units which have been conveyed, the total number of units in the condominium project is presumed to include the units the developer has reserved the right to build in the recorded condominium instruments;

(4) shall pay all expenses of the unit owners association prior to the first common expense assessment and thereafter shall pay the common expenses for each unit that he owns;

(5) shall not convey to a purchaser an interest in a unit which may be used for residential purposes, unless (i) that unit is substantially completed as evidenced by a certificate of occupancy from a governmental entity or a recorded certificate of completion executed by a registered or licensed architect or engineer who is not an affiliate of the developer; or (ii) there is an executed construction contract for completion of the project and a performance bond of not less

than 100 per centum of the cost of completing that project;

(6) shall display or deliver to prospective purchasers advertising and promotional material only if that material is not inconsistent with the information required to be disclosed under section 206;

(7) shall, other than in a conversion condominium project, warrant and guarantee against defects in the plumbing, electrical, mechanical, structural, or any other components constituting any of the units or common elements. The developer shall assure that subcontractors providing such components are also liable to fulfill the warranties and guarantees under the terms and conditions of this paragraph. Such warranties and guarantees shall exist on a unit for at least one year from the date of conveyance of that unit by a developer to a bona fide purchaser and on all of the common elements for at least three years from the date of completion of each common element or the date of conveyance of the first unit to a purchaser other than an affiliate of the developer, whichever is later. Such warranties and guarantees by the developer shall be separate from, and in addition to, any warranties or guarantees provided by any other person or as otherwise provided by law;

(8) shall, in a conversion condominium project, warrant and guarantee against defects any repair, addition, or improvement which the developer or an affiliate of the developer makes to the plumbing, electrical, mechanical, structural, or any other components constituting any of the unit or common elements. The developer shall assure that subcontractors providing such components are also liable to fulfill the warranties and guarantees under the terms of this paragraph. Such warranties and guarantees shall exist on a unit for at least one year from the date of conveyance of that unit by a developer to a bona fide purchaser and on all of the common elements for at least three years from the date of completion of each common element or the date of conveyance of the first unit to a purchaser other than an affiliate of the developer, whichever is later. Such warranties and guarantees by the developer shall be separate from, and in addition to, any warranties or guarantees provided by any other person, or as otherwise provided by law;

(9) shall in the case of a conversion condominium project—

(i) give each of the tenants and any subtenant notice of the conversion no later than ninety days before the developer will require the tenants and any subtenant in possession to vacate. The notice shall set forth generally the rights of tenants and subtenants under this paragraph, and shall be hand-delivered to the unit or mailed by prepaid United States mail to the tenant and subtenant at the address of the unit or any other mailing address provided by a tenant. No tenant or subtenant may be required by the developer to vacate upon less than ninety days' notice, except by reason of nonpayment of rent, waste, or conduct which disturbs other tenants' peaceful enjoyment of the premises, and the terms of the tenancy may not be altered during that period. Failure of a developer to give notice as required by this paragraph constitutes a defense to an action for possession. Nothing in this paragraph permits termination of a lease by a developer in violation of its terms;

(ii) for sixty days after delivery or mailing of the notice described in (i) of this paragraph, offer to convey each unit or proposed unit occupied for residential use to the tenant who leases that unit. If a tenant fails to purchase the unit during that sixty-day period, the developer may not offer to convey an interest in that unit during the following one hundred and eighty days at a price or on terms more favorable to the offeree than the price or terms offered to the tenant. This clause does not apply to any unit in a conversion condominium project if that unit will be restricted exclusively to nonresidential use or if the boundaries of the converted unit do not substantially conform to the dimensions of the residential unit before conversion;

(10) shall make books and records of the association reasonably available for inspection and copying during the period of his control to unit owners and their authorized representatives, and so long as the units are being offered for sale by the developer, make available for such persons changes in disclosures previously made to purchasers;

(11) shall not enter into contracts or leases with himself or any affiliate of the developer or enter into any management contract, employment contract, or lease of recreational or parking areas or facilities on behalf of the unit owners association, unless those contracts or leases may be terminated by the owners association at any time after the termination of developer control, without penalty, upon not less than ninety days notice to the other party. This paragraph does not apply to any ground lease unless the real estate subject to that lease was submitted to the condominium for the purpose of avoiding the right of the association to terminate a lease under this paragraph.

(b) This section shall not apply to a condominium project in which the developer has conveyed, in an arms-length transaction, at least one unit to a purchaser other than an affiliate of the developer prior to the effective date of this section.

NATIONAL STANDARDS FOR DISCLOSURE

SEC. 206. (a) Not later than the time of sale, a developer of a condominium project shall provide to each purchaser of a condominium unit the following written information—

(1) the name and principal address of the developer, and of the condominium project;

(2) a brief narrative description of the condominium project, including, without limitation, (i) a precise statement of the nature of the interest which is being offered, (ii) the types and number of units presently planned to be built, and (iii) the total number of units that may be included in the condominium project by reason of action of the developer, such as by future expansion or withdrawal of real estate, and the expected effects which such future action would have on the purchaser's interest, and (iv) the nature and extent of any recreational facilities the developer has built or is obligated to build, and (v) a statement as to whether, and under what conditions, persons other than unit owners in the condominium project are entitled to use such facilities;

(3) a statement of the number of units the developer intends (i) to rent or (ii) to sell in blocks of units to persons who do not intend to occupy the units on a year-round basis;

(4) a statement disclosing whether any units or common elements in the condominium project may be used for commercial or industrial purposes, the nature and extent of such uses, and the effect of such uses, if any, on the condominium unit owners;

(5) the developer's schedule for start and completion of all buildings, units, recreation facilities, and other common elements, together with a statement of which portions of the condominium project he is obligated to build under the recorded documents and which portions need not be built;

(6) (i) copies and a brief narrative description of the significant features of the sales contract, the condominium instruments, the bylaws, rules, and regulations, and amendments thereof, (ii) copies of any contracts and leases to be signed by purchasers, (iii) a brief narrative description of any contracts that are subject to section 205(a)(12), and (iv) a statement disclosing whether or not the developer or an affiliate of the developer has an interest in such contracts or leases, and disclosing the extent of such interest, if any;

(7) the expected significant terms of any financing the purchaser is required to use by the developer, including the name of the lender, estimated interest rate, minimum downpayment and commissions, if any, the developer may receive for arranging the financing;

(8) the terms of warranties, if any, provided by the developer and subcontractors under section 205;

(9) the annual association balance sheet, if any, and a projected budget for the association covering the period of one year from the date the first unit is conveyed to a purchaser, and thereafter the current budget of the association, a statement of who prepared the budget, and a statement of the budget's assumption concerning occupancy and inflation factors. The budget shall include, without limitation: (i) a statement of the amount, or a statement that there is no amount, included in the budget as a reserve for repairs and replacement, the items to be covered by the reserves and a statement of the basis for and the adequacy of the amount of the reserve, if any, (ii) a statement of any other reserves, (iii) the projected common expenses by category of expenditures for the association, (iv) the projected monthly common expense assessment for each type of expenditures for the association, (iv) the projected monthly common expense assessment for each type of unit and the formula for determining each unit's share of common expenses, (v) the projected income from common expense assessments and a statement identifying any other sources of income, and (vi) any current or expected fees or charges to be paid by unit owners for the use of the common elements and other facilities related to the condominium project.

(10) a statement disclosing any services provided by the developer which are not reflected in the budget, or any expenses he pays which he expects may become, at any subsequent time, a common expense of the association, and the amount of the additional cost which would be assessed at that time for each type of unit;

(11) a statement disclosing what utilities, insurance and taxes shall be paid for by the association and an estimate of the cost of utilities, insurance, and taxes to be borne by the unit owners individually;

(12) the amount of any initial or special fee due from the purchaser at closing, together with a description of the method of calculating the fee, the purpose to which the moneys will be put, the limitations, if any, on the use of the funds, and whether or not the fee is refundable upon sale of the unit by the purchaser;

(13) a description of any liens, defects, or encumbrances on or affecting the title to all or part of the condominium project;

(14) a statement of any judgments against the association or against the developer materially affecting the condominium project and the status of any pending suits material to the condominium project of which a developer has actual knowledge or to which the association or developer is a party;

(15) a statement of all restrictions or limitations on the use, occupancy, sale, or rental of any condominium unit;

(16) a statement of the purchaser's rights under section 204 of this Act;

(17) a statement that any deposit made by a purchaser in connection with the sale of any unit will be held in trust or escrow until delivered to the developer either at settlement or upon forfeiture by the purchaser, or returned or otherwise credited to the purchaser. The statement shall also contain the name and address of the trustee or escrow agent holding such escrow; and

(18) a statement of all unusual and ma-

terial circumstances, features, and characteristics of the condominium project.

(b) In the case of a conversion condominium project, the developer shall provide the following information in addition to the information required in subsection (a) of this section—

(1) a report, or a statement by the developer based on such report, prepared by an independent licensed architect or engineer, describing the present condition of all structural components and mechanical and utility installations which are material to the use and enjoyment of the condominium project;

(2) a statement by the developer of the expected useful life of each item reported on in paragraph (1) or a statement that no representations are made in this regard, and a statement of which items reported on in paragraph (1) are not covered by warranties disclosed under subsection 206(a)(8); and

(3) a list of any outstanding notices of uncured violations of building codes or other municipal regulations, together with the estimated cost of curing those violations.

(c) In the case of a leasehold condominium project, the developer shall provide the following information in addition to that required in subsections (a) and, if applicable, (b) of this section—

(1) a brief narrative description of the terms and significant features of the lease including, but not limited to (i) the amount of annual rent, (ii) the method of payment, (iii) the provisions pertaining to increases in rent, (iv) the date and place of recordation of the lease, (v) the expiration date, and (vi) the real estate subject to the lease;

(2) a statement describing any rights of unit owners to redeem or renew the lease and to remove any improvements, the manner whereby such rights may be exercised, or a statement that they do not have those rights;

(3) the formula for determining allocation of ownership interests, voting rights, and common expense liability upon termination of the lease; and

(4) a statement describing any right of the lessor to terminate the leasehold interest prior to the expiration of the lease.

(d) The developer, prior to conveyance, shall disclose to all purchasers any material change in the information previously furnished as required by this section.

(e) All information required by this section shall be in writing and fully, accurately, and simply stated.

(f) If a condominium project is composed of not more than twelve units and no power is reserved to a developer to make the condominium project part of a larger condominium project, group of condominium projects, or other real estate, the disclosures need not include the disclosures otherwise required by paragraphs (2) (ii) (iii), (3) (4), (5), (11), (12), (13), and (14) of subsection (a) of this section.

(g) This section shall not apply to a condominium unit restricted to commercial or industrial purposes.

(h) This section shall not apply to the sale of a unit in a condominium project in which the developer has conveyed, in an arms length transaction, one or more units to a purchaser other than an affiliate of the developer prior to the effective date of this section.

(i) If a condominium project is currently registered with the Securities and Exchange Commission of the United States, delivery to a purchaser of a copy of the prospectus files with the Securities and Exchange Commission, under the provisions of the Securities Act of 1933, satisfies the disclosure requirements of section 206 of this Act.

STATE CONDOMINIUM JURISDICTION

SEC. 207. (a) Nothing in this Act may be construed to prevent or limit the authority of any State or local government to enact and enforce any law, ordinance, or code with regard to any condominium project or condominium unit not in conflict with this Act. It is the intent of Congress to encourage the assumption and exercise by States of the authority and responsibility for the protection of condominium purchasers and owners.

(b) The Secretary, in the Secretary's discretion, may certify that standards and disclosure requirements in a State's laws applicable to condominium units or projects, taken as a whole, provide substantially equivalent or greater consumer protection than the national standards. Upon such certification the standards under the State's laws will apply for the purposes of this Act in lieu of the standards in sections 205 and 206. The Secretary may, in the Secretary's discretion, withdraw certification upon determination that a State's laws do not meet the requirements for certification.

INVESTIGATIONS, AND PROSECUTION OF OFFENSES

SEC. 208. (a) Whenever it shall appear to the Secretary that any person is engaged or about to engage in any acts or practices which constitute or will constitute a violation of the provisions of this Act, or of any rule or regulation prescribed pursuant thereto, the Secretary may, in the Secretary's discretion, transmit such evidence as may be available concerning such acts and practices to the Attorney General who shall bring an action in any district court of the United States, or the United States District Court for the District of Columbia to enjoin such acts or practices, and, upon a proper showing, a permanent or temporary injunction or restraining order shall be granted pursuant to this section, without bond. The Secretary also may transmit such evidence as may be available concerning such acts or practices to the Attorney General who may institute the appropriate criminal proceedings under this Act.

(b) The Secretary may make investigations as the Secretary deems necessary to determine whether any person has violated or is about to violate any provision of this Act or any rule or regulation prescribed pursuant thereto, and may require or permit any person to file a statement in writing, under oath or otherwise as the Secretary shall determine, as to all the facts and circumstances concerning the matter to be investigated. The Secretary is authorized to publish information concerning any such violations, and to investigate any facts, conditions, practices, or matter which the Secretary may deem necessary or proper to aid in the enforcing of the provisions of this Act, in the prescribing of rules and regulations thereunder, or in securing information to serve as a basis for recommending further legislation concerning the matters to which the Act relates.

(c) For the purpose of any such investigation, or any other proceeding under this Act, the Secretary or any officer designated by the Secretary is empowered to administer oaths and affirmations, subpena witnesses and compel their attendance, take evidence, and require the production of any books, papers, correspondence, memorandums, or other records which the Secretary deems relevant or material to the inquiry. Such attendance of witnesses and the production of any such records shall be required from any place in the United States or any State at any designated place of hearing.

(d) In case of contumacy by, or refusal to obey a subpena issued to, any person, the Secretary may, in the Secretary's discretion, transmit evidence of such act or practice to the Attorney General who shall bring an action to invoke the aid of any court of the United States within the jurisdiction of which such investigation or proceeding is carried on, or where such person resides or carries on business, in requiring the attendance and testimony of witnesses and the production of books, papers, correspondence, memoranda, and other records and documents. And such court shall issue an order requiring such person to appear before the Secretary or any officer designated by the Secretary, there to produce such records and documents if so ordered, or to give testimony touching the matter under investigation or in question; and any failure to obey such order of the court shall be punished by such court as a contempt thereof. All process in any such case may be served in the judicial district whereof such person is an inhabitant or wherever he may be found.

OPERATIONAL TERMINATION OF SELF-DEALING CONTRACTS

SEC. 209. (a) Any contract that—

(1) provides for operation, maintenance, or management of a unit owners association or property serving the unit owners; and

(2) is between unit owners or the unit owners association and the developer or an affiliate of the developer; and

(3) is entered into prior to the termination of developer control of the unit owners association; and

(4) is for a period of more than two years

may be terminated without penalty by the unit owners or owners association.

(b) The termination may occur at any time following termination of developer control of the unit owners.

(c) The termination shall be by a vote of owners of not less than two-thirds of the units other than the units owned by the developer or an affiliate of the developer.

(d) Following the unit owners' vote, the termination shall be effective ninety days after hand-delivering notice or mailing notice by prepaid United States mail to the parties to the contract.

(e) It is the express intent of Congress that the provisions of this section shall apply to contracts regardless of execution date.

CIVIL ACTIONS; UNCONSCIONABLE LEASES

SEC. 210. (a) Unit owners may bring an action seeking a judicial determination that a lease or leases, or portions thereof, are unconscionable if each lease has all of the following characteristics:

(1) it was made in connection with a condominium project; and

(2) it was entered into before termination of developer control of the unit owners association; and

(3) it had to be accepted or ratified by purchasers or through the unit owners association as a condition of purchase of a unit in the condominium project.

Such suit must be authorized by the unit owners through a vote of the owners of not less than two-thirds of the units other than units owned by the developer, or an affiliate of the developer, and may be brought by the unit owners as a group or through the unit owners association.

(b) In making its determination of unconscionability, the court shall consider, but not be limited to—

(1) any gross disparity between the obligation incurred and the value of the benefit derived by the lessees, including consideration of (i) the obligations to pay rent, taxes, and insurance, and to maintain, repair, and replace the property, (ii) the value of the leased property, (iii) the price at which comparable property could have been acquired, and (iv) the lessor's rate of return on investment in the leased property and the condominium development as a whole;

(2) the unequal bargaining position of the parties to the lease;

(3) the adequacy of disclosure of the existence and terms of the lease to purchasers and the ability of purchasers to comprehend their rights and obligations thereunder; and

(4) the identity of interest, if any, of original parties to the lease.

(c) If it is established that, in addition to the characteristics of subsection (a) of this section, the lease—

(1) is for a period of more than twenty-one years or is for a period of less than twenty-one years but contains automatic renewal provisions for a period of more than twenty-one years; and

(2) contains an automatic rent increase clause or creates a lien subjecting any unit to foreclosure for failure to make payments; and

(3) contains provisions requiring the lessees to assume all or substantially all obligations and liabilities associated with maintenance and use of the leased property;

then the court, in making its finding, shall consider the lease to be unconscionable, unless proven otherwise by clear and convincing evidence under the standards in subsection (b).

(d) Upon finding that any lease, or portion thereof, is unconscionable, the court may exercise its authority to grant remedial relief as necessary to avoid an unconscionable result. Such relief may include, but shall not be limited to, rescission, reformation, restitution, the award of damages and reasonable attorney fees and court costs.

(e) The remedies provided by this section are to be liberally administered to the end that the aggrieved parties are put in as good a position as if the bargaining and terms had been fair.

(f) Notwithstanding the provisions of subsections (a) through (e) of this section, exercise of any automatic rent increase clause shall be unenforceable, against unit owners or the owners association, as to future increases in rental payments occurring after the effective date of this Act in a lease having all of the following characteristics:

(1) it contains provisions requiring the lessees to assume all or substantially all obligations and liabilities associated with maintenance and use of the leased property; and

(2) it was entered into before termination of developer control of the unit owners association; and

(3) it had to be accepted or ratified by purchasers or through the unit owners association as a condition of purchase of a unit in the condominium project.

(g) It is the express intent of Congress that the provisions of this section shall apply to leases regardless of execution date, except that subsections (c) and (f) shall not apply to—

(1) ground leases entered into prior to the enactment of this Act; or

(2) any ground lease which the lessor has entered into in an arms-length transaction with the developer, without there being an identity of interest between the lessor and the developer. Such identity of interest includes, but is not limited to, situations where the lessor is the developer, an agent of the developer, an affiliate of the developer, or is a member of the immediate family of the developer or affiliate of the developer.

CIVIL ACTIONS; ADDITIONAL REMEDIES

SEC. 211. (a) A developer, or agent or successor thereto subject to this Act, may be sued at law or in equity by any person aggrieved by a violation of this Act.

(b) In any suit authorized by this section for violation of sections 203, 205, or 206, damages may be awarded or such other relief granted as deemed fair, just, and equitable. The court in awarding relief shall consider, but not be limited to, the contract price of the unit, the amount paid by the purchaser on the contract, the cost of any improvements or necessary repairs paid by the purchaser, the fair market value of the unit at the time of sale to the purchaser, the fair market value of the unit at the time the suit was brought, and the fair market value of the unit at the time of judgment.

(c) In any suit brought by purchasers alleging misrepresentations or omissions of disclosure requirements in violation of sections 203(a) or 206, the plaintiff must prove that the misrepresentations or omissions were material and that the defendant acted intentionally or negligently.

(d) Unless otherwise specified, suits authorized under this Act may be brought by one or more purchasers on behalf of all purchasers in a condominum project or by the owners' association in its own right or as representing all or part of the members of such association. In a class action under this Act brought by one or more unit owners as representative of other unit owners in a condominum project, the complaint shall be verified and shall allege with particularity the efforts the plaintiff has made to have the owners association bring such action on behalf of all unit owners. The class action may not be maintained if plaintiff has failed to notify the officers of the association of the intention to file the suit, or if such owners association is seeking in a pending suit to enforce the rights alleged in the plaintiff's suit.

(e) Every person who becomes liable to make any payment under this section may recover contributions from any person who, if sued separately, would have been liable to make the same payment.

(f) The amounts recoverable under this section may include interest paid, reasonable attorneys' fees, independent engineer and appraisers' fees, and court costs.

CRIMINAL PENALTIES

SEC. 212. Any person who willfully violates section 203(a), 205, or 206 of this Act shall upon conviction be fined not more than $10,000 or imprisoned not more than five years, or both.

JURISDICTION

SEC. 213. The district courts of the United States, the United States courts of any territory, and the United States District Court for the District of Columbia shall have jurisdiction of offenses and violations under this Act and under the rules and regulations prescribed by the Secretary pursuant thereto and concurrent with State courts, of suits in equity and actions at law brought to enforce a liability or duty created by this Act without regard to amount in controversy. Any such suit or action may be brought in the district wherein the defendant is found or is an inhabitant or transacts business, or in the district where the offer or sale took place and process in such cases may be served in other districts of which the defendant is an inhabitant or wherever the defendant may be found. Suits by purchasers to enforce their rights under section 205 or 206 regarding condominium projects located in States certified pursuant to section 207(b) shall be brought in State court. No case arising under this Act and brought in any State court of competent jurisdiction shall be removed to any court of the United States, except where any officer or employee of the United States in his official capacity is a party. No costs shall be assessed for or against the Secretary in any proceeding under this Act brought by or against the Secretary in the Supreme Court or such other courts.

LIMITATIONS OF ACTIONS

SEC. 214. No action shall be maintained to enforce any right or liability in sections 210 and 211 unless brought within six years after such cause of action accrued except that an action pursuant to section 210 involving a lease in existence at the time of enactment of this Act must be brought within three years of enactment of this Act.

ADMINISTRATION

SEC. 215. (a) The authority and responsibility for administering this Act shall be in the Secretary of Housing and Urban Development who may delegate any functions, duties, and powers to employees of the Department of Housing and Urban Development.

(b) The Secretary shall have authority, from time to time, to make, issue, amend, and rescind such rules and regulations and such orders as are necessary or appropriate to carry out the purposes of this Act. For the purpose of rules and regulations, the Secretary may classify persons and matters within the Secretary's jurisdiction and prescribe different requirements for different classes of persons or matters. In the development of these rules and regulations the Secretary shall consult with representatives of the building industry, with appropriate public officials and organizations of public officials, with representatives of the lending community and with representatives of consumer groups.

(c) Any person who violates any provisions of this Act or any rule, regulation, or order issued by the Secretary thereunder may be subjected to a civil penalty, in a determination by the Secretary after opportunity for a hearing, not to exceed $5,000 for each violation. Each separate offense shall be a violation and, in the case of a continuing offense, each day shall constitute a separate violation. The determination of the Secretary shall be subject to review only as provided in subsection (d) below.

(1) Penalties assessed pursuant to this section may be collected in an action brought by the Attorney General or, if the Attorney General directs, by the Secretary in any district court of the United States. In such action the validity and appropriateness of the final determination imposing the penalty shall not be subject to review.

(2) The amount of such penalty, when finally determined shall be payable to the United States Treasury.

(d) All hearings pursuant to subsection (c) of this section shall be public and any determination after such hearing shall be based on the record made at such hearing which shall be conducted in accordance with the provisions of the Administrative Procedures Act. A person aggrieved by a final determination of the Secretary under subsection (c) of this section may request a judicial review thereof in the United States court of appeals nearest where the person does business or United States Court of Appeals for the District of Columbia within twenty days after the Secretary's determination. Technical review of the Secretary's determination shall be in accordance with section 706 of title 5, United States Code.

CONTRARY STIPULATIONS VOID

SEC. 216. Any condition stipulation, or provision binding any person to waive compliance with any provisions of this Act or of the rules and regulations of the Secretary shall be void.

REPORT TO CONGRESS

SEC. 217. The Secretary shall prepare and submit to Congress, a comprehensive report on the administration of this Act and the Progress of States in providing consumer protection for condominium purchasers. The report shall be due thirty months after the enactment of this Act.

CONSUMER RESEARCH, EDUCATION, AND INFORMATION

SEC. 218. The Secretary is authorized by contract or otherwise, to undertake research, education, information, and technical assistance activities designed to inform, assist, and protect consumers in the purchase of condominium units and management of condominium projects.

ADDITIONAL REMEDIES

SEC. 219. The rights and remedies provided by this Act shall be in addition to any and all other rights and remedies that may exist under Federal or State law.

APPLICABILITY OF OTHER PROVISIONS OF LAW

SEC. 220. (a) Compliance with the requirements imposed by or under this Act by a developer of a condominium project, not exempt under section 202, in which the units are in a building or buildings that are constructed or proposed to be constructed by the developer, shall be deemed to satisfy the requirements now or hereafter imposed under the Interstate Land Sales Full Disclosure Act with respect to a sale of or an offer to sell a condominium unit in a condominium project.

(b) Nothing in this Act shall affect the applicability of the Securities Act of 1933 and the Securities and Exchange Act of 1934.

(c) The provisions of the Magnuson-Moss Warranty—Federal Trade Commission Improvement Act (15 U.S.C. 2301 et seq.) shall be applicable in addition to warranty provisions of this Act, notwithstanding section 111(d) of that Act (15 U.S.C. 2311(d)).

AUTHORIZATION OF APPROPRIATIONS

SEC. 221. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

SEPARABILITY

SEC. 222. If any provisions of this Act or the application thereof to any person or circumstance is held invalid, neither the remainder of this Act nor the application of such provision to other persons or circumstances shall be affected thereby.

EFFECTIVE DATE

SEC. 223. This Act shall become effective upon enactment, except sections 205, 206, 208–210, 212, 213, and 220(a) shall become effective one year after enactment.

---

EXHIBIT 2

CONDOMINIUM ACT OF 1978: SECTION-BY-SECTION SUMMARY

The first section of the bill would provide that, upon enactment, it may be cited as the "Condominium Act of 1978."

TITLE I

*Findings and purpose*

Sec. 101. This section, in part, would set forth Congressional findings that utilization of the condominium form of homeownership would expand homeownership opportunities particularly for low- and moderate-income and elderly persons and families, that abuses in the sale and operation of condominiums threaten the continued acceptability of condominiums by consumers and that these abuses interfere with interstate commerce. The section would also set for the purpose of the Act which is to establish national standards for consumer protection and disclosure, to encourage States to adopt statutes which will provide substantially equivalent or greater consumer protection, and to correct and prevent existing and continuing abuses in the sale and operation of condominiums.

TITLE II

*Definitions*

Sec. 201. This section would define terms used in the Act.

*Exemptions*

Sec. 202. This section would exempt from the Act, condominium projects in which all units are restricted to non-residential uses and a sale of or an offer to sell condominium units by a governmental agency. This section would also give the Secretary the authority to make other exemptions.

*Prohibitions*

Sec. 203. This section follows the language of the Securities Act of 1933 and the Interstate Land Sales Full Disclosure Act in making a developer liable for any fraudulent acts he commits in connection with a sale of or offer to sell a condominium unit.

Additionally, the section would provide that any provision in existing or future leases or management agreements, requiring unit owners to reimburse the developer or his successors for attorney's fees or money judgments, regardless of the outcome of the suit, are void.

*Cooling-off period*

Sec. 204. This section would give the purchaser the right to cancel the sales contract within 15 days after signing the contract or after receiving the disclosure material, whichever is later. If the purchaser does not receive disclosure material before conveyance, the purchaser has the right to receive an amount equal to 10 percent of the purchase price.

*National standards for consumer protection*

Sec. 205. This section sets forth the standards to be followed by developers. This section would, in part, require a developer to place any deposit made in connection with a reservation or sale of a unit in trust or escrow; terminate any right to control the owners association within five years; not display any advertising and promotional material which is inconsistent with the information in the disclosure statement; allow the owners association to terminate without penalty all employment or management contracts, recreation leases and any contract between the developer and the owners association made before termination of developer control; give a one-year warranty on the units and a three-year warranty on the common elements and also require subcontractors to be liable for their work; and in a conversion condominium give tenants 120 days' notice to vacate and a 60-day exclusive option to buy. This section would not apply to the sale of a unit in a condominium project in which the developer has conveyed in an arms length transaction at least one unit to a purchaser prior to the effective date of this Act.

*National standards for disclosure*

Sec. 206. This section would require a developer to disclose to purchasers, in a simple manner, circumstances and features of the condominium project including, in part: the name and address of the developer; the developer's schedule for starting and completing all of the facilities; a statement of all written warranties; budget and estimate of monthly assessments and other fees; a copy of all important documents; a statement of purchasers' rights; and special additional disclosures in the case of conversion and leasehold (ground rent) condominium projects. Some items of disclosure need not be given for condominium projects with 12 or fewer units. This section would not apply to the sale of a condominium unit in a condominium project where the developer had already conveyed a unit to a purchaser, in an arms length transaction, prior to the effective date of the Act, nor to a commercial or industrial condominium unit, nor to a condominium project registered with the Securities and Exchange Commission if the developer gives the purchaser an approved prospectus.

*State condominium jurisdiction*

Sec. 207. This section would state that the Act should not be construed to limit States and local governments from enacting or enforcing laws not in conflict with this Act. It expresses the intent of Congress to encourage the assumption and exercise by States of the authority and responsibility for the protection of condominium purchasers and owners. The section, further reflecting this intent, would allow the Secretary to certify standards and disclosures in a State's laws if the Secretary finds that such standards and disclosures, taken as a whole, provide substantially equivalent or greater consumer protection than the standards and disclosures of the Federal Act (Sections 205 and 206). Upon certification, purchasers would still have certain rights established by this Act, including rights to a 15-day cooling-off period and to bring actions on unconscionable leases or self-dealing contracts, as well as for fraud.

The effect of certification would be that the developer in a certified State would have to conform to the State requirements rather than the specific provisions of sections 205 and 206. The Secretary would have the power to withdraw such certification if it was later determined that the State laws do not contain substantially equivalent or greater standards.

*Investigations, injunctions, and prosecution of offenses*

Sec. 208. This section would provide the Secretary with powers to enforce this Act. The Secretary could make investigations, and subpoena documents and witnesses in such investigations. The Secretary would have authority to refer evidence of serious violations to the Attorney General for criminal prosecution or civil injunctions. The Secretary could also seek enforcement of subpoenas through the Attorney General.

*Optional termination of self dealing contracts*

Sec. 209. This section would allow the unit owners, by two-thirds vote, to terminate certain contracts made by the association with the developer or his affiliate while he was still in control of the unit owners association.

*Civil actions—Unconscionable leases*

Sec. 210. This section would allow the unit owners, by two-thirds vote, to seek a judicial determination that any lease or portions of leases are unconscionable if the lease was made in connection with the condominium project, was made while the developer was in control of the association, and had to be accepted or ratified by the purchaser or the association as a condition of purchase.

If the lease is for 21 years or contains provisions for automatic renewal for a period of more than 21 years, either contains an automatic rent increase clause or subjects the unit to foreclosure for failure to make payments, and contains provisions that the lessees assume all obligations and liabilities associated with the maintenance and use of the property, then the court shall consider the lease unconscionable.

Several factors are listed for the court to consider in determining unconscionability, including any gross disparities between the obligations incurred and the benefits received, the bargaining position of the parties and the adequacy of disclosures. Upon a finding of unconscionability, the court would have the power to grant remedial relief including rescission, reformation, restitution, the award of damages, attorneys fees and court costs.

In addition, this section would provide that any automatic rent increase clause would be unenforceable, as to future increases in rental payments, in a lease which was entered into prior to termination of developer control, had to be ratified by purchasers, and contains provisions that the lessees assume all obligations and liabilities associated with the maintenance and use of the property.

Ground leases in existence at the time of enactment, made in an arms length transaction, are exempted from the provisions setting out certain of the provisions dealing with unconscionability and as well as the unenforceable automatic rent increase clause provisions. However, ground leases are subject to judicial determinations of unconscionability.

*Civil actions—Additional remedies*

Sec. 211. This section would provide for other civil suits under the Act. A civil suit could be brought by any person aggrieved by a violation of the Act, including a purchaser or unit owners association, on its own behalf or as a class action. In any suit

alleging misrepresentation or omissions in connection with the disclosures or the standards, the plaintiff would be required to prove that the misrepresentation or omissions were material and that the defendant acted intentionally or negligently. In determining damages the court would consider several factors including the contract price of the unit, the amount paid by the purchaser, the cost of any improvements or repairs made by the purchaser, and the fair market price at the time of sale, at the time the suit was brought and at the time of judgment. Relief in such actions would include damages, attorneys' fees and other costs.

*Criminal penalties*

Sec. 212. This section would provide criminal penalties of up to five years imprisonment and/or $10,000 fine for willful violations of certain provisions of the Act.

*Jurisdiction*

Sec. 213. This section would give jurisdiction to district courts for suits under the Act, concurrent with state courts. Jurisdiction would apply without regard to the amount in controversy. Suits could be brought in a district where the defendant is an inhabitant or transacts business, or in a district where the offer or sale took place. However, actions seeking to enforce State standards and disclosures will be restricted to State courts in cases where the State law has been certified, and the condominium project is located in that State.

*Limitation of actions*

Sec. 214. This section would establish a statute of limitations of six years from the time of a violation, unless the action is under Section 210 and involves a lease in existence at the time of enactment of the Act, in which case it must be brought within three years of enactment.

*Administration*

Sec. 215. This section would give the authority and responsibility for administering this Act to the Secretary of Housing and Urban Development. The Secretary would have the authority to make rules and regulations, issue orders, and delegate functions, duties and powers to employees of the agency. In carrying out this rulemaking authority, the Secretary is required to consult with representatives of the building industry, lending community, consumer groups, and public officials. The section also provides for the imposition of a civil money penalty of up to $5,000 for each violation of the Act and sets up the administrative and judicial procedures thereunder.

*Contrary stipulations void*

Sec. 216. This section would void contract provisions waiving any purchaser's rights under the Act.

*Report to Congress*

Sec. 217. This section would require the Secretary to prepare and submit a report to Congress thirty months after the enactment of the Act.

*Consumer research, education, and information*

Sec. 218. This section would authorize HUD to carry out research, education, technical assistance and information activities such as preparation and distribution of a buyer's handbook, a sample "easy to read" disclosure statement, technical assistance on problems confronting condominium associations, lenders, and attorneys, as well as assist State and local officials wishing to adopt or amend condominium laws. HUD could also serve as a clearinghouse for consumer protection information and activities.

*Additional remedies*

Sec. 219. This section would make it clear that purchasers would continue to have rights to remedies which already exist under State or Federal laws.

*Applicability of other provisions of law*

Sec. 220. This section would limit overlap of Federal laws by providing that developers of most condominium projects, where the developer has built or plans to build the units, and who comply with this Act, would be deemed in compliance with the Interstate Land Sales Full Disclosure Act. The section also states that nothing in the Act affects the applicability of the Securities Act of 1933, the Securities and Exchange Act of 1934, and the Magnuson-Moss Warranty—Federal Trade Commission Improvement Act.

*Authorization of appropriations*

Sec. 221. This section would authorize such sums to be appropriated as may be necessary for the administration of this Act.

*Separability*

Sec. 222. This section would allow any provision to be held invalid without affecting the remainder of the Act.

*Effective date*

Sec. 223. This section would provide that the anti-fraud cooling-off, civil action and limitation of action provisions become effective upon enactment. The balance of the Act becomes effective one year after enactment.

---

EXHIBIT 3

CONDOMINIUM ACT OF 1978: EXPLANATION AND JUSTIFICATION

A bill to encourage the broader utilization of the condominium form of homeownership, to provide minimum national standards for disclosure and consumer protection for condomium purchasers and owners and tenants in condominium conversions, to encourage States to establish similar standards, to correct abusive use of long-term leasing of recreation and other condomium-related facilities and for other purposes

INTRODUCTION

Generally, the condominium form of ownership is characterized by the separate ownership of individual units combined with a share in the ownership of the common elements. Because condominiums offer many of the benefits of single family ownership at affordable prices and without the burdens of property maintenance, they have a particular appeal to small families on tight budgets—young couples, singles, and older people. Condominiums, therefore, have strong potential as a less expensive alternative to single family homeownership in and around metropolitan areas where land is at a premium necessitating higher densities.

The condominium form of ownership was first introduced in this country in the early 1960s, but it was not until the early 1970s that condominiums began to represent a significant segment of the housing market. By October 1976, the condominium inventory approximated 700,000 units, most of which were constructed during the previous six years.

As the number of units increased, however, so did reports of problems and abuses associated with the development, sale, and ownership of condominiums. Consumer confidence in this form of tenure began to wane and the sale of condominiums was affected adversely.

As a consequence of public concern about abuses, Congress mandated a HUD Condominium/Cooperative Study which was completed in 1975. The Study identified the following major problems associated with condominiums:

Documentation was too complicated and difficult for the average purchaser to understand.

Purchasers' deposit were not escrowed and were often lost if the developer went into bankruptcy.

Developers underestimated future maintenance costs.

Construction was often of poor quality and purchasers were not protected by adequate warranties on their units and the common elements.

Purchasers were unwittingly committed by some developers to long-term leases in recreational facilities at extremely high rates, often tied to cost-of-living indices.

Tenants were displaced without sufficient notice when the rental units were converted to condominiums.

Developers failed to pay common expense assessments on their units.

Unit owners associations encountered difficulties in operating condominium projects.

The study also showed that the laws governing the creation and operation of condominiums varied widely—as they still do—from State to State. Some State laws merely require a courthouse filing, while "second generation" State statutes have detailed requirements and, in some cases, provide for regulatory agencies. Only fifteen States and the District of Columbia have enacted such second generation statutes. All other States—including four of the ten States with the highest level of condominium development—still have minimal requirements and few, if any, consumer protections.

Recognizing that modern State law was essential to deal with advances in condominium development, the National Conference of Commissioners on Uniform State Laws has recently adopted a model State enabling statute, known as the Uniform Condominium Act (UCA), which is patterned after the most advanced second generation State statutes.

This proposed national legislation complements, rather than substitutes for, the UCA and other State enabling statutes. Under this bill, all States would have uniform minimum standards for consumer protection that are similar to those provided in the UCA. Since the proposed bill is designed to encourage the enactment of second generation statutes such as the UCA, it provides a mechanism for the Department of Housing and Urban Development to certify State standards and disclosure requirements, if the State law provides substantially equivalent or greater consumer protection. Existing State laws which meet this test would be certified as soon as possible after enactment of the bill. The Federal standards and disclosures would apply in those States with laws that do not meet this test. Any State that subsequently adopted the UCA or similar statute would meet the test and be eligible for certification. The protection in the Federal statute, other than the standards and disclosures, would be available in all States whether or not they are certified.

The proposed bill is designed to restore consumer confidence in condominium without unduly restricting the condominium market. It addresses major problems and abuses associated with the sale and ownership of condominiums including existing long-term recreation leases and "sweetheart" management contracts. The bill would establish national standards for consumer protection and national disclosure requirements in the sale of condominium units. Residential projects including time-share and recreational condominium projects would be covered by the Act, but industrial and commercial projects are exempt.

DISCLOSURES

Because of the complexity of the condominium concept, purchasers often fail to comprehend the ramifications of a decision to buy a unit. The proposed legislation would, therefore, require full disclosure to the purchaser of all documentation and information necessary to make an informed and prudent buying decision. This information includes narrative descriptions of the condominium, statements by the developer concerning what he is obligated to build, com-

pletion schedules, and a statement of the purchaser's rights. Budget figures for the owners association also would be disclosed with separate estimates of dues, fees and other costs.

Additional disclosures would be required in the case of condominium conversions because of the difficulty in assessing the structural condition of the building, especially when all or a part has been rebuilt or rehabilitated. These disclosures include engineers' reports and lists of outstanding code violations with estimates of the costs of correction.

In the case of leasehold condominiums (a condominium where the unit owners do not own, but rent the underlying land on a long term lease) the purchaser would also be furnished with such material information as the length of the lease and termination rights.

This section also contains a general clause requiring disclosure of unusual and material features which would affect a purchaser's buying decision, such as serious detrimental characteristics of the environment or location.

In order to avoid conflicts with State laws and a time-consuming approval process, Federal registration of the disclosure statement is not required by this bill In addition, unnecessary duplication and overlapping disclosure statements are prevented because disclosures made in a prospectus filed with Securities and Exchange Commission are deemed to satisfy the disclosure requirements of the proposed bill and, for most residential condominiums, disclosures made in connection with this bill are deemed to satisfy the requirements of the Interstate Land Sales Disclosure Act.

The bill would require developers to present the disclosure information fully and accurately, and simply stated, so that the disclosure is of maximum benefit to the purchaser. The Secretary would be authorized to prepare educational and informational materials beneficial to the purchaser, such as a model "buyer's handbook" and other information in layman's language.

PROHIBITIONS

Disclosure, in and of itself, is not adequate protection if the purchaser does not receive the information prior to settlement or in a timely fashion. Thus, the proposed legislation provides a fifteen-day right of rescission after the purchaser signs the sales contract or receives the disclosure information, whichever occurs later. If the purchaser does not receive the disclosure information before conveyance of the property, he would not be able to rescind the conveyance, but could receive an amount equal to 10 percent of the purchase price. Damages above this amount could be claimed in a civil suit. In addition, anti-fraud provisions would protect the purchaser from misstatements in the disclosure statement or in the advertising or promotional literature, or other fraudulent conduct.

The cooling-off and anti-fraud provisions of the bill would apply, whether or not a State's standards and disclosure sections are certified.

STANDARDS

The proposed legislation also establishes national standards for condominiums intended to alleviate the major problems and abuses disclosed by the HUD Condominium Study. For example, buyers' deposits would have to be placed in escrow accounts, a protection against loss due to project failure or willful misapplication of funds.

Some of the most common consumer complaints concern poor quality construction and the lack of warranties and engineers' reports. While these problems occur in all types of housing, they are aggravated in condominiums because of the interdependence of the unit owners and the impracticability of individual inspections of the common elements. The proposed bill would require the developer to warrant the common elements for at least three years and to give each purchaser a one-year warranty on the unit. As a further protection to unit owners, the developer would be required to assure that subcontractors are also liable to fulfill all warranties and guarantees for work that is performed.

It should be noted that these warranty provisions are not intended to take the place of any warranty or guaranty, express or implied, provided under any other Federal, State or local law.

Many of the problems associated with condominiums result from the way the developer operates the owners association. A condominium developer typically retains control over operation and maintenance of the common property until most, and in some cases all, units are sold. The developer's retention of control or influence past the time necessary to protect his interests can severely hamper future operation and management of the project. This bill protects the unit owners from acts or negligence of the developer while the owners association is under his control.

Many of the problems that beset the owners association when it assumes control of the project arise from the fact that the unit owners lack the necessary knowledge and experience. In order to provide the unit owners with an opportunity to participate and gain experience in the operation of the association, the unit owners would elect a minority of directors of the association prior to the transfer of control. The developer would be required, within five years, to relinquish any special rights to control the owners association.

The proposed legislation would also authorize the Secretary to provide technical information to unit owner associations to help them overcome operational and management problems which might jeopardize the economic viability of existing and future condominium projects.

UNENFORCEABLE AUTOMATIC RENT INCREASE CLAUSES

The bill also addresses problems with existing long-term leases and contracts which had to be accepted or ratified by the purchasers as a condition of purchase, and were entered into during the period of developer control. For example, a developer may have retained the ownership of the recreational facilities and leased them to the unit owners—on a noncancellable basis—for periods as long as 99 years. The unit owners would be required under the lease to directly bear all, or substantially all, of the operating and maintenance costs of the facilities. This type of net-net lease with an automatic rent increase clause tied to a cost-of-living index, which has no relationship to the developer's obligations under the lease, has become an abusive practice. The proposed legislation would make these automatic rent increases in net-net leases unenforceable as to future increases.

UNCONSCIONABLE LEASES

In addition, the unit owners can agree, by two-thirds vote, to seek a judicial determination that a lease is unconscionable. Subsection 210(a) lists certain characteristics that the lease must have in order to bring this action, such as the fact that it had to be accepted by the purchaser as a condition of purchase. Section 210(b) sets forth several standards for the court to consider in making a determination of unconscionability. These include any gross disparity between the obligations incurred and the value of the benefit derived.

If the lease has the characteristics listed in subsection (a), and the unit owners can prove that the lease is for a long term, has an automatic rent increase clause, and contains provisions requiring the lessees to assume all liability for operation and maintenance of the leased property, then the court shall find, under subsection (c), that the lease is unconscionable, unless the developer can prove otherwise by clear and convincing evidence. For example, the developer could show that the lease was not unconscionable under the standards set forth under subsection 210(b) by proving that there was a reasonable relationship between the rent payable under the lease and the value of the benefit received by the lessee. The developer also might present evidence that the lease was negotiated with full knowledge, on the part of the lessees, of the terms and the implications for future payments. If the unit owners could not meet the burden of proof for a court to find a lease unconscionable under the option in subsection (c), they would still have the opportunity to prove the lease unconscionable under the standards set forth in subsection (b).

Upon a finding of unconscionability under any of the provisions of this section, the court may, in its discretion, modify all or a portion of the terms of the lease in order to achieve a just result.

The unconscionability provisions would apply to a lease in existence at the time the Bill is enacted, but any action must be brought within three years of enactment.

OTHER LONG-TERM CONTRACTS

Long-term contracts that provide for the operation, maintenance or management of the association or property serving the unit owners, which are made between the developer, or an affiliate of the developer, and the owners association, while the developer still controls the association, may be detrimental to the interests of the unit owners. The unit owners by two-thirds vote would be permitted to terminate these self-dealing contracts without penalty after they assumed control of the project. This provision would apply to a contract in existence at the time the bill is enacted.

This section and the unconscionability provisions would apply in all States including those that are certified as to disclosures and standards.

The proposed bill also provides that, in addition to self-dealing contracts, the owners association can terminate certain contracts and leases which are critical to the operation of the condominium and to the unit owners' full enjoyment of their rights of ownership. If these contracts are made by the developer on behalf of the owners association while he still controls the association, the unit owners can terminate them without penalty after they assume control of the project.

CONVERSATIONS

An increasing number of rental accommodations are being converted to condominiums, particularly in urban centers, and the rights of tenants in conversions has received national attention. The proposed bill contains special provisions to protect the tenants in a proposed condominium conversion by affording a minimum of 120 days' notice to vacate and a 60-day exclusive right to buy the unit, and also requiring that all existing leases be honored.

ENFORCEMENT

In addition to the specific provisions noted above, basic enforcement of the provisions of the proposed legislation would be achieved through private rights of action, including class action in Federal court. Enforcement would be supplemented by criminal penalties for willful violation of some provisions of the law and by HUD authority to conduct investigations and seek injunctions for violations of the Act. It is contemplated that the Federal government would take action only in cases where there were severe abuses or flagrant violations of the Act or where the sales activities involved were of a sig-

nificant interstate nature. There would be no necessity for Federal action in cases where private rights under the Act were easily enforceable or where State agencies could act. Most actions in certified States would fall into these latter categories.

The bill would allow unit owners to bring suit in State courts and would require such action on standards and disclosures in certified States, thereby alleviating possible burdens on Federal district courts.

The standards and disclosure sections of the bill would not become effective until one year after enactment to facilitate early certification of eligible States, although the anti-fraud, cooling-off, civil action and limitation of action provisions become effective immediately.

In summary, it is anticipated that the proposed legislation will have a beneficial effect on condominium development because it will bolster confidence in this form of ownership by establishing minimum consumer protection standards on a national level. Wherever possible, the provisions are consistent with the Uniform Condominium Act so as to facilitate State adoption of that model law. It is hoped that, in the future, the Federal role in regulating the condominium industry will phase out as the States assume an active role in this field.

## ADDITIONAL COSPONSORS

S. 1783

At the request of Mr. ANDERSON, the Senator from Minnesota (Mrs. HUMPHREY) was added as a cosponsor of S. 1783, the Homemaker Retirement Act.

S. 2312

At the request of Mr. MCCLURE, the Senator from Indiana (Mr. LUGAR) was added as a cosponsor of S. 2312, a bill to amend the Food and Agriculture Act of 1977 to further encourage and strengthen the Nation's commitment for the production and marketing of industrial hydrocarbons and alcohols from agricultural commodities and forest products.

S. 2369

At the request of Mr. ANDERSON, the Senator from North Dakota (Mr. YOUNG), and the Senator from South Dakota (Mr. ABOUREZK) were added as cosponsors of S. 2369, the Dutch Elm Disease Control Act of 1977.

S. 2371

At the request of Mr. ANDERSON, the Senator from Minnesota (Mrs. HUMPHREY) was added as a cosponsor of S. 2371, a bill to amend title 39 of the United States Code to provide that pledge reminders of charitable organizations may be mailed at third-class rates.

S. 2416

At the request of Mr. JAVITS, the Senator from Alaska (Mr. STEVENS), and the Senator from Arkansas (Mr. BUMPERS) were added as cosponsors of S. 2416, the Nurse Training Amendments of 1978.

S. 2507

At the request of Mr. ANDERSON, the Senator from Delaware (Mr. BIDEN), and the Senator from Arizona (Mr. DECONCINI) were added as cosponsors of S. 2507, a bill to authorize the Smithsonian to acquire the Museum of African Art, and for other purposes.

S. 2576

At the request of Mr. MCCLURE, the Senator from Pennsylvania (Mr. SCHWEIKER), the Senator from California (Mr. HAYAKAWA), the Senator from Nebraska (Mr. CURTIS), the Senator from Arizona (Mr. GOLDWATER), and the Senator from Texas (Mr. TOWER) were added as cosponsors of S. 2576, a bill to amend the Internal Revenue Code of 1954 with respect to the tax treatment of earned income of U.S. citizens and resident aliens from sources without the United States, and for other purposes.

S. 2626

At the request of Mr. BUMPERS, the Senator from Tennessee (Mr. BAKER) was added as a cosponsor of S. 2626, a bill to provide price and income protection for agricultural producers by assuring such producers a price for their agricultural commodities of not less than the cost of producing such commodities to assure consumers an adequate supply of food and fiber at reasonable prices, and for other purposes.

S. 2732

At the request of Mr. PERCY, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of S. 2732, the Small Scale Energy Technology Programs Reorganization Act.

S. 2735

At the request of Mr. DURKIN, the Senators from Hawaii (Mr. MATSUNAGA and Mr. INOUYE), the Senator from South Dakota (Mr. MCGOVERN), and the Senator from Alaska (Mr. GRAVEL) were added as cosponsors of S. 2735, a bill to facilitate the transition to an economy based upon solar energy.

S. 2819

At the request of Mr. MCGOVERN, the Senator from South Dakota (Mr. ABOUREZK) was added as a cosponsor of S. 2819, a bill to improve rail transportation and the transportation of passengers by common carriers and to foster and promote employment opportunities through surface transportation employment as covered by the provisions of this act.

S. 2835

At the request of Mr. PERCY, the Senator from Alaska (Mr. GRAVEL) was added as a cosponsor of S. 2835, a bill to amend the Export-Import Bank Act by creating an office to promote the export of solar and other renewable energy technologies.

S. 2895

At the request of Mr. BENTSEN, the Senator from Florida (Mr. CHILES), the Senator from Texas (Mr. TOWER), and the Senator from North Dakota (Mr. BURDICK) were added as cosponsors of S. 2895, a bill to amend the Meat Import Act of 1964.

SENATE JOINT RESOLUTION 122

At the request of Mr. ANDERSON, the Senator from Nebraska (Mr. ZORINSKY) was added as a cosponsor of Senate Joint Resolution 122, a joint resolution to direct the Office of Technology Assessment to undertake a comprehensive evaluation of energy policy alternatives.

SENATE RESOLUTION 360

At the request of Mr. HATHAWAY, the the Senator from New York (Mr. MOYNIHAN) was added as a cosponsor of Senate Resolution 360, to amend the Standing Rules of the Senate to require committees to report on the legality of new or revised executive branch rules, regulations, and guidelines, to create a special counsel to the Senate, and for other purposes.

AMENDMENT NO. 1702

At the request of Mr. PERCY, the Senator from Nevada (Mr. CANNON) was added as a cosponsor of Amendment No. 1702 intended to be proposed to H.R. 7200, the Social Security Act.

AMENDMENT NO. 1709

At the request of Mr. DURKIN, the Senator from New Hampshire (Mr. MCINTYRE) and the Senator from Nebraska (Mr. ZORINSKY) were added as cosponsors of amendment No. 1709 intended to be proposed to the bill (S. 2467) to amend the National Labor Relations Act to strengthen the remedies and expedite the procedures under such act.

AMENDMENT NO. 1726

At the request of Mr. DURKIN, the Senators from Hawaii (Mr. MATSUNAGA and Mr. INOUYE), the Senator from Rhode Island (Mr. PELL), and the Senator from Alaska (Mr. GRAVEL) were added as cosponsors of amendment No. 1726 intended to be proposed to S. 2692, a bill to expand the fiscal year 1979 Department of Energy photovoltaics research, development, and demonstration program.

AMENDMENT NO. 1727

At the request of Mr. DURKIN, the Senators from Hawaii (Mr. MATSUNAGA and Mr. INOUYE), the Senator from Rhode Island (Mr. PELL), and the Senator from Alaska (Mr. GRAVEL) were added as cosponsors of amendment No. 1727 intended to be proposed to S. 2692, a bill to authorize in fiscal year 1979 a passive solar energy research, development, and demonstration program.

## SENATE RESOLUTION 433—SUBMISSION OF A RESOLUTION RELATING TO MAJOR LEAGUE BASEBALL IN WASHINGTON, D.C.

Mr. MCGOVERN (for himself, Mr. ABOUREZK, Mr. CANNON, Mr. GARN, Mr. HATHAWAY, Mr. HODGES, Mr. LEAHY, Mr. MATSUNAGA, and Mr. YOUNG) submitted the following resolution, which was referred to the Committee on Commerce, Science, and Transportation:

S. RES. 433

Whereas baseball is our national pastime and sport; and

Whereas since 1971 the Metropolitan Area of Washington, D.C. has been deprived of a major league baseball team: Now, therefore, be it

*Resolved*, That it is the sense of the Senate that all efforts, both in the public and private sector, to bring major league baseball back to Washington, D.C. should be assisted and encouraged to the full extent it is proper to do so.

● Mr. MCGOVERN. Mr. President, I send to the desk a resolution and ask for its appropriate referral.

Mr. President, since 1971, the city of Washington has been without a major league baseball team. Many of us enjoyed following the Washington Senators and feel it is important to have our national sport represented in the Nation's Capital.

The Washington Senators, organized

in 1859, and then called the Washington Nationals, were the oldest baseball team in the United States. Their departure to Texas in 1971 where they became the Texas Rangers has left Washington without a major league team. Efforts to move the San Diego Padres, the Baltimore Orioles, and the San Francisco Giants to Washington have failed, and a city which for over 100 years has supported major league baseball, no longer has the opportunity to do so.

Whether or not baseball returns to Washington remains to be seen, but the Senate should express support for an effort which will bring our national sport back to this city. I ask my colleagues to join with me and Senators ABOUREZK, CANNON, GARN, HATHAWAY, HODGES and YOUNG in encouraging the establishment of a major league baseball franchise in our Nation's Capital.●

## AMENDMENTS SUBMITTED FOR PRINTING

### FOREIGN ASSISTANCE AUTHORIZATIONS, 1979—S. 2646

AMENDMENT NO. 1779

(Ordered to be printed and referred to the Committee on Foreign Relations.)

Mr. KENNEDY submitted an amendment intended to be proposed by him to the bill (S. 2646) to amend the Foreign Assistance Act of 1961 to authorize development assistance programs for fiscal year 1979, and for other purposes.

INTERNATIONAL DISASTER ASSISTANCE FUND

● Mr. KENNEDY. Mr. President, one of the most important provisions of the Foreign Assistance Act is the authorization it contains for international disaster assistance. Over the years it has been the clear intent of Congress that the United States should have the means to respond to international disasters wherever they may occur, and that this is an important expression of the humanitarian concern and tradition of the American people.

Recent experience around the world tells us that legislation supporting our Nation's effort to contribute to humanitarian emergencies created by natural or manmade disasters must be flexible and broadly defined in order to meet all needs that might arise. Regrettably, current law and practice fail to provide this flexibility. The law is both too narrowly defined and restricted in its application.

The "working amendment" I am introducing today attempts to strengthen the international disaster provisions of the Foreign Assistance Act, to assure that the United States can respond adequately and expeditiously to the full range of relief, rehabilitation, and reconstruction needs that may be caused by natural or manmade disasters.

Mr. President, the current authorization language is deficient in three important respects. First, it is too narrowly focused on "relief and rehabilitation" assistance, to the exclusion of medium or longer term "reconstruction" assistance—projects that might contribute to longer term developmental efforts even as they repair the damages of disaster. This has led, under present practice, to a series of restrictive congressional reports and confining AID regulations on the provision of international disaster assistance.

I believe it is self-defeating and counterproductive for the Congress to stipulate that international disaster relief funds must be utilized within 60 days, solely for relief and rehabilitation purposes, and barring any longer term programs. It is increasingly clear that important linkages exist between the provision of disaster assistance and longer term rehabilitation, reconstruction, and developmental goals. In many disaster situations the most useful form of assistance, beyond immediate relief supplies, is that which takes into account the implications for future developmental or reconstruction plans.

The most recent examples of this range from the natural disasters in the Sahel, Guatemala, Italy, and southern India, to the man-made disaster on Cyprus. In each case, disaster assistance to help provide housing and shelter, or restore public facilities, necessarily had to look beyond an arbitrary 60-day relief period.

It should not be necessary, Mr. President, for the Congress to pass special legislation every time there is a need for funds for rehabilitation and reconstruction assistance—such as in Lebanon today. We should not cause unnecessary delay in responding to international disasters by requiring that we amend the international disaster assistance provisions of the law every time there is a disaster. It should be a routine and well-established feature of our foreign assistance program that we can respond expeditiously and generously to international disaster programs.

The need to reform this aspect of our foreign disaster assistance program has been fully documented in an exhaustive study recently completed by the National Academy of Sciences. One of their principal recommendations is that there must be "stronger linkages between the AID/Foreign Disaster Assistance Office's disaster assistance program and the broader developmental programs at AID." Mr. President, I ask unanimous consent that the relevant excerpt from the academy's recent report be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EXCERPT FROM "THE U.S. GOVERNMENT FOREIGN DISASTER ASSISTANCE PROGRAM," BY THE NATIONAL ACADEMY OF SCIENCES, 1978

2. The development of stronger linkages between the AID/OFDA's disaster assistance program and the broader development programs at AID should be given careful consideration.

The relationship between AID's disaster assistance programs and its general development programs currently is conceptually confused. This is evidenced by attempts to make distinctions between (1) preparedness and prevention programs prior to disaster and (2) short-term relief and long-term recovery programs after the occurrence of disaster. Historically, the AID policy has been long-range and societally directed, whereas disaster assistance should be short-term and largely directed to the individual needs of victim populations. Since preparedness is geared to improve emergency response, it has been an assigned function of the AID/OFDA. Conversely, disaster prevention or mitigation has been seen as a development problem, suggesting that this is the responsibility of other elements of AID.[5] Policy has also directed that relief and rehabilitation programs sponsored exclusively by the AID/OFDA should not involve major capital projects of a developmental character.[6]

The Committee believes that strengthening the organizational linkages between AID's disaster assistance programs and its general development programs should produce a clearer conceptualization of the interrelationships between disasters and the development process that will be benficial to both types of programs. The precise nature and magnitude of the relationship between disaster and societal development are currently not known, but the theoretical possibilities merit careful study. For example, to the extent that safer physical structures and improved growth management are by-products of economic development, a society reduces its vulnerability to certain types of disasters. More broadly, perhaps the ultimate goal of development is improved economic and social well-being. The realization of that goal should be accompanied by a correlative improvement in a society's ability to cope with various forms of hazards and emergencies. Moreover, with effective disaster-response planning and preparedness measures a society can better respond to the impact of disaster as it develops economically. In many cases the impact of disaster may also serve as an important stimulant to economic and social development.

As stated previously, the AID/OFDA technical assistance program in disaster preparedness has disaster mitigation potential, although its present focus is narrow, its scale is quite small, and it is not currently linked to development assistance planning at the AID. The primary emphasis of the AID/OFDA activities is short-term emergency relief. We believe that this form of disaster assistance also has potential development consequences. On the negative side, unneeded and unwanted external assistance can divert attention away from development problems and within-country programs geared to reducing those problems. On the positive side, emergency assistance may have usefulness beyond the emergency period. For example, recent research indicates that externally provided temporary housing materials have frequently been used locally for permanent housing. This suggests that, with proper planning, emergency assistance and development programs can sometimes be directly linked. These potential linkages between disaster assistance and development assistance programs during both the pre- and postdisaster periods should be further explored.

Mr. KENNEDY. The second objective of my amendment is to strengthen the coordinating function and power of the special coordinator for international disaster assistance. My amendment creates a new coordinating committee within AID that includes the participation of the newly established Office of the Assistant Secretary of State for Human Rights

[5] An excellent case in point is the present AID program to prevent or to mitigate drought problems in the Sahel.

[6] However, some monies from the AID/OFDA's FY 1977 International Disaster Assistance Fund are being spent for a building construction program in Romania in the aftermath of the March 1977 earthquake. This is a clear exception to the historical policy.

and Humanitarian Affairs. This new bureau in the Department of State has important responsibilities in the humanitarian and refugee field, and refugees and displaced persons are frequent aspects of many disaster situations. In a much more systematic and meaningful way, this bureau should be called upon, where appropriate, to support and to participate in international disaster assistance programs administered by the special coordinator.

The amendment also strengthens the role of the special coordinator and gives him authority to call upon other relevant offices of AID to contribute to reconstruction or longer term disaster assistance programs.

Finally, my amendment establishes a permanent International Disaster Assistance Fund, to be drawn upon when necessary to meet relief, rehabilitation, and reconstruction needs caused by disasters. The appropriations process will, of course, monitor the replenishment of the Fund and, together with special reporting requirements, will adequately assure congressional oversight on the responsible use of the Fund. Such a Fund will eliminate the need for special legislation every time there is a disaster of any magnitude.

Mr. President, I ask unanimous consent that the text of my amendment be printed at this point in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 1779

On page 15, line 4, strike out all thorough line 8, and insert in lieu thereof the following:

"SEC. 12. Sections 491 through 493 of the Foreign Assistance Act of 1961 are amended to read as follows:

"SEC. 491. POLICY AND GENERAL AUTHORITY.—(a) The Congress, recognizing that prompt United States assistance to alleviate human suffering caused by natural and man-made disasters abroad is an important expression of the humanitarian concern and tradition of the American people, affirms the willingness of the United States to provide assistance for the humanitarian relief, rehabilitation, and reconstruction of peoples and countries affected by such disasters. Such humanitarian assistance both symbolizes the concern of the United States for the welfare of people in need throughout the world, as well as constitutes an important element in the foreign relations and foreign assistance effort of the United States.

"(b) Notwithstanding any other provision of this Act or any other provision of law, the President is authorized to furnish assistance to any foreign country, international organization, or private voluntary agency, on such terms and conditions as he may determine, for international disaster relief, rehabilitation, and reconstruction, including assistance relating to disaster preparedness, and to the prediction of, and contingency planning for, natural disasters abroad.

"(c) In carrying out the provisions of this section the President shall insure that the assistance provided by the United States shall, to the maximum extent possible, reach those most in need of relief and rehabilitation as a result of natural and man-made disaster, and that reconstruction assistance shall relate to the greatest extent possible to the longer-term development needs of the countries and people affected by natural and man-made disaster.

"SEC. 492. INTERNATIONAL DISASTER ASSISTANCE FUND.—There is established an International Disaster Assistance Fund to carry out the purposes of section 491. There is authorized to be appropriated to the President from time to time such amounts as may be necessary for the Fund to carry out the purposes of section 491. Amounts appropriated hereunder shall remain available until expended.

"SEC. 493. DISASTER ASSISTANCE COORDINATOR.—(a) The President is authorized to appoint a Special Coordinator for International Disaster Assistance who, with the Administrator of the Agency for International Development and the Assistant Secretary of State for Human Rights and Humanitarian Affairs, shall constitute a Coordinating Committee for International Disaster Assistance. The responsibility of the Coordinating Committee shall be to promote maximum effectiveness and coordination by United States agencies and between the United States and other donors in response to foreign disasters. The Coordinating Committee and the Special Coordinator shall have the authority to draw upon the resources and personnel of other offices of the Agency for International Development in order to respond more effectively to international disasters, especially during the reconstruction phase of disaster assistance programs which have longer term developmental implications. Included among the Special Coordinator's responsibilities shall be the formulation and updating of contingency plans for providing disaster relief.

(b) Not later than six months after the date of enactment of this section, and at the end of each six month period of each fiscal year thereafter, the Special Coordinator shall transmit to the Speaker of the House of Representatives, and to the Committee on Appropriations and the Committee on Foreign Relations of the Senate, a report describing fully and completely the disposition and use of funds made available under section 492.".●

## RESERVATIONS SUBMITTED FOR PRINTING

RESERVATION NO. 15

(Ordered to be printed and to lie on the table.)

Mr. STONE submitted a reservation intended to be proposed by him to the resolution of ratification of the Panama Canal Treaty, Ex. N, 95–1.

● Mr. STONE. Mr. President, I am today introducing a reservation to the Resolution of Ratification of the Panama Canal Treaty to clarify paragraph 1 of article XIII of this treaty which states that the Panama Canal "shall be turned over in operating condition and free of liens and debts, except as the two parties may otherwise agree."

This reservation adds at the end of the Resolution of Ratification the following language:

The Panama Canal Commission may not incur any debt arising out of the operation or maintenance of the Panama Canal or encumber the Panama Canal with any lien, unless the United States of America by legislation authorizes the Commission to incur such a debt or encumber the Canal with such a lien.

During consideration of this treaty by the Senate Foreign Relations Committee, I had much concern with the language of paragraph 1 of article XIII because it is certainly conceivable that, as presently worded, this language would commit the United States to turn over the Panama Canal to Panama in the year 2000 clear of debts which may run into hundreds of millions of dollars. At that time, I asked Secretary of State Vance to inform me of the Canal Company's present debts. He wrote me on January 31, 1978, that presently the Panama Canal Company has used its legal authority to defer $9.3 million of certain statutorily required payments to the Treasury. It has already paid part of this deferred amount and will pay the remaining $3.9 million in fiscal year 1978. The Secretary states:

Once this payment has been made, the Company will have no outstanding long-term obligations and will have continued its record of meeting all its expenses for operating revenues.

The present statutory borrowing authority for the Panama Canal Company is found in the Panama Canal Code and is limited to borrowing only from the U.S. Treasury to a maximum amount of $40 million. The Commission will become a Government Corporation and is thus regulated by the Government Corporation Control Act (31 U.S.C. 849). This act allows private borrowing by Government Corporations. Indeed, Secretary Vance also stated in his letter to me that:

Our management authority under the Treaty is so broad that the United States could, for example, authorize the new Commission to borrow funds from private sources. Accordingly, it was considered appropriate to provide Panama the assurance contained in the quoted phrase that the United States would turn over the Canal free and clear, and not subject to a mortgage to which Panama did not consent.

While I agree with the concern of Secretary Vance, it also seems to me that we should not subject the taxpayers of the United States to a mortgage to which they did not consent. Indeed, the management authority of the new Panama Canal Commission is extremely broad and there is no procedure established either in the treaty or in the administration draft of the implementing legislation by which the Commission can enter into long-term debt.

Because of my concern with this article, I asked the Comptroller General of the United States to give me his views on a number of fiscal matters relating to the treaty, including the liens and debts question. He wrote me on April 4, 1978, that Secretary Vance's above mentioned statement concerning further outstanding long-term obligations is "not completely accurate." The Comptroller General stated that as of September 30, 1977, the Company had the following long-term obligations:

$15.1 million liability for retirement benefits to certain former employees and for employees' repatriations (The Canal Zone government had a comparable liability for $4.3 million.);

$72.3 million contingent liability for a 25-year contract effective May 9, 1969, with the Institute de Recursos Hidraulicos y Electrificacion, an autonomous agency of the Republic of Panama, for the purchase of electric power to be produced by that agency; and a

$26.6 million commitment under uncompleted construction contracts and unfilled purchase orders.

So we find that the Panama Commission is already encumbered to a certain degree with long-term obligations. Under this reservation, no further debt would be incurred and no liens would be encumbered by the Panama Canal Commission unless the Congress enacts legislation authorizing the Commission to incur such a debt or lien.

This reservation is necessary to insure that the broad borrowing authority of the new Commission, which encompasses both U.S. Treasury and private borrowing powers, will be subject to scrutiny by Congress. This perhaps would not be necessary were it not for the fact that all debts must be cleared as of the year 2000. Comptroller General Staats stated the problem in his letter as follows:

It is of course conceivable that the revenues of the Panama Canal Commission will not be sufficient to cover the expenditures of the Commission. Such a deficit would need to be offset either through borrowings or appropriations. Accordingly, it has been proposed that the $40 million borrowing authority under current legislation be retained. Since the treaty provides for the Canal to be turned over to Panama free of liens and debts (unless otherwise agreed), to the extent that such borrowing becomes necessary and could not be repaid from future revenues of the Commission the United States would either need to appropriate funds for the Commission or forgive the Commission's indebtedness to the Treasury under this line of credit.

This reservation will specify and clarify congressional oversight of the broad borrowing authority of the Panama Canal Commission. The clarification needs to be made as to the treaty rather than in the implementing legislation because the procedure for granting borrowing authority for this unusual Government corporation is an integral part of the treaty, affecting the condition of the canal—which will be turned over to Panama.

Because of the possibility that canal revenues will not meet expenses, or that capital improvements of a large scale will be necessary, this reservation is an important way of insuring that major debts will be incurred only with the full participation of the Congress. In this way, future U.S. taxpayers will have some input into the Commission's ability to incur debts which must be repaid in a lump sum. This reservation is a fiscal checkpoint which can be greatly helpful to our operation of the Canal Commission and to the taxpayers of the country.●

## UNDERSTANDING SUBMITTED FOR PRINTING

UNDERSTANDING NO. 16

(Ordered to be printed and to lie on the table.)

Mr. THURMOND submitted an understanding intended to be proposed by him to the resolution of ratification of the Panama Canal Treaty, Ex. N, 95–1.

## NOTICES OF HEARINGS

SELECT COMMITTEE ON ETHICS

● Mr. STEVENSON. Mr. President, I announce that on Thursday, April 20, 1978 at 1:30 p.m. the select committee will hold a public hearing to consider amendments to rule 46 on unofficial office accounts. More specifically, should rule 46 be clarified to preclude inkind contributions and should funds derived from a political committee be confined to a Member's principal campaign committee?

The committee will meet in S–126, the Capitol.●

DEPARTMENT OF EDUCATION HEARINGS

● Mr. RIBICOFF. Mr. President, the Committee on Governmental Affairs will resume hearings on S. 991, and related legislation, to establish a separate, Cabinet-level Department of Education in the Federal Government, on Tuesday, April 18, 1978, at 10 a.m. in room 3302 of the Dirksen Building.●

SUBCOMMITTEE ON ENERGY CONSERVATION AND REGULATION

● Mr. JOHNSTON. Mr. President, on Thursday, April 20, 1978 the Subcommittee on Energy Conservation and Regulation of the Committee on Energy and Natural Resources will hold a hearing to receive testimony from private witnesses on regulatory programs of the Department of Energy. This hearing will commence at 10 a.m. in room S–126 of the Capitol.

Question about this hearing should be addressed to Benjamin S. Cooper or James T. Bruce of the subcommittee staff at 224–9894.●

## ADDITIONAL STATEMENTS

## SHHH! IDAHO!

● Mr. McCLURE. Mr. President, well, the secret's out. The Washington Post sent reporter Ken Ringle to Boise, Idaho, in search of the reason why so many easterners are heading West. As Mr. Ringle notes, many of them headed for Idaho "seeking clear skies, clean streams, and an uncrowded way of life." And that's just what they found.

Those of us who have lived in this kind of environment all of our lives have, somewhat selfishly, I suppose—tried to keep the good news about Idaho a little quiet. After all, we didn't want the rest of you rushing out there, bringing your big city problems with you, to ruin our good thing. But thanks to the Post, the whole world is finding out just how great it is to live in Idaho, and I don't see any reason why I shouldn't now share the news with my colleagues in the Senate. It is not without its own irony, however. As the article points out:

While migrants who flock to cities for the advantages of "bigness" enhance that bigness, those who move to places like Boise for smallness help destroy, with each arrival, the qualities they came to find.

There is even a rumor—I don't know how much truth there is to it—that Mrs. Graham may now pack up and move the entire Post operation to Boise, in order to better enjoy the last remaining outpost where, as Mr. Ringle points out, the American spirit still prevails. If so, it may do wonders for her paper.

Mr. President, I ask that the article from last Sunday's Post be printed in the RECORD.

The article follows:

AMERICA'S AFFLUENT MIGRANTS

(By Ken Ringle)

BOISE, IDAHO.—The migrating American, that restless animal historians say has shaped the American spirit since the first wagon rolled west, is moving in a new direction that raises profound questions for the nation's future.

For the past decade, according to U.S. Census figures, an increasing number of Americans have been migrating not to the nation's metropolitan areas but away from them, reversing patterns of growth underway since the industrial revolution.

Their destination, more often than not, is a small town or city in a remote area of the South, Southwest or West—often the very sort of environment from which their parents fled to the cities a generation before.

But while those earlier migrants were usually the poor and dispossessed of the Dust Bowl seeking work of any kind, today's migrants include not only students and retirees but a new group of relatively educated and affluent urban fugitives in search of something else.

Spiritual heirs of the pioneers who fled the sound of a neighbor's ax, they move seeking clear skies, clean streams and an uncrowded way of life. And like the pioneer, whose own ax rang in the virgin woods where he sought refuge, they are changing by their very arrival the environment they came to find.

Boom towns are sprouting in lethargic, backwater regions whose isolation, once a drawback, is now a lure. Growth-spawned problems of land speculation, strip development and rising taxes are plaguing small communities whose major worry a few years ago was not too many people but too few.

Reaction to those inevitable pressures is proliferating in such communities as Petaluma, Calif., whose no-growth policies threaten to impede what some historians consider the freedom most essential to the American experience—the freedom to move on.

"It may be," writes population expert Peter Morrison of the Rand Corp., "that the true safety valve for . . . discontented Eastern masses was not the free lands of the West but a kind of frontier of the mind—the image of an 'elsewhere' with its idealized possibilities—created and sustained by a tradition of unhindered migration." To restrict that vision, Morrison suggests, is to tamper with the essence of what we are as a nation.

THE BOISE BOOM

Nowhere are the dynamics of the new migration more visible and dramatic than here in booming Boise (population: 150,000), the New Jerusalem for an influx of ex-urban pilgrims, many seeking the California life style they feel California no longer provides.

Here on the Snake River Plain, hard by the gransite peaks and crystal lakes of Idaho's savagely beautiful wilderness, they feel there's still a chance to do things right. Their bumper stickers shout the warning: "Don't Californicate Idaho!"

"I've seen it all happen on the coast," says Randall Morris, 30, a dentist who grew up in Los Angeles and now lives near here in Mountain Home. ". . . the trout streams dug up for freeways . . . the smog . . . the elk herd declining. It's the same old story of unplanned growth. It's happening here, but here there's still time."

The boom in Boise is merely the focal point of a statewide population explosion that has pushed once-somnolent Idaho into the nation's fourth fastest-growing state.

From 1960 to 1970, according to census figures, all but nine of Idaho's 44 counties were losing population. From 1970 to 1976, however, all but two gained population, in spite of a steadily declining national birth rate.

Boise itself, which loafed along at a 2 percent annual growth rate during the high-growth 1960s, mushroomed 24 percent in the past six years alone, becoming one of the nation's fastest-growing metropolitan areas and perhaps the most vivid example of the new migration phenomenon.

"It's just like San Jose in the 1960s," says Rand's Morrison. While a few places in the country, like Ft. Lauderdale, Fla., are growing faster, "we know what's happening there . . . it was happening in the 1960s. But these growth areas in places like Idaho, Ozarks and upper Michigan are something new—places which have never had much growth before and would not appear from their location to possess many of the prerequisites for urban greatness."

COMING FROM CALIFORNIA

Founded in 1863 as a cavalry fort during a gold rush to the nearby Boise Basin, Boise nearly lost its reason for being a few years later with the last of the gold.

The Oregon Trail passed nearby, but the city was snubbed by the railroad and slumbered in its sagebrush-covered foothills for nearly 30 years, a frontier town on the way to nowhere in particular.

The hatchet-shaped state of which it was capital stretched north to Canada in a network of emerald fir forests and snow-topped mountain ranges laced by the Continental Divide and by the sparkling white-water rivers that pour from its peaks. But its mountain passes were forbiddingly high and blocked by deep snow from November to June.

It was, in the words of the silver miners who lived in its remote and rarely accessible valleys, "a heaven of a place to live, but a hell of a place to make a living."

Boise itself sprawls at the foot of the Boise Range in Treasure Valley, an arid, dun-colored highland of mild winters and temperate Julys, where today Interstate 80 carries the progress that the railroad's absence so long delayed.

From the grounds of Maj. Pinckney Lugenbeel's original stockade, it stretches east and west along the knee-deep Boise River, its few blocks of Victorian buildings giving way to the ranch-style anonymity of the ubiquitous American subdivision and the roadside clutter of its commercial counterparts.

No one can say precisely why or when the boom in Boise and other small cities began, but John Mitchell, an economics professor at Boise State University, says "It appears that around 1968 all of a sudden the things that Idaho had—the wilderness, the wilderness and the mountains—began to be valued elsewhere." And elsewhere, other things were happening.

Howard Bradley, then 32, was riding his motorcycle near his home in Berkeley, Calif., that year when he smelled what he thought was the scent of flowers. When the smell persisted for several blocks, however, he realized it wasn't flowers at all: It was tear gas drifting off the nearby University of California campus from yet another riot of the turbulent 1960s.

"That did it," he recalled the other day in his office in Boise. Long disenchanted with the increasing crime, "bizarre" politics and generally deteriorating quality of urban life in general and Berkeley's in particular, Bradley and his wife had talked of moving to some area in the West more remote from people and the pressures they bring with them.

"The day I could no longer tell tear gas from flowers," Bradley remembers, "I knew it was time to leave."

The first step, he decided, was to acquire a transferable skill which might be in demand in a less urban area. Since he was a pilot and "pretty good with my hands," he left his job as a laboratory research technician, moved to Los Angeles and worked two years for Northrop Aviation to become an aviation mechanic. Then he and his wife loaded "the tent and the sleeping bags and a few other things" into their small plane and took off for the Pacific Northwest, not knowing where they would land.

"It was not a good time," he remembers. "The country was deep in recession and the layoffs at Boeing in Seattle had sent a flood of aviation technicians into the Northwest. We looked over Montana but that didn't look too good. We had a friend here in Boise so we decided this looked like a good place to start."

While Boise itself "doesn't have much personality as a city," and was already somewhat larger than they had hoped for, they discovered it offered many of the amenities they had left Berkeley to find. It had both an "appealing social stability and a college where they could continue their education.

Less than an hour away were mountains to climb and rivers to run and wilderness areas to backpack and camp in. An hour after work they could be skimming down one of 37 slopes at Bogus Basin, a community-run jewel of a ski area in the mountains overlooking the city.

"In California we had regularly driven four and five hours to Yosemite on weekends," Bradley remembers. "I never really minded the drive, but here all this was at our door."

So the Bradleys moved to Boise without even a job.

"The sacrifices at first were severe," Bradley remembers. "Even when we finally did get work we were bringing home at least 60 to 75 percent less than we'd been making in Berkeley. And Boise is not that cheap a place to live."

But his wife, a criminologist, found work in the state crime lab and Bradley moved from airplane engines into helicopter transmissions, formed one partnership, sold out and today a runs his own company repairing precision tools.

THE IMPORTANCE OF ENVIRONMENT

If the Bradleys are one of the more dramatic examples of in-migrainationto Boise, they are far from unique. A 1975 study of some 1,500 new families in the Boise area, conducted by economist Mitchell and the Boise Center for Urban Research found that 25 percent of those moving into Boise from out of state came from California—the largest percentage from any other state. Many, like Randall Morris, are the children or grandchildren of Idaho pioneers who followed the California dream westward in the 1930s to see that dream sour in a fouled nest of overbuilt subdivisions and freeways. Drawn by a combination of clean air and nostalgia, the children have retraced the journey.

Mitchell's study showed that more than 32 percent of those moving into the Boise area, like Bradley, had no job when they came, and 23 percent said they moved here "to enjoy the benefits of a smaller metropolitan area". Fully 44 percent—the largest single category in the sample—said they moved to Boise "to live in Idaho's environment".

The importance of Idaho's environment is hard to overemphasize. It dominates almost every discussion of why people move to the state. Gary Watson, managing editor of Boise's newspaper, The Idaho Statesman, says it affects not only the quality of his job applicants but their attitude once hired.

"This is a good little newspaper and we're proud of it but it's not The New York Times," he said. "Yet we're getting really fine people—guys in their 30s who've worked overseas with Newsweek or somewhere with The Wall Street Journal who want to come out here and work as reporters. These are people at the peak of their profession who've decided there is more to life than just a job. And for many of them a lot of those other things are here."

Watson said newspeople on his staff, given the choice between taking overtime pay or extra time off, almost invariably insist on taking the extra time—"to go backpacking or skiing or something". At any other newspaper where he's worked, he said, money was always king.

JOBS FOLLOW PEOPLE

There is more to the Boise boom than outdoor sports, however, as economists Mitchell is quick to point out. Despite its out-of-the way location, Boise has a number of economically stimulating factors, including unusually good air service for a city its size and the corporate headquarters of such business giants as Boise-Cascade and Morrison Knudson, the world's largest engineering firm.

Several factors, he says, combined to help the city over the 100,000 population mark, which he describes as "a threshold beyond which growth to some extent becomes self-sustaining".

One factor was the nation's general population shift to the West, which gradually has made it more and more practical for industries to locate a factory or a division or even a corporate headquarters west of the Rockies.

Another was the rapid growth in state government and of Boise State University, which ballooned in the 1970s from a two-year community college to a university of some 15,000 students.

A third included such intangibles as the interstate highway system, improved air service and television, which reduced the sense of isolation associated with many small towns and cities in previous decades.

But once a city hits the 100,000 mark, he says, a number of other growth spurs kick in automatically:

Restaurants and chain stores begin to look at the city as a suitable location for a branch or a franchise.

Businesses like insurance companies, which have serviced the area with a traveling representative located somewhere else, start thinking about opening a branch office.

Service industries in general, from boutiques to bowling alleys, proliferate to serve the population, triggering in turn more industries with more jobs to attract more people.

But environmental considerations and job opportunities often go hand in hand. Ray Smelek, 43, plant manager for the Hewlett-Packard Co., started a new division in Boise four years ago and now has some 750 people employed in the area making computer printers and memory discs. The decision to locate in Boise, he says, was prompted largely by three factors. One was overcrowding in the company's main base near San Jose, Calif. Another was the high productivity of the labor force in Idaho. The third was the environment around Boise.

"We're a company whose profitability depends to a great extent on attracting young engineers right out of college," Smelek says, "young people with bright ideas. We need them. Companies like ours discovered about 1970 that those kids don't want to locate in a big city. They want a place where they can get out into the mountains and the wilderness areas and leave their work behind."

Hewlett-Packard began experimenting, locating plants in places like Loveland, Colo., and Colorado Springs and was "very pleased with the results . . . it's more and more the trend."

The Boise area, he remarks, is so popular that Hewlett-Packard attracts some 75 percent of all young engineers to whom it offers positions at the plant here. Most plants or companies, he says, are very happy with a "hit rate" of 50 percent.

WANTING TO BE "THE LAST ONE IN"

The portraits of Boise's in-migrants as painted by people like Smelek, Watson and Mitchell coincide almost exactly with the characteristics of the new migrants nationwide sketched by demographers like Morrison at Rand. They are, in Mitchell's words, a "new educated elite who can afford the luxury of choice."

They are people like Bob Dews, 36, who decided to leave Washington State for Idaho "the day I was backpacking in the Cascades and 30 people passed my tent after I'd pitched camp." Or Renee Winn, a Pittsburgh-raised travel agent in her 30s from Burley, Idaho, for whom "the whole point in being out here is to load the kids in the camper, get up in the mountains and sit under a tree with a six-pack and drink and think."

"When I'm out camped in the wilderness at the end of the day," says Randall Morris, the Mountain Home dentist, "sitting by the fire watching the sunset and stirring my coffee, I say a little prayer—this is really true—I say a prayer for all those poor bastards in New York City."

But environmental satisfaction, as the new migrants ruefully acknowledge, is a fragile thing. While migrants who flock to cities for the advantages of "bigness" enhance that bigness, those who move to places like Boise for smallness help destroy, with each arrival, the qualities they came to find.

Already the debate over growth is raging in Boise, where morning traffic jams are being born and pollution taints the downtown air. "Shhhh! Idaho!" say the bumper stickers on the new migrants' cars.

Yet to keep Idaho as it is is to resist growth, to resist growth, in this era of falling birth rates, is to resist migration. And to resist migration is to raise such patently unconstitutional questions as "Who will be allowed to live where?" Or, perhaps more important, "Who will decide and by what criteria?"

Howard Bradley, for one, is already uneasy.

"You know," he says, "There's a particular place when you're driving west on Fairfield Avenue and where you look in the rear view mirror and see the miles of houses and the signs of the fast food joints and the used car dealers and the mountains in the sunlight above them. There's a spooky sense of *deja vu* about it. It looks exactly like the San Fernando Valley in the 1950s."

He's been thinking lately, he says, of packing his plane once more and moving on somewhere else. "It's an old story," he says. "Everybody wants to be the last one in." ●

## SENATOR CANNON ON AIRLINE DEREGULATION

● Mr. McGOVERN. Mr. President, I would like to express my appreciation to Senator CANNON, the distinguished and able chairman of the Senate Commerce Committee for his informative and detailed response to my concerns regarding the proposed airline deregulation legislation, which appeared in the March 21, 1978, edition of the CONGRESSIONAL RECORD.

I have great respect for Senator CANNON's views on aviation and, indeed, he is generally regarded as one of the leading experts in the Senate on matters of this kind. Under normal circumstances, I would be inclined to accept his judgment on what is good for the airline industry and the American traveling public. It is, therefore, with regret that I must again take issue with Senator CANNON's position, restating my reservations on airline deregulation within the context of Senator CANNON's remarks.

In point of fact his arguments and examples can easily provide a case against S. 2493. Specifically, I raised four points in my statement to which the Senator responded: First, deregulation can lead to industry concentration as smaller carriers are driven out of business by larger airlines having additional financial resources and excess fleet capacity; second, that this will result in fewer flights and ultimately higher fares; third, while the industry attempts to trim costs systemwide in order to maintain profitable routes, thousands of airline employees may lose their jobs; and fourth, small communities currently receiving scheduled service will experience service reductions and disruptions.

Senator CANNON and the proponents of deregulation argue that deregulation will not lead to increased domination of U.S. commercial air service by a few carriers. This argument is predicated on the assumption that beyond a relatively low threshold there is no advantage to size, and that vigorous competition by large carriers against small efficient carriers will not endanger the existence of the smaller carriers. According to the proponents, Pacific Southwest Airlines is an excellent case in point as it successfully competes against several federally certificated carriers.

I must question this example and consequently the case made for the smaller carriers. If PSA is thriving on this vigorous competition, why has the company reported a net loss for the fourth quarter of 1977 and have a year earlier net loss of $1.6 million? Presently, the company is planning to file a rate increase request with the California Public Utilities Commission, although PSA had just received a rate increase in December 1977. The company has also stated that 1978 earnings will suffer unless the California PUC acts promptly on their new rate request.

I fail to understand how the operations of the Pacific Southwest Airlines represents the small carrier's projected success in facing head-to-head competition with larger federally certificated carriers. In point of fact, this case is a strong indicator of the uncertain future of small carriers in the event of deregulation as mandated by S. 2493. As the smaller carriers are eventually driven out of their markets and a few larger carriers achieve market dominance my second major concern, that there will be fewer flights and ultimately higher fares, may be realized. The proponents of deregulation argue that with automatic market entry as provided by S. 2493, that carriers will be aware that all of their route will be vulnerable to new entry and subsequently will be motivated to keep their prices as low as possible on a systemwide basis to prevent such entry.

However, in order to effectively trim costs systemwide, airlines will have to cut their costs and services from other operations. Options they may elect include flight reductions and service elimination on less profitable routes, reducing employment of ground crews on such routes or reducing safety margins. This could result in unemployment with the airline and related industries, safety problems, and fewer flights or service eliminations on less profitable routes. Additionally, proponents of deregulation argue that S. 2493 would generate more jobs rather than create unemployment within the industry. This statement is based on the assumptions that lower fares will generate increased traffic which will in turn increase flights and service and generate employment.

Mr. CANNON indicates that Delta's Chicago Midway-St. Louis operation is a prime example. When Delta established this operation they had two flights daily to St. Louis. Under that structure the operation was losing money due to inadequate use of ground personnel and a variety of other factors. In 1977, Delta received approval to develop a third midday flight with low fares. Its traffic has increased fivefold and has been adding flights in this market, resulting in better service, lower fares, and more jobs. The proponents declare that this can happen throughout the country under S. 2493.

However, this already is happening throughout the country, without the benefit of deregulation legislation. The CAB has recently approved a variety of fare reductions and route applications indicating that it presently has the statutory authority to promote competition and better service within the industry. Why do we need legislation intended to accomplish what has already occurred? To return to the example, under this legislative proposal, other carriers would have the opportunity to enter Delta's profitable market and under the automatic market entry and flexible pricing provisions, perhaps drive Delta out of the market it developed. Ultimately, this could have a calamitous effect on Delta's employment regarding its Chicago-St. Louis operations. Moreover, under the proposed legislation, this could occur in a variety of markets throughout the country.

Of greater importance and concern than the specific issues addressed by Senator CANNON and other proponents of deregulation is the questionable necessity of the legislation at this time. This proposal was created in response to growing criticism from public officials, consumer groups, and others who contend that CAB regulation is inappropriate for a modern air transportation system and no longer functioned in the public's best interests. Proponents argue that the lower fares and route applications recently approved by the Board are representative of the actions this legislation will encourage. However, what has be-

come increasingly apparent is that under the threat of deregulation the Board has begun to operate, within their present statutory authority, in the best interests of the American traveling public and the industry. CAB has recently approved a variety of measures long awaited by industry and consumers. Consequently, the need for this legislation no longer exists as the Board is now operating in a manner to encourage the same policies as the proposed legislation.

However, I believe a reexamination of the Board's past actions are necessary in light of the fact that until recently, they have not acted in an appropriate manner with regard to the processing of applications and were not operating in accordance with their declaration of policy. The proponents of S. 2493 would have more efficiently addressed the problems of the Board by holding oversight hearings to determine the necessary alterations within the Board and its authority in order for it to operate in the public's best interests. However, oversight hearings have not been held on the CAB for the past 20 years. Obviously, such hearings are long overdue and would have mandated a variety of internal changes within the Board to allow them to function in a manner appropriate to our current transportation needs. Consequently, I remain convinced that this legislation, although well intentioned, is unnecessary in light of recent CAB actions. More importantly, S. 2493, if passed, will create havoc with the finest air transportation system in the world.●

## HEARINGS ON ACREAGE LIMITATIONS OF RECLAMATION LAW

● Mr. GOLDWATER. Mr. President, it was my pleasure to appear yesterday before the Senate Subcommittee on Public Lands and Resources to testify for the repeal of all acreage limitations and residency requirements in the reclamation law.

In my opinion, repeal is the only sure solution to the problems growing out of the antiquated 1902 Reclamation Act and its successor amendments. In short, the 1902 law imposes totally unrealistic restrictions on farming which take no account of the mechanization of farms or other inflationary costs of production, such as rising farm labor pay scales.

Mr. President, I am pleased that the bill, S. 2867, which I have introduced together with the senior Senator from Maryland, Mr. MATHIAS, to repeal the outmoded provisions of law was endorsed today in testimony presented to the Senate subcommittee by Mr. Allan Grant, president of the American Farm Bureau Federation. Also, I am delighted that the basic concept of my bill, which is elimination of the acreage and residency limits of reclamation law, has been approved by the Arizona Irrigation Districts Coordinating Committee.

Mr. President, in order to share with my colleagues the very practical problems which farmers have been experiencing under these restrictions of reclamation law, I ask that the following materials be printed in the RECORD: First, my statement on S. 2867; second, the testimony presented by the Farm Bureau in support of S. 2867; and third, the resolution on this subject adopted by the Arizona Irrigation Districts Coordinating Committee.

The material follows:

1. STATEMENT BY SENATOR BARRY GOLDWATER OF ARIZONA BEFORE THE SENATE SUBCOMMITTEE ON PUBLIC LANDS AND RESOURCES APRIL 12, 1978

Mr. Chairman, I applaud the prompt scheduling of your hearings on the acreage limitation provisions of Reclamation Law.

Mr. Chairman, I urge adoption of a simple, clean approach to the problem: repeal of the acreage limits and residency requirements.

Now, I have introduced a bill, with Senator Mathias, S. 2867, to do just that; and a companion bill, H.R. 11944, has been introduced by Congressman Stump in the House.

Mr. Chairman, I know there are alternative proposals before the Committee, some of which include excellent features, which I would strongly endorse, such as the payout provisions of S. 2606 and S. 2818. These provisions would allow reclamation districts to repay the full public investment and be exempted from the excess land laws.

But, Mr. Chairman, I feel so strongly about the need for correcting the 1902 Act that I believe the best solution is not to modify, but to repeal antiquated provisions from the law.

In my opinion, no magic figure will work.

We cannot apply a flat rule to every type of crop. And, even if we could come up with an average acreage needed for efficiency of production as to specific crops in specific areas of the country, today's figure might not be adequate for the future. Today's 1,000 acre efficient farm might be a 2,000 acre farm in the future due to changing technology and inflationary costs of production.

Mr. Chairman, one thing is clear. The current 160 acre restriction on individual ownership of irrigable land that can be supplied with Reclamation project water is absurd. Even if family ownerships are taken into account, an artificial rule of this kind is inadequate to modern agriculture.

Why should a farmer who does not have a large family be put at a disadvantage with his neighbors solely on the basis of childbearing capacity? And, what happens if a son or daughter moves away to become a teacher or doctor?

Mr. Chairman, let me present some specific example of the impact of these restrictions. Our most valuable crop in Arizona is cotton. Many persons do not realize this, but Arizona is the fourth largest cotton-producer in the nation.

The value of our cotton and cottonseed production was $355 million last year, 48% of the value of all crops grown in Arizona. When we add the usual multiplier effect to this value, we can see that the 1977 cotton and cottonseed income added approximately one and one-half billion dollars to Arizona's economy.

About 90% of our cotton is exported. These exports help to counter the massive deficit in our nation's trade account caused by fuel imports.

To these statistics, let me add that the minimum size of a cotton farm in Arizona dependent upon farm income is 1200 acres and on up. This will increase in the future as production costs go up.

Alfalfa and grain crops are also two major crops grown in Arizona. Arizona cash receipts for these crops in 1977 totaled about $160 million. Vegetables and melon production also exceeded $100 million last year. All these crops require expensive machinery and large acreage to run an economical operation. Even limiting leasing to 1,280 acres would put many of these operations out of business.

For example, an average size tractor with plowing, planting and cultivating equipment now costs $50,000. A two-row cotton picker costs about $65,000. A grain combine about $60,000. Haying equipment costs about $35,000.

So the large size of farms in producing these crops did not just happen. They grew out of necessity and they will have to grow larger to stay efficient as production costs rise.

Mr. Chairman, farm experts in my region of the country predict that if all the farms in the United States were broken into hundred sixty acre, or even three hundred twenty acre units, the cost of food and fiber to consumers in this country and to the export nations we supply, would at least double.

Back in 1902, farmers did most of their work with a team of horses. Horses burn hay, not gas.

But today, almost every aspect of farming is mechanized, along with the development of new higher-yield crops. Farm labor wages are going up and up. All of this costs a great deal of money and is generally more than the small farmer can afford.

So we have a choice. We either increase the cost of farm products way beyond the pocketbook of the average household, and at the same time we price ourselves out of the export markets, or we put some common sense into an archaic and restrictive farm law.

Mr. Chariman, I would close with a statistic developed recently by the Bureau of Reclamation. According to a study of 1976 data made by Denver Research Institute for the Bureau, there was a net increase in business activity, total wages and employment attributable to all reclamation projects of $12 billion in that one year alone. Of this total benefit to the economy, there was a $5 billion return from agriculture alone.

Mr. Chariman, I believe this answers anyone who disparages the reclamation program as a subsidy. This statistic proves that in two years time, the positive impact on the growth of our economy resulting from reclamation projects exceeds the maximum, Federal interest contributions, or so-called subsidy, that went into developing these projects.

These projects have boosted the economy and provided the American consumer with the widest availability of farm products and fibers, at the lowest prices, of any people in the world. If this be a subsidy, then I believe the public welcomes the results and will want no part in destroying the system that gave them this blessing.

2. STATEMENT OF THE AMERICAN FARM BUREAU FEDERATION TO THE SUBCOMMITTEE ON PUBLIC LANDS AND RESOURCES OF THE SENATE COMMITTEE ON ENERGY AND NATURAL RESOURCES WITH REGARD TO S. 2867, A BILL TO AMEND THE ACREAGE LIMITATION PROVISIONS OF FEDERAL RECLAMATION LAW, PRESENTED BY ALLAN GRANT, PRESIDENT, APRIL 13, 1978

We are pleased to have this opportunity to express the views of Farm Bureau members concerning the acreage limitations applicable to Bureau of Reclamation projects. This topic is not only vital to those people who are served by reclamation projects, all agricultural land owners, and financial institutions with agricultural loans; it also ultimately affects all Americans who are dependent upon agricultural production.

Farm Bureau is the largest general farm organization in the United States with a membership of over 2.8 million families in 49 states and Puerto Rico. It is a voluntary

nongovernmental organization, representing farmers who produce virtually every agricultural commodity that is produced on a commercial basis in this country.

Farm Bureau policies are developed through study, discussion, and decision by majority vote at community, county, state, and national meetings. These comments are based on the following policies adopted by the voting delegates of the member State Farm Bureaus at the 1978 annual meeting of the American Farm Bureau Federation:

"The technology of modern agriculture has made the 160-acre limitation impractical and uneconomic. We support legislation to remove the 160-acre limitation. We oppose surcharges on water from state or federal projects used on land in excess of 160 acres in a single ownership."

The American economy, as well as that of other countries, is dependent on the ability of the American farmer to maintain his productive capabilities. Water is a critical factor if agriculture is to maintain its outstanding record of food and fiber production. Farmers and ranchers are, therefore, vitally interested in, and are the nation's foremost supporters of, wise and careful use of water resources. Recent Bureau of Reclamation statistics indicate that in 1976 the "gross value of all crops" produced with the aid of water from Bureau of Reclamation projects totaled $4.3 billion.

The acreage limitation feature of reclamation law, originally enatced in 1902, is completely out of date. The present situation is comparable to one where a state official discovered an obsolete law which says that "motor carriages" must pull over to the side of the road when they approach within 100 yards of any horse or horse-drawn vehicle. This state law had not been enforced for over 75 years. But when the state government proposed to enforce it, the legislature elected to increase the distance at which "motor carriages" must pull over from 100 to 500 yards, rather than to repeal this obsolete law.

We have the same situation in the acreage limitations of the 1902 act and subsequent acts. Some are suggesting that the basic limitation be increased from 160 acres to some other "magic" number. We, however, propose that this obsolete law be repealed. While its original purpose may have been meritorious, it has long since become unnecessary and counterproductive.

As presently interpreted by the courts, the acreage limitation provision of the 1902 Reclamation Act limits farm income, abuses private property rights, dictates to whom an owner can sell, sanctions a philosophy of land redistribution, limits farm operations to an arbitrary size, and discourages free enterprise. As Senator Wallop so succinctly said on March 10:

"The problems with the present excess lands law are many. One hundred sixty acres is no longer an economical farm unit for virtually all lands within reclamation projects. Variations in productive potential of various lands are ignored in all but a few isolated instances. Residency requirements are unduly strict. The limitations apply equally to those receiving only a supplemental supply of water, as well as those who are totally dependent on water from federal reclamation projects. Many irrigators are now being denied the benefit of payout contracts which they entered into in good faith. Their Government has breached its faith."

It is our conviction that the solution to the dilemma in which we find ourselves is the total repeal of the acreage limitation that has been placed on the amount of water a person may receive from federal reclamation projects. We, therefore, support S. 2867 as a comprehensive bill which would repeal the 160-acre limitation and remove the residency requirement.

One of the philosophical questions that has been posed is: Should the general taxpayer subsidize the delivery of water to farmers and others? We suggest to this Subcommittee that it is the general public which benefits from the delivery of water to agricultural land. These benefits come in the form of lower prices and the increased availability of products in the marketplace. Other indirect benefits include an improved local tax base, improved community services, increased stability of agricultural income, added employment in the transportation and processing of agricultural products, and increased purchases of agricultural production items, which are supplied from all regions of the nation. It also should be noted that the water for Bureau of Reclamation projects is often derived from large multiple-use projects, which also provide nonreimbursable benefits, such as recreational opportunities and improved habitat for fish and wildlife, to the general public.

Over 80 percent of all of the Bureau of Reclamation's investment has been or will be, repaid to the federal government. The only expenditure for irrigation purposes which is not repaid is interest on the money that is borrowed until the project is finally paid out. Completely accurate information on the level of subsidy to irrigation uses is not available. However, in an effort to get some idea of the magnitude of the "subsidy" to irrigation uses, we have selected the figure of $1,000 per acre for the life of a project. We have been advised by the Bureau of Reclamation that $1,000 per acre is a gross over-statement, as many older projects have much lower costs. Nevertheless, using $1,000 per acre as an assumed subsidy and calculating that approximately 11 million acres receive Bureau of Reclamation water, we come up with a total "subsidy" to irrigation users of $11 billion for the life of the projects.

The United States Department of Interior, in its latest estimates, has calculated the "net increase in business activity, total wages, and employment attributable to reclamation projects, 1976" at over $12 billion. The net increase in agricultural business activity in 1976 was over $5 billion.

Therefore, Mr. Chairman, in a single year the net increase in business activity due to Bureau projects is $1 billion greater than the maximum estimates of the total "subsidy" over the entire life of the projects now in operation. The increase in the agricultural business activity would exceed the "subsidy" in a little over two years. All things considered, the federal government is not subsidizing irrigation at all, but rather is making wise investments which yield high returns.

In conclusion, we wish to call to your attention the fact that California Rural Legal Assistance has obtained a federal grant of $155,000 to form a Reclamation Law Unit. This Reclamation Law Unit's stated purpose is to push for redistribution of excess lands to farmworkers and other rural poor. This grant was made by the Office of Economic Opportunity's Community Services Administration. We have information which indicates that Reclamation Law Unit attorneys will be lobbying with administrative agencies and the Congress, particularly with respect to bills introduced to change the Reclamation Act. We feel very strongly that this is a most inappropriate use of federal funds and one not contemplated by the Congress. This activity is illustrative of the efforts of certain individuals to use the acreage limitation as an excuse for social experimentation in land redistribution. We urge you to do everything in your power to limit the use of federal funds in this manner.

Mr. Chairman and members, the time has come to do away with the outdated and unnecessary acreage limitation provisions of reclamation law. S. 2867 will accomplish this objective. We urge you to enact it.

We appreciate the opportunity to present our views.

---

3. ARIZONA IRRIGATION DISTRICTS COORDINATING COMMITTEE—RESOLUTION OF THE AIDCC

Whereas, the Congress included acreage limitations in the 1902 Reclamation Act to encourage the settlement of the West by family farmers; and

Whereas, the purpose of the Reclamation program and the economics of farming have changed since that time; and

Whereas, the Congress has recognized these changing conditions and has provided certain modifications and exceptions to the acreage limitation provisions for certain specific projects; and

Whereas, the Department of Interior, under court order, has proposed regulations to enforce acreage limitation provisions which. in the past, the Department of Interior has not determined to be necessary and realistic;

Whereas, the proposed rules and regulations are now being finalized to enforce the acreage limitation provisions of the 1902 Reclamation Act, which would have varied and unequitable impact on various projects;

Now therefore be it resolved, that the Arizona Irrigation Districts Coordinating Committee urges the Arizona Congressional Delegation and the United States Congress to assert its sole authority to legislate by not allowing the bureaucratic establishment to write the laws of the land; and

Be it further resolved, that Congress be urged to take the following action:

1. That the Congress of the United States amend the Reclamation Act of 1902 to eliminate the acreage and residency limitations contained in section five of such Act.

2. That, as an alternative to eliminating the acreage limitation, the Congress of the United States amend such Act to revise the acreage limitation substantially upward and to authorize acreage equivalency provisions to include consideration of farm economics, the availability of water and rights thereto.

Copies of this resolution shall be transmitted to the President of the United States Senate, the Speaker of the United States House of Representatives and to each Member of the Arizona Congressional Delegation. March 6, 1978.●

---

## NOTICE OF DETERMINATION BY THE SELECT COMMITTEE ON ETHICS UNDER RULE 43, PARAGRAPH 4 PERMITTING ACCEPTANCE OF A GIFT OF EDUCATIONAL TRAVEL FROM A FOREIGN ORGANIZATION

● Mr. STEVENSON. Mr. President, it is required by paragraph 4 of rule 43 that I place in the CONGRESSIONAL RECORD this notice of a Senate employee who proposes to participate in a program, the principal objective of which is educational, sponsored by a foreign government or a foreign educational or charitable organization involving travel to a foreign country paid for by that foreign government or organization.

The Select Committee on Ethics has received a request for a determination under rule 43 which would permit Ms.

Beverly M. M. Charles, legislative assistant to Senator JAVITS, to participate in a program sponsored by a foreign educational organization, the American Institute of the University of Munich, of the Federal Republic of Germany, July, 1978.

It has been determined that participation of Ms. Beverly in the program in West Germany, at the expense of the institute to discuss human rights is in the interest of the Senate and the United States.●

## REDUCING THE HIDDEN COST OF BIG GOVERNMENT

● Mr. McCLURE. Mr. President, on April 11, Dr. Murray Weidenbaum, director of the Center for the Study of American Business at Washington University in St. Louis, testified before the Joint Economic Committee on the impact of Government regulation on the Nation's economy.

According to studies completed by the center, Government regulation adds over $600 to the price tag of an automobile and tacks on $1,500 to $2,000 to the cost of a new house.

Like the motorist and the homeowner, the businessman, the consumer, the worker, and the investor all feel the adverse effects of Government regulation. In Professor Weidenbaum's opinion, excessive regulation has cost the country dearly through many hidden taxes—lower productivity, reduced technological innovation, spiraling inflation, higher unemployment and, perhaps worst of all, the transfer of corporate decisionmaking away from local managers to Washington bureaucrats.

Weidenbaum predicts that there is likely to be even more Government intervention in internal business matters in the future. Regulation is clearly America's biggest growth industry today, with no end in sight. Federal outlays of 41 regulatory agencies grew from $2.2 billion in fiscal year 1973–74 to an estimated $4.8 billion in fiscal 1979. The aggregate cost of regulation, the direct administrative expenses of Government plus the costs of compliance in the private sector, should exceed $102 billion during the next fiscal year.

The need for reforming Government regulation is urgent, but the process will be slow and difficult. Dr. Weidenbaum suggests an agenda of change which I commend to my Senate colleagues as a reasonable and worthwhile regulatory reform program.

Among his recommendations is the requirement of an economic impact statement prior to the issuance of each new agency regulation. What is needed, he says, is not merely a cost benefit analysis but a test: Congress should enact legislation limiting the regulations of all Federal regulatory agencies—the independent commissions as well as the executive branch agencies—to those instances where the benefits exceed the costs to society.

Dr. Weidenbaum also argues persuasively for subjecting Government regulatory activities to the sunset mechanism as the best way to eliminate overlapping, conflicting, and unnecessary rules and regulations.

I concur completely with Dr. Weidenbaum. In fact, Mr. President, both of these proposals made by this distinguished economist are included in legislation which I am pleased to cosponsor, the Regulatory Reduction and Congressional Control Act, introduced last year by Senator SCHMITT. I call the Senate's attention to this bill, S. 2011, and urge its early consideration.

Mr. President, I ask that the complete text of Murray Weidenbaum's excellent statement before the JEC on "Reducing the Hidden Cost of Big Government" be printed in the RECORD.

The statement follows:

REDUCING THE HIDDEN COST OF BIG GOVERNMENT

(By Murray L. Weidenbaum)

The largest and most rapid increase in government power over the private sector is not in the areas of taxation or government spending. Rather, it is the expansion of government regulation of private economic activity which is affecting the citizen in so many important and costly ways. Although not generally appreciated, the process of government regulation generates many of the hidden costs of big government. It is a special source of concern in the present circumstances because excessive government regulation is increasing inflation and unemployment simultaneously.

Fundamental reforms of government regulation will be difficult. They will be opposed by a host of special interest groups, including many that have the conceit of automatically identifying their views as the sole expression of the public or consumer interest. But sensible reforms of government regulation could yield substantial benefits to the consumer, the motorist, the homeowner, the worker, the investor, and the taxpayer. It is the intent of this statement to lay the groundwork for such reform by showing how much is at stake for each of those major sectors of our society. Several initial reforms are suggested, not as panaceas, but as practical means of accelerating the process of constructive change.

THE VARIOUS COSTS OF REGULATION

The impacts of government regulation of business are being felt in every part of the economy:

1. The taxpayer feels the effect. Government regulation literally has become a major growth industry, an industry supported by the taxpayer. The cost of operating federal regulatory agencies is rising more rapidly than the budget as a whole, the population, or the gross national product. Outlays of 41 regulatory agencies are estimated to increase from $2.2 billion in the fiscal year 1974 to $4.8 billion in fiscal 1979, a growth of 115 percent over the five-year period.

2. The motorist feels the effect. Federally-mandated safety and environmental features increase the price of the average passenger car by $666 in 1978. When we consider that about 11 million cars are likely to be sold to Americans this year, that means that compliance with those regulations are costing American consumers $7 billion a year in the form of higher priced cars. In addition, the added weight of the cars is increasing fuel consumption perhaps by about $3 billion dollars annually. Thus, the American motorist is paying in the neighborhood of $10 billion a year to meet federal regulatory requirements in the two areas of environment and safety.

3. The businessman feels the effect. There are over 4,400 different federal forms that the private sector must fill out each year. That takes over 143 million man hours, the economic equivalent of a small army. The Federal Paperwork Commission recently estimated that the total cost of federal paperwork imposed on private industry ranges from $25 billion to $32 billion a year and that "a substantial portion of this cost is unnecessary."

It is hard to believe that most of those reports are even read by anyone in the government before they are filed in some federal storage area. Indeed, cases have been reported of a small company repeatedly sending in nonsense results, without receiving any criticism from the federal agency requiring the information. It is widely known, of course, that the smaller business is hit disproportionately hard by paperwork, as well as by other types of government regulation.

4. The homeowner feels the effect. Regulatory requirements imposed by federal, State, and local governments are adding between $1,500 and $2,500 to the cost of a typical new house. The government-imposed costs range from permit and inspection fees to wider and thicker required streets to time-consuming and excessively detailed environmental impact studies. Using the midpoint of the range of cost estimates ($2,000) and applying it to the two million new homes built in 1977 results in an added cost to the homeowner of $4 billion a year.

5. The consumer feels the effect. The costs of complying with government regulations are inevitably passed on by business to the consumer in the form of higher prices. On the basis of a conservative estimating procedure, the aggregate cost of complying with federal regulation came to $62.9 billion in 1976, or over $300 for each man, woman and child in the United States. The estimated $62.9 billion of costs imposed on the private sector is twenty times the $3.1 billion spent to operate the regulatory agencies in the same year. If we apply the same multiplier of twenty to the amounts budgeted for regulatory activities for more recent years, we can come up with approximations of the private sector's cost of compliance and thus with the total dollar impact of government regulation. On that basis, it can be estimated that the costs arising from government regulation of business (both the expenses of the regulatory agencies themselves as well as the costs they induce in the private sector) totalled $79.1 billion in the fiscal year 1977 and may reach $96.7 billion in the current fiscal year ending September 30, 1978.

On the basis of the federal budget estimate for the fiscal year 1979, the aggregate cost of government regulation may come to $102.7 billion, consisting of $4.8 billion of direct expenses by the federal regulatory agencies and $97.9 billion of costs of compliance on the part of the private sector.

6. The worker feels the effect. Government regulation, albeit unintentionally, can have strongly adverse effects on employment. The minimum wage law has priced hundreds of thousands of people out of labor markets. One increase alone has been shown, on the basis of careful research, to have reduced teenage employment by 225,000, with a disproportionately large impact on nonwhite youngsters, precisely the group reporting the highest unemployment rate. In addition, many industry facilities and entire factories have been closed down—with substantial but unmeasurable effects on employment—because of the high costs of meeting environmental, safety and other regulatory requirements.

7. The investor feels the effect. Approximately $10 billion of new private capital spending is devoted each year to meeting governmentally mandated environmental, safety, and similar regulations rather than being invested in profit-making projects. Edward Denison of the Brookings Institution has estimated that in recent years these

deflections of private investment from productive uses have resulted in a loss of approximately one-fourth of the potential annual increase in productivity. The result is to exacerbate the already strong inflationary pressures in the American economy.

8. The nation as a whole feels the effect of government regulation in a reduced rate of innovation and in many ways. The adverse consequences of government intervention in business decision making range from a slowdown in the availability of new pharmaceutical products to the cancellation of numerous small pension plans. In total, the aggregate response to the proliferation of government regulation is a basic bureaucratization of American business. These undramatic but fundamental effects occur because of the diversion of management attention from traditional product development, production, and marketing efforts designed to provide new and better products and services to meeting governmentally imposed social requirements. It is not inevitable that these various adverse effects flow from every regulatory activity, but it will take serious efforts to avoid or reduce these adverse side-effects.

THE NEED FOR REGULATORY REFORM

There are no simple approaches to reforming government regulation. It surely is not a question of being for or against federal regulation of business. A substantial degree of governmental intervention is to be expected in a complex, modern society. The need, rather, is to identify those sensible changes that can be made in the regulatory process so as to achieve the desired social goals (less pollution, fewer product hazards, etc.) with minimum adverse impacts on other important goals (more jobs, less inflation, etc.).

1. A new way of looking at the effects of regulation is needed for public policymaking. The pertinent question is not whether there are shortcomings in the private sector. Of course, the human beings involved in the operation of the American business system are fallible and the results of their activities do not always conform to the prevailing notions of what is in the public welfare. The serious question is whether, in view of the many goals of our society, government regulation in a particular instance is doing more good than harm.

A parallel can be drawn to macroeconomic matters, where important and at times conflicting objectives and trade-offs are made. Similarly, a cleaner environment is a very important national objective, but surely many sensible trade-offs must be made here, too (e.g., cleaner air versus cleaner water, ecological improvements versus energy conservation, etc.) Thus, the all or nothing approach, zero discharge of pollutants, is not a feasible objective or even a sensible goal to aim at. The same sense of balance is needed in each of the other regulatory programs.

2. An economic impact statement should be required prior to issuing each new regulation. The notion that policymakers should carefully consider the costs and other adverse effects of their actions as well as the benefits is neither new nor revolutionary. The Ford Administration's institution of economic impact statements for new regulations was an important and useful innovation. President Carter has recently made some changes in the procedures, particularly in providing more attention to existing as well as proposed regulations. Unfortunately, the Ford and Carter approaches are not up to the task.

The modest requirements currently imposed on some regulatory agencies need to be given a firm legislative mandate, and to be extended to all regulatory agencies of the federal government. There mere performance of benefit/cost analyses by a reluctant agency is not adequate. The key action needed by the Congress is to pass a law limiting the regulations of all federal agencies to those instances where the total benefits to society exceed the costs. Government regulation should be carried to the point where the added costs equal the added benefits, and no further. Overregulation—which can be defined as regulation for which the costs exceed the benefits—should be avoided. The failure to take those costs into account has resulted in the problem of overregulation that faces the United States today.

The implementation of benefit/cost analyses needs a great deal of attention. An agency not directly involved in regulation—such as the General Accounting Office or the Office of Management and Budget—should set government-wide standards, concepts, and methods of performing economic evaluations of regulations, including the estimation of benefits and costs. The determination of the interest rates to be used in discounting future costs and benefits, for example, should not be a matter left to the judgment of the agency which is attempting to justify its own action.

3. The federal budget process should focus more directly on regulatory activities. Unfortunately, because the requested appropriations for the regulatory agencies are relatively small portions of the government's budget, limited attention has been given to them in the budget preparation and review process. In view of the large costs that they impose on the American public, the appropriation requests of the regulatory agencies deserve far more attention than they are now getting. One possibility for making the regulatory agencies and their budget reviewers more sensitive to the costs being imposed on the public is for Congress to give the regulatory agencies "budgets" of private costs that they can cause to be incurred by their regulations.

Thus, not only would an agency be given a budget of $X million for operating costs, but also a ceiling of $Y billion of social costs that they can impose during the fiscal period. As a start, it would be helpful to include in the Special Analysis volume accompanying the federal budget, a section on the costs of government regulation similar to the existing special analyses on other extra-budgetary activities, notably "federal credit programs" and "tax expenditures." Such a special analysis would be an initial step toward incorporating regulatory costs into the federal government's annual budgetary and program review mechanism.

4. All government regulatory activities should be subject to a sunset mechanism. Each regulatory agency should be reviewed by the Congress periodically to determine whether it is worthwhile to continue it in light of changing circumstances. Many government programs, regulatory or otherwise, tend to prolong their existence far beyond their initial need and justification. In a world of limited resources, the only sensible way to make room for new priorities is periodically to cut back or eliminate older, superseded priorities. In the case of the older, one-industry regulatory agencies, such as the Interstate Commerce Commission and the Civil Aeronautics Board, the sunset mechanism could be an effective way of pursuing a "deregulation" approach.

Very frankly, it may be relatively easy to get the members of the Congress interested in correcting the shortcomings of the federal bureaucracy. Those shortcomings are real and important. Nevertheless, many of the fundamental problems in the regulatory area can be traced back to the legislation enacted by the Congress—the maze of overlapping, conflicting, and excessive regulation. Legislative changes are a key part of any serious regulatory reform effort.

5. Alternatives to regulation should be carefully considered. Government has available various powers other than regulation. Through its taxing authority, government can provide strong signals to the market; pollution control taxation may indeed provide a more effective and less costly mechanism than the existing standards approach in achieving desired ecological objectives. In the case of the traditional one-industry type of regulation of business (as of airlines, trucking, railroads, and natural gas), a greater role should be given to competition and to market forces. The more widespread provision of information to consumers on potential hazards in various products may, in many circumstances, be far more effective than banning specific products or setting standards requiring expensive alterations in existing products. The information approach takes account of the great variety of consumer desires and capabilities.

Surely, as we have found out, it just is not practicable for government to attempt to regulate every facet of private behavior. This statement, however, is not a plea for anarchy. Indeed, it is important that government do well the various important tasks that it undertakes. That makes it essential for the Congress to choose carefully those tasks that it does assign to government.

6. The role and importance of individual decision making should not be ignored. We all need to be cognizant of the fact that the massive extent of federal intervention in the economy—high levels of taxation, expenditures, and regulation—makes it difficult for the private sector to perform its basic functions. In important ways, the major contribution of the Congress could be in the form of reducing those burdens rather than adding to them, albeit with the best of intentions.

## PRIVATE SLOVIK

● Mr. McGOVERN. Mr. President, Pvt. Eddie Slovik was the only member of our Armed Forces executed for desertion during World War II. His widow, Antoinette Slovik, has been denied the proceeds of her husband's national service life insurance policy in spite of the highly unusual circumstances surrounding this case. In an article in Parade magazine, March 26, 1978, William Bradford Huie describes some of those circumstances.

While I do not condone desertion, it appears that the unique nature of this case makes it a matter of simple justice to see that Antoinette Slovik receives a payment of $70,000, which would be equal to the proceeds of the insurance plus interest.

I call my colleagues' attention to Mr. Huie's article and ask that it be printed in the RECORD.

The article follows:

THE UNITED STATES SHOULD PAY PRIVATE SLOVIK'S WIDOW

(By William Bradford Huie)

The proposal, backed by President Carter, that Congress pay Antoinette Slovik $70,000 in lieu of her husband's GI insurance plus interest pleases many Americans and displeases others. As author of the book *The Execution of Private Slovik* [published in 1954] and as one who has lived with this case for 33 years, I think Congress should pay this money, for I believe the execution was a mistake.

The execution was not illegal, for Eddie Slovik had "refused to bear arms in a combat zone," which is a form of desertion. The execution was ordered by General Eisenhower, who hoped he was doing right.

But I don't believe there was any point in shooting a U.S. Army deserter in France as late in the war as 1945. And if one of our thousands of deserters in Europe should have been shot as an example when the war was almost over, Slovik was the wrong one to pick.

The 28th Division's legal officer who approved Slovik's death sentence said to me, "I figured we were getting down close to shooting somebody for desertion. We were at the point where just *sentencing* deserters to death wasn't doing any good. No soldier thinking about deserting feared a death sentence that everybody knew wasn't going to be imposed. To slow the desertion rate, we had to shoot somebody. And I figured if one deserter had to be shot, the United States wouldn't be losing much if it was Slovik. He was weak as dishwater . . . about the nearest thing to nothing you ever saw."

"That's why he should not have been picked as the example," I said. I cited the FBI report on his civilian record which told how Slovik, when he was 12, was hungry in Detroit during the Depression; that he was sent to the Michigan Reformatory for petty theft and kept there for six years, not because he was bad but because of an 'unfavorable situation' existing at his home. Further, on May 30, 1942, he was classified 4–F . . . the Army didn't want him. But later he was reclassified, and the Army inducted him on Jan. 3, 1944, when it was scraping the bottom of the barrel for infantry replacements. He was never in combat. He refused to bear arms before he was put in the line.

"On the other hand," I continued, "we had young officers in France . . . college graduates . . . who, before their own troops, refused orders to lead night patrols and preferred to sit out the war under death sentence in a disciplinary center. If we had to shoot a deserter as an example in 1945, we should have picked a privileged officer, not a 'near nothing' like Slovik."

ORDERED BY IKE

When General Eisenhower decided to have a deserter shot, the Battle of the Bulge was raging, thousands of troops were deserting, and he hoped an execution would slow the desertion rate. He signed Slovik's death warrant on Dec. 23, 1944. But Slovik was not shot until Jan. 31, 1945. By then German resistance had collapsed, our troops were virtually unopposed, and nobody was deserting. On the day Slovik was shot to slow the desertion rate, there was no desertion rate to slow.

When Eisenhower made his decision, he thought the job would be done in a disciplinary center by the hangman who had executed 95 murderers and rapists. But the Standard Operating Procedure, dated 1862, said a deserter must be "shot to death with musketry" at the battle front, by the division he deserted, and there must be many witnesses. Eisenhower had ordered two other deserters to be shot after Slovik. But within minutes after the Slovik execution, officers who had witnessed it telephoned Supreme Headquarters and cried, "It's a mistake! It mustn't be done anymore!"

Eisenhower then canceled his orders to shoot the other two, thereby leaving Slovik in his unique position: the only American serviceman to be shot for desertion since the Civil War.

Slovik's execution was to have been announced to all American troops in Europe. Men thinking of deserting can't be deterred by an execution unless they are told about it. But the only troops who were ever told about Slovik's execution were those in the 109th Infantry Regiment, which was commanded by Lt. Col. James Earl Rudder, who had led the Rangers at Omaha Beach and witnessed Slovik's execution. When Rudder died in 1970, he was a major general and chancellor of Texas A & M University.

Had Rudder been in Eisenhower's place, the first American soldier to desert in Europe would have been shot, and his execution would have been announced to the world. "Then we wouldn't have had those other thousands of deserters," General Rudder said to me in 1954 after he read a proof copy of *The Execution of Private Slovik*.

If the Army didn't consider Slovik's execution a mistake, why didn't they tell his widow about it? Doesn't the next of kin of every American serviceman have the right to know the circumstances of his death? Six weeks after the execution, the Army wired Anne Slovik that her husband had "died" in Europe. That's all the Army ever told her. She never learned the circumstances until 1953, when I told her.

When she received the Army's wire, she naturally assumed that Eddie had died honorably. She so notified the supervisors at the Michigan Reformatory, who placed a gold star at Eddie's name on the institution's list of servicemen. Imagine Anne's humiliation when in 1954 the gold star had to be removed!

If President Carter ever hands Anne Slovik a check for $70,000 before television cameras, I hope that Somewhere Out There beyond the communications satellites, Father Carl Patrick Cummings will know it. He'll praise the Lord for it. When I found him in 1953 at St. Patrick's Church, Nicholson, Pa., and handed him an Army letter allowing him to discuss the Slovik execution with me, he said:

"I've wondered for eight years why I never heard from his widow. After the execution, I wrote her a letter which I thought would comfort her. I told her how Eddie and I spent his last hours together . . . how I gave him letters from her and watched him read them as tears rolled down his cheeks . . . how I heard his last confession and gave him the last rites . . . how I walked with him to the post in that snow . . . how proud I was of the courage with which he met his death . . . and how as the MP put the hood over his head I said to him, "When you get Up there, Eddie, say a little prayer for me.' I wrote all that to Mrs. Slovik, both because I wanted to tell her and because Army regulations required me to tell her. I wonder why she never acknowledged my letter?"

"She never received it, Father," I said. "I saw it last week. For eight years your letter has been buried in the secret Slovik file in the Pentagon."

His shoulders sagged under that blow. "Oh, my God," he sighed. "They had no right to intercept my letter!"

"They were scared," I said. "They had made a mistake, and they were trying to hide it."

"NEVER HAD MUCH CHANCE"

If payment is made, I hope, too, that somehow the late Maj. Gen. Norman D. Cota can hear of it. West Point never graduated a finer soldier than "Dutch" Cota. As commanding officer of the 28th Division, he convened the court that sentenced Slovik, he approved the death sentence, and he presided at the execution.

When I saw him at Bryn Mawr, Pa., in 1953, he said, "I've always been sorry about one thing and glad about another. I'm sorry that the one deserter we shot was a replacement infantryman. I hated our replacement system. Bringing up one man during the night and putting him under fire among strangers! Handled that way, not many men can fight with courage and skill. An American soldier deserves to go under fire with men he has trained with. He deserves to be led by officers he knows and trusts. I'll always be sorry that when we decided to shoot one deserter, we didn't choose a man who had had a better chance. Slovik never had much chance.

"But I've been glad of one thing," General Cota went on. "I had a premonition that the lot might fall on Slovik. If it did, I wanted his wife to get his insurance. I called in the lawyers and told them to change the wording of Solvik's death sentence. And I approved that death sentence only after the lawyer assured me that if Slovik was executed, his wife would get $10,000. I've always been glad I arranged for her to get that money."

"She didn't get it, General," I said.

He was startled. "She didn't?"

"No, sir, she didn't," I replied. "Officers in the Pentagon showed me the unusual wording you insisted on. But that wording didn't accomplish what you thought it would. Knowing that her husband had the insurance, after she was told by the Army that he had died, Anne Slovik wrote to the Veterans Administration. The VA lawyers replied that under the law the VA could not pay the insurance, for her husband's death had been the result of willful disobedience."

"Didn't she get a lawyer to help her?"

"No, sir," I said. "She wanted to keep secret what the VA had told her. She burned the VA letter, told people she had been paid the insurance money, and didn't try any further to collect it. That's the position she had been in for eight years when I found her last week."

"I hate to hear that," General Cota said. It disturbs me."

I then tried to get Congress to pay Anne Slovik $16,000, which would have been the insurance plus interest to 1954. Three U.S. Senators agreed to help: Homer Ferguson and Charles E. Potter of Michigan, and Paul Douglas of Illinois. Senator Potter was important to this effort, for he had lost both legs serving in the 28th Division.

But we failed. All three Senators were informed that our effort would be "an affront to President Eisenhower . . . it would look like you are accusing the President of making a mistake when he ordered that cowardly deserter shot!"

I wanted the story to be filmed, to try to affect far more Americans that I could ever affect with a book. A film producer went with me to the Pentagon. The Army agreed to cooperate in making a film. But the White House sent an officer to California to inform the major studios that a Slovik film would not serve the nation's best interest.

That delayed the film 20 years—until 1974, when a TV production was aired.

Now it's another day, another President, and another effort to persuade Congress to pay Anne Slovik. The cost will be $54,000 higher than it would have been in 1954. Delay is always expensive.

I hope Congress authorizes payment, and that when President Carter pays Anne Slovik the $70,000 he will emphasize that the money is being paid to signify to all mankind that the United States will never execute another criminal because the lot has fallen on him. Therefore, as long as this nation remains free, what happened in the Vosges Mountains in France at 10:05 a.m., Jan. 31, 1945, will not happen again.●

## SOUTH AFRICA

● Mr. GOLDWATER. Mr. President, during my recent visit to South Africa and Southwest Africa, the question I heard as often as any other one concerned the seeming advocacy of the United States of terrorism in the southern parts of Africa. I have no answers for them because, frankly, until I visited that part of the world on this occasion, while I knew trouble was brewing in Rhodesia and trouble was possible in Southwest Africa, I never realized the extent to which the fear had gone that the United States actually, probably

without knowing it, was advocating a state of terror throughout the countries that I have mentioned, and to those you can add Angola. A very good article on this that I know will provoke some controversy appeared in Government Executive magazine entitled "Why Does the U.S. Advocate Terrorism in Southern Africa?" It was written by C. W. Borklund, the publisher. Therefore, I ask that this article be printed in the RECORD following my remarks, and I hope that my colleagues will read it. What we have seemingly lost sight of or at least the State Department has lost sight of, is the disastrous effects of our pulling out of Angola and the subsequent attacks on the Horn of Africa and the mobilization of Cuban troops and Soviet advisers in Mozambique directed, apparently, against Rhodesia.

I would hope that before my Government pursues this disastrous course any further, which seems to me to be guaranteeing Soviet control over the whole of the continent of Africa that they will stop and study what they have been doing and hopefully change their approach.

The article follows:

WHY DOES THE U.S. ADVOCATE TERRORISM IN SOUTHERN AFRICA?

(By C. W. Borklund)

In South Africa, Government-legislated relations among ethnic groups requires some unfair, even atrocious, practices among citizens. That is not, of course, uniquely a South African characteristic. Any time any government anywhere dictates moral behavior, it invariably does an injustice to somebody.

But the unwarranted, even stupid, barriers to a more cohesive, stronger community of peoples in South Africa are being torn down: the political ones according to a seeming "game plan" which, over time, should satisfy the vast majority of whites and non-whites alike; the education and quality-of-life ones as fast as economic growth, largely, will allow.

In short, South Africa is working at least as hard to develop equitable inter-racial relations as the U.S. or any other world nation concerned about such things. That claim may seem incredible to an American public that has been so thoroughly brainwashed by its political leadership and its own gullible Press into believing the opposite, but by any fair comparison the claim is easily documentable nonetheless.

Realities?—Why then is the whole world, it frequently seems, trying to steamroller into subservience—if not annihilation—the present white government in Pretoria? For the political and military stability it brings to an otherwise volatile continent; for its strategic location on the aorta of oil shipments from the Middle East to the U.S. and Europe; for its huge mineral storehouse essential to the running of Western industry, South Africa ought, and wants, to be a close U.S. ally, militarily and economically.

Yet, since President Jimmy Carter pronounced his "Human Rights" campaign a year ago and apparent U.S. leadership stomped it on South Africa as hard as, or harder than, on anyone else, these essential military and economic facts have been ignored. Or have they? Is all this drumbeating over "oppressive violations of human rights" in South Africa really a cover?

"In politics," President Franklin Roosevelt once said, "nothing happens by accident. If it happens, you can be sure somebody meant it to happen that way."

Are the so-called race riots in Soweto, Port Elizabeth, Cape Town and Durban "spontaneous combustion;" or, in fact, carefully orchestrated tactics financed primarily by non-South Africans to gain very material ends of wealth and power? Even though he applies his vaguely defined "human rights" with a capricious inconsistency which undermines the merit of it, Carter may really mean the church-like intent of it. But are those exploiting it more in tune with Roosevelt?

For at least two years (and for some, longer than that) South Africans have been digging below the cover, looking for answers to those questions. The result is, South Africa's leadership has uncovered a complex collection of inter-locking motivations for the "Hate White South Africa" campaign as intricate as the plural society of South Africa, itself—virtually none of them would be laudable to the average American.

Among the ones:

The Organization for African Unity (OAU) member-nations owe the Western world and its banking institutions an estimated $100 billion. "Either this year, or certainly no later than next year," claims one South African, "those black African nations will announce they consider the loans a 'gift' which therefor will not be repaid."

Even the huge U.S. Treasury would shudder over default on a debt that big. The huge size and vulnerability of these "soft" loans is one reason for the dollar's declining value in world markets. The Chase Manhattan, whose boss, David Rockefeller, is also a key figure in the Trilateral Commission (see below), for one, has a big chunk of that weak paper.

And since the loans have not gone for economic development, as intended, but mostly for arms and current expenses; those impoverished countries are generating no dividends to pay even the loan interest—except in Nigeria where Western expertise is helping them pump wealth-producing oil.

Upshot of such a move would be, of course, a fiscal crisis in the West and a socio-economic "crash" at the African end, followed by a trapping of millions of Black people in old-style peasant existence. One alternative: a message to OAU creditors to "help us drive the white out of South Africa so we can take over those rich mines."

Though a black revolutionary's ability to run a mine is highly suspect, "Board members of the largest U.S. banks argue quite cynically," one U.S. banker told *The Citizen*, a South African newspaper, "that they could negotiate far more easily with a weak and possibly corrupt Black government in Pretoria than they can with a strong White one."

Already, Mozambique has claimed, and received from United Nations members, millions in grants to prop up its sinking economy. The trumped-up excuse: the forced closing of Mozambique's border with Rhodesia (a decision Mozambique made unilaterally) is the cause of Mozambique's economic woes. In fact, the cause is governmental incompetence—and the price being extracted from the UN far exceeds any reasonable estimate of what the border closing should have cost in the first place.

Similarly, Lesotho, a Basotho-nation independent "homeland" set up by the British smack in the middle of South Africa in 1964, flummoxed the UN into believing its economic growth had been shattered by the closing of its border with Transkei. (Lesotho, a product of British "Homelands" policy, is recognized by the UN. Transkei, a result of a virtually identical policy fostered by South Africa, is not, because the OAU claims it "perpetuates" the "hatred White apartheid.")

Though all Lesotho's main communications routes and all its foreign trade originates in or comes through South Africa, and not through Transkei at all, and even though 160,000 of its people work in South Africa (compared to 20,000 in Lesotho, itself), the fact is that none of the three border crossings into Transkei ever was closed. (Neither were any of the 33 crossings into South Africa.)

Yet, Lesotho asked the UN for, and received, some $90 million in compensation payments—a figure 30% higher than Lesotho's entire gross national product. A similar raid on world treasuries occurred when Zambia's Rhodesia border was closed. "And it takes no genius to predict more," says one South African, "if the UN agrees to the economic and investment sanctions the OAU wants to see imposed on our country."

According to a South African Schlesbusch Commission report of some three years ago, the American Friends Service Committee (AFSC) has developed a 60-page "Action Guide on South Africa." (This is the same group that battled to kill off the B–1 among other U.S. weapon systems; "has bitterly denounced anti-communism, according to *The Citizen;* urged the U.S. "to get rid of its military establishment"; has received funding support from the Ford and Rockefeller Foundations—in violation of their tax-exempt status—and, says the same source, "believes in One-World government.")

Some 74 organizations have pledged their backing to its "Group Action" master plan to wreck the South African economy. If they succeed even partially, say South Africans, "they will incite black revolution." The U.S. already exports more than $1.4 billion a year to South Africa; is surpassed only by Britain and Japan as a customer; and the 400-plus U.S. firms in South Africa represent 20 percent of all foreign investment in the country.

"Group Action" already has approached more than 1,000 anti-South Africa university, church, labor and community groups. Their plan, in simplest terms: arrange, sponsor and promote trade and sports boycotts; attack banks and finance houses dealing with South Africa; wreck sales of South Africa's Kruger Rand in the U.S.; picket, boycott and intimidate U.S. firms doing business in South Africa.

An anti-South Africa "Liberal-international wing," as The Citizen's Aida Parker calls it, has moved into key posts in the State Department and, now, the White House—more commonly called "The McGovernites" domestically when the subject of SALT talks or U.S. Defense expenditures comes up.

They trace some of their heritage, philosophically at least, to the Trilateral Commission, set up in 1973 by the Council on Foreign Relations (CFR) whose leaders, among its 1,000-plus members, have been called lately "America's invisible government." The Trilateral Commission consists of 80 members each from Western Europe, Japan and North America; hence, its name.

Created, according to intelligence sources, by David Rockefeller and Zbigniew Brzezinski, now Carter's foreign policy advisor, who coached him on the subject for three years ("It was like a private tutorial," says Carter), the Commission keeps a low public profile. But apparently, it is a "New World Order" group. Says one of its pamphlets: to prevent world nuclear and economic chaos, it is necessary to abolish "the narrow dictates of national interests" and create a new "world order."

Among the ways: control the ultimate military weapon, nuclear power, and the ultimate financial one, gold. South Africa is a major world supplier of uranium and the source of two-thirds of all the world's newly mined gold. So, as South Africa sees it, arrayed against her are not only communists and revolutionary terrorists (both black and white) but "One Worlders" as well.

In Washington, alone, according to South African intelligence sources, members of either the Trilateral Commission and/or the CFR read like a "Who's Who." Among the

prominent names: Carter, Vice President Walter Mondale, Brzezinski, State Secretary Cyrus Vance, Defense Secretary Harold Brown, Cabinet Secretaries Blumenthal, Califano and Harris and a batch of second-level State officials including Anthony Lake, director of the State Department Policy Planning staff and Richard Moose, Assistant Secretary of State for African Affairs.

Notes Cas de Villiers in his recent book, *African Problems and Challenges:* "Soviet policy towards Southern Africa is aimed at liquidation of the White governments . . . by toeing the Black nationalism line (and) putting the West in a very delicate dilemma where it can hardly support White governments without being branded allies of the so-called new-colonialist cause.

"Russia cashed in on what is wrongly portrayed as a Black/White power struggle on the sub-continent of Southern Africa, despite the fact that it became very clear in Angola that it is, in essence, a power struggle between moderate pro-Western and radical pro-Marxist elements, sponsored by Russia," and China.

Worse, notes former Secretary of State Henry Kissinger, "the Carter Administration is seeking to encourage the most radical of the terrorists and has no concern whatsoever for the White minorities." The same can be said for a lot of other American-based or American supported groups.

Item: The Lawyers Committee for Civil Rights Under the Law provides funds to pay for defense in almost every major treason and resistance in South African courts. They plunk down as much as a half million dollars a trial, dragging the litigation out because "extensive trials earn extensive publicity," says *The Citizen.*

Their funds, according to Schlebusch, come from the Africa-America Institute, the South African Council of Churches and a London legal firm. The Africa-American Institute (AAI), in turn, receives a lot of funding from the Ford Foundation, which Henry Ford recently left because he said it no longer encouraged the free enterprise goals for which it was founded. The real hooker, of course, is more people will try riskier, illegal things if they know large sums are found for their defense.

Church groups, through the South African Council, among others, have given more than $125 million to African terrorists in the past few years. Red Metrowich, author of *African Survey,* estimates, according to their own numbers, that the World Council of Churches alone sends "60% of the money it receives from Christian worshippers" to finance "those whose political weapon is not the ballot box but the knife, the hand-grenade and the machine gun."

Item: the U.S. State Department has financed a total of four grants, mainly to the Africa-American Institute to train Blacks to take over South African Governmental administration. They also are launching a program to "upgrade professional skills and experience of Black teachers (who) can play a significant role in community organization and social-political awareness." The "Catch-22" is that most applicants have to be approved by a "recognized liberation movement."

One such: Drake Koka, a militant Black trade unionist who fled South Africa after the Soweto riots of 1976: now reportedly has set up in Botswana a channel for Soweto "students" (they run in age about 20–28) to jump across the border and be sent north to such places as Dar es Salaam for training in terrorist tactics. They then try to infiltrate back into South Africa.

Item: Harry Winston, former chairman of the U.S. Communist Party, claims the now-banned (in South Africa) Pan African Congress "was formed in the luxurious offices of the USIS (United States Information Service) in Johannesburg," and Schlebusch says the offices have "frequently been used after hours for duplicating revolutionary pamphlets."

Item: USIS has opened a "library" in Soweto where many of the books, pamphlets, films, meetings and lectures compare the civil rights movement in the U.S. to potential "Black nationalism" moves in South Africa. State also has announced the setting up of four powerful new radio transmitters (television is embryonic in Africa and most Blacks are illiterate) to broadcast "the new U.S. initiative for Black rule on the continent of Africa."

Item: the South Africa Students Organization (SASO), of which the late Steve Biko was a former president, has a charter based entirely on the theories and concepts of Stokely Carmichael and Professor Charles V. Hamilton in their book, *Black Power.* When it fired up riots on U.S. campuses, *Newsweek* compared it to other "manifestoes—such as *Mein Kampf,* Mao's *Thoughts* or those written by Marx and Engels."

The basic theme: *Black Power* advocates must generate black-white polarization "in order to instigate confrontation." It was introduced in South Africa by the University Christian Movement shortly after the burnings started in U.S. universities. (UCM disbanded when SASO started. Most of its funding came from U.S. and European church groups.)

Some of the outfits raising this storm of hate and violence in South Africa are well-remembered by Americans from the 1960's. Among them: the Southern Christian Leadership Conference, Americans for Democratic Action, American Friends Service Committee, and the Ford Foundation—which Paul Pretorius, a former president of the National Union of South Africa Students (another forerunner of SASO), testified "also funded a host of other groups including SASO and the Christian Institute through the International University Exchange Fund in Switzerland."

Others just have new, grand-sounding names such as: the Carnegie Endowment for International Peace, which financed development of an amateur plan for blockade and invasion of South Africa; the Johnson Foundation of Racine, whose "Wingspread" conferences are run for the benefit of anti-South African zealots; the Interfaith Center for Corporate Responsibility; the U.S. Catholic Conference; World Council of Churches to Combat Racism; Task Force on Southern Africa; United People's Campaign Against Apartheid and Racism; World University Service, ACCES (American Coordinating Committee for Equality in Sport); American Society for African Culture; the Christian Institute etc., etc., etc.

Nearly all these outfits, and a few score more, have at least a leftward tilt to them. And a violent "Black liberation movement," whoever instigates it, is precisely what communism, Russian variety, wants. Notes J. A. Du Plessis in a Foreign Affairs Association monograph, *South Africa: The Link of Terror:*

"In fanning the flames of unrest in South Africa, the SACP (South African Communist Party) acts as an external manipulator of the situation, under the guidance of Moscow, relying on its liberation front, the African National Congress (an organization banned in South Africa) to operate the country. Moscow, and unfortunately, many in the Western world who should know better, claim that the ANC is the real representative of the Black peoples of South Africa."

In a trial of 12 persons under the Terrorism Act last year, South Africa's Government lawyers noted, almost in passing, that "the net effect of a successful ANC revolution would be that a white-dominated Russian-Marxist government would replace the present Government."

Noted a London *Times* columnist in May, last year, "While the American administration is painfully learning about the realities of African politics, the Soviet Union is poised to take advantage of every mistake and to exploit every opportunity to expand its influence. As a result, it has to be recognized that the alternative to White minority rule in southern Africa may not be simply Black majority rule—it may well be communist rule as well."

And, to the extent that the U.S. acts by design and not out of ignorance, its actions seems to be predicated on a belief:

A–That revolutionary overthrow of the whites is inevitable;

B–By out-doing Moscow in supporting the revolutionaries, the U.S. aim, when "the inevitable" happens, is to have their friends, not Moscow's, in Pretoria, and elsewhere.

Thus, Andrew Young, U.S. ambassador to the United Nations, apparently with the support of his Government, insists no peace can come to either Rhodesia or South West Africa unless communist-backed terrorists play the lead role in the transition to Black control. In effect, in spite of the fact that whites and moderate blacks (who in both countries represent the overwhelming majority of the people) are reaching agreements on a peaceful transition, of the U.S. continues to fan the flames of war.

Namibia Issue.—Snapped Roelof (Pik) Botha, South African Foreign Minister, in a recent CBS *Face the Nation* interview: By demanding that the present armed forces in the two countries be disarmed and/or incubated, the well-armed terrorists are "not interested in open, fair elections on a one-man, one-vote basis, but want to have (for themselves) an extra reserve of force if they should lose the elections."

The West, specifically the U.S., he added, apparently is backing "a new concept being introduced in international life and that is that the man who carries the gun is entitled to political power."

Demanded Richard Hottelet of CBS News: "Will you go ahead with your plan of moving Namibia (South West Africa) to independence by the end of this year, on your terms, and if you do, are you prepared to take the international consequences?"

Answered Botha, "This decision is for the people of South West Africa, not for us. . . . We are committed to give independence to (Namibia) by the end of the year unless their leaders decide otherwise."

"But is it clear to you," Hottelet persisted, "that if you reject the Western proposals for an internationally accepted formula for this transition, there will be action in the (UN) Security Council to put pressure on you through economic sanctions, through the withdrawal of investments, through the rupture of trade, (actions) which the Western five (U.S., Britain, France, Germany, Canada) are almost certain to join in . . . ?"

Botha: "Yes, Yes. We are aware of that, but my government is not prepared to buy international friendship . . . and the people of South West Africa are not prepared to pay for international recognition by voluntarily destroying themselves." And looking at some aspects of the Western proposal for government transition, he added, "there is a severe, a real danger of those people (in Namibia) being overrun and governed by a Marxist, terrorist organization, without any hope, ever, of one-man, one-vote or freedom of expression."

Yet, Western leadership persists in seeing no viewpoint but their own. And in many respects the threatened sanctions already have started—in violation of U.S. law which requires that such things be approved by the

Congress first. Nor is the U.S. getting a free ride by these State, mostly, unilateral actions.

A radar at the port of Richards Bay goes out for lack of a part which nine months later the British manufacturer still can't seem to find—and coal shipments to Japan and the U.S. have to be cut back.

The U.S. State Department denies an export license for computer software for Silver Mine, a vast underground maritime communications and surveillance center near the Simonstown naval base on the Cape of Good Hope, because "it could have military value." And two huge U.S.-owned oil tankers collide near East London.

And because the U.S. has forbidden U.S. ships using South African ports—a pressure ploy Black Africans view with immense indifference—one tanker has to be towed all the way to Singapore for repairs.

South African miners are considered the most expert in the world, particularly at deep mining. For years, the U.S. Bureau of Mines has been drawing on their research in mine health and safety—except in the last two years their contacts have been cut off.

The reason: under the Freedom of Information Act, some journalist might demand to see copies of the data exchange—and use its release to claim the Bureau of Mines is undermining Administration anti-South Africa policy. How many U.S. miners will pay with their lives for that freeze in communications no one will ever know

State Department is forbidding shipment to South Africa of the most elementary computers the U.S. sends even to Russia and Eastern Europe. Yet, South African weather stations are the best, if not the only, source of computer-analyzed weather data for the South Atlantic and their section of the Indian Ocean. And ship collisions in the South Atlantic are increasing—which means inevitably an increase in insurance rates, operating costs and the prices of the goods those ships carry.

While Russian naval vessels and merchant ships move persistently in rapidly increasing numbers south along the continent, finding friendly ports in Marxist-run countries as they go, the U.S. has been offered—and are refused to accept—use of South Africa's Simonstown naval base for free.

Defense Elements—Though the U.S. Navy doesn't think as highly of Simonstown for a surface fleet as South Africa does, "What it has going for it," says one recently retired Admiral, "is geography. Simonstown is a natural place for Soviet nuclear submarines. So, it is a natural place for U.S. ASW (Anti-Submarine Warfare.)"

In short, Navy non-politicans would like to have an airfield there to handle the operation of *ASW P-3* aircraft—but don't dare ask for it in today's U.S. political climate. They also would like to be able to refuel non-nuclear ships without having to send tankers down there to do it.

En-route refueling adds about two weeks transit time, sea captains say, to "get around the corner" and up to ports on the Persian Gulf. In addition, notes Miami University's Center for Advanced International Studies, the long journey is dangerous for destroyers because by the time they reach Lourenzo Marques they are well below 25 percent fuel capacity—"a low fuel level for a destroyer."

"Rough seas encountered while rounding the Cape could endanger the ship and crew because a ship low on fuel is less stable than a fully fueled one."

What really is at stake, points out Anthony Harrigan of the U.S. Strategic Institute, is not just the sea lanes over which travel most of U.S. and West European oil. "America also obtains many strategic minerals (beryllium, chrome ore, antimony, asbestos, copper, lead, nickel and uranium) from Africa. The U.S. is facing not only an energy but also a mineral crisis. Access to strategic minerals and materials will be an increasingly serious national concern in the latter part of this decade.

"The same situation applies, of course, to our NATO partners . . . the security of Indian Ocean routes is of prime importance to us all." Already, a study group in Britain has warned that country and Europe that they had best start stockpiling those essential minerals and materials on the same presumption as evidently accepted in the U.S. State Department, i.e. that the guerrilla infiltration already going on—as in Vietnam 20 years ago—is only the prelude to the "inevitable" fall of the White regime.

"There seems little doubt," says de Villiers, "that with China and Russia sailing the waters of the Indian Ocean and with apparent Western complacency about Communist power aspirations, tremendous demands will be placed in the near future on the lonely defenders of Western civilization at the southernmost tip of Africa."

Indeed, South African "Think Tanks" are beginning to realize that their strategic military location is their biggest chip in this international poker game. Naively (or maybe not so naively, considering what socialist forces are at work), the U.S. withdrawal of its Naval attache last year from South Africa was its way of saying, "South Africa is not all that important."

"If they (the U.S.) think, in the end, we have to be on their side, they could be mistaken. Since the arms embargo on us justifies it, we could just declare a neutrality policy," says one highly placed South African, "like Sweden or Switzerland. Then the oil routes would be what they really are anyway—a NATO problem."●

## NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

● Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Glen E. Robinson, of California, to be U.S. marshal for the northern district of California for the term of 4 years vice Frank X. Klein, Jr.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Thursday, April 20, 1978, any representations or objections they may wish to present concerning the above nomination with a further statement whether it is their intention to appear at any hearing which may be scheduled.●

## NUCLEAR WASTE MANAGEMENT

● Mr. SCHMITT. Mr. President, one subject that has been receiving increasing attention is the issue of nuclear waste management. It is a subject that is seriously impeding the continued growth of the nuclear industry.

Due to the Department of Energy's proposed waste isolation pilot plant, located in Carlsbad, N. Mex., has become a focal point for the nuclear waste issue. The Department of Energy has recommended the WIPP facility would be a pilot repository for "low-level" and transuranic wastes and experimentation with "high-level" wastes, to demonstrate the safe disposal of highly radioactive nuclear wastes.

However, the Department of Energy has changed the scope of WIPP several times. This is creating increasing distrust among the citizens of New Mexico, as well as citizens elsewhere in the country who are looking to New Mexico as a leader in this important issue. In an effort to dissuade the citizens of their fears, the Department is currently holding public hearings in New Mexico of the WIPP project. The first hearing was yesterday in Carlsbad.

Last night's edition of the Washington Star carried a front page article entitled "New Mexico Development Doubts on Nuclear Power." I submit the article for the RECORD.

The article follows:

NEW MEXICO DEVELOPING DOUBTS ON NUCLEAR POWER

(By John J. Fialka)

CARLSBAD, N.M.—A Department of Energy road show whose mission is to remove the mounting political obstacles facing nuclear power has opened here to decidedly mixed reviews.

The mission consists of convincing the citizens of New Mexico—once a vehemently pro-nuclear state—that they should accept the nation's first facility for the permanent storage of long-lived commercial nuclear power plant wastes.

But the star of the show, John O'Leary, the Energy Department's deputy secretary, learned last night that attitudes are changing in New Mexico, especially when it comes to becoming the first custodian of plutonium, uranium and other radioactive waste products that will remain dangerous for tens of thousands of years.

Some 400 people attending a hearing at a motel—the first of three Energy Department hearings in this state on the proposed waste project—were deeply divided on the issue.

Many of the local businessmen and politicians who had once been highly enthusiastic about the proposed $325 million facility were sitting on their hands.

O'Leary, accompanied by a team of other Energy Department officials, pressed the case hard, explaining that the evolving politics of the situation means the long-deferred question of how to deal with nuclear wastes can wait no longer.

California, O'Leary pointed out, recently passed a law that said no further nuclear power plants can be licensed unless a method of permanent disposal of nuclear wastes has been demonstrated. At the moment, it appears New York, Connecticut, Oregon and several other states may soon follow suit.

So in order to preserve nuclear power as an energy option, O'Leary said, the United States must "demonstrate to the whole country that we do know how to deal responsibly with our nuclear wastes."

To accomplish this, the Energy Department is proposing to take a small portion of existing commercial power plant wastes, 1,000 spent nuclear fuel assemblies, and store it in rooms dug out of deep salt beds under barren desert land, 27 miles east of here.

The Government has been interested in the salt deposits since 1972, but until last month the plan had been to use them as an experimental waste storage projects, concentrating on low and intermediate level wastes that would be "retrievable," that is, they could be removed from storage in case of difficulty.

Last month, however, Washington's game plan suddenly changed in a move which seriously disturbed many of the project's strongest political backers.

A team of Energy Department experts led by John Deutch, energy research director, revised a plan for the facility to include the high-level power plant wastes. The new plan also neglected to mention the part about the waste being retrievable.

Angry letters were fired off to Washington. Energy Secretary James Schlesinger attempted to mollify New Mexico's congressional delegation during a closed meeting on the Hill by promising that New Mexico would be given the right to veto the waste facility.

Since the nuclear age began in 1945 in a ball of fire from a secret government facility in a New Mexican desert, the federal government has handled most nuclear decisions by fiat and condemnation of land.

The New Mexico delegation was temporarily stunned by Schlesinger's offer of a veto.

"At first we didn't believe him," said one person who attended the meeting. "Then we got him to go out in the hall afterwards so he would say it to the press."

Yesterday O'Leary brought the message home. "I tell you that we will not go forward with this, even with a license in our hands, if the state of New Mexico doesn't want it to go forward. . . . How you make that decision is your business."

O'Leary also brought along a modification in the Deutch plan: The 1,000 spent fuel assemblies—the quantity of waste generated by approximately seven nuclear power plants in one year—would now be considered retrievable.

In case there were technical problems, O'Leary explained, the government would be able to haul them out during the first years of storage.

Carlsbad's mayor, Walter Gerrells, brightened at that point. However, he stuck by a joint statement prepared by the city, its chamber of commerce and its board of realtors. The statement said that Carlsbad supports the project "as originally proposed," hinting that the city fathers might withdraw their support "if there was any significant deviation.

"Some of our communications from Washington have not been as good as we would have liked," it said.

A State senator, Joseph Gant, said that he, too, had been troubled by the meaning of retrievable. "We need to find the truth on this matter," he said.

The truth, Deutch later explained, was that if there were any technical problems, the metal canisters of spent fuel could be retrieved from the storage rooms 2,600 feet below the surface.

After 15 to 25 years, however, salt would begin to corrode the canisters, he said, and the waste would eventualy fall into the salt, which is believed to be geologically stable.

At that point the government could still retrieve it by mining out contaminated salt, Deutch explained. "Of course, then your costs would go way up," he added.

One local witness at the hearing, Charles Hyder, a geophysicist, scoffed at Deutch's explanation, calling the retrievability statement a "bureaucratic joke." Hyder claimed the spent nuclear fuel could generate so much heat that retrieval might be "impossible."

"If you're going to do tests, why don't you test it with material that isn't so deadly," Hyder asserted.

With few exceptions, the younger witnesses at the hearings, those 40 and under, were opposed to the project, and those who were older were for it.

One of the exceptions was Alfred Schettler, a man in his 60s, who said "at my age I am not worried about 10 or 12 years from now, but I have a son who is 9 years old and I have to be representing him."

Because scientists disagree over the matter, Schettler said, "the only possible solution is to go with the group that says it isn't safe. Then we can still call our area the Land of Enchantment instead of someday possibly calling it the Land of Radiation."

Leonel Ceniceros, a young antipoverty lawyer, put it this way: "They say it's going to be retrievable for 15 years, but that's no time at all compared to 250,000 years."

William Adair Gossett, a former mayor of Carlsbad and a former state civil defense official, cautioned the audience to have faith in government scientists. He recalled witnessing an atomic bomb test in Nevada.

"I saw the heat and later felt the tremors. It did not affect me because I was told that they knew what they were doing."

Gossett told O'Leary: "The majority of the people of this area are not opposed to this project. If you are going to do something, say you are going to do it and they'll accept it."

Ben Alexander, a Hobbs, N.M., businessman agreed: "I think it's necessary that we restore a little of our faith in our government. If the salt beds in New Mexico are the best place to take care of this extreme problem, so be it."

The proposal to use salt beds as the ultimate disposal site for nuclear wastes has had its ups and downs—mostly downs—since the government began working on it 15 years ago.

The old Atomic Energy Commission prepared an abandoned salt mine near Lyons, Kans., for disposal during the late 1960s. In 1972, however, the project was abandoned. At the last minute the government discovered that a series of old, uncharted gas and oil drilling holes perforated the storage area.

Later, the state of Kansas invited the AEC to look for salt beds in another state. Michigan and Louisiana have also rejected proposals to use their salt deposits for waste disposal.

The drilling began near here in 1974, but the original site had to be abandoned after unsuspected pockets of brine and gas were found in supposedly dry, stable salt beds.

A second site was found which the Energy Department believes to be suitable, but two weeks ago another government agency, the U.S. Geological Survey, said that geologists still don't know exactly what would happen in the chemical interaction between the canisters, the waste heat and the salt.

One of the other assumptions the government is making here is that New Mexico will continue to be politically stable when it comes to nuclear projects. But the heat being generated by the proposed project has left many observers wondering whether New Mexico might use its veto.●

## WHY FARMERS ARE ANGRY

● Mr. McGOVERN. Mr. President, for those Members of this body whose constituencies are largely urban, I commend an article from the April 17, 1978, issue of U.S. News & World Report entitled "Why Farmers Are Up in Arms."

I hasten to point out that the article to which I have referred is, in my judgment, very restrained and very objective. Relying on facts rather than rhetoric, the editors point out that in a $124.5 billion home food industry coupled with a $55.5 billion restaurant industry, only a third of the food dollar trickled down to the farmers' pockets.

"Even so," the article states, "farmers are getting most of the blame from housewives as supermarket prices go up—by an unexpected 6 to 8 percent this year."

The truth of the matter is that the middleman gets 63 cents of the food dollar before the supermarket basket reaches the consumer's home. There are few who do not point with either pride or nostalgia to the virtues of the family farm. On the other hand, fewer and fewer Members of the Congress are inclined to support programs designed to aid farmers, as was reflected in the closeness of the most recent vote in this Chamber on this subject.

We are historically a nation of farmers. Though their numbers are now dwindling, the fundamental issue of farming as a foundation of the economy persists.

Mr. President, I ask that the text of the article to which I have referred be printed in the RECORD.

The article follows:

WHY FARMERS ARE UP IN ARMS

America's farm problem is again at the foreground of national concerns—as it has been off and on for the past two centuries.

In the aftermath of their angry demonstrations during the winter months, nearly all farmers again are preparing the soil for crops that will feed the nation. The drought in the West has broken, and most farming regions are enjoying favorable weather.

Spring's arrival, however, has not dulled the frustration that impelled thousands to drive tractors into the heart of metropolitan traffic. pelt Secretary of Agriculture Bob Bergland with eggs and invade the halls of Congess.

They are not excited by Jimmy Carter's March 29 promise of interim aid that would boost farm income by 3 to 4 billion dollars, with growers keeping idle about 25 million acres of wheat, corn, other grains and cotton land this year.

In Congress, a House-Senate conference committee has agreed on an emergency bill guaranteeing higher crop prices for farmers, despite threats of a presidential veto. Details of the proposed legislation appear on page 27.

These responses, politicians hope, will cool rural antagonism by making up some of the losses that farmers incurred in the price downslide in 1976 and 1977. But they fall short of what many farmers want most: legislation guaranteeing them 100 percent parity—a concept aimed at keeping commodity prices commensurate with production costs so that farmers keep their purchasing power at reasonable levels.

Since the beginning of America as a nation, a continuing procession of political leaders and scholars has paid homage to the importance of farmer as the embodiment of national well-being and virtue—even as urbanization eroded his political power and technology brought soaring risks along with bigger profits.

Periodic eruptions. Over a two-century span, the conflict between rural individualism and an urbanizing society has erupted periodically into violence. Debt-ridden Massachusetts farmers in 1786–87 staged Shays' Rebellion. Farm-belt discontent a century ago spawned a Populist revolt against Wall Street interests. In the 1930s Depression, farmers forcibly prevented foreclosure sales and destroyed crops in hopes of bolstering prices.

For all its turbulent history, U.S. farming in 1978 stands at the peak of its productive power—the envy of Soviet planners, the salvation of starving nations and a major export in the fight to curb the nation's rising trade deficit.

One American farmer produces enough food and fiber for 56 other people—more

than double the production power of agriculture in any other country. In no other nation do families spend as little of their disposable income on food as in the United States.

Yet a paradox is building up: Thanks to technology, farmers now are less at the mercy of nature than ever before—but more defenseless against the power and mysteries of international finance, commerce and government. Says Jim Emal, extension agent for Saline County, Nebr.: "Fellows my age, in their 30s, graduated from the universities when they were preaching 'Bigger is better.' Now it takes a quarter to a half-million dollars to start in farming. A 160-acre farmer can't make it."

REVOLUTION ON THE LAND

For farmers, bad times of the present are rooted in the good times of the early 1970s, when a rare combination of big harvests and high prices for U.S. farm products brought prosperity to most of the nation's individual farmers—and riches to some.

Year by year, new farmhouses dotted rural America. New-model tractors and combines rolled out of showrooms onto farmlands; newly affluent farmers snatched up any available land nearby to reap even bigger profits. Many used the inflated value of their land as collateral for rising debts. And thousands of young people deserted urban careers to seek the good and simple life they envisioned in the countryside.

Today, however, life on the farm is neither peaceful nor simple for the 8 million Americans who make their living from the soil. As prices for farm products soar, so do farming's costs. A tractor's cost rose from $14,500 in 1972 to $32,500 three years later. Prices of fuel, seed and fertilizers changed almost weekly—always up. Pacing the inflationary spiral is farmland itself. In the corn belt, for example, land values tripled from an average of $374 per acre in 1970 to $1,072 in 1977. In the wheat-growing areas of the southern Great Plains, land prices doubled during the same period Over all, farmland prices rose 105 percent in the last five years.

Much of the boom was a direct response of farmers to government exhortations for "fencerow to fencerow" plantings at a time of huge markets in a food-hungry world. But farmers complain that the boom in land prices now is being fueled by urban speculators and large agribusiness firms in search of tax shelters and long-term investments—and the still relatively low cost of U.S. farms in attracting more and more foreign investors.

Whatever the cause, the boom collapsed as suddenly as it began. In 1976 and 1977, good crops around the world brought a global surplus of grain. Other nations stopped buying at a time when record harvests were coming off U.S. farms—and prices plummeted. Even last year's drought failed to eat into massive stockpiles.

Commenting on the downturn, an Agriculture Department official says: "Somehow, farmers got sold a bill of goods that $12 [per bushel] soybeans, $6 wheat and $3 corn were going to be a normal thing for farmers. Someone planted the idea there would always be a Mother Russia with perennial crop failures and an inexhaustible capacity to take all the wheat and corn we could raise."

With income down, the farmer's borrowing ability is eroding. Now, farmers are holding huge debts and short tempers. "I'm deeper in debt than I've ever been," laments Harold Tonn, 65, wheat and cattle farmer in Arlington, Kans. "I'm broke. I'm paying interest on interest now."

THE ENDANGERED SPECIES

Investigators find evidence that the bucolic life envisioned by some city dwellers is largely illusionary. Many farmers, in fact, are beginning to see themselves as an endangered species in an increasingly urban nation.

Thousands of farmers annually quit the struggle. The Agriculture Department reports that the number of farms dwindled to 2.75 million in 1977, some 26,000 fewer than the previous year and less than half the 1950 total. Today the U.S., with a population of more than 217 million, has the smallest number of farms since 1870—when the population stood at less than 40 million.

Moreover, latest statistics show that a majority of U.S. farm families earn more money from working at jobs in nearby towns than they do from farming.

Rural America contains more than 50 percent of the nation's substandard housing and 40 percent of its poverty-line families. Education and health-care standards lag behind those in urban areas. Federal statistics show that crime is growing faster in rural areas than in cities.

HEAVY BLACK OUTFLOW

Among those who have deserted the farms in large numbers are blacks. While the South lost nearly 60 percent of its farms between 1945 and 1969, some 87 percent of all nonwhite-operated farms in the South disappeared. The Agriculture Department reports there are about 90,000 black families living on farms today, down from 925,000 in 1920.

Mose Thomas, 60, of Headland, Ala., knows of only three other black farmers in the area. He has watched the exodus all his life. "Public jobs pay pretty good," he says. "Most want to get out of the farm and into the city."

The once-powerful political influence of farmers has dwindled along with their numbers. In the U.S. House of Representatives, according to Bergland, urban congressmen outnumber rural and farm congressmen 400 to 35. In terms of voting power, farmers comprise less than 4 percent of the population, down from 25 percent in 1930.

Just as disturbing to many is the changing way of life on the farm as, year by year, holdings become larger in order to cope with rising production costs.

The number of farms with yearly sales of $100,000 more and increased from 23,000 in 1960 to 155,000 in 1976. Even in hard times such as these, it is not unusual to find grain farmers in the Midwest managing assets worth 1 million dollars and debts up to $300,000.

Too many rules? This trend has transformed farming in most parts of the country into big business, even for many individual owners who must handle many of the same problems that big corporations do: labor shortages and unrest, government red tape and environmental restrictions.

Les Hubbard, a Western Growers Association official, points out that when there is an increase in the cost of labor, taxes, land and water, farmers have to increase efficiency to survive. "To lower the unit cost, you replace people with machines," he said. "A tomato harvester can replace 100 people you need to pick 25 acres, but to use the machine efficiently, you should use it on 125 acres."

The heavy use of equipment has, in many cases, changed the nature of farm labor. "I don't spend too much time in the field," says Max Kellough, a Nebraska farmer. "Instead, I spend more time fixing and repairing equipment."

The more-successful farmers are beginning to make widespread use of computers. Radio networks provide farmers with the latest data on weather conditions, commodity prices and a variety of information from local agricultural extension services and colleges. It is not unusual to see a farmer whip out a pocket calculator and punch in some figures before answering a question.

This spring, the government will test a five-state computer network that allows farmers to dial up from their homes information ranging from weather data to market-price reports and advice on how to fight insects. A similar system already is operating in Nebraska. Making decisions that once were left to intuition and tradition, the computer tells farmers what and when to plant, how much fertilizer and irrigation to apply, and the per-acre cost of production—and analyzes their chances of making a profit. Nebraska farmer Bob Weber says: "Ten years ago, we spent no money on outside advice. This year, we'll spend $7,000 to $10,000 to help us make management decisions. Now I have to have a CPA and lawyers that we didn't need 10 years ago."

Despite its growing technical sophistication, farming remains essentially a family business. Some 95 percent of U.S. farms are family owned and operated. The Department of Agriculture estimates that firms with 10 or more shareholders account for under 3 percent of the total farm sales.

Some of the large companies that entered farming in the 1950's and 1960's—Gates Rubber Company, the Purex Corporation and Ralston Purina Company—have abandoned the business. Nat Scatena, who with his wife and two grown sons farms 1,500 acres near Stockton, Calif., comments: "The efficient family farm can do better than corporations that stack up layers of supervisors with no interest in costs."

SURVIVAL IN THE MASS SOCIETY

Assessing the current mood of farmers, Dick Reynolds, a farm-equipment dealer in Hutchinson, Kans., says: "Farmers feel used. They feel they are victims of the system."

This prevailing attitude is enforced by the nature of today's agriculture. It is a high-risk business. Weather, despite great advances in forecasting, can wipe out a year's work overnight. Insects and crop diseases are constantly mutating into new strains with more resistance to insecticides and pesticides.

Farmers get only a small portion of the profit trickling down from the intricate system that brings food from the fields to the dinner tables of America. Latest statistics show that less than one third of the 180 billion dollars consumers spent for food produced on U.S. farms went to farmers. The rest went to marketing costs—labor, packaging, transportation and corporate profits. In fact, labor costs came to 36 percent of the food bill—nearly 5 percent more than the farmer's share.

Even so, farmers complain, they are getting most of the blame from housewives as supermarket prices go up—by an expected 6 to 8 percent this year.

Key problem confronting officials. As some studies suggest, the basic problem confronting U.S. leaders is this: how to stabilize the farm economy without driving out the individualist who, historically, is the one most willing to cope with farming's risks.

Since the New Deal era, experts say, government action has been mostly of the stopgap variety—often seeming to work against the smaller farmer. Now they are waiting to see if the Carter administration will do any better.

During the past winter, Washington made several moves to alleviate the desperate lot of many farmers—ranging from a boost in dairy and sugar price supports to a reduction in foreclosures against farmers on past-due payments on loans from the Farmers Home Administration.

Over all, the government has paid farmers 1.8 billion dollars in subsidies in the past year in an effort to bolster the agricultural economy.

These measures are furthering the beneficial impact of a five-month upward swing in grain prices and rising receipts for dairy, livestock and pork products. Exports of wheat and corn are rising.

Agriculture Secretary Bergland predicts that net farm income in 1978 could jump as much as 3.5 billion dollars, to 24 billion

dollars—third highest on record. That figure, which is still far below the 30 billion dollars earned in 1973, would go a long way toward easing the financial crunch that now has farmers 119 billion dollars in debt, up 30 percent since 1976.

Given the diversity of American agriculture, the individualism of farmers, the unpredictability of weather and the complex workings of the U.S. economy, the farmers' woes are likely to continue to be a national concern—as they have been since the earliest days of the Republic.

Senator Herman E. Talmadge of Georgia observes: "We were founded as a nation of farmers. It remains true that the welfare of the whole community depends on the welfare of the farmer." ●

## WE'RE HEADED FOR ANOTHER DEPRESSION

● Mr. GOLDWATER. Mr. President, one of the most brilliant men in our country at this particular time in history is Dr. Jay W. Forrester whose writings and thinking cannot help but bring attention to the problems that we face. I have long been interested in his approach by modular computerization to the solving of our problems but, frankly, I was unable to get two former Presidents interested in it but maybe President Carter would pay him the courtesy of inviting him down to discuss his approaches to these problems. He has written an interesting article appearing in the January issue of Fortune magazine entitled it "We're Headed for Another Depression," and I ask that this article be printed in the RECORD.

The article follows:

WE'RE HEADED FOR ANOTHER DEPRESSION

Back in the Twenties, the Rusian economist Nikolai Kondratieff collected and published a set of statistics which seemed to indicate that all capitalist countries were subject to fifty-year cycles of growth and decline. He predicted the Great Depression, but because his long-wave theory suggested that capitalism would bounce back, it was heresy to Marxists, and Kondratieff ended up in Siberia. His theory was little better received in the West. Now, with the world economy recovering rather slowly from a severe recession, Kondratieff is gaining some converts.

One believer is Jay W. Forrester, who invented the random-access magnetic memory for computers and who is into a second career, examining the dynamics of social and economic behavior. A professor of management at the Massachusetts Institute of Technology and a member of the Club of Rome, he developed the computer models used in that now-famous volume, *The Limits to Growth*, and in his own *Urban Dynamics*. More recently, Forrester and his associates have put together a new model of the U.S. economy which suggests, he says, that we have again passed the peak of a "Kondratieff wave" and, if current policies prevail, will probably face a prolonged period of economic doldrums.

It seems rather a big jump from designing computers to disinterring the theory of a defunct Russian economist. How did you happen upon the work of Nikolai Kondratieff?

For the past two decades we have been developing a field called system dynamics using computers to simulate the behavior of complex systems. We found that the interactions between consumer sectors and capital-goods sectors can produce a long fluctuation of economic activity spanning forty-five to sixty years. The behavior was much like that described in the literature for the Kondratieff cycle. The cycle tends to exhibit a long growth phase for some thirty years, a rapid decline in capital spending occurring in a few years, and a decade of stagnation before the next growth phase starts.

The dynamics of the long wave can be seen by starting with the industrial economies in 1945. After the Great Depression and World War II, every aspect of capital plant was inadequate. Consumer durables, housing, office buildings, factories, transportation systems, and schools were old and inadequate. To rebuild the depleted capital stock in a short time, like twenty years, construction rose to a rate higher than would be needed in the long run to compensate for physical depreciation. And when adequate capital plant had been created, a time that may have occurred in the 1960's, tremendous forces persisted to sustain the process of capital accumulation. The result has been an unbalancing of the system, with too much capital and too much debt. Eventually, momentum falters as capital plant becomes more and more excessive. It is probable that enough capital plant now exists to sustain output for at least a decade with little additional investment.

But many people think that we have not an excess of capital but rather a capital shortage right now. How does this square with your notion that we are well on the road to 1929?

Those who see a capital shortage are looking at a few special industries or are simply extrapolating attitudes of the last three decades about growth in capital plant. I don't share the widespread expectation that the resumption of business investment will solve the existing economic problems. The current slowdown in investment is attributed by many to a lack of confidence. But that lack of confidence is produced by the underlying facts. Return on gross investment has been declining for the past decade and there is no longer a significant risk premium for investment. And as you look around the economy, there is a strong tendency toward excess capacity; you see it in office buildings, in the steel industry, and in airline seats. New tankers have been coming out of the shipyards and going immediately into lay-up. College graduates, who represent investment in human capital, find it increasingly difficult to get jobs.

You are aware, of course, that most academic economists don't give much credence to Kondratieff's theory.

Most academic economists still think only in terms of the short-run business cycle, to which they attribute almost all variations in economic behavior. This is perhaps natural. Business cycles are familiar; most people have experienced several, and changes during the business cycle occur fast enough to be readily observed. But familiarity is not equivalent to importance. As the business community and governmental authorities become more interested in the long-wave phenomena and as the evidence becomes more clear, I think economists will take the existence of a Kondratieff wave more seriously. Also, as we develop a theory of how the long wave is generated, evidence from real life becomes more understandable and persuasive.

Are you predicting then that the world is about to tumble into a 1930's-style depression?

Not necessarily. As we see it, the most basic characteristic of the long wave is a process in which the capital-goods sectors grow to a size that cannot be sustained and then collapse. But collapse does not always take the same form.

What actually happens depends on how the country reacts. I don't see the outcome as necessarily disastrous. It need not even reduce our standard of living if we understand the process and learn to encourage necessary changes rather than stand against them until the economy develops great internal stress. But if government actions are counterproductive, as I think has often been the case in the past, then the down phase will be one much like the Thirties—a time of great economic and social distress.

I think it is likely that the classical levers of monetary and fiscal policy are unable to deal with the kind of unemployment that comes from long-wave behavior. One might be able to sustain a peak period of production for two or three additional years by forceful use of monetary and fiscal mechanisms, but the result will only be a steeper drop when the inherent pressures accumulate. So the real trade-off of activist policies will not be between unemployment and inflation but between temporary and long-range solutions.

If you can't reduce unemployment by conventional economic policies, what can you do?

The most fruitful policies would probably be in the area of manpower allocation. We are beginning to examine alternative policies with respect to how people can be encouraged rather than inhibited in moving to sectors where there can be economic opportunity. People who are becoming unemployed in the capital-goods sectors probably cannot remain effectively employed in those sectors. If the country tries to solve such long-term unemployment through unemployment compensation and welfare, it will trap a whole generation of people as wards of the state.

The long wave is clearly coupled with major changes in technology. A unique technological infrastructure goes with each succeeding wave. For example, the infrastructure that supported railroads was incompatible with the one that grew up around airplanes. It is not possible to change that social and economic infrastructure quickly.

Historically, the down-slope of a Kondratieff wave has been a period in which the economy extracts itself from the old technology by using up the old capital plant, while the up-slope has been a period of rebuilding along new technological lines. The social and economic policies that will help alleviate the distress of the downturn might be ones that start the rebuilding earlier than would happen naturally.

For example, the kind of issue that now arises can be seen in the debate on energy. For several years there has been a controversy about whether or not a new energy system could be built without robbing capital-creating capacity needed by industry. One of the arguments against aggressive construction of a new kind of energy-producing system was that the economy cannot produce the necessary capital plant. But the concern is groundless if the capital sectors are no longer needed for the present industrial infrastructure.

So we face a major policy dichotomy: Does the government support those who are becoming unemployed in the capital sectors with welfare and unemployment compensation, or does it do what is done in wartime and redirect that capital-producing capability into an area that we are going to need in the future?

Does your theory have any message for corporate managers?

Those managers that still have room to maneuver should be reducing indebtedness and putting themselves in a position where they have future flexibility. Capital-goods producers in particular have a problem of deciding where they are going to go in the near future. Simply trying to hold on to a situation that is no longer viable may well be a losing battle. Rather than trying to simply perpetuate the past, they should look twenty years ahead and see the kind of economic activity into which they could fit; they should try to lay the groundwork for a future compatible with the next long wave

of capital creation and the new technological infrastructure that replaces the present one.

For example, General Motors went into the development of diesel locomotives around 1930, an investment that did not begin to pay off until after the Depression. One must look for a degree of innovation comparable to the development of television when radio was the major source of entertainment, or the development of the airplane when railroads were still the most important means of transportation. Those who correctly look across into the next technological upswing will be the ones who lay the foundations for success. Those who look across incorrectly and back the wrong vision of the future will be in difficulty.

The pressures are going to make people feel that they have short-range problems that must be solved immediately, when the real message is that they should take a long-range view.

Do you have any idea of the technological basis for the next major wave?

I am no more sure of the shape of the next technological wave than other people. I expect that energy will move toward renewable and more decentralized sources, not only because of the nature of new energy sources, but because of changes in our social system. If our society goes to still bigger and more centralized energy sources, as we have been doing in the past, we will produce a more and more vulnerable socioeconomic system. I expect that declining worldwide political stability with increasing unrest and sabotage will combine with the persuasiveness of decentralized energy sources—like solar and wind power and alcohol from farm products—to encourage decentralization. Energy networks with larger power plants are not, I think, the wave of the future.

Likewise, I believe we are at the end of the pendulum swing toward a tightly integrated world economy. Many stresses are now arising from excessive international coupling. Countries will realize that they can't solve all their problems outside their borders. Hence, the natural drift of political forces will be toward more economic nationalism. Now that is not necessarily bad. It will bring problems down to a more manageable scale. If individual countries can't understand and manage their economies, I doubt the likelihood of managing all countries simultaneously.

If the industrialized countries enter a decade of economic weakness, what will be the political effects? The Thirties, after all, were a period of great instability.

If the country moves into a major economic dislocation without public understanding of why problems are occurring, there may well follow a breakdown of political stability. A succession of progressively deeper recessions could lead to even greater mutual accusations between government, business, and the public. Actually, no one group is causing the problems. The stresses arise from how the socioecoonmic system has been functioning. Every segment of society has had a hand in creating that system. The group here at M.I.T. working on the System Dynamics National Model hopes to contribute thoughts and suggested alternative policies.

In reality, much conflict between the interests of different groups arises from misunderstanding. There is every reason for government, corporations, and labor to move in the same direction. But this requires a public grasp of the real nature of our economic distress. Rather than battles over ideologies and interests, what we need is a constituency for the future. ●

## THE FARM CRISIS

● Mr. McGOVERN. Mr. President, newspapers in the farm community have commented in varying ways and in varying attitudes toward the current farm crisis. One paper in my State, the Aberdeen American News on March 24, 1978, published a penetrating commentary on both the Senate-passed bill and the general economic position of the Nation's farmers.

Mr. President, I ask that the editorial, entitled "Senate Action on Farm Bill Gives Recognition to the Plight of Agriculture" be printed in the RECORD.

The editorial follows:

SENATE ACTION ON FARM BILL GIVES RECOGNITION TO PLIGHT OF AGRICULTURE

The observance of American Agriculture Day, earlier this week, attracted a great deal of attention, as it should .

South Dakota, which relies on farming and ranching for the major share of its economic livelihood, never underestimates the importance of agriculture.

People of this state have been joining with others in effectively describing the plight of farmers because of low prices for their crops at a time when production costs are rising drastically. They are encouraged that during the week in which American Agriculture Day was observed national interest was focused on agricultural problems by congressional action on an emergency farm bill.

What will become of the Senate-passed package of income-increasing measures to benefit farmers remains to be seen. The House will not act upon the farm bill until after the Easter recess of the Congress.

But the Senate's concession by a 67 to 26 vote that more generous government aid should be considered as a means of easing the farm problem is significant.

Obtaining national recognition of the farm problem, as the Senate vote succeeded in doing, is a necessary step toward remedying the problem.

The cost-price squeeze that is threatening some farmers with growing indebtedness if not bankruptcy is not generally of their own making. Many farmers willing or not, are the victims of government agriculture programs that have been badly blotched. Blaming the government for getting them into the present unprofitable situation, they are appealing to the government to guide them toward recovery of their losses.

The U.S. News & World Report commented appropriately:

"There must be something wrong with a system in which the prime producer's take goes down below cost while everybody else's goes up. The farmers have been the only people in the food-supply chain with no control over how much pay or profit they will work for.

"Up to now, we have taken the farmers for granted, and it has always seemed that they took themselves that way too. They have stood proudly individual and self-sufficient, in the role of Jefferson conceived for them nearly 200 years ago—the pillars of a free nation.

"Now the nation has changed. The farmers can no longer afford to take themselves for granted—nor will they let the rest of us do so. Like so many other self-interest groups, 'they have found out how the machine works.' "

The multibillion-dollar farm bill passed by the Senate may not be the solution to current farm ills but it puts some startling facts before the public.

Members of the U.S. Senate and U.S. House are faced with a challenge. The farm problem is real. ●

## THE PANAMA CANAL TREATY

● Mr. LUGAR. Mr. President, as the Senate debates the Panama Canal Treaty, I would like to call to the attention of my colleagues a concise, well-reasoned analysis offered by Lynton K. Caldwell, Bentley professor of political science at Indiana University. I believe that Professor Caldwell has made a significant contribution to the national dialog on this issue, and I ask that his statement be printed in the RECORD.

The statement follows:

SOME OBSERVATIONS ON THE PANAMA CANAL TREATIES

(By Lynton K. Caldwell)

The Panama Treaties now pending in Washington offer a lesson in how not to conduct foreign policy. Little good may be expected from whatever action is taken in the Congress. Changes in existing arrangements for the Panama Canal may have been overdue, but the proposed treaties, as negotiated by the State Department, have created a situation that is divisive at home and dangerous abroad. It is, moreover, a sheer act of faith to believe that the proposed treaties will accomplish their alleged purpose or that violence will be avoided, or that the Canal will be better protected by an American withdrawal from Panama.

Three courses of action are open to the United States Senate when it considers the treaties. It may ratify, reject, or require revision. Ratification of substantially the present text appears to be the only alternative acceptable to Panamanian Supreme Leader, General Omar Torrijos. The constitutional obligation of the U.S. President to seek the advice and consent of the Senate has been perverted (as on other occasions in the past) to lining up votes for ratification. Neither the Nation nor the Congress have been prepared during the years of negotiation to consider the issues at stake, nor to form independent judgments as to ways in which national interests in the Canal might best be served.

Whatever the merits of the treaties, the arguments for their ratification as advanced by the State Department and its supporters have been less than candid. There is only one valid argument for turning the canal over to Panama: continuing American presence can only be maintained by military force at an unacceptable cost in lives, dollars, and in ill-will against the United States. All other arguments are "window-dressing" and some—such as "seven Presidents have favored a new treaty with Panama"—are irrelevant to the present issue.

Many of the arguments for the treaties are misleading to the point of dishonesty. For example the Canal has been described as "obsolete," although more than 90 percent of world shipping can pass through it. There is in fact, a continuous flow of traffic through the Canal, but we are told that most of it is under foreign flags, little of it in American carriers. Yet this argument fails to note that American shipping is in any case a minor factor in world commerce, or in the flow of goods to and from the United States. Should the political authority controlling the Canal impede the passage of shipments to and from the United States, it would matter little what flag the goods were carried. Moreover, the controllers of the Canal could deny shipping to and from countries whose governments they wished to subvert. For example, a Marxist government in Panama might exercise its sovereign right to hinder passage through the Canal to anti-communist or non-communist governments—for example to Chile or Venezuela.

The argument that supertankers and the largest aircraft carriers cannot use the Canal is likewise misleading. The main routes for oil-carrying supertankers are *not* through the Canal, nor would they be even though the Canal could accommodate them. Oil from the

Middle East is carried to Europe, North America and Japan over more direct routes. If the largest aircraft carriers cannot pass through the Canal, and do not need to, there are many other naval craft that could. And who can assess the probability that they would never need to?

Military testimony regarding the defense of the Canal may puzzle Americans who forget that the President is Commander-in-Chief of the armed forces and that the Chiefs-of-Staff and active officers generally carry out the policies of their Commander. Retired officers may express independent opinions. But surely Americans are entitled to be puzzled by assertions that the Canal either could not be defended, or defended only at an unacceptable price while American forces control the Canal Zone, yet could be defended by the United States with American forces withdrawn and the Panamanians in control. Treaty advocates warn of another Vietnam should the United States attempt to remain in Panama. But this analogy is upside-down. Americans now control the terrain and if they could not hold it against whatever subversion or violence might be attempted against them, what confidence could be placed in American defense capabilities anywhere? How could we expect American military presence to be more effective elsewhere in the world? For example, how much faith could be placed in an American promise to guarantee a peace treaty in the Middle East, if our Nation appeared unable to or unwilling to defend its lawful and fortified position in the Canal Zone?

The most misleading argument on behalf of the treaties is that they appear to "guarantee" the right of the United States to use military forces to maintain right of access to the Canal, should that right be threatened in the future. Affirmation of this "right" by General Torrijos is a condition that some senators have set for their vote to ratify. But their constituents may be pardoned the suspicion that these Senators could be trying to simultaneously guard both their political fronts and rears—to have an alibi whatever the outcome in Panama. Should they vote to reject, they may be blamed if American lives are lost in defense of the Canal. Should they vote to ratify without "guarantee" they could be held at fault if a future regime in Panama obstructs American interests in the Canal. Except, of course, if the "guarantees" were known to be of such doubtful value as to be worthless, the Senators would have taken advantage of the proverbial naiveté of the American people regarding the promises of political leaders, foreign as well as domestic.

Three considerations bring any so-called "guarantee" into question. First, as a practical matter, General Torrijos cannot bind his successors, whatever the status of the treaties under international law. Second, once American withdrawal is well underway and American opinion resigned to departing from Panama, Panama could denounce the treaty as having been made under duress. General Torrijos has declared that Panama has made a great sacrifice in tolerating a gradual American withdrawal and in acknowledging any continuing American right to modify in any way the soverign control of Panama over the Canal. Third, the treaties promise that the United States will not intervene in the internal affairs of Panama. But once the Canal is firmly under Panamanian control what action could the United States take in relation to Panama, or the Canal, that could not be construed as intervention? For once the Canal is wholly Panamanian, does not any American intrusion in defense of the Canal, unless requested by Panama, become intervention in its internal affairs?

Persons who argue that to "return" the Canal to Panama is wise and mature statesmanship might appropriately be asked to assess the historical record of wisdom, maturity or stability of Panamanian governments. How reasonable is the prospect that Panama would or could honor its treaty commitments? In theory, Panama should be able to manage the technical operation of the Canal. In fact, General Torrijos has promised Panamanians three jobs for every job now held by a gringo. The Canal could easily become Panama's principal welfare project, with jobs being bought at the price of loyalty to the Supreme Leader. But optimists argue that responsibility for the Canal would induce responsibility in Panamanian politics—that the Canal, being Panama's greatest economic asset, would hardly be mismanaged by Panamanian governments.

There are at least three reasons for doubt that Panama could be counted upon to manage the Canal efficiently, even in its own interest. First is the pressure already noted, to make the Canal a sink for unemployed and largely unskilled Panamanian labor. The excessive birth rate in Panama relative to its resources creates a continuous and mounting pressure on Panamanian politicians, and explains in large measure their efforts to divert popular discontent to hatred of the gringo, along with their anxiety to obtain control of the Canal and the Canal Zone. One needs only compare conditions within and outside the Canal Zone to understand why General Torrijos cannot afford to wait twenty-two years to oust the Americans. But Panamanian poverty and fecundity may easily expand to fully occupy the Canal Zone—and what then?

A second consideration clouding the prospect for efficient Panamanian management is the "pot of gold" that the Canal would represent. Treaty proponents regard the Canal as economically unimportant to the United States. But what a prize and power-base for politics in Panama! Control of the Canal—its jobs and its revenues—would mean absolute control of Panama. Would such a temptation make for sober, business-like responsibility, or would it become the object of subversion, intrigue, and violence—possibly at the expense of the safety and economy of Canal operations.

And third would be a temptation, not confined to Panama. With the American pressure removed, other political interests would gain opportunities hitherto unavailable. Other Latin American states with ideological or economic interests in the Canal would almost certainly have a new stake in Panamanian politics. For example, Panama was formerly Colombian territory, and the Canal is a major avenue for communication between Colombia's Atlantic and Pacific ports. Even more hazardous to international relations would be the temptation which an unstable Panama would open to adversaries of the United States. A sovereign Panama would have the right to bring in whatever technical experts it pleased to help run the Canal. These could be Cuban, East German, or Soviet—and their peaceful presence in Panama would be none of the business of the United States. They might be more acceptable to Panama than a return of gringos for whom Torrijos has cultivated a contempt among his followers.

Finally, the argument that all Latin America and the Third World resents American "imperialism" and "colonialism" in Panama is not necessarily persuasive even if it should be true [which is debatable]. Should Americans retain control over the Canal, even with Panamanian consent, the United States could be attacked in leftist and extremist nationalist presses everywhere. Resolutions against the United States would doubtless be passed by overwhelming majorities in the General Assembly of the United Nations—most of whose members are nations only by international courtesy. But would anyone love the Americans more if they voluntarily relinquished the Canal? It is easy to generalize about public opinion where little is, in fact, known about it. Whatever their private convictions, Latin American statesmen are not likely to publicly approve a United States presence in Panama. It would, however, be a misreading of Latin American politics to believe that all Latin American people or their leaders do, in fact, want to see the United States turn over the Canal to Panama. Were the Canal to be administered by the Organization of American States, or even by the United Nations Security Council, an American withdrawal might be viewed with great equanimity.

America may like to think that "world opinion" (certainly an abstraction) will admire the generous and magnanimous act of a great power turning over the Canal, which has symbolized national pride in achievement, to a poor small neighbor. World opinion, however, may as easily interpret the gesture as an act of resignation and a failure of nerve—particularly in the face of the threats and boasts of Panama's Supreme Leader, General Torrijos. And would "world opinion" support an American attempt to return to Panama by force, should American security be threatened there?

Short of relinquishing American control over the Canal and the Canal Zone, much might have been done to have accommodated Panamanian sensitivities regarding the American presence. Ultimately, however, the insecurity and cupidity of Panamanian politicians would have demanded a complete ouster of Americans. At this point, a showdown might not have been avoidable. Perhaps a firm American posture along with sympathetic consideration of Panama's real needs could have over a period of time, brought Panamanians to a more realistic assessment of alternative futures. Unfortunately for everyone, the State Department's negotiators have now all but foreclosed this option.

It appears that unless the United States is "guaranteed" the legal right to defend the Canal, the pending treaties cannot win Senate approval. But should the United States agree to relinquish the Canal Zone and the Canal to Panama, it should be understood by Americans that they must, if need be, get along without the Canal in the future. The United States cannot go back without bringing about all and more of the disasters now predicted by treaty supporters should the treaties be rejected. And yet the United States cannot relinquish its claim to lawful intervention without openly inviting the indefinitely expanding influence of Cuba, the Soviet Union, or other adversaries into Panamanian affairs.

It may or may not be too late to make a better treaty with Panama. But it is not too late to prevent the State Department, on behalf of the President, from negotiating the Nation in the future into positions that its Congress and its people neither understand nor approve, and in a less tolerant age could have been regarded as treasonable. If the advice and consent of the Senate to treaties can be no more than a mere figure of speech, then perhaps a reexamination of the Presidential power to negotiate treaties is in order if treaties are to remain the supreme law of the land and if the American people are to act responsibly even though they may never be truly self-governing in relation to foreign affairs.●

## COMMISSIONER JOHN R. LARSON ON COMMODITIES MARKETS REGULATIONS

● Mr. ANDERSON. Mr. President, while I was Governor of Minnesota, I had the good fortune to appoint John R. Larson to the post of Commissioner of Securities.

Before his appointment, John Larson

had earned a reputation as a young, able attorney. Since assuming responsibilities as Commissioner of Securities, he has gained nationwide recognition for his knowledgeable assessment of securities matters.

On March 20, 1978, Commissioner Larson testified before the Agricultural Research and General Legislation Subcommittee of the Senate Committee on Agriculture, Nutrition, and Forestry. In his testimony, the commissioner discussed the Commodity Futures Trading Commission, its exclusive jurisdiction to regulate commodities markets, and the impact of the exclusive jurisdiction upon the public.

Mr. President, in order that my colleagues may benefit from John Larson's keen insight into the problems of commodities markets regulation, I submit for the RECORD the text of his testimony before the subcommittee.

The material follows:

STATEMENT OF JOHN R. LARSON

Thank you for the opportunity to be here today to discuss with you the performance of the Commodity Futures Trading Commission since its inception on April 21, 1975. I should point out that I have worked with the CFTC and followed closely their performance since their inception on April 21, 1975. I have done so in three different capacities: first as Commissioner of Securities for the State of Minnesota; second as Chairman of the North American Securities Administrators Association's Liaison Committee with the Commodity Futures Trading Commission; and also as a member of the CFTC's Advisory Committee on state regulation.

At the time Congress adopted the Commodity Futures Trading Commission Act of 1974, it was noted by Senator Herman E. Talmadge that:

"The act is designed to insure fair practices and honest dealings in the commodity exchanges and to provide a measure of control over those forms of speculative activity which often demoralize the markets to the injury of producers, consumers and the exchanges themselves. The fact that an independent regulatory commission will now regulate trading in existing futures contracts as well as any new futures trading contracts makes the law a matter of concern and interest not only to farmers, members of exchanges, attorneys, and investors, but to all consumers."

Not only did the Act establish an independent regulatory agency to oversee the commodity markets, but it granted such agency the authority to regulate the area exclusively. Such jurisdiction has been upheld in a number of court decisions which precluded the application of state securities laws to any transactions involving commodities. It is the nature of this exclusive jurisdiction, and the impact upon the public, that I wish to address today.

At the present time the total complement of the CFTC staff is approximately 460 persons. This is to regulate an industry which trades in excess of $1.2 trillion worth of commodities annually. A recent report by the CFTC to Congress dated January 20, 1978 indicates that there were 98 persons involved in the activity of enforcement during 1977. The question that must be asked is whether that number of people are able to effectively carry out the enforcement activities over a $1.2 trillion industry?

The Securities and Exchange Commission on the other hand has approximately 2,000 people on staff to regulate an industry smaller than the commodities industry. The various state securities administrators offices have an additional 1,500 to 1,700 people in securities regulation. In addition, the National Association of Securities Dealers has a substantial staff directed at many regulatory activities over the securities industry. Just from looking at the numbers it would appear that a comment made recently at public hearings in Boston concerning commodity options was accurate. The comment noted that "the police force was cut from fifty to one in the middle of the crime wave, and the only cop (CFTC) had no staff, no expertise and no regulations." The disaster that followed was predictable.

It should be apparent to everyone that the CFTC is not equipped to adequately regulate the commodities industry. But the state securities administrators are effectively precluded from assisting the CFTC in protecting the public. The CFTC has argued that the state attorney general can file an action based on the concept of *parens patriae* or can bring an action under general state anti-fraud statutes. There have been occasions when such enforcement activity have been used, the most notably were the actions by the states of Michigan and Massachusetts against Lloyd Carr and Co., Inc. The problem with such actions is that they are often slow processes or that the remedy does not address the wrong.

The concern of state securities administrators is the fact that state securities anti-fraud provisions are not available for the protection of the public. It seems inconsistent that one anti-fraud provision is available to address an investment fraud when another, and more appropriate, anti-fraud provision is not.

Over the years the state securities administrators have developed an expertise in many different types of investment schemes, some of which are fraudulent. Often the fraudulent investment scheme is similar with just the underlying product or object varying. For example, broiler room selling techniques similar to those used by Lloyd Carr and Company were used previously in selling coal syndications, interests in oil and gas offerings, and other securities. The method of investigating such activities is the same and the securities administrators provide that service at the state level.

Once a fraudulent investment scheme is discovered and investigated, the case is handled pursuant to the states administrative procedures act, or referred to the Attorney General or District Attorney for prosecution. In the latter cases our office must educate the attorney who is bringing the case. Typically the Attorney General or the District Attorney do not receive complaints, do not investigate such activities and are only familiar with the case prior to the law suit. The effect of the CFTC's exclusive jurisdiction, therefore, is to remove from protecting the public some of the people who are most familiar with fraudulent investment schemes.

At this point, I should note that I and all members of the North American Securities Administrators Association are supportive of the desire to eliminate duplicative and unnecessary regulation. To the extent that the CFTC has exclusive jurisdiction over commodities markets and the registration of persons engaged in the commodities business we have no quarrel, nor desire to regulate. We are committed to working with the CFTC, at whatever level it chooses, in establishing the regulatory framework for the commodities industry.

It is noted that CFTC Chairman William T. Bagley, in his letter of January 23, 1978 to the Honorable Jamie L. Whitten concerning the CFTC, cited some of their accomplishments by stating:

". . . the futures markets have grown and prospered as the Commision gave their new protective strength by requiring uniform exchange records and procedures; we have established an awareness that the exchanges are a public, not a private marketplace; we have imposed new economic tests to assure viability, and we have improved the spirit and the fact, of self-regulation by encouraging affirmative action in rule enforcement by responsible and independent exchange employees."

We support the CFTC in these accomplishments, but must point out that enforcement of the law and the rules is not cited as an accomplishment. In fact, Chairman Bagley admitted to the House Subcommittee that the CFTC's enforcement record "can hardly be described as successful".

Let us look at the aspect of commodities regulation that involves specific enforcement activities within the total regulatory framework. Let us address the issue of how the public will be protected from unscrupulous individuals engaging in fraudulent commodities investment schemes.

In testimony before Congress last year, Chairman Bagley stated that there were 29 attorneys and 25 investigators in the enforcement division. He noted that during the major potato default case of May 1976, 30 percent of the enforcement staff was occupied so that significant cases involving churning of customer accounts, prearranged and phoney trades, and other irregularities had to be dropped or put aside. In such a situation where the CFTC lacks adequate resources, they must make decisions concerning priorities and concerning which cases are most important. The effect of such decisions, coupled with exclusive jurisdiction, means that many unscrupulous operators and fraudulent schemes go unaddressed.

In a recent case in Arkansas, the Securities Commissioner brought an action against a commodities option dealer alleging "boiler room" selling tactics and making false and deceptive statements. An injunction was obtained in the Chancery Court and the decision was appealed to the Arkansas Supreme Court. At that point the CFTC filed an amicus brief on behalf of the commodities dealer noting that they had exclusive jurisdiction and the Arkansas Securities administrator lacked standing to obtain the injunction. The Arkansas Supreme Court upheld that position and dismissed the injunction on October 3, 1977. Without ever getting to the merits whether this company was engaging in fraudulent selling practices, the CFTC's action allowed this company to get back into business. Since that decision there has not been an enforcement action brought against this operator by any other agency, including the CFTC. One has to question if the public is being adequately protected in that case.

In mid 1976, the activities of an individual in Minnesota came to the attention of my office. We conducted an investigation and determined that this individual was engaged in fraudulent activities concerning commodities transactions. Recognizing the exclusive jurisdiction vested in the CFTC, we turned the entire file over to the Commission. By a letter dated September 1, 1976 I received notice from the Regional Counsel, Division of Enforcement for the CFTC concerning this matter with the letter stating in part:

"As Mr. Tyler indicated during that conversation, our staff believes that the matter of Jerry LaFavre and Interstate Marketing Associates should, more appropriately, be handled by either state or local authorities; therefore, we are referring it to you for appropriate disposition. We would appreciate being informed of the ultimate resolution of the case." (Emphasis added)

We were somewhat confused by this letter in light of the exclusive jurisdictional language of the Federal law. But since this matter was referred to us for appropriate disposition we commenced criminal proceed-

ings against Mr. LaFavre based on a violation of Minnesota Securities Law. Mr. LaFavre subsequently pled guilty to securities fraud and was sentenced to five years in prison. In handing down this sentence, the Judge indicated that LaFavre's actions "could be characterized in one word—deceit . . . I would have imposed a greater sentence if the law would have allowed me".

It was apparent to us that the Jerry LaFavre matter which involved only $31,000 in public losses, was too small for the CFTC to get involved with. Obviously it was not small to us nor to the people who lost the money.

A federal agency, such as the CFTC, has resources which are superior to state resources in certain large, complicated enforcement actions. However, it is not possible for that agency to become involved in smaller, more local problems. This is the area where states can supplement the activities of the CFTC, and the Jerry LaFavre matter is a perfect example.

It is for these reasons that I urge you to consider amending the exclusive jurisdiction of the CFTC and provide additional vehicles to protect the public against fraudulent activities.

I have taken the liberty to attach a copy of a proposed amendment to the Commodity Exchange Act which will allow state securities administrators to assist the CFTC in protecting investors without opening the door to inconsistent regulation and without increasing the bureaucracy at either the federal or state level. Also attached is a resolution unanimously adopted by the 27 member Midwest Securities Commissioners Association supporting the proposed amendment to the Commodity Exchange Act.

Thank you for the opportunity to share my comments with you. Should you have any questions, I would be pleased to respond.

---

COMMODITY EXCHANGE ACT

SEC. 2. (a)(1) For the purpose of this Act, "contract of sale" shall be held to include sales, agreements of sale, and agreements to sell. The word "person" shall be construed to import the plural or singular, and shall include individuals, associations, partnerships, corporations, and trusts. The word "commodity" shall mean wheat, cotton, rice, corn, oats, barley, rye, flaxseed, grain sorghums, mill feeds, butter, eggs, Solanum tuberosum (Irish potatoes), wool, wool tops, fats and oils, soybean oil and all other fats and oils, cottonseed meal, cottonseed, peanuts, soybeans, soybean meal, livestock, livestock products, and frozen concentrated orange juice, and all other goods and articles, except onions as provided in Public Law 85–839, and all services, rights, and interests in which contracts for future delivery are presently or in the future dealt in: *Provided*, That the Commission shall have exclusive jurisdiction with respect to accounts, agreements (including any transaction which is of the character of, or is commonly known to the trade as, an "option", "privilege", "indemnity", "bid", "offer", "put", "call", "advance guaranty", or "decline guaranty"), and transactions involving contracts of sale of a commodity for future delivery, traded or executed on a contract market designated pursuant to section 5 of this Act of any other board of trade, exchange, or market: *And provided further*, That nothing contained in this section shall (i) supersede or limit the jurisdiction at any time conferred on the Securities and Exchange Commission or other regulatory or law enforcement authorities under the laws of the United States or of any State to investigate and prosecute violations of this Act and of any other state or federal law to the extent such laws are not inconsistent with this Act, and, except as hereinabove provided, to exercise regulatory jurisdiction otherwise provided by law, or (ii) . . .

RESOLUTION

Whereas, the Midwest Securities Commissioners Association is an organization formed in 1961, and consisting of 27 states dedicated to the protection of the public and investors; and

Whereas, in the last three years members of the Association have witnessed numerous investment schemes relating to commodities, many of which involve the offer and sale of securities as defined by state law, and which were either fraudulent or sold without adequate or accurate disclosure; and

Whereas, the Commodity Futures Trading Commission has asserted that the authority of the state securities administrators to investigate and enforce the anti-fraud provisions of state securities law with regard to commodity related investments has been preempted by reason of the exclusive jurisdiction language of Section 2(a)(1) of the Commodities Exchange Act; and

Whereas, the CFTC lacks the staff and resources effectively to enforce the Federal Act or protect investors; and

Whereas, the State Securities Administrators have resources and staff available to assist in protecting the public from fraud and unfair dealings, and are anxious to do so;

Now, Therefore, Be It Resolved, that the Midwest Securities Commissioners Association urges Congress to amend the language in Section 2(a)(1) of the Commodities Exchange Act relating to "exclusive jurisdiction" to permit the states to take action under state law (including the State securities laws) against illegal sale schemes involving commodity related investments and to regulate margin and leverage contracts for gold or silver coin or bullion for the protection of their state's investors.●

---

## EUROPE AND SOLAR ENERGY

● Mr. PERCY. Mr. President, a recent article in Business Week magazine details the progress made by the European solar energy industry. It is one of the fastest growing industries in Europe, and the real boom is yet to come.

Since Europe's present fuel difficulties presage this country's, we should learn from their initiatives. If cloudly Europe can profit from a strong commitment to solar energy, the sunnier United States should look very seriously to solar energy's ability to satisfy a large percentage of our energy needs.

Sun Day, the national solar energy celebration taking place May 3, should help turn the attention of this country to the Sun as a source of usable power. Sun Day activities are now planned in all 50 States and many foreign countries. The Congress has expressed its support by passing a resolution officially declaring May 3 Sun Day and urging the President to issue a public proclamation. He did so on March 27th.

Though the United States' oil and natural gas situation is much stronger than Europe's, it is in our best interests to match their progress in the use of solar energy. Mr. President, I submit for the RECORD the article appearing in the March 6 issue of Business Week entitled "EUROPE: A Burst of Energy in Solar Heating".

The article follows:

EUROPE: A BURST OF ENERGY IN SOLAR HEATING

Like the U.S., Europe has been socked this winter by blizzards and bone-chilling cold. For the Continent's fledgling solar energy industry, however, soaring fuel bills are good news. From West Germany and Sweden to France, Italy, and Switzerland, hundreds of companies are eagerly venturing into what its advocates tout as one of the hottest growth prospects of the late 1970s. Solar-market analysts foresee double-digit growth through 1985 in annual sales of home hot-water systems, heating and cooling units, and, ultimately, solar electric components.

Though the business is unfolding at varying rates across the Continent, West German and French companies are in the lead. Starting from scratch two years ago, some 500 West German producers, suppliers, and installers of solar collectors have mushroomed to annual sales of $20 million in 1977. "We are reckoning with double to triple that figure this year," says Axel Urbanek, an official of Munich's Solar Energy Association. Though most are tiny, local service companies, heavyweights such as Robert Bosch (which has designed a gas-assisted solar system for home heating and hot water) and Messerschmidt-Boelkow-Blohm are gearing up projects.

At least a dozen French companies also are working on solar power plants, home systems, and photovoltaics (direct conversion of sunlight to electricity). Their 1977 sales totaled roughly $15 million. One of the more advanced companies, La Radiotechnique-Compelec (RTC), a majority-controlled subsidiary of Philips of Holland, sold 5,000 of its photoelectric panels around the world last year at an average cost of $400.

USING THE SUN

Pierre-Marie Brun, RTC's solar product chief, says that most customers use the units to power remote radio beacons, highway telephones, navigation buoys, and aircraft warning lights, such as those on the mountaintop approaches to Saudi Arabia's Medina airport. RTC will soon have competition from Motorola Inc., which plans to retool part of its semiconductor plant in Toulouse to produce photovoltaics.

The key to the industry's continued growth, especially in the often cloudy regions of northern and central Europe, may be government incentives to sweeten solar's appeal. Germany is expected to enact a tax credit to meet 25% of solar costs, and a British parliamentary committee has urged cash grants of up to 50%. France is spending $30 million a year on research and development aimed at commercializing its solar industry. In Sweden, where half of all oil imports are used in home heating, the government underwrites 35% of the costs of home solar units up to a maximum of $650. That could broaden the still tiny market that chemical maker KemaNobel hopes to tap in a joint venture with Euroc, Sweden's largest maker of building components.

"There's a tremendous potential," says Ulf Liljestrand, KemaNobel's solar-project chief. "Stockholm gets more sunlight than Paris." He concedes two stiff obstacles: snow and "plumbers who don't like to go climbing around roofs."

BROAD INTEREST

Still, the vast increase in oil prices since 1973 has spurred many governments to action. In addition to national solar programs such as Germany's four-year, $60 million R&D effort, the European Community is putting $70 million into projects to commercialize solar collectors and sharply cut the cost of photovoltaics.

In Sicily, the EC is financing a $7 million solar electric plant built by a Europe-wide consortium to power a town of 800 by 1980. Italian companies now exploring solar projects include Fiat, Montedison, Zanussi, Ansaldo, and Metalli Industriale.

Even the snowcapped Swiss are stirring. Polisolar in Berne, one of a dozen small Swiss solar-energy companies, will "supply a $1 million solar heating and cooling system" this year at the Rome plant of Contraves Italiana, a Swiss-owned electronics and arms

maker in the Oerlikon-Buhrle empire. Polisolar's collectors are now being used for industrial processes, desalting, and small power plants by licensees in Spain, Sweden, and Austria.

Though the great sunbelt from Morocco to India is an enticing, already perceptible target, the largest market for Europe's solar entrepreneurs will be their 350 million fellow citizens. The French government foresees 200,000 solar-assisted homes and offices by 1981, and spokesmen for German industry project similar growth. Judging by the heady mood of solar's pioneers, the sky—the seat of the industry's principal "fuel source"—is the limit.●

## SAMUEL E. MESHKEN

● Mr. RIBICOFF. Mr. President, one of Connecticut's outstanding citizens recently died. Sam Meshken was an old and dear friend, going back a lifetime to my youthful days where both of us were brought up in New Britain, Conn. Sam was a man of outstanding character, ability, personality, and warmth. He was loved by his family, friends, and the entire community. On April 5, 1978, Joe Owens of the Bridgeport Telegram wrote a most perceptive editorial on Sam Meshken, and I ask that it be printed in the RECORD.

The editorial follows:

SAMUEL E. MESHKEN

We would be remiss in our duties if we failed to make note of the untimely death of Samuel E. Meshken.

He would not stand on formality, so our few words about him, we hope, will be in keeping with the manner of the man. Sam was a successful businessman, an individual unafraid to venture where angels fear to tread. For example, he conceived and operated the largest independent supermarket on the East Coast, the King Cole store.

Often he would donate a percentage of the receipts on a particular day to a worthy charity.

Youth held a high place on his roster of causes as did the Police Sick Benefit Association and the Connecticut Symphony Orchestra.

If the cash registers were not busy that day, Sam would go into his own wallet to make sure the donation was large.

In the world of politics, he walked with the Connecticut giants, Ribicoff, Dempsey, Grasso, etc. But always, to close friends and new acquaintances alike, he was just plain "Sam."

People in the Bridgeport area should consider themselves fortunate. We had Sam Meshken among us for many years and we were beneficiaries of the inborn characteristics of the man which enriched the lives of countless individuals and organizations.

What else can be said beyond "Sam, you were a great guy."●

## SUNSET LEGISLATION

● Mr. BELLMON. Mr. President, from time to time an individual Member of the Senate generates an idea which is of great importance to the body as a whole. It is from such ideas that many needed changes have come to the Senate and then translated into legislation of great importance to the country.

Such is the case with sunset legislation. This bill was introduced 2 years ago by the distinguished senior Senator from Maine. Joining with Senator MUSKIE were 59 Members of the Senate of which I was one.

On April 11, Senator MUSKIE discussed the sunset legislation issue and the hope it offers for restoring confidence in government during a speech at St. Joseph College, Philadelphia, Pa. Senator MUSKIE's comments are of great significance. They relate to the ongoing effort to bring order out of the chaotic way Congress has historically handled the public purse. Senator MUSKIE's remarks review the progress which has been made since the passage of the Budget Act and eloquently outlines the need for prompt action on the sunset bill. I believe the Senate will be well advised to heed Senator MUSKIE's warning.

I ask that a copy of his remarks be printed in full in the RECORD.

The remarks follow:

REMARKS BY SENATOR EDMUND S. MUSKIE

I want to talk to you today about the state of your Government in Washington—a Government of which I am now a part—and which your generation will inherit before the next decade is out.

The news I bring from Washington is mixed.

The good news is that for most of us, 1978 is a pretty good year. We are coming out of the worst recession since the 1930's. Unemployment is slowly but surely coming down. The economy is slowly but surely picking up steam. We are at peace abroad and at home. We have little immediate reason for complaint.

The bad news is that many of us are uneasy about the state of national affairs. Unemployment may be coming down, but inflation is heating up. Our most thorny problems—energy and inflation—defy easy solution. We are less certain in our optimism for the future—and more nostalgic for times now passed.

Much of our uncertainty is directed at government as the cause of all our ills.

The polls tell us that even with Vietnam and Watergate well in the past, Americans continue to have little confidence in their government in Washington. Three quarters of the people believe government is wasting their hard-earned money.

We in Congress get particularly low marks. Only a third of the public approves of the way we do our job.

But the public is not the only one who's frustrated with government these days.

For years, Presidents have complained that when they push a button to get something done, nothing happens. President Carter is learning this painful lesson now. He may be the President. But up against an entrenched bureaucracy, an independent Congress, and well-established special interests, he is not always in charge.

And, believe it or not, some of us Members of Congress are frustrated as well.

Over the last fifteen years, Congress has been at the forefront of tremendous economic and social change. Government has labored to produce a governmental remedy to every injustice and need under the sun.

Clearly, the Nation has made much progress as a result.

We have made tremendous strides toward racial equality.

We have raised the standard of living for many poor Americans.

And we have provided health care to many who previously could not afford it.

Surely, we all have reason to be proud.

Yet today, our Nation has many unmet needs. And they bear a striking resemblance to those we first addressed through government programs a decade ago.

Economic opportunities for blacks have increased dramatically. And yet unemployment among black inner city youth is a national disaster.

We have not yet eliminated poverty. Indeed, we have not even lessened the imbalance in income distribution between rich and poor to any great degree.

And we still have not cracked the fundamental heatlh problem—providing high quality care at a cost all can afford.

We have pursued these and other problems at no small cost to the Federal budget.

And we have reaped an even greater cost, in the form of massive frustration with government at every turn.

This frustration stems, I believe, not from government having tried to solve problems—but from not having solved them well enough.

It stems not from a disenchantment with the goals we've set—but with a government grown so large and ineffective that it is suffocating the very goals it seeks to achieve.

Finding a remedy for this frustration is the most important—and difficult—challenge to Government today. For we have little hope of solving the truly serious problems we face—from inflation to energy to jobs—as long as Government bears this burden of no trust.

And I am convinced that we cannot meet that challenge unless Government is prepared to change its ways.

In my view, the task of meeting this challenge must fall first of all to the Congress.

It is the Congress which is the arbiter of national priorities, through the legislation we enact.

It is the Congress which is vested with control over Government spending, through the constitutional power of the purse.

And it is the Congress which has generated most of the activities of Government which now give us both hope and despair.

If Government has become unresponsive to the people, it is the Congress which must bear much of the blame. For it is our job not just to take the credit for new programs, but to see to it that all tax dollars are well spent.

Today, I believe that Congress is failing to meet its responsibilities on both important counts. Instead, we find ourselves increasingly unable to respond to problems which arise. For to a surprising degree the hands of Congress are tied by legislative commitments we've made in the past.

A brief look at some numbers from the budget illustrates the reason for my concern.

President Carter's budget for next year will be at least $40 billion larger than last year's spending total.

Of that $40 billion increase, fully three quarters is automatically committed before the first budget decision is made. That $30 billion will be spent on programs we call "uncontrollable"—programs which mandate certain benefits regardless of cost, and over which neither Congress nor the President has any control save through amending or repealing existing law. Uncontrollable spending includes such programs as social security, veterans' benefits, medicaid, medicare and welfare.

Only $2.5 billion of the increase in next year's budget is available for all other domestic needs—education, housing, mass transit, pollution control and many more.

More shocking than these numbers is the budget trend they confirm. Over roughly the last ten years, uncontrollable spending has grown from about 55 percent of the budget to more than 75 percent of all federal spending for fiscal 1979. From 1968 to 1977, the budget grew from $180 billion to $400 billion. Of that increase, a staggering 37 percent went for three uncontrollable programs alone—social security, medicare and medicaid.

Meanwhile, other spending on which the public places a high priority has been

squeezed out. For example, federal spending for education has actually grown less than the budget as a whole over this same period.

Why doesn't Congress do something to rein in uncontrollable spending? Because most of these programs, in addition to being popular, are also permanent. They never come up on a regular basis, for thorough, top-to-bottom review.

To be sure, they are amended from time to time, to correct the worst examples of waste. But by and large, they are protected from normal political and budget pressures of our democratic process. So each year we watch them devour ever larger amounts of scarce resources. And each year we are left with less room in the budget to meet changing national needs.

To make a bad situation worse, the meteoric rise in uncontrollable spending is not the only factor tying our hands. Uncontrollable programs are the big ticket items, and so they command the greatest concern.

But the vast majority of Federal programs are relatively modest, short-term efforts aimed at a highly specific need. And today, these programs constitute a maze of government activity that no mere mortal can comprehend.

We have both health and community development programs in the hundreds—veterans and education programs in the dozens.

We have over a hundred different agencies with regulatory responsibilities, and twenty-two separate offices have health programs that they run.

In a single office in the Department of Housing and urban development, there is one program to promote development in inner cities, and another to encourage development in the suburbs.

Of the many health programs we have, there are 29 related to cancer prevention alone. That *ought* to be enough to meet any conceivable need. Yet a comprehensive cancer prevention plan proposed by the state of New Jersey early last year has yet to be funded, because individual Federal agencies couldn't get together in a joint effort to help the state.

Legislation to remedy this kind of problem has seldom been used, because each agency insists on going its own separate way. Only one state in the country, for example, has succeeded in untangling dozens of overlapping planning programs into a single, unified plan.

In 1973, the Federal Register contained 35,000 pages of rules and regulations governing the way Federal laws are carried out. Only four years later, the size of the register had almost doubled, to 65,000 pages.

Twenty-four states and 44 cities now have their own office in Washington to keep up with everything the Federal Government churns out.

And it's not hard to understand why.

Many programs overlap. Others work at cross purposes to each other.

No agency knows what any other is doing, and until recently, many congressional committees did not even know how many programs fell within their jurisdiction.

In sum, over the last fifteen years, Congress has created an array of programs so complex that government cannot deliver the very services we've enacted into law.

What good does it do us to have 29 different cancer programs when they can't work together to do the job?

What good does it do us to spend billions to revive our older cities and at the same time encourage people to leave the cities behind?

The answer is, of course, that it makes no sense at all.

Why then, doesn't Congress do something to make the system more sane?

The answer to that question lies in the way Congress works.

Over the years, Congress has responded to a host of individual problems and needs. We have done so with the best of intentions. But we have also done so one program at a time.

Today, our good intentions notwithstanding, we've accumulated so many programs that we have no idea how they all mesh. And we have even less idea how much the public's tax dollars have bought.

Pressure to continue all these programs is strong.

Support for reexamining them simply does not exist. Every agency, committee and lobby wants its own program to not only continue but grow. No one is willing to take the risk that fewer programs might be for the good.

As a result, we are all paying the price, in the form of government immobilized by the past.

As one who believes strongly in an active federal role, I am very much troubled by this situation we are in.

Our dilemma limits both present and future budgets—and the national priorities they define.

It denies Congress the money and the public support it needs to effectively carry out its legislative work.

It raises a particularly serious issue for your generation. For your future could be even more heavily mortgaged to the past, unless congress is willing to mend its ways.

And there is another, more tangible threat which concerns me very much. It is that if Congress cannot bring spending under control, government may well drive inflation through the roof.

In a recession, it is important for government to spend money to keep the economy from going dry. When unemployment is high, government spending replaces private consumption, which declines during hard times.

But as we head into an inflationary period—which by all accounts we are doing today—excessive government spending only makes inflation worse.

That means that over the next few years—or as long as inflation poses a threat—if we want to spend more money on a good program, we're going to have to throw a bad one out.

This is not lofty rhetoric about making government more effective. It is a hard fact of life—one that Congress can ignore only at substantial political peril to itself, and at devastating economic peril to the nation as a whole.

With all this talk of gloom and doom, where should Congress go from here?

For starters, Congress took an important step toward controlling government spending four years ago, when it adopted the Congressional Budget Act. In agreeing to budget reform, Congress for the first time committed itself to considering the budget as a whole—of setting spending limits each year and trying to abide by them.

As chairman of the Senate Budget Committee since that new process began, I can report that our experience so far has been mixed.

On the positive side, budget reform has dramatically increased the awareness in Congress of the costs of actions we take.

On the negative side, budget reform has not yet given us the discipline over spending that we need.

The temptation to always spend more on existing programs is irresistibly great. And in our yearly battle between the budget total and its individual parts, the parts always seem to win.

So the lesson of budget reform for me is that the process does not go far enough. For unless and until Congress gains control over the individual parts of the budget, we will never have truly effective control over the budget as a whole.

Two years ago, I introduced a bill in the Senate which I believe can help provide the kind of extra discipline that we need. Known as the "sunset" bill, this proposal embodies a very simple approach. First, it would require that all federal programs come up for review on a regular basis. Only those programs which Congress specifically decided to reenact would remain on the books.

Second, the bill would require that all programs of similar purpose come up for review at the same time. This provision would give Congress much needed perspective on the entire Federal effort in an area at once, instead of the usual one program at a time.

When the sunset bill was first introduced it had enormous political appeal. More than half the Senate and over a hundred members of the house added their names to the bill's support.

In the campaign of 1976, sunset was a ready-made issue for voters concerned about government out of control.

Today, that political climate has changed—and the outlook for sunset is bleak. Efforts are afoot in the Senate and House to do the bill in—and replace it with legislation which resembles sunset only in name.

And the closer we get to a vote, the harder it is to find the support we thought we had.

Opponents of sunset argue that it will create a workload too great for Congress to manage well. They argue that termination is too heavy-handed an approach to encourage program review.

I believe these arguments are a smokescreen for other, more political concerns.

The real opposition to Sunset, I believe, is rooted in the very system which makes Sunset such a good idea—a system that rewards policitians if we pass new programs, but not if we take some away.

And sunset, for all its ultimate promise, offers none of us the immediate acclaim we've come to expect.

Over the long haul, sunset can help free up scarce resources—and that will be a boon to us all. Indeed, that is the essence of my support and hard work for this idea for the last two years.

But others view the sunset idea as a threat to benefits they've fought hard to win.

I do not share their worry. And it concerns me very much.

Our national interests are not set in con crete, and we are not well served by a govern ment which is.

We have a great unfinished agenda—one begun two hundred years ago. To fulfill it we will need to call on every resource we have. Today, we may all have to forego something we want, so that tomorrow we will have the resources we need.

We cannot afford a government which does not spend our money well.

We cannot afford the inflation which will come if government does not tighten its belt.

And we cannot afford a continuing vote of no confidence from the people we are bound to serve.

Sunset offers us one of the few opportunities I've seen to respond to these various needs. It may not be a perfect answer—but I haven't heard anything better. And I think we ought to give it a try.

As widely as sunset is feared, it will not change the spending patterns of government overnight.

All it can do is open up the political process through which our democratic system works best—so that we can again have a government which reassures and unites the hopes of this great land.

## THE VIETNAM VETERAN

● Mr. McGOVERN. Mr. President, most Americans now realize the Vietnam war was a mistake, but the memory of that

tragedy cannot be erased by neglecting the needs of the Vietnam veteran. Their plight is a disgrace. They are faced with incredible difficulties—unemployment, physical and mental disabilities, drug related problems, discrimination—and the country that sent them to war seems unable or unwilling to help them now that that war is over. The Washington Star has published an excellent series by Donia Mills detailing the problems of the Vietnam veteran. I commend it to my colleagues and ask that it be printed in the RECORD.

The material follows:

[From the Washington Star, Mar. 26, 1978]

VIETNAM VETS: IS HELP COMING 10 YEARS TOO LATE?

(By Donia Mills)

For half a million survivors of the Vietnam war, scattered today throughout the country, the return to a normal life has not come easily.

For some it will never come at all.

Ten years since the peak war action of the Tet offensive, and five years since the withdrawal of American ground troops, government officials still have not dealt wtih the social, moral and psychological damage suffered by the men who fought the most controversial foreign war in the nation's history.

There is shockingly little detailed data on the depth of the problem, but authorities estimate that one in five of the 2½ million soldiers who fought in Vietnam still suffer some effects of postwar maladjustment.

Statistics also show that:

450,000 Vietnam-era veterans are jobless.

125,000 are incarcerated in state and federal prisons.

750,000 ex-soldiers are stigmatized by less-than-honorable discharges.

497,000 soldiers left the service with mental or physical disabilities, and 10,000 of them are still hospitalized in Veterans Administration facilities three years after the end of the war.

Fewer than one-fifth of those eligible for VA vocational rehabilitation had taken advantage of the program by the end of last year.

Now, five years after the last man came home, the Veterans Administration finally has commissioned a comprehensive study of this troubled minority.

"I guess you could say this is all happening 10 years too late," said Max Cleland, the severely disabled Vietnam veteran who became VA Administrator last year.

"On the other hand, maybe this is exactly the right time to act. Now, in 1978, we've been through several years of preliminary sifting and we're finally down to the veterans with the real hardcore problems. Now it may be easier to identify them and tailor programs to fit their particular needs."

In addition, it appears that the House Veterans Affairs Committee this year may finally approve a readjustment counseling program that was so badly needed a decade ago. Similar proposals have been defeated three times over the last five years.

And last month the Carter administration, no doubt pressured by a recent burst of publicity surrounding the 10th anniversary of the Tet offensive, initiated its own mini-survey of the situation.

In a directive issued by the president's domestic affairs adviser, Stuart Eizenstat, officials at the VA and departments of Labor, Justice, Defense and Health, Education and Welfare were given two months to come up with their own appraisals of the problem.

Frank Raines, the member of Eizenstat's staff assigned specifically to veterans affairs, was quick to suggest in a recent interview that the review is designed as a fulfillment of Carter's campaign promises to veterans rather than as an expression of unusual concern.

"The White House feels no more concern over veterans right now than over other areas," Raines said. "We spend a lot of money on vets—about $20 billion a year. Our main concern is that the money is being properly utilized. But there is no crisis in veterans programs at this time."

Veterans from older generations frequently gripe that the men who fought in Southeast Asia should not be singled out for special attention. War is hell, they say, whether the battleground is the fields of Shiloh, the beaches of Normandy or the rice paddies of Vietnam.

But most serious scholars of the Vietnam war and its political impact vehemently disagree.

In "The Forgotten Warrior Research Project", a three-year study funded by the Disabled American Veterans Association, John Wilson, a Cleveland State University psychologist, draws the following profile of the Vietnam soldier and the conflicts he encountered.

Typically, he was a high school graduate who entered the service believing that military duty was a proper and patriotic obligation.

After a period of basic traning designed to equip him for killing and survival, Wilson maintains, the soldier was flown into enemy territory where he soon encountered a number of factors that raised serious questions in his mind.

The guerrilla nature of the war, a lack of confidence in his superiors, the difficulty of recognizing the enemy, the apparent lack of South Vietnamese military and civilian commitment to victory, coupled with widespread signs of political and economic corruption, the fixed limits on his own tour of duty, the seemingly meaningless deaths of his friends—all these factors combined to cast the young soldier into deep ethical and spiritual conflict.

The final conflict occurred when the men discovered they were up against still another divided front when they returned home.

In place of victory parades these soldiers were greeted by apathy from one faction, who suggested they somehow hadn't done their jobs well enough, and by angry anti-war demonstrations from the other, who told them they were dopes to have taken on the job in the first place.

"Psychologically, the veteran was in an untenable position," Cleland says. "The war ended with no answers. The validity of his sacrifice was not there. He was forced to provide the answers for himself. This challenge was unique in U.S. history—the malaise, the sense of being a sucker.

"We all faced it. Most guys handled it okay. We should keep emphasizing the fact that 80 percent readjusted fine."

Among the 20 percent who didn't, the VA's Cleland conceded, the psychological impact often continued on through the years "like a series of secondary explosions."

Too many still bear the compound and inextricably linked effects of depression, alienation, divorce and alcohol dependency, unemployment and run-ins with the law.

The feelings of neglect and inequity and exploitation that stung then have continued to fester in the hearts and minds of veteran activists who refuse to let the issue die.

"The whole situation is atrocious," says Rusty Lindley, a former Green Beret captain who has become an outspoken advocate for down-and-out ex-GIs.

"The guys who went to college got degrees and good jobs. The guys who went to Canada got amnesty. But the guys who went to Vietnam—they've never yet gotten their share of the American dream they were told to go fight for."

In the seven years he has spent in Washington pestering political bureaucrats for legislative reforms, Lindley says, he has watched three different adminstrations pour billions of dollars into meaningless programs with no attempt to follow through.

"Society has succeeded in dehumanizing the veteran the way the military dehumanized the enemy in Vietnam," he goes on. "Now the government's attitude seems to be, 'Let's pity the poor vet as a new kind of social problem, let's appease the crazed dope fiend-psychopathic-sniper-rapist-mass murderers by throwing them multi-million-dollar programs scraped off the bottom of some welfare bill.'

"Well, these guys don't want dead-end public service jobs where you sweep streets and then end up out of work again after a year. And they don't want pity, and they don't want to stand in welfare lines or go whimpering to the VA. They want careers. They want a chance to prove themselves in good jobs at home the way they proved themselves under the gun in Vietnam."

Most authorities agree that a significant part of the problem for many veterans is their generalized disenchantment with Uncle Sam, their rejection of any more involvement with a government that sent them to Vietnam in the first place, whether it involves going to a VA hospital or registering with a state employment office.

Theoretically, the older veterans claim, the soldier returning from Vietnam was in good shape, dollar-wise—better shape than any previous generation.

On separation from military service he received from the VA a 71-page booklet detailing the multitude of benefits for which he was eligible: 45 months of educational payments under the GI bill, free medical care, free vocational rehabilitation training, plus additional cash compensation if he was disabled, low-cost loans and life insurance, and numerous federal veterans-preference laws that required he be given priority in job counseling, referrals and hiring.

While the majority of all veterans have taken advantage of at least a portion of their benefits, for many others the system short-circuited somewhere along the line and let them down.

Men who needed personal guidance and encouragement received instead booklets and form letters written in gobbledygook, or instructions from VA counselors that seemed to lead them through mazes of red tape only to terminate in Catch-22 barriers.

Those least able to maneuver through the minefields of application procedure were unfortunately the very men who needed support the most—the poor, undereducated and minority GIs who bore a disproportionate share of actual battle in Vietnam because they could neither afford nor qualify for the middle-class haven of college deferments.

One of the more persistent critics of the VA over the years has been Bobby Muller, a former Marine lieutenant who was transformed from a track star into a paraplegic in 1969, when he caught an enemy bullet in his spine on a hilltop near Con Thien.

He spent the next year in the notorious Bronx VA hospital that was described as a "medical slum" in a 1970 Life Magazine expose, and his sense of outrage has not dimmed much over the years.

Muller paused one day recently during an all-day siege of congressmen's offices, pulling his wheelchair over to a quiet corner of the Longworth Building to explain his latest mission.

"Would you like to know our biggest problem?" Muller asked a reporter. "It's a lack of statistical proof that there's really a prob-

lem. Incredible as it seems, the VA has never bothered to evaluate the billions of dollars worth of programs they run, and so nobody has any idea how effective or ineffective they may be."

Details become muddled, but the basic outline is clear: the Vietnam veteran has not been delibrately neglected so much as simply set on a back burner with low priority, in budget after budget, year after year, all the way down the line.

Max Cleland, the man occupying the VA hot seat at present, is an accomplished politician in an arena where politics is the name of the game.

Cleland was also an athletic star and academic achiever in his home town of Lithonia, Ga., before an errant grenade blew off his right arm and both legs in a bizarre noncombat accident at Khe Sanh.

Being a triple amputee did not keep him out of commission for very long.

At 34 he had already served two terms in the Georgia Senate, run unsuccessfully for lieutenant governor, and worked a year for the Senate Veterans Affairs Committee before Carter appointed him last spring to head the federal government's second largest bureaucracy.

Ranking only behind the Department of Defense in number of employees, the VA annually administers a $20 billion multibenefit program for 30 million veterans and their dependents.

But only 8 million of these served during the May 1964-August 1975 period officially designated as the Vietnam Era, and only 2½ million experienced actual duty in Southeast Asia.

This means that while the Vietnam veteran's readjustment difficulties may be more immediate, he is in the minority, and lacks the lobbying influence of his older World War II counterparts.

"What the VA system does is pit the older veterans against the younger veterans for a limited pot," says lawyer Stuart Feldman, an indefatigable lobbyist for veterans affairs. "And any agency naturally has to go with its majority constituency."

This generation, Feldman adds, is united under the powerful brotherhood of such old-guard organizations as the American Legion and Veterans of Foreign Wars, and is naturally more concerned with maintaining hospital care and pensions than with supporting the needs of young veterans whom they tend to identify with the dissident, long-haired generation.

Cleland readily admits that the VA has fallen behind where Vietnam veterans are concerned, but he insists that he has put things on the right track with the research project just commissioned.

"This will not be just another study, but the first really thorough analysis ever done of the Vietnam veteran in all his dimensions," Cleland said in a recent interview.

"What we're really doing is picking up and continuing an independent study begun three years ago by the Center for Policy Research in New York. This means we'll be able to wind up the first phase in about a year and a half, and should be able to give Congress the data they want. After another six months, we can begin to use the collected information to make our readjustment counseling program more effective.

Cleland's sharpest critics contend that his political ambitions have kept him from taking a hard and potentially unpopular stand for Vietnam veterans against the status quo.

But the entire issue is too complex and contentious for simple analyses.

The fact is that veterans affairs are under the domain of so many different political entities that any one can always legitimately pass the buck and the blame for inaction onto another.

The VA says it can't set up programs if they aren't funded by Congress, and Congress has to play ball with the Office of Management and Budget, which is guided by the administration.

When two congressmen recently attempted to put some teeth in the administration's ongoing interagency review of Vietnam veterans by requesting that a $200 million contingency fund be set aside to cover whatever proposals might come out of the study, the request was voted down 14-4 by the House Budget Committee. In the same session, its members voted favorably on a $931 million bill for VA pension reform.

The House Veterans Affairs Committee is swayed by the powerful old-guard veterans organizations, accuses the VA of failing to come up with the studies needed to justify expenses and lays the blame for unemployment squarely with the Labor Department, which can always point to the Civil Service Commission's recent proposal to do away with veterans preference in hiring.

"You can't look at these issues in isolation," cautions one longtime Capitol Hill observer of veterans affairs. "It's hard for the politicians in Washington to put over programs if the sentiments aren't with them back home in their constituencies.

"And Vietnam was simply never a war that American civilians felt they had any stake in. There was never the question of choosing between guns and butter, the way people had to do in World War II. During Vietnam we had guns and butter too."

At the same time, the man continued, legislators have come under increasing pressure from rival segments of society, such as women and minorities, who have developed a level of organization and lobbying power far beyond that of the Vietnam veterans.

"Instead of scoring a big victory and coming home all in one body like the World War II soldiers, the Vietnam soldiers came home singly, each when his 13 months was up, in a mood of defeat. And that's where they still are today—isolated and alone."

---

JOBS: A BLIND ALLEY FOR MANY VIETNAM VETERANS

(By Donia Mills)

By 9 o'clock most Monday mornings, the reception area of the local Veterans Assistance Center on North Capitol Street is already crowded with men whose search for jobs has led them mainly down blind alleys and one-way streets.

A photograph of President Carter seated by a fireplace smiles down at them from a handbill posted on the bulletin board, underscored by his "fireside chat" statement of Feb. 3, 1977:

"The top priority in our job training programs will go to young veterans of the Vietnam war."

In this context, it is a bitter reminder of the gap that exists between the rhetoric and the reality on the issue of veterans' unemployment.

Many veterans of all ages were angered, if hardly surprised, earlier this month when the President proposed a 10-year limit on the long-standing policy of "veterans preference" as part of a general overhaul of the Civil Service Commission.

Because of the lengthy winding-down of the war, most of the men who actually saw combat in Southeast Asia will soon be past their 10-year limit and will no longer receive preference pointson Civil Service tests as veterans have since the 1940s.

According to Labor Department statistics for the last quarter, about 450,000 Vietnam era veterans, aged 20–34 are unemployed, and an additional 100,000 veterans over 34 are also out of work.

Roland Mora, appointed last year as deputy assistant secretary of Labor for veterans employment, thinks the actual figures are much higher. Based on personal observations, he estimates that for every veteran actively seeking work, two have given up in frustration.

Despite a 1972 federal law requiring state employment service personnel to give priority to veterans in job counseling and referral, Labor statistics show that fewer than one in five veteran applicants was placed in jobs, and only one in 20 received any counseling.

The Labor Department itself is far behind many other agencies. In 1976 only 0.8 percent of Labor's employees were Vietnam veterans, compared with 6 percent of the Treasury Department's, 5 percent of Justice's and 8.7 percent of the Civil Service Commission's.

Stan Williams, a counselor at the District's Veterans Assistance Center, ticks off a long list of obstacles facing jobseekers he sees, many of whom are undereducated, minority members who did much of the dirty work in the war and were hardest hit by the recession when they came home.

"Most of these guys graduated from high school and went right into the service, which means they come out and hit the job market with no experience to their credit," Williams explained.

Military experience, he added, usually counts for nothing with a civilian employer, which can mean a demoralizing step backward for a man who has mastered a specialty and enjoyed some job responsibility in the service.

"And to those looking for trades, the unions are extremely tough to get into," he said. "They have very few openings."

The jobs listed in the voluminous computerized job-bank books reveal more frustrations. Except for menial jobs such as porters' and dishwashers', most listings require at least 12 months of job experience.

Williams said the entries are updated daily, but men who have been through the process tell a different story.

"You start looking through the book and some of those jobs are three years old," one unsuccessful job hunter said bitterly.

The greatest foes of veterans preference would seem to be women and minorities, two groups that also claim that they deserve special consideration.

Most observers feel that the gains now being made by women and minority employees are losses for the veterans.

While the veterans community here was initially encouraged by the $1.3 billion jobs-for-vets programs announced with great fanfare by the administration a year ago, spokesmen for most veterans organizations now charge that the plans were poorly conceived and have been inadequately administered.

Putting it simply, they feel the President was throwing the veterans a bone to appease the growling that arose over his controversial amnesty decision announced just a few days earlier.

The administration in an attempt to alleviate the veterans unemployment last spring proposed three programs funded through Labor's Comprehensive Employment and Training Act (CETA):

One provision expanded the already existing Public Service Employment program, designed to provide unemployed people with temporary jobs in public and non-profit agencies, using CETA funds to pay their salaries.

A projected 250,000, one-year jobs, 35 percent of the total new jobs created, were earmarked for disabled and Vietnam era veterans.

Mora has acknowledged that the current level of veterans hiring under the program is only 28 percent, however. "I thing this is pretty much where we're going to end up," he said.

A second program, the Disabled Veteran Outreach Program, provided for the hiring of 2,000 men to be placed in local branches of

state employment offices where they would help develop jobs for other disabled veterans. The program was to provide jobs for 40,000 by the end of 1978, according to Labor.

Mora said this program is his favorite and repeatedly described it as "successful," though no one at Labor has been able to document how many disabled veterans have actually been placed.

But Ron Drach, employment director of the Disabled American Veterans, which did some spot monitoring on its own, said the group found several instances in which disabled veterans were prevented from counseling other veterans because they had been assigned by their office managers to do routine clerical jobs or to fill in elsewhere.

In addition, Drach said, many veterans in the program have discovered large discrepancies between the salaries they were promised and what they actually were paid.

For example, in Virginia, which has 44 disabled veteran counseling positions funded at $10,000 each, workers were paid between $7,000 and $8,000.

A spokesman for the Virginia State Employment Service explained that the remaining balance of the $10,000 was held out by the central office for "benefits and expenses," which included travel money for workers going out into the community on projects.

But because of a "communication breakdown" in the early months of the program, the spokesman added, local managers were not informed that there was travel money available. As a result, the veterans' activities were curtailed for a while.

"To tell you the truth, we've experienced a lot of turnover in this program," the spokesman said. "Because of the low salary scale, a lot of the DVOP counselors leave when a better job comes along. Then of course, we have to start all over again training someone new."

The third and most ambitious of the job programs is Help Through Industry Retraining and Employment (HIRE), a cooperative venture of government and private industry. The program is funded by $140 million in CETA funds used to reimburse companies for providing on-the-job training that would lead to permanent employment.

Disabled and Vietnam era veterans were to receive top priority in placement.

HIRE also has had a spotty record during its first year, largely because the program was originally aimed at large firms that represented only 1 percent of the nation's employers.

Last November when only two companies had signed up after four months, the guidelines were altered to encourage smaller companies to participate. The program is now picking up momentum, according to Charles Collins of the National Alliance of Businessmen (NAB), the marketing agent for the program.

But only $20.7 million of the original $140 million has been contracted out so far. The most recent Labor figures indicate that only 220 veterans have actually gone to work under HIRE.

A second, voluntary part of HIRE has fared somewhat better, according to NAB officials, who report that 20,000 veterans have been hired in private industry under a non-reimbursable provision that spares employers the governmental red tape of the reimbursable plan.

But because the 20,000 veterans represent only one-fifth of the original goal set for September 1978, the figure hardly indicates extra effort above and beyond normal hiring patterns.

To date, three local firms have signed HIRE job-training contracts: Southern Railroad, Interstate Van Lines and Peoples Drug Stores.

A closer look confirms what most veterans advocates have been claiming: When good opportunities come along, they are snapped up immediately.

Interstate's president and founder, Arthur Morrissette, said the HIRE trainees will be paid the program's minimum of $3.50 per hour, which is Interstate's normal starting salary anyway. The company will be reimbursed for half the training costs through CETA.

Morrissette acknowledged that he had learned about the HIRE program at a time that happened to coincide with his need for new employees. He said that his major concern was finding good workers, not hiring veterans.

---

FOR MANY VIETNAM VETS, EDUCATION AID CAN BE A CATCH-22

(By Donia Mills)

Like many young veterans who returned from the war in Vietnam in the late 1960s, Steve Anderson found himself in a Catch-22 bind shortly after he enrolled in College on the GI Bill.

It provides a flat cash supplement for 45 months following separation from active service. But the payments from the VA, which netted a full-time, single student $175 a month in 1969, were not enough to cover Anderson's books, tuition, and living expenses, so he had to work part time.

This cut down on his course load and further reduced his payments.

"I had to make a choice," he says simply. "So I ended up quitting for a couple of years to work full time. I had to live."

He took courses intermittently after that. But at present, employed full-time by the VA as an education liaison officer and studying part-time at the University of Maryland, Anderson is still about two years away from a degree.

Cost-of-living increases passed by Congress over the years have raised the current benefit level to a record $311 monthly for single veterans, with graduated payments for those supporting dependents. But at the same time, inflation has driven tuition, books and living expenses to record levels.

And now, because of the 10-year limiting date attached to VA benefits, Anderson's time will run out in December before he has a chance to use the entire 45 months he is entitled to.

"Congress," he said, "had many opportunities to make the bill effective so the veteran could go back to school when and where he wanted, back during the years when there were huge numbers of guys who could have used a little extra help, but they dragged their feet and watered down every proposal that came along." He said these opinions are his own, and not the official VA position.

"The VA says that more Vietnam era vets have taken advantage of their benefits than vets of any other war—over 60 percent," he said. "But that only tells us how many enrolled initially. How many were actually able to hang in there long enough to get any good from it? There's no way of knowing."

Last year when a revision of the GI Bill was up for congressional consideration, veterans' advocates lobbied hard for administrative changes they thought would make the regulations more effective for certain groups of veterans.

For example, evidence was presented that indicated many were unable to use their benefits in the Midwestern and Eastern states because of high tuition costs.

Under the GI bill of World War II, the VA paid tuition directly to the schools, whatever the level might be, and an additional cash supplement to the veteran.

When that system led to such abuses as greatly inflated tuition fees at some institutions, Congress adopted the present procedure of paying a flat sum to the veteran.

Today, veterans living in Western and Southern states rich in low- or no-cost public colleges are at a distinct advantage. For instance, a Pennsylvania resident attending Temple University, which is public, finds that education expenses take 57 percent of his total yearly benefits, compared with 14 percent for a student attending a California State University campus.

The equitable-payment proposal was hotly debated before the House Veterans Affairs Committee but was ultimately defeated in favor of an across-the-board benefits increase of 6.6 percent, supplemented by a system of loans.

Congress also passed severely reduced versions of a measure that would have extended the limit for vets who still had a portion of their entitled benefits after the 10-year cutoff date.

Congress also passed another version that would have permitted accelerated payments for vets who wished to use up their benefits in half the time at twice the rate of payment. This would have been especially helpful, it was argued, for a man who simply wished to learn a marketable skill in a short, expensive, vocational program.

"The problem is now, the prime time for most of these guys has passed," Anderson said. "The average vet is 30 years old and has a family to support.

"I'm beginning to think that the ones who haven't gotten a start by this time are pretty hard core, and it's going to take a hell of a lot more to bring them back into the mainstream than most people realize—I mean knocking on doors and holding their hands and practically carrying them through the education process."

In terms of education, the hardest of the hard core are the 20 percent of Vietnam era veterans who had not completed high school when they entered the service.

James Finley Jr. is a good example: His government didn't teach him to read or write very well, but they found that he was a whiz when it came to shooting a gun.

Finley came home from Vietnam with an honorable discharge that listed pistol expert, rifle expert and firearms instructor among his accomplishments. Unfortunately for him, civilian employers were more interested in the reading and writing.

Now he's enrolled in Veterans Upward Bound, a high school equivalency course administered by Prince Georges Community College and paid for by federal Comprehensive Educational Training Act funds. He and 44 classmates in the same boat attend classes five days a week in a training center in the basement of a motel.

They receive weekly stipends of about $78 for full-time attendance in five subjects: reading, social studies, mathematics, English science. If they can pass their tests by the end of 24 weeks, they receive a high-school equivalency certificate.

When they miss a day, they don't get paid.

"The people in this country, they act like we're so almighty lucky to be getting that check from the government every month," Finley says bitterly. "But do they ever think what we put on the line to be getting that money today?"

These are the men with disadvantaged backgrounds who bore a disproportionate share of Vietnam combat duties and casualties because of a draft law that allowed college deferments for those who could afford it.

Ten years later, to no one's great surprise, the same men are bearing a disproportionate share of the unemployment and social problems. They share a growing feeling of hostility toward an inscrutable system that seems to block them at every turn.

"One thing I know for sure, this country don't want to hear about no Vietnam veteran," spoke up a man from the back of the room. "We lost the war, and they're still holding it against us."

"Yeah," grumbled another man, a former Army rifleman who has had trouble working

because of a nervous disability from the war. "Then you walk into a 7-Eleven, and there's some Vietnamese guy working behind the counter telling you, 'Hey you can't put that newspaper under your arm like that, you got to put it here in the bag,' all that stuff. Man! Who is he to be telling me what to do? We go over there and fight to save those people. Now they come over here and get our jobs."

The men were enthusiastic about the high school equivalency program and the personal interest the director, "Doc" Alfred Simons, has taken in them. But several had horror stories about the red tape at the VA: Records lost, checks delayed, counselors who all left for the weekend by 2 p.m. on a Friday, or GS-2 clerks who "run you around in circles like a chicken with its head cut off" while sipping coffee and chatting among themselves.

"It's hard to concentrate on the lesson when you're sitting there worried about things like the man going to come around for the rent check the first of the month, and where am I going to get it this time?" the man with the nervous disability said.

"You know, President Carter, he says he wants to help the veteran. Well, one day I'd just like to sit down man to man and talk with him. Like, maybe go to Sunday School and just sit down next to him and ask him what's really happening. I'd like to see if he can really do anything for guys like me."

Veterans are faring somewhat better at the Rockville Campus of Montgomery College, where their class schedules, grade point average and VA status are neatly computerized and can be called up at the drop of a switch by student-veteran counselors trained to steer through red tape.

Rick Bannerman, Ruth Ralston and Sandra Detmer say their main function is to keep the paperwork moving.

"When a guy comes in saying that the VA lost his check," Bannerman said, "chances are about 95 percent that the mixup is because he's failed to re-register himself or some such technical oversight. Believe me, Rick Bannerman's checks never get lost! Working in this office, it has become very real to me that the VA does things their way and you have to conform to them, not the other way around.

"It really freaks some of these vets out who couldn't wait to get discharged and get away from all the military red tape. They figure, 'Ugh, now the VA is going to control my life for 10 more years!' I think some of them come in here for counseling expecting to find us all dressed out in our fatigues."

Some veterans, the counselors say, get caught in a bind because of the three months of processing between the time they enroll and the time their benefit checks start arriving. This new policy replaced pre-payment last year after the VA lost $1 billion in "overpayments" during 1976 to students who had dropped out of classes.

It is the financially strapped student of 1977-78 who is now suffering from that little fiasco, Bannerman says.

"Sometimes," he said, "by the time a guy is all certified and his checks start arriving, he's had to drop part of his course load and take on a job to support himself in the interim, which means the benefit figure changes and we've got to start the whole thing all over again."

Many of the 700-odd veterans enrolled at Montgomery College find they have to work full-time to "afford" their GI benefits, the counselors add.

"It would be no problem to get by on the GI bill alone if you had a Podunk cost of living," says Detmer, who has sole support of her 5-year-old son. "But in Montgomery County, it's just about impossible. I live in a subsidized housing apartment in Gaithersburg, where they just raised the rent to $234 for us 'low-income' people. Two-thirds of my incomes goes for the rent."

But Sandra Detmer isn't complaining. In fact, hearing some of the stories about the readjustment struggles of the vets returning from Southeast Asia, she confesses that sometimes she feels a little guilty about drawing the same benefits as the combat veterans, even though her 18-month Vietnam era assignment was in a telecommunications office at the Pentagon.

"I know it's a good deal for me," she says. "Sometimes I wonder what I did to earn it."

---

DISABLED VIET VETS: AFTER COPING, THEN WHAT?

(By Donia Mills)

Larry Roffee insists there is nothing to it, the elaborate maneuvering to get from his wheelchair into his car, a Jaguar he bought a couple of years ago and had specially modified with hand controls.

Relying solely on his muscular arms, Roffee positions the chair next to the car and hoists himself into the driver's seat, manually dragging his dead-weight legs in after, one at a time.

Then he folds up the wheelchair, hoists himself over onto the passenger side, slides the driver's seat forward so he can reach over and drag the wheelchair into the back seat, slides back to the driver's seat, hoists himself back into it again, and is ready to go.

"It's worse on my passengers than on me," Roffee says with a droll, Dennis-the-Menace grin. "They have to stand out in the rain or whatever till I finish going through the whole bit."

Currently working as executive director of the Paralyzed Veterans of America, based in Bethesda, Roffee was a 22-year-old Army artillery lieutenant when a bullet smashed into his spine during the invasion of Cambodia in 1970.

Paralyzed from the waist down, he spent the next two years in hospitals, first in Vietnam, then at a support base in Japan, then more military and VA hospitals back in the States.

"It takes a while to accept it," he said. "The doctors never really tell you that you're never going to walk again. They don't say either yes or no, really. They just tell you that you're young and strong and you can overcome a lot of obstacles.

"I think it was five or six months after I was wounded, one day during a rehabilitation session, when it finally dawned on me—hey, this is it, for the rest of my life.

"After that, it's just a matter of adapting and coping. I decided long ago that being bitter gets you nowhere. The most important thing is to get involved in something so you can keep your mind off your disability and hang onto the notion of your own self-worth.

"When you come right down to it, the good old-fashioned American work ethic is usually the best therapy."

Like many other disabled Vietnam veterans who have come to Washington to work on behalf of their fellow veterans, Roffee makes a great effort to create an image of a handicapped person who is capable and industrious on the job.

At the same time, he stresses that much remains to be done to bring the half-million men who left the service with mental or physical disabilities back into the mainstream of American life.

The Veterans Administration has some basic statistics: They can tell, for example, that as of last September over 497,000 disabled veterans, rated on a severity scale from 10 to 100 percent, were receiving compensation payments averaging $175 a month.

Thanks to improvements in medical technology, coupled with the fast and efficient rescue work of helicopter medivac teams in combat zones, severely wounded men in Vietnam stood twice as good a chance of survival as their World War II and Korean predecessors.

About 30,000 veterans are still considered 100 percent disabled five years after the end of the fighting. Because it was a booby-trap sort of war, more soldiers than might have been expected, 12,500, lost their lower limbs or use of them.

In terms of material compensation, the government has provided well for severely disabled veterans. Those with amputated limbs, paralysis, or loss of bodily functions that require them to have full-time custodial care receive nearly $1,900 a month, tax free, from the VA.

"That sounds like a lot, doesn't it?" Larry Roffee smiles, and then adds in a briefly wistful tone: "You wanna trade?"

What the VA cannot tell with much certainty is what becomes of these men after they are taught to cope with the basic needs of daily life—wheelchair travel, showering and dressing techniques and bowel and bladder care for paraplegics—and released from VA hospitals to start their lives over again as best they can within their own families and communities.

Most disabled veterans qualify for the VA's free vocational rehabilitation program under which the government will pay all expenses for whatever educational curriculum the veteran may choose, with no reduction in the regular compensation payments.

But a disturbingly small number of eligible veterans, only about one in five, have ever entered a vocational rehabilitation program as of last year.

And since the VA has not done followup studies on the use of benefits, there is no way to tell how many men may have completed rehabilitation and been able to parlay it successfully into a job.

"The VA did wonders for me," said John Fales, a former Marine captain who came home from the war totally blind. "But there's always room for improvement."

"For a guy who's got a disability, sometimes the difference is made by the GS-1 who answers the phone and is rude or unhelpful. You can have all the fantastic programs and facilities in the world, but somebody has to help you find out about them."

Fales lost one eye in 1967 when a mortar exploded in his face at Can Thien. The other eye deteriorated from side effects of malaria pills.

Now working as employment director for the Blinded Veterans of America, he demonstrated his virtuosity one day not long ago by escorting a reporter to lunch, leading the way to his favorite midtown restaurant through a formidable obstacle course of construction debris, traffic and lunch hour crowds.

"The big thing is breaking down attitudinal boundaries, the stereotypes of what a handicapped person can and can't do," he said.

Fales agreed with other veteran spokesmen that substantial discrimination against disabled people exists in the private sector and that the Labor Department should be doing more to enforce the affirmative action provisions already on the books.

Roffee and Fales both said that informal surveys indicated only 13 percent of their organizations' members were working. Estimates of unemployment among disabled veterans place the rate at 30-50 percent.

"You can give a person all the medical attention in the world," says Ron Drach, employment director of the Disabled American Veterans, "and all the training and education in the world, but unless you have a job, what good is it to get back on your feet? What has the VA really done for you?"

Bobby Muller, another paraplegic who has been a tireless veteran activist since his return from Vietnam, puts it more bluntly.

"The most neglected area of the VA is rehabilitation of the severely disabled," Muller says. "How the hell do you explain the fact that over 80 percent of these guys are shut-ins, even though they have absolutely nothing to lose by taking vocational rehabilitation?

"The VA may have the technical facilities to physically rehabilitate a man, but there is no follow-through, no attempt to motivate and give him confidence.

"The attitude is, 'Here, son—take your check and go home.' That's much easier, just give a guy a government check for $1,900 a month. That kind of money makes it hard to get sympathy on your side. People look at you funny when you go around pitching a fit about being neglected."

VA administrator Max Cleland, himself a triple amputee, admitted in a recent interview that a year-long study of the vocational rehabilitation service showed the entire system was badly in need of upgrading.

"The way it works now, we rehabilitate a man but then we have to turn him over to the Labor Department to find him a job," Cleland said.

"What I want to do is ask Congress to give us the authority to do the whole thing—from picking the guy up out of the hospital bed to finding him a job and then doing a followup check six months later."

Cleland suggested, however, that the incentive to work might not be too great for a severely disabled man, considering the generosity of the VA payments.

"It's quite possible to live very well indeed without ever hitting a lick," he said.

But the key issue, Muller insists, is one of emotional and social adjustment rather than mere physical maintenance.

"These guys' lives are human tragedies because they have no sense of accomplishment, without a meaningful occupation. Wouldn't you expect the goal of a rehabilitation program to put you back as close as possible to the place you were before, to restore your original sense of identify and worth?"

Drach said that the DAV had been discouraged by the Labor Department's failure to implement effectively a Disabled Veterans Outreach Program (DVOP) which the administration gave a rah-rah sendoff last spring.

Under this plan, 2,000 disabled veterans were hired and placed in state employment offices around the country and were supposed to develop job opportunities for 40,000 additional disabled veterans.

But DVOP workers reported that they've been hindered by lack of support from both the private sector and Labor agencies that are supposed to enforce affirmative action programs for hiring the disabled.

---

"Too Flipped Out or Tranquilized"

(By Donia Mills)

Five more years have passed now since the poet, a former Marine corporal from Bethesda, took control over his mutinous mind long enough to put down those lines.

Today, at 28, the former Marine remains one of the hidden casualties of the Vietnam conflict, a 100 percent mentally disabled veteran whose wounds are not visible to the casual observer.

VA statistics on the Vietnam era, which extended officially from August 1964 to May 1975, reveal that more than 92,000 men left the service with diagnosed psychiatric disabilities. The figures for physical disability ran to more than 400,000.

In 1976, three years after U.S. ground troops left Southeast Asia, 19,000 ex-soldiers like the Marine from Bethesda were 100 percent disabled.

More than 6,000 of them remained in VA hospitals that year, outnumbering by two to one the general medical and surgical patients hospitalized.

The former Marine—let's call him Pete Meyer—considers himself one of the lucky ones because he has been able to leave the hospital and live independently with encouragement from his family and friends.

Nevertheless, after $20,000 worth of private psychiatric treatment, in addition to free VA care, his mental condition is still diagnosed as "chronic undifferentiated schizophrenia."

His psychotic symptoms are controllable only by heavy doses of two tranquilizers he must take morning and evening to maintain a facsimile of a "normal" life.

No doctor can tell him when or if he will ever be the way he was before the war.

Meyer joined the Marines in August 1967, fresh out of Walter Johnson High School and a comfortable middle-class home. Old friends describe him as alternately bookish and zany in those days, with a wide range of interests (from Future Teachers of America to folk-singing and model rocket club) and a flair for the dramatic that won him a lead part in his senior class play, "You Can't Take It With You."

College would have seemed the obvious choice for Meyer, except he wasn't quite ready to plunge into school again, and his parents agreed that if he joined the service, he could always go to school afterward on the GI bill.

And so he went "gung-ho" into boot camp at Parris Island, followed by more training at Camp Lejeune and jungle training in California.

He reached Vietnam in the spring of 1968, sent over in a batch of replacements for a 3rd Marine Division platoon that had just been wiped out in the Tet offensive.

Meyer speaks coolly, in a tone of quizzical amusement, about the events of the following 13 months, as if he were telling someone else's story.

"Most of the time we went out on 28-day operations. At times, we were getting shot at every day. I ended up on what they called a 'permanent point squad.' That meant we were always the first guys through the bush.

"In the year I was there, out of 14 guys, only two of us in the original bunch lasted the whole time. The rest were either killed or wounded and sent home.

"But I kind of liked the point squad, because you got certain benefits. Like, you would get six hours' sleep instead of four. You just get so tired in war—eating one meal a day, going a month at a time without a shower or a change of clothes, staying awake all night on watch, or when you do sleep, just rolling up in your poncho and sleeping on the ground.

"I stayed so tired and hungry and worn down the whole time I was there I just did what I was told. I was too tired to question anything."

Meyer got the nickname "Crazy Pete" when he volunteered to be radio operator. Everybody knew the antenna sticking up behind his ear was an easy target for the enemy.

After a couple of months in the bush, his weight was down to 125 pounds and he was carrying nearly 100 pounds of gear: an M-16 automatic rifle, 18 extra 18-round magazines of ammunition, a .45-caliber pistol, a light anti-tank weapon, a shotgun with 25 rounds, eight grenades and an incendiary grenade to destroy his radio if he were captured, plus the 30-pound radio and a few spare flares.

Soon he had another nickname—"The Next Man"—because in skirmish after skirmish, with his buddies going down all around him, Meyer somehow came through without a scratch.

"It got to be a real thing after a while. Everybody just knew I was going to take a hit next time around. I never did. I guess the worst time I can remember was in the Ashau Valley, when we went up Hill 1375—they were named after their altitude—and we have a new squad leader who couldn't read a map.

"We were all marching in single file and the first two guys went around a bend and got disintegrated from the waist up by land mines they had rigged in trees by the path.

"The third guy was shot in the side. The fourth guy was blinded by shrapnel. I was the fifth one in line and I wasn't touched.

"I helped wrap up the bodies of the guys that got blown to pieces, so the units that were following "behind wouldn't have to see them. Then we called up some artillery support and napalmed the enemy position.

"The funny thing about fighting over there was I never saw a live enemy soldier—except one time. Just saw a lot of dead ones."

It was about three months before his time was up, Meyer recalls, during a really rough campaign when nobody in his unit was getting more than 45 minutes of sleep at a stretch, that he started to hear the voices of his dead friends.

"I'd be standing watch and I'd hear the voice of a guy who had been a close buddy in the squad calling my name out behind me. I'd turn around and say, "What?" But of course there was nothing there.

"At that point, I'd been called Crazy Pete so long, I figured it had really happened. So after that, I just tried to stay real busy, to stay up near the front where things were happening. I didn't hear the voices unless things got slow."

Near the end of his tour, when Crazy Pete actually volunteered to spend another year in Vietnam, his superiors knew it was time to send him home.

Still revved up for combat, he reported to his new stateside assignment. They had made him a file clerk in the company office at Camp Lejeune, and for the first time the Marines had handed Meyer something he just couldn't swallow.

He had return to a different country from the one he had left a year before. When he went home on weekend passes, his friends were into the anti-war movement and the drug scene.

Within a few weeks, he had become just as gung-ho about wanting his country out of the war as he had been to get into it the year before.

Back at Lejeune, he says, he couldn't stand being stuck in an office with a bunch of know-nothing "boots" just out of basic training. He felt he had served his country honorably, and now they were playing around with him.

Meyer swears he had never before taken drugs, not even marijuana back in Vietnam where the weed grew so wild the troops sometimes used it for camouflage.

But after he got home, the way he figures it, he used drugs to "medicate" himself against the frustrations and conflicts he felt over the war.

"I started out sniffing typewriter correction fluid," he recalled. "Then I moved on to speed and began smoking pot. Then it was hashish, and finally acid. Also I started trying to put together a kind of underground newspaper at Lejuene, but counterintelligence caught me and threatened to throw me in the brig if I didn't cut it out."

Eventually, the combination of drugs and anti-war involvement got Meyer an early discharge for medical reasons, an honorable discharge to go along with the Silver Star and Navy Cross he had won for his combat duty.

He spent the next couple of years flipped out on drugs, hallucinations, and aimlessly wandering around Europe and North America. A botched suicide attempt—he didn't take quite enough Valium to do the job—led to the first of several periods of hospitalization.

"But all the hospital does is prevent you from killing yourself and keep you on your medication," Meyer says. "The best way is to live in the real world and get good counseling."

Meyer has been off acid and heavy drugs since 1973, and now lives alone in a one-bedroom apartment near his parents' home, controlling his psychosis with a powerful 400-milligram dosage of Thorazine each day.

Rated at a 100-precent disability level by the VA, he gets a monthly compensation of $754.

For six years he enrolled in courses at Montgomery College, trying at least to salvage the college education he had always planned to get on the GI bill.

"But after all that time, I only ended up with 50 credits. I'd go along fine and make straight A's during the semester, but the pressure of finals would make me flip out again right before the exams and then I'd hole up and be a recluse for several months before I could get up the nerve to register again."

Weekly sessions with a private psychiatrist and a therapy group, paid for by his parents' insurance, help Meyer to overcome the occasional attacks of anxiety that still plague him.

"On my next disability review the VA will probably downgrade me to 70 percent because I'm working," he says. "They'll take away some of the compensation, even though my take-home is only about $300 a month. But I don't care. I really enjoy working. For so many years, I was either too flipped out or too tranquilized to do much of anything."

Nine years ago, when Peter Meyer and thousands of other American youths were struggling alone with the demons of memory and conscience that have come to be known as "Post-Vietnam Syndrome," some of the more progressive Veterans Administration doctors here were trying to convince their recalcitrant colleagues of the need for a "transitional readjustment program" to provide counseling for returning veterans and their families.

But emotions about the controversial war itself were still so strong that the proposal became a victim of politics.

Despite a significant mental health pattern that was developing among Vietnam soldiers—they suffered the lowest rate of battlefield breakdowns of any war, but a high incidence after returning to civilian society—versions of the plan were defeated three times by congressional committees in the early and mid-'70s.

Now, says Dr. Charles Stenger of the VA's mental health division, the fourth revision, called the readjustment professional counseling bill, is pending before Congress.

"The problem is, you look like idiots seven or eight years later, still trying to get something like this through," Stenger said. "At this point, of course, the effect will be more one of repair than of prevention, as we initially designed it. We took care not to tag the program as 'psychological,' in order to avoid that kind of stigma in the men's minds."

---

VETS EXPLAIN THE PATH FROM VIETNAM TO PRISON

(By Donia Mills)

The Monday night meeting of the Prison Organization for Veterans Affairs (POVA) was called to order, more or less, in an olive drab classroom at Lorton Reformatory where the day's lesson in prepositions and conjunctions was still scrawled across the blackboard.

A dozen men in jeans, Army fatigue jackets and knit skullcaps squeezed themselves into desk-top chairs, waiting for the discussion to begin.

Of 126 veterans at Lorton, 87 were in Vietnam. A visitor at the meeting asked a handful of the Vietnam veterans if they thought there was a connection between the time they had served over there and their current confinement at Lorton.

So they were each thinking back, trying to come up with something that would make some kind of sense.

"When a brother comes back home after fighting for his country and he can't find a job, that turns a man around," said Sammy Paige.

"And when a brother gets messed up on drugs, that turns a man around. When they come back sometimes, they're not the same man they were when they left."

"The average guy came out of that war not caring about nothing" added Carl Strong, a former infantryman drafted at 18. "I know me, I was just so young and wild. I think they should have planned some special training for the ground troops. I came home and I wasn't trained for anything."

Strong said he got an honorable discharge in 1970 although he did a lot of "bucking"—refusing to follow orders—in Vietnam.

"People was giving me orders that was going to get me killed. I could see that very clearly. Guys that followed orders was dead within a month. So when I was told to do something that looked wrong. I just didn't do it."

The pattern persisted after his return, Strong added.

"I guess you could say deep down inside I was still rebelling against the boss' orders," he said. "I tried a little of everything—messenger, porter, moving company. I even worked at the post office a while."

Sooner or later, his efforts failed. Strong just couldn't hold a job. In 1976 he held up a Safeway Store and was sentenced to 7 to 25 years for armed robbery.

"I served two tours in Vietnam," Henry Carter said. "I hear people say now, man, you was a fool to go over there. But while I was there, I never heard any of that. It's only since I been out on the street I learned any different.

"If you want to know what I think . . . I think the U.S. government used Vietnam as a testing ground to show the Communist world what they could do if they wanted to, which was kill a whole lot of people.

"Ha," Carter added as an after thought. "Then I come back and they put me in the penitentiary."

He was a good soldier the six years he served, Carter insists proudly. He was a machine operator in the Corps of Engineers, building roads along landing zones where a soldier had to check for mines every step of the way.

"I was an E-5. That don't mean anything today. Nobody recognizes military training out in the civilian world."

"Yeah," Carl Clark spoke up. "I came back well trained as a steam distribution engineer, but no employer here would trust me on the job. I mean, I ran a 150-pound pressure boiler over there. That thing was so powerful no building in Washington would have one because if anything happened, it would blow the whole place sky high."

As with a great number of the men now serving time in prison, Carter's downfall was drugs.

"Now, during the first tour, that was 1968–69, I never saw anything but marijuana. But the second time, 1970, the heroin was everywhere. Just about everybody was into it. I started smoking it a lot."

The smokable "smack" that flooded Vietnam during the early '70s was very pure and dirt-cheap, compared with stateside prices.

Back home and stationed at Fort Story, Va., Carter soon realized he was in over his head. His drug habit was eating up all his military pay, and to supplement it, he turned to robbery.

"At first I didn't seek medical help in the military because they just looked down on you," he said. "Once you tried to get help for drugs you were a marked man. After that, they wouldn't leave you alone.

"Once, I did go into de-tox for 11 days. That just got the monkey off my back. I felt they should have put me in a good drug program. They talked about 'drug amnesty,' but it was no real amnesty. The attitude of the military was not to help addicts, just get rid of them."

On his first robbery arrest, Carter was put on probation. He violated the probation and was subsequently found guilty on a burglary charge and sentenced to 9 to 27 years.

Carter pleaded innocent at the time, and after two years at Lorton, still claims he is innocent. His case is being appealed.

"They sure didn't consider I'd paid any dues at all with those six years in the service, did they?" he said quietly. "In the sentence that judge didn't go light on me at all. I got a wife and two children. I also got nine years. I don't see much hope she's still going to be around by the time I get out of here."

The lawyers and veterans groups who volunteer legal aid to incarcerated veterans seem to think there are very strong connections between poverty, Vietnam, drugs and prison for men like these.

In one government-sponsored survey of men returning from Vietnam in 1971, a year when both heroin use and troop reductions were at their height, more than three-fourths of the respondents reported that drugs could be had for the asking right in their own units, any time of the day or night.

Nearly half the men admitted they had tried narcotics during their tour of duty, saying they sought out the euphoric effects of drugs for reasons including boredom, homesickness, depression, insomnia and fear.

About one in five was addicted to heroin while in Vietnam.

Half of them still had their habits at the time of their return, though follow-up studies indicated a high rate of remission within a few months, supporting the notion that it was the nature of the war, and not the men, that was to blame.

"Over there, that stuff was as plentiful as cigarettes," explained Bobby Williams, a 37-year-old inmate who serves as a liaison between the prison office and the veterans group.

"A lot of guys over there used drugs to cope with the reality of what they were doing. Some of them were being ordered to shoot women and children, to fire into a building, and maybe they don't really know what's inside it.

"I mean, you look around here, these guys might have done some bad things in their lives, but everybody here has got some human standards."

The POVA program at Lorton, believed to be the first such organization in the country, was begun about four years ago to assist all veteran inmates with VA benefits and various legal matters, including appeals for upgrading of the less-than-honorable military discharges many are saddled with.

June Willenz, a director of the American Veterans Committee who has counseled several Lorton prisoners about their so-called "bad paper" discharges, sees a vicious circle of poverty, ignorance, substandard military behavior, less-than-honorable discharges, joblessness and crime at work in the men's lives.

"A lot of people," she said, "want to dismiss this group as society's losers, the guys who would have gotten in trouble anyway, war or no war. And yes, that may be the case with some of them. But those with the most disadvantaged backgrounds are the ones who most often ended up getting drafted and put in the front lines, and it's a mistake to assume that the uneducated can do all right in combat, if nothing else.

"With many of these men, their lives had simply not prepared them for the kind of discipline required in the Army. Believe it or not, having some degree of education does help an individual in adjustment to military life."

With the help of volunteer counsel, six inmates so far have succeeded in getting their

discharges upgraded, and 12 more are currently awaiting a decision from military review boards.

POVA secretary John Long explained that the organization also attempts to line up housing and job opportunities for veterans prior to their prison release date but admits that this effort is usually rough going.

"Most of the landlords are not receptive," he said ruefully. "Also, we help the men file job applications, starting with teaching them how to fill out the forms properly. But that's also kind of hit-and-miss. Jobs are hard enough for a free man out on the street to find, let alone a prison inmate."

A number of the men take courses offered in Lorton's education center by Howard and the University of the District of Columbia and paid for by the GI bill.

Carl Strong recalled, with a little amusement, the hassles he went through trying to go to school on the GI bill in between his job troubles and his trouble with the law.

"I bought a car and started studying TV repair at Columbia Tech, but I went six months before the VA sent my first check. I was dependent on those checks. By the time it would arrive each month, I owed it all back.

"Then I decided to change to a different course of study. But that stopped the checks again till they got the paperwork all changed. So I had to sell the car. Now the school was in Arlington, and I lived in the District and didn't have my car to get there."

It was about that time he robbed the Safeway.

"I guess I was just frustrated. It wasn't so much needing the money, really. Everything was going wrong and I didn't know what to do."

Now Strong is enrolled in University of D.C. courses at Lorton, but he's perturbed again because he wants to go to Lincoln Technical Institute if he can get out of Lorton before his 10-year benefits limit is up. The VA has told him there is a regulation that says a veteran can't change schools or programs more than three times or else he loses his remaining benefits.

The veterans said that their tuition and book expenses are deducted by the prison office from their monthly benefit checks and that they are allowed to send the rest home to their families or keep it in the bank as a nest egg to help them get a start after their release.

---

ARE "BAD PAPER" VETERANS THE "ULTIMATE SCAPEGOATS OF WAR"?

(By Donia Mills)

In January 1977 when President Carter made amnesty for Vietnam draft evaders a top priority, it was a real blow to the 750,000 ex-soldiers who had left the service bearing the stigma of less than honorable discharges.

The number of these so-called "bad paper" discharges had escalated steadily over the decade of the war. By 1975 the pre-war norm of 5 percent had climbed to 11.2 percent.

Only about 1 in 10 of these men, however, were courtmartialed for serious offenses and given bad conduct or fully dishonorable discharges.

The majority received simple administrative discharges labeled "general" or "undesirable," offered to errant GIs by the service as a quick alternative to the extended ordeal of a court-martial.

The offenses ranged from charges of AWOL and insubordination to such behavioral aberrations as homosexual tendencies, smoking marijuana and a catch-all category called "personality disorders."

All those with discharges below the "general" level became ineligible for VA benefits. In addition, any man with a less than honorable discharge stood a good chance of being discriminated against by employers who would view him as a bad risk.

Statistics show that while blacks accounted for only 12 percent of the military population, they received one-quarter of all less than honorable discharges.

And recent surveys of veterans in prison revealed that nearly half had left the service with bad paper.

A several veterans activists have suggested Carter's amnesty decision made this group feel like "the ultimate scapegoats of the war"—getting punished by the military for exactly the same behavior they saw their collegiate and draft-dodging peers getting away with in civilian life.

But two months later, the president seemed to be giving the scapegoats their due when he announced a special discharge review program under which veterans could apply to have their discharges upgraded.

One of the first in line to apply for an upgrade a year ago was Mike Sarkin, a former Army electronics technician who went AWOL following his return from Vietnam and received an undesirable discharge in 1971.

Sarkin had joined the Army young and gung-ho in 1966. Two years later, at the age of 21, he had already attained the rank of staff sergeant and successfully completed a tour of duty as an instructor at Fort Monmouth, N.J.

He promptly re-enlisted and spent a year in Vietnam with a unit that was operating, repairing and defending a radio and TV facility on a hill-top near Pleiku, in the central highlands, under frequent Viet Cong fire.

"I think I re-enlisted just to go over there," Sarkin said dryly the other day, describing the unhappy nine years that followed his four-year military career.

"It sounded at the time like a real John Wayne thing to do—and of course, I figured if my country was doing it, it had to be right."

Sarkin says he changed his mind about the war during the Tet offensive, watching innocent civilians get blown apart just walking down the street.

"The worst thing about it was the way we were conducting the war," he recalled. "It was more like a diplomatic war—the government was sending us over there to get shot at, but then making us ask permission before we could shoot back."

Like many soldiers who held up during their tour in Southeast Asia, Sarkin had a delayed psychological reaction after he returned home.

During his absence, his four-year marriage to his high school sweetheart had disintegrated, and the anti-war movement was in full swing all around him.

"My friends who were in college looked at me like. 'Oh, there's Mike Sarkin, the killer.' I went around a couple of months trying to defend the war—but in 1969, that was about as dangerous as actually being in Nam."

Sent back to Fort Monmouth for the remainder of his tour, Sarkin balked at returning to the classroom.

"You know, when you get back from Nam you have a funny attitude," he reflected. "Like, all right ———, I went over and I did the job and I came back alive . . . now, the next time you tell me to do something, there better be a good reason for it."

Sarkin told his superiors he had no desire to teach any classes that were Vietnam-bound—an attitude his superiors refused to accept.

"I requested an early discharge, but they denied it," Sarkin continued. "So I took what you might call the chicken way out. I knew I would get an undesirable discharge if I accumulated 150 days of AWOL. I didn't really go anywhere—I just didn't report for duty.

"Eventually they transferred me to Fort Dix, where they had set up a special processing unit for guys who just wanted to check out, whatever it took. It was sort of an AWOL factory—we used to sit around the barracks at night counting off our days."

Sarkin said the men with undesirable discharges were told they could be eligible for VA educational benefits, but his application was denied by the VA the following year, and he began working in a series of menial electrician's jobs.

"After you've been a television engineer, installing light switches in apartment houses isn't too challenging," he said.

Last spring, he applied under Carter's special program, which looked like his last remaining hope to study electronic engineering under the GI bill.

Because he met several of the program's criteria—he had more than 24 months of honorable service previous to his behavior problem—the panel of review judges voted unanimously to upgrade his discharge to fully honorable.

By the end of the summer he had received his eligibility notice from the VA and enrolled in Essex Community College near Baltimore.

Told to expect his first VA check on Oct. 1, Sarkin began attending classes and in the same burst of optimism, married on October 7 a woman he had been dating for some time.

The very next day, he was crushed to learn that Carter had capitulated to Congressional hawks and signed Public Law 95–126, a Senate bill that held up payment of VA benefits to all 16,000 veterans with newly upgraded discharges.

Viewing the president's program as a "giveaway," Congress was demanding a second complete review of each individual case, to determine whether it would have met traditional military standards for upgrading.

Despite a clause affording 180 days of provisional payments to anyone who was already enrolled in school and receiving benefits before the bill's passage, Sarkin says he has yet to receive a penny from the Baltimore VA office—only administrative errors, delays, misinformation, and outright neglect.

The VA has also failed to explain to him satisfactorily why he can't receive benefits based on his first, honorable tour of duty.

"My wife has been marvelous about supporting me so I can keep going to classes until the VA comes through," he said. "But I know my mother-in-law looks at me and thinks, when is this freeloader going to start paying his own way?"

Another blow struck earlier this month when Sarkin's wife underwent emergency surgery and suffered ensuing complications which will keep her convalescing for a while.

Now, added to the overriding strain of personal worry, is Sarkin's discouraging realization that he will have to quit school within a month if he doesn't get his VA benefits.

"The whole system has been quite arbitrary," says David Addlestone, director of a military discharge review project set up by the American Civil Liberties Union to study cases like Sarkin's.

"Our position is that there are serious legal processing problems involved in the way many of these discharges were handled. Every case we've taken to court, we've ultimately won upgrades for. But the military still hasn't published any fixed set of standards applicable to review procedures.

"An Army officer once admitted to me that the decisions of the review board members are about 5 percent logic, 15 percent emotion and 80 percent gut reaction."

In January 1977 the ACLU and 21 veterans organizations won an out of court settlement against the military discharge review boards, insisting that "statements of findings and reasons" be written and made publicly available on each case reviewed.

And in a case sponsored by the ACLU, settled in U.S. District Court here in February, the Army agreed to review and probably upgrade 50,000 personality-based general discharges that Army officials admitted might have been misprocessed between 1958 and 1975.

Civil libertarians are still badgering the Defense Department for "published uniform standards," but the kind of 1-2-3 list they're asking for is simply not practical, according to Col. William E. Weber, current president of the Army Discharge Review Board.

"The ACLU people want precedent and judicial procedure, and it's not possible," Weber said. "We deal with intangibles, just like a civil court of law.

"The way the review board operates, each of the five members is a judge, and collectively, they're a jury. And how do you weigh a factor like family problems—do you assign it a numerical factor of 5? Of 10?"

Weber said the review board's workload has increased 1,000 percent over the past four years, partly because of the president's special program and the subsequent Congressional order to review again all the cases upgraded under the program.

At the same time, he asserted, the "almost unbelievable amount of discussion" generated on the subject of discharge review over the past few years really concerns a tiny and "insignificant" number of Vietnam veterans—less than 1 percent.

"Any program being administered by humans is going to have mistakes made," he said. "And during a time of trauma, the incidence of mistakes might escalate slightly. But there is nothing at all that supports the idea that because some discharges were unfair, all are automatically unfair."

He compared the difference between an honorable and "general" discharge to the distinction between an A and a C on a report card.

"What the general discharge says is, 'this individual served adequately, but held something back.' We don't have a cum laude discharge to distinguish the really superior soldier. So until we stop giving A's and B's and C's in civilian life, I imagine we will keep giving general discharges."●

## A GLOBAL APPROACH TO THE ENERGY CRISIS

● Mr. PERCY. Mr. President, since the 1973 Arab oil embargo and the OPEC oil price increases, numerous articles, pamphlets and books have been written about the effects of the energy crisis on the less developed countries (LDC's). There exists an overwhelming consensus that the development plans of the LDC's are in serious trouble without secure and reasonably priced energy supplies. One of the most concise and thoughtful expositions of this problem, and its possible solutions, was written by James Howe and William Knowland of the Overseas Development Council. Even though this article was published in December 1976, it still contains timely advice. The article is entitled "Energy and Development: An International Approach."

In their article, Mr. Howe and Mr. Knowland stress the vital link between energy and development. However, they caution against applying conventional energy solutions to the problems of the bulk of the developing world. For many of these nations, small-scale energy technology appropriate for the village level would be far more useful in lifting these people out of abject poverty than large centralized electric power grids.

Mr. Howe and Mr. Knowland urge a global approach to solving this problem. They stress that this is in the self-interest of all nations. In particular, they urge the United States to play a key role in global energy strategy by initiating and supporting a number of international programs. This is a responsibility we cannot shirk.

Mr. President, I ask that this excellent article be printed in the RECORD.

The article follows:

ENERGY AND DEVELOPMENT: AN INTERNATIONAL APPROACH

(By James W. Howe and William Knowland)

The immediate U.S. reaction to the shock of the 1973 Arab oil embargo and OPEC oil price increases was to seek national energy self-sufficiency—energy independence. But several years after the oil embargo, the United States is growing still more dependent upon OPEC oil and facing ever higher energy costs. It is time to reassess the situation and consider the possibilities of achieving energy security through a global approach that more clearly recognizes the realities and opportunities of our energy interdependence.

The energy problem for the United States and other developed countries is largely one of adapting to suddenly higher energy prices without a significant loss of economic welfare. But for over half the world's people living in the oil-importing developing countries, the energy problem is more fundamental. Despite low per capita consumption of oil in these countries, rising oil costs have forced many of them to choose between importing either less oil or less food, fertilizer, and other inputs essential to their economic development. Without support either to help pay their higher fuel bills or to increase their indigenous energy supplies, they are doomed to remain poor.

Taking the energy needs of developing countries into consideration would cost the United States and other developed countries relatively little but could yield significant benefits, including making the world's use of energy more efficient, more secure, and possibly even cheaper for all nations, rich and poor.

U.S. ENERGY INDEPENDENCE

The official U.S. energy strategy since 1973 has sought to reduce U.S. oil imports to a point where the United States would no longer be vulnerable to another embargo. The basic tactics of this policy—Project Independence—are to (1) reduce U.S. consumption of oil imports by 1 million barrels per day by 1985 (present U.S. consumption totals about 17 million barrels per day, of which about 7 million are imports), (2) greatly increase domestic production of fossil fuels and nuclear power, (3) build up an oil storage reserve equal to six to twelve months of oil imports, and (4) develop a standby rationing system that could be quickly implemented in the event of another embargo.

There is, however, a growing realization that the direct and indirect costs of fully implementing this program would be enormous. For the 1976–1985 decade, the U.S. Federal Energy Agency estimates that investment in the energy industry would approach $600 billion (in 1975 dollars); some private analysts expect the final figure to exceed $1 trillion. And after 1985, the program's costs would accelerate even more. In addition, the amount and type of energy growth projected (with an emphasis on electrification) would produce tremendous amounts of pollution and waste heat. Thousands of square miles of U.S. landscape would be irrevocably altered by strip mining, as would be the lives of many communities in coal and oil-shale areas or areas adjacent to offshore oil fields. Major development of nuclear power would present additional environmental, health, and political problems.

But even if the United States were willing and able to increase its domestic energy production and to achieve the other goals of Project Independence, it still would not be immune from a future embargo. As long as its major trading partners—Western Europe and Japan—are not similarly independent in energy supply, the entire world economy will remain vulnerable to the actions of the Organization of Petroleum Exporting Countries (OPEC). Despite the North Sea oil reserves now being tapped, neither Western Europe as a whole nor Japan has any short- or medium-term hope of ending its heavy reliance on Middle East petroleum.

These observations are not offered as a condemnation of the goal of energy independence. In fact, it would be ideal if the technology were developed to permit nations and even localities to be truly energy independent—i.e., to draw their energy needs from safe, clean, inexpensive, and renewable *local* sources such as sunshine, wind, or wastes. However, the best route to such eventual independence (if it is indeed technologically and economically feasible) is a cooperative international approach—without which there will be time-consuming and costly duplication of research and development and neglect of the potential of *all* nations to make the most efficient use of their resources.

ENERGY AND DEVELOPMENT

It is the oil-importing developing counties that suffer the most from rising energy prices. In order to purchase essential fuel, many have little choice but to borrow foreign exchange and go further into debt. And if developed countries reduce other imports to compensate for higher fuel costs, the developing countries will lose their export markets—and the ability to repay their debts.

Developing countries have two distinct energy sectors. The first is commercial energy such as oil, gas, coal, and electricity, which are bought and sold in large regional or national marketing and distribution networks. Many of the developing countries are attempting rapid industrialization and trying to meet the commercial energy needs of quickly growing and increasingly urbanized populations. The second sector is traditional or noncommercial energy such as firewood and draft animals, which are used on the spot by the producer and gathered or traded only within the traditional village context. Noncommercial energy is still very important in the developing world and represents the larger share of the total energy consumed. One source estimates that the amount of noncommercial energy consumed is comparable to the entire flow of crude oil among nations (about 30 million barrels a day). Yet *per capita* consumption of traditional energy is low; most individuals use no more than 15,000 calories daily for food, firewood, and animal power. (By contrast, the suburban American who lives 10–15 miles from work burns more than three times as much energy just driving to and from work.)

For the 50–80 per cent of the people in developing countries who still live in rural areas, relatively cheap and abundant energy is a prerequisite for development. The conventional answer to this need has been to slowly extend modern electrification networks. But for many Latin Americans and most Africans and Asians, this remains a dream for their grandchildren. Long before that dream can become a reality, however, it might be possible for small-scale technologies that utilize locally available energy sources to help in the performance of essential daily tasks. Among such small-scale options are the conversion of animal and human wastes and crop residue into methane gas and fertilizers; the use of windmills for water pumps and electricity; the use of small streams for electricity generation; and the

use of direct solar energy for heating, crop drying, and electricity generation. Most developing countries, however, lack the knowledge to create such technology or the capital to import it without outside help.

Throughout the 1950s and 1960s, the general economic development strategy of most poor countries was patterned after the economic model of the North. That model was largely urban-oriented and capital-intensive and emphasized the development of large-scale industry. It was assumed that the benefits of this approach would "trickle down" to the poor, even where the poor constitute the majority. Many scholars and policy makers in the developing countries are now challenging this approach and calling for a strategy to benefit the majority from the very start—a strategy that emphasizes agriculture more than industry, rural more than urban development, small-scale rather than large-scale technology, and labor-intensive rather than capital-intensive investments. Those countries which focus their development strategy on human needs may well find that an energy strategy that relies on small-scale renewable or inexhaustible sources (such as solar energy, wind, water, and bioconversion) would be more appropriate and less expensive—especially for rural areas—than one dependent on a centralized energy system.

A GLOBAL APPROACH

It is in the self-interest of all countries to pursue a global approach to the energy problem on several counts:

Cooperation can avoid time-consuming and costly national duplication of energy research and development. Thus it can help develop energy sources to meet global needs when oil, gas, and uranium supplies are depleted, as they are likely to be in a few decades.

Encouraging development of oil and gas, wherever they are found, is economically rational and will provide more time to develop alternative sources.

If developing countries have sufficient energy from other sources, they will be less likely to turn to the costly development of nuclear fission (with all that it also portends for weapons proliferation and terrorist activities).

To the extent that poor countries can develop their own energy resources economically, they can lessen their economic and political dependence on outside sources.

A global effort at cooperation on energy development and related problems might begin with the following steps:

1. Initiation of Global Analysis and Planning. The energy supply and demand picture for the United States and most developed countries is known in considerable detail, but for much of the world there is very little information available. The problem is similar to that which until recently existed for food. Thanks to the efforts of the U.N. Food and Agriculture Organization and the U.S. Department of Agriculture, we now have substantial information about global food supply and demand and the projections of the balance into future years. The same is needed for energy, yet there is no international energy agency to perform such an analysis. We need a World Energy Council—an international agency capable of coordinating the necessary data-gathering on energy use and supply, assessing that information, preparing and keeping current a global energy balance sheet, and performing special analyses that would be of use to national energy decision makers.

2. Cooperation in Exploration for Fossil Fuel Resources. Experts estimate that there may be between 1.7 and 5 times more oil in the earth's crust than already has been discovered. The U.S. Geological Survey estimates that about half of this oil will be discovered in the poor countries that are not now members of OPEC. Why hasn't this oil already been discovered? Some observers point to the lack of intensive exploration. There are vast areas of Africa and to a lesser extent Latin America and Asia that have not yet been adequately explored, even though they are geologically promising. For every well drilled in Africa, for example, 300 wells have been drilled in the United States on geologically comparable terrain.

The international oil companies have traditionally underwritten the high costs of petroleum exploration. But the oil companies now maintain they are reluctant to invest in developing countries because they cannot get sufficient guarantees for the security of their investments. Thus international action is needed to improve the investment climate. One possibility is to establish an international program to insure oil and gas companies against the political risk of contract abrogation. A variety of other steps are also worth considering, including the provision of technical assistance to developing countries to strengthen their ability both to negotiate satisfactory contracts and to confidently monitor the execution of these contracts by foreign companies.

In addition to oil and gas resources, which are the most important fossil fuels expected to be found in the developing countries, many developing countries almost certainly have significant reserves of coal and other fossil fuels. There has been even less exploration, on a worldwide basis, for coal, lignite, peat, shale oil, and tar sands than for gas and petroleum. Means should be sought through international cooperation to help developing countries find and develop these assets.

At the May 1976 session of the U.N. Conference on Trade and Development, the U.S. government proposed an International Resources Bank (IRB), which is still being discussed in a variety of forums. It would provide political risk insurance, such as was suggested above, for both energy and non-energy minerals. The IRB, or at least a variation of it which would deal exclusively with energy and would incorporate other actions designed to make the climate for investment more reliable for both developing countries and foreign companies, is worth pursuing.

3. Collective Consideration of the Nuclear Option. The euphoria of the 1950s over the promise of cheap, "clean" electricity from nuclear fission has deteriorated into a state of confusion. The scientific community is split over questions of safety. Businessmen, concerned with rising costs, cancelled or delayed plans in 1975 for 148 nuclear power plants in the United States alone. Manufacturers of such plants, however, are continuing efforts to sell nuclear plants abroad—an activity their governments encourage.

At the same time, there is growing citizen concern in the developed countries both over the further proliferation of nuclear weapons and over the environmental consequences of the spread of nuclear power. But as long as nuclear technology continues to grow in other nations, local or unilateral national opposition cannot ensure safe storage for radioactive residues, prevent the diversion of explosive materials into weapons, or avert the resort of terrorist groups to radioactive or explosive materials. All of these are issues that can be resolved only by global action. Thus the debate within industrialized countries over whether to go ahead with nuclear power needs to be complemented by an international dialogue on the same issue.

In many developing countries, the developed world's recent concern about the spread of nuclear technology—after years of Western promotion of the anticipated "blessings of the atom to mankind"—is viewed with considerable resentment. This feeling is strengthened by the fact that international discussions and decisions on nuclear matters often exclude the developing countries. These countries see the developed countries applying a "double standard" in the nuclear field: nuclear technology is judged to be "safe" when produced and used by other developed countries (capitalist or communist)—in spite of the fact that four developed countries use it to manufacture nuclear weapons—but not when used by the developing countries. There is also suspicion of the motives of developed-country spokesmen who advise the developing world that nuclear energy is not in its best interests. To some in the poorer countries, Northern talk about "appropriate energy technology" seems a ruse to keep the South from modernizing. But many specialists who are genuinely in favor of advancing the developments of the poor countries (including the authors of this communique) are convinced that a growing list of disadvantages (quite apart from proliferation of nuclear energy an unwise policy for most developing countries. Among the particular limitations of the nuclear option to the developing countries are the lack of capital, the shortages and high costs of skilled manpower and management, dependence on outside sources for fuel and technology, and the fact that most plants are too large to be cost-effective for the small national electrical grid systems now used in most of these countries.

Given the now widespread recognition of nuclear energy's many problems—which have highly undesirable implications for all countries, developed and developing alike—the United States and other developed countries should move to change their international positions on the development of nuclear energy. They should 1) discontinue the subsidies they presently offer in the form of government financing on favorable terms for a portion of nuclear exports; 2) revise the mandate of the International Atomic Energy Agency (IAEA) so that the Agency would end its advocacy of the use of atomic energy and instead concentrate its efforts on its second main task, that of regulating the production and handling of radioactive and explosive nuclear materials; 3) discourage the developing countries from following the nuclear path and actively help them find better alternatives to meet their energy needs; 4) offer to work closely with those developing nations which, despite advice to the contrary, do opt to follow the nuclear path, by extending technological support to them to make their development of nuclear energy as safe and environmentally sound as possible: and 5) search for an acceptably balanced mechanism to include representatives of the developing countries in discussions of international nuclear energy options and policy choices.

4. Making World Energy Research More Applicable to Development. Not surprisingly, most energy research and development is financed by and takes place in the industrialized countries. That research has three general characteristics. First, almost all of it is devoted to large-scale, centralized energy production units. More than 90 percent of U.S. energy research and development is devoted to such large-scale technologies as fission, fusion, fossil fuels, and geothermal electricity-generating facilities, even though a portion of modern energy use (such as the bulk of domestic and commercial water and space heating) could be more efficiently met by decentralized, "on-site" sources. For much of the developing world, where, according to World Bank estimates, nearly half of the people still will not be reached by centralized national electrification by the turn of the century, there is an urgent need to explore appropriate village-scale or farm-scale energy sources.

The second characteristic of energy research and development is that it is conducted mostly on a country-by-country basis, with all too little international cooperation. Yet international cooperation offers an opportunity to speed up research and develop-

ment and to reduce its costs. Internationally coordinated research has paid handsome dividends, for example, in the case of research on food grains, as is evidenced by the rapid spread of high-yielding varieties of rice, corn, wheat, and sorghum developed within internationally coordinated agricultural research networks. Similar networks might be formed for research on wind, waste, the sun, and other nonconventional energy sources.

Finally, all but a small fraction of energy research and development is devoted to depleting the remaining finite stocks of fossil and uranium fuels. Almost all energy authorities agree, however, that sometime before or near the turn of the twenty-first century, most conventional sources of energy (oil, gas, uranium) will be in short supply and that it will be necessary to have competitively priced inexhaustible sources of energy such as solar heating and solar electricity. Thus the hundreds of billions of dollars that are being invested in oil, gas, and nuclear fission are for a transitional period of perhaps 15 to 30 years until the technologies to tap inexhaustible and renewable energy sources become widely available. Yet in the United States today, only one energy research dollar out of twenty is spent on increasing the efficiency with which conventional fuels are utilized, and only one out of four is spent on the development of inexhaustible or renewable sources.

A number of prototype small-scale and renewable/inexhaustible energy technologies have already been developed. The problem is that they generally are not yet cost-effective, at least in the major market areas of the industrialized countries, which have well-established electrical transmission networks and traditional pricing practices favorable to conventional electric and fossil-fuel consumption. But the costs picture is shifting inexorably against the continued consumption of finite fuel reserves even in the developed countries. Meanwhile, in the developing countries some of these alternative technologies may already be competitive with conventional approaches, particularly for providing energy to the villages and farms that are not located near major electrical transmission lines. Studies and pilot programs comparing the cost and performance of conventional and alternative approaches in rural areas would be very useful.

As promising village-scale technologies are identified from these pilot programs, it may be warranted to extend aid to install them in village experiments on a wide scale and—if experience so indicates—eventually to finance their export to developing countries on a major scale through loans with favorable terms (as every country that exports nuclear fission facilities has done). This not only would help to meet an important need for rural development but also would provide a large market for small-scale energy technology. Recent experience with other technologies (e.g., the transistor radio and the pocket computer) suggests that this will lead to dramatic cost reductions which would benefit both developing- and developed-country consumers.

5. Convening a World Conference on Energy Alternatives. A World Conference on Energy Alternatives—organized along the lines of the 1974 U.N. World Food Conference—should be held to stimulate and symbolize the need for the kind of cooperation outlined in this paper. One or two years of comprehensive preparatory work by national and international groups and debates at international workshops would be needed in preparation for such a Conference.

THE U.S. ROLE

The United States clearly has an opportunity to play a cooperative role in a global energy strategy and should do so in a number of areas:

1. The United States should support the creation of an international World Energy Council to coordinate the collection of global energy facts, maintain an energy balance sheet, and perform global energy analyses and planning.

2. It should support and help underwrite a political risk insurance program and other actions to encourage increased exploration for gas, oil, and coal.

3. The United States should use its influence to assure serious collective consideration of the nuclear option. It should discontinue subsidies on nuclear exports: cooperate in revising the IAEA mandate to focus on regulating the production and handling of nuclear materials; help developing countries find better alternatives to meet energy needs; cooperate with those nations which decide to use nuclear energy to facilitate safe nuclear development; and seek institutional improvements that would represent developing countries in nuclear discussions.

4. It could play a significant role in improving world energy research and development activities by refocusing a portion of its energy research and development programs on small-scale renewable sources of energy. It should take the lead in creating energy research networks to gain the benefits of international cooperation; eventually it should subsidize the sale of suitable small-scale technologies to developing countries and help those countries develop their own energy hardware production facilities.

5. The United States should cooperate in initiating and planning a World Conference on Energy Alteratives.

6. In order to enhance its credibility in assuming a leadership role in a global energy strategy, the United States should—at the same time it takes action in the above areas—launch a government-supported program of domestic energy conservation. The per capita energy consumption of the United States and Canada is unique—nearly 40 per cent above that of West European countries with similar or higher standards of living. Energy conservation is less a question of making life-style changes than one of making all forms of energy use more efficient.

An interdependent approach in the energy field is not a threat to U.S. energy security. On the contrary, energy independence would be far more costly to the United States and could itself lead to exacerbated global economic confrontation. After three years of striving for an illusory energy independence, it is time to recognize the advantages implicit in a global approach emphasizing energy interdependence.●

## NATIONAL ARCHITECTURAL BARRIER AWARENESS WEEK

● Mr. ANDERSON. Mr. President, the 1968 Architectural Barriers Act and enforcement of the 1973 Rehabilitation Services Act offer new hope to all citizens impeded by physical barriers. Therefore, I am very pleased to note the Senate's passage this week of a resolution authorizing the President to proclaim the third weeks of May 1978 and 1979 as "National Architectural Barrier Awareness Week."

I commend my Minnesota colleague in the House, Congressman RICHARD NOLAN, and my Senate colleague, Senator RANDOLPH, for their leadership in this area. Without their commitment and concern, this special and much-needed observance could not become a reality.

It is my hope that this resolution will further compliance with the law requiring federally funded structures to be barrier free. Also, I hope more private businesses will become aware of the tax deductions currently available for creating accessibility in buildings for handicapped citizens. I ask that the committee statement accompanying House Joint Resolution 578 be printed in the RECORD.

The statement follows:

STATEMENT

The Architectural Barriers Act of 1968 (Public Law 94-480) committed the Government to remove all physical barriers from Federal buildings. The National Architectural and Transportation Compliance Board was created by the 1973 Rehabilitation Services Act and was given responsibility of enforcing compliance with Public Law 94-480. In April 1977, the Secretary of HEW issued regulations implementing the Rehabilitation Services Act by requiring all buildings constructed, significantly altered, or leased with Federal funds to be barrier free.

The Tax Reform Act of 1976 also recognized the plight of the handicapped by allowing a maximum $25,000 tax deduction for businesses who make facilities fully accessible to the handicapped. The deduction is available through 1979.

The dates specified in the bill also correspond to the week selected by the Easter Seals Society for observing National Handicapped Awareness Week throughout the country.●

## WESTERN AIRLINES SUPPORTS REFORM

● Mr. PERCY. Mr. President, Western Airlines, the ninth largest carrier in the United States, recently announced its support of airline regulatory reform. The Los Angeles-based airline thus joins the ranks of other major carriers supporting reform such as United Airlines, Pan American World Airways, Hughes Air-West, Frontier Airlines, Federal Express, Flying Tiger and virtually every commuter airline in this country. The enlightened move by Western Airlines is a significant development in the growing support for airline reform in this country. Western is a medium-sized airline that serves 41 cities in 15 States, Canada, and Mexico.

Previously Western was opposed to reform, but its corporate officers were sage in changing their minds and realizing that an aggressive and well-managed airline had little to fear from less Government regulation.

Western is one of the Nation's senior air carriers and is the ninth largest in revenue passenger miles, available seat miles, and total operating revenues. It has 10,000 employees.

Mr. President, I submit for the RECORD a statement in favor of reform by Cliff Madison, director, public affairs, Western Airlines, Inc., presented before the Subcommittee on Aviation of the House Committee on Public Works and Transportation on March 7, 1978.

The statement follows:

STATEMENT OF CLIFF MADISON

Mr. Chairman, Members of the Subcommittee, we appreciate the opportunity to appear before you today to give you our views on the "Air Service Improvement Act of 1978", H.R. 11145.

Western Airlines endorses H.R. 11145, and we commend you and the Members of the Committee for recognizing the need for a Reform Bill which is tempered by experience and by the realities of our air transportation system as it exists today. Moreover, H.R. 11145 maintains the essential concept

which has fostered the very best air network in the world; the recognition that the Federal Government has a responsibility to ensure air service to American cities—large and small, profitable and not so profitable.

This measure is designed to improve our air transportation system by moving toward a more competitive environment with less federal regulation and with a greater reliance on the market place to determine service and fares. In addition, the "Air Service Improvement Act" is intended to encourage efficient and well-managed carriers to earn adequate profits and attract capital. Western Airlines, as one of the air carriers with a good route structure, an experienced and able management team with 10,000 highly trained and skilled employees, welcomes the opportunity to operate in an even more competitive atmosphere.

As this Committee knows, Mr. Chairman, Western Airlines through Mr. Arthur F. Kelly, Chairman of the Board, has testified in opposition to proposed legislation which would rather drastically alter the regulatory framework which governs this industry. We have opposed those attempts primarily because of the provisions which would mandate a removal of all federal controls over entry into the air transportation system. It has been our view that large scale entry and exit to and from markets could create havoc and could produce incalculable harm to an air transportation system that all agree is the finest in the world.

If large scale entry were automatic, we—as one of the smaller trunk carriers—feel that a large carrier—with its extensive route system and almost unlimited resources—could enter a market where we have been successful; it could reduce prices and sustain losses—increase capacity to the point that both carriers have extremely low load factors, until we are forced out of the market. Then, the large carrier—when it has become the dominant carrier in the market—would reduce service, raise fares, and the traveling and shipping public would suffer.

Accordingly, the result of an expedited automatic market entry program would be to quickly destroy the progress made by the Civil Aeronautics Board during the past 25 years in its effort to strengthen the smaller carriers so as to reduce the imbalance in size which has existed between the largest 4 or 5 carriers and the remaining smaller carriers in the industry.

If entry were automatic, and an additional carrier entered a market served by Western, we might be forced to transfer more and more resources to that particular market in order to compete. Those resources would come from other parts of our system, and as a result, one area may have excessive capacity while another area may suffer from a shortage.

If entry were automatic, a carrier might cut corners in order to survive. While safety is today's highest priority, under a drastically altered system, its importance may decline.

Thus, for these reasons—industry concentration, uncertainty of service levels, and safety considerations—Western Airlines has opposed previous proposals which contained automatic market entry provisions.

The "Air Service Improvement Act of 1978," H.R. 11145, however, encompasses the philosophy that we have advocated which acknowledges the role of the Civil Aeronautics Board in controlling entry into and exit from the air transportation system, recognizing the need to preserve competition by strengthening smaller carriers.

This philosophy recognizes the cyclical nature of this industry which requires discretion and flexibility, rather than rigid standards established by law. We feel that maintenance of the basic structure which exists today and which brings scheduled, certificated service to approximately 500 American towns and cities is essential to our national welfare. Thus, we support the thrust of H.R. 11145 which directs the Civil Aeronautics Board to develop a program "to assure a phased and orderly transition to a more competitive air transportation system." In the development of such a program, the Civil Aeronautics Board will be able to further its long established program of strengthening the smaller carriers so as to assure a better balance among carriers in endeavoring to maximize competition.

We support this concept; however, we caution the Committee that this mandate to the Board is perhaps too broad and may not produce the desired results which to us are safety, improved service, lower fares, and avoidance of industry concentration. For example, in developing the program, is competition to be attained at the expense of safety? Is the encouragement of new carriers to be at the expense of existing ones? Is low cost transportation more important than frequent and dependable service?

These questions need answers, and we feel that Congress should give the CAB more direction by listing priorities to be followed in developing the program. In our view, the Congress should more explicitly spell out the goals, the desired results, of the program. Mr. Chairman, this Committee should direct the CAB to establish a program precisely along the lines of H.R. 11145, but with the mandate to place the highest priority on safety and then, in order of importance, a diverse industry with balanced competition among carriers without concentration of economic power, lower fares, better service and more competition.

The maintenance of a safe air transportation system is of the highest priority in our view. Next, we feel that a diverse industry with balanced competition and without industry concentration is of utmost importance if we are to encourage a variety of services and if the consumer is to realize the advantages of the competing firms. The Congress should realize the value of maintaining many strong competitors, rather than permitting, or even encouraging, the concentration of economic power. We feel that lower fares, better service and even more competition follow closely behind these priorities.

While the Civil Aeronautics Board should be given the requirement for developing this program, the Congress should establish guidelines, priorities and goals to be realized. Establishing the policy is no easy task, but we strongly feel that such a task should be undertaken in order to give direction to the Board in creating this program.

While we are confident that Western will continue to succeed under a more competitive environment, we feel that this Committee should consider and adopt provisions which will protect the employees of those carriers which may not succeed under such a change.

Mr. Chairman, we thank you for the opportunity to appear before you today. We commend you for the efforts that you have made to bring a fresh insight to the regulatory reform debate and we appreciate your desire to bring about improvements while preserving the successes of the past, which have produced the finest air transportation system in the world.●

## ISRAEL AS A DEMOCRACY

● Mr. RIBICOFF. Mr. President, the State of Israel is soon to celebrate its 30th anniversary. It has been 30 years of progress unequaled by any other nation in three decades. The people of this courageous country have much to fill it with pride.

It has enabled an inmigration of persecuted and homeless Jews from all over the world to live as free men. It has successfully fought four wars and repelled continental terrorist attacks. It has made the desert bloom into the Biblical land of "milk and honey." Its education, health, and science are among the foremost in the world. In art, music, literature, culture, and archeology it is not surpassed. In agriculture and industry Israel shows the entire underdeveloped world how to become a modern nation.

But above all its attributes Israel was born as a democracy, lives as a democracy, and will stay a democracy. It is the only democratic country in the Middle East. In spite of wars, troubles, and adversity Israel has remained true to democratic principles. Freedom of speech and discussion is a basic tenet of Israel's existence and faith whether in the Knesset, in the press, in the home, on the street, or in the field.

This is vividly caught in an article in the Wall Street Journal of April 12 by Felix Kessler. I ask that it be printed in the RECORD at the conclusion of my remarks.

It is, therefore, disturbing that there are those in this country who by pressure seek to throttle freedom of discussion in the United States. There can be no greater disservice to Israel, the United States, or the people of Jewish faith everywhere than to deny any American the freedom to speak out on any issue, a freedom so meaningful to Israelis and American alike.

In the quest for a real peace in the Middle East it is essential that there be full discussions on basic issues so that when peace comes it can be permanent.

The article by Felix Kessler follows:

[From the Wall Street Journal, Apr. 12, 1978]

ISRAEL'S DEBATE—BEGIN PRESSED TO EASE STANCE ON WEST BANK TO REVIVE PEACE TALKS

(By Felix Kessler)

TEL AVIV.—Yuval Neria is an authentic hero even among fellow Israelis who take valor and military daring for granted.

When Egyptian shells blasted his tank in the 1973 Yom Kippur war, he quickly climbed into another and continued the battle. Then, wounded and again knocked out of action, he found a third tank and kept fighting. His Sinai exploits earned him the army's top bravery medal—and six months in a hospital.

Now, the 26-year-old reserve captain has entered a new battle, against his government. Under a huge banner proclaiming "Better Peace Than Territories," Mr. Neria explains why he and fellow reservists became so disenchanted with Prime Minister Menachem Begin's policies that they organized one of Israel's largest rallies—police estimated the crowd at 30,000—to protest the Israeli government's peace stance.

"President Sadat's visit was only the first step," he says. "It now depends on Begin and our government to be more flexible, to know that peace can't be achieved without giving back some of the West Bank."

HARD LINE UNDER FIRE

The army reserve officers' movement obviously has touched a sensitive nerve. Israelis increasingly are attacking the Likud coalition government's hard-line proposals to retain control over all the territories Israel has occupied on the West Bank of the Jordan River since the 1967 war. Opposition politicians denounce the government's view that Israel isn't obliged to yield its claims to any of the Biblical lands of Judea and

Samaria, part of the West Bank, to conform with past Israeli willingness—and UN Security Council resolution 242—to withdraw in return for peace.

The mounting criticism follows, and is fed by, the U.S.-Israeli dispute over peace strategy that became clear during Mr. Begin's Washington visit last month. At that time, President Carter bluntly told the Israeli leader that territorial concessions were necessary "if the peace negotiations are to succeed," but Mr. Begin stood firm.

On another front, even Israelis convinced of the nation's overriding security needs are questioning the size of the invasion of Lebanon that followed a Palestinian terrorist raid claiming more than 30 Israeli lives. "How many were killed?" asks a Haifa housewife. "How many prisoners were taken? How many made homeless? We haven't been told enough."

BLUDGEON OR SCALPEL?

A resident of a northern kibbutz wrote the Jerusalem Post saying that for the first time he was "ashamed" of his country, because of the loss of life and the wounded, orphans and refugees produced by the invasion. Military writer Hirsh Goodman asks whether Israeli military power is being used as a "bludgeon rather than a scalpel."

"Perhaps the time has come to rethink our entire policy," Mr. Goodman suggests, "or at least to think of other solutions rather than massive retaliation of the kind exhibited in southern Lebanon."

Yet, for all the dissatisfaction and self-criticism, there is a muted quality to Israel's internal debate. Even Israelis at the big "peace rally" expressed grave fears over where negotiations might lead. "We can't take too big a chance," says Varda Cohen, 29. "We're only three million people, living in a tiny area, and we're the ones who are supposed to do all the giving and risk taking. One risk that's too great, and it's the end of us."

Such fears are reflected by the political opposition's reluctance to attack the government as wholeheartedly as might be expected. In part, this amounts to a form of Jewish tribal solidarity against a hostile or uncaring outside world. Opposition leader Shimon Peres says he refrained from seeking a recent no-confidence vote against Mr. Begin because it might be interpreted as siding with the U.S. against Israel.

CHIEF CULPRIT

Former foreign minister Abba Eban condemns Prime Minister Begin for refusing West Bank territorial concessions, but reserves his principal blame for Egypt—"the chief culprit"—and charges the U.S. with causing the present negotiating deadlock by seeming to lean toward the Egyptian position.

Critics inside the governing Likud coalition are even more reticent. Defense Minister Ezer Weizman's recent call for a national peace government was seen as implicit criticism of Mr. Begin's leadership, and it won Mr. Weizman the enmity of political friend and foe alike. He has refrained from further sniping at the government.

Indeed, Mr. Carter's suggestion that Israeli intransigence had hamstrung the peace talks was contradicted by Mr. Weizman's recent trip to Cairo. Though no progress was reported, the defense minister is scheduled to return to Cairo soon, amid some speculation that the two nations might be nearer agreement on a declaration of principles governing further peace talks.

The Middle East has a way of confounding realistic predictions of the way events will turn out. However, many Israelis wonder if Mr. Begin, with his ideological commitment to the boundaries of the historic land of greater Israel, will be able to modify his policies for meaningful negotiations. Some critics score his "wrong-headed" tactics of building new settlements while negotiating with Egypt, and say the prime minister may have poisoned the atmosphere of the talks.

Although the criticism doubtless has eroded Mr. Begin's position at home, there hasn't been a serious movement to displace him, despite—or perhaps because of—hotly denied rumors that the U.S. wants such a change. The government survived handily a vote in the Knesset, the parliament, on Mr. Begin's peace program.

Members of the Democratic Movement for Change, a dovish faction in the governing coalition, abstained, rather than voting against Mr. Begin. Amnon Rubenstein, a DMC member, says the government's credibility has been damaged by its settlement program, but doesn't believe his party should resign from the coalition.

Lining up against Likud, says Mr. Rubenstein, could be misintepreted as "letting the U.S. dictate Israeli policy." In the meantime, his party plans to work from within the government to change Mr. Begin's views. "The whole process—a new momentum toward either peace or war—should be clearer within a few weeks or months," says Mr. Rubenstein.

Israel has survived crises more serious than the present one, but the feeling is widespread that the Jewish state is approaching a watershed moment. Says one politician: "The question of whether—and how much—land to give up for peace is the most serious debate in our history."

Some politicians hope that protest movements like that led by the reserve officers will spark movement towards new policies. Shulamit Aloni, a Knesset critic of both the Likud and past Labor governments, thinks the protests are in response to "fanatic" Jewish nationalists who want to retain the West Bank for reasons of religious ideology, not for security.

"Not being ready to give back at least some of the West Bank means another war," she says. "We don't want to rule other people. It's better to have a smaller, Jewish country—and a democratic one—and to live in peace than to have a binational state."

THE BEGIN PACKAGE

Mr. Begin's peace plan, essentially unmodified since its rejection by Egyptian President Anwar Sadat, calls for Israel's continued military control of the West Bank and the Gaza Strip, whose 1.1 million Arab residents would be given limited self-rule, a form of autonomy that most Palestinians reject.

Under the plan, Jews would be permitted to buy land within the West Bank, and Palestinian Arabs would be given an option of taking Israeli citizenship and settling within Israel. Critics here say this soon would destroy the state's Jewish character. Because of the higher Arab birth rate, say the critics, the result would be a secular, predominantly Arab, binational state, which is the stated goal of the Palestine Liberation Movement (although Mr. Begin's plan wouldn't give real political power to the Arabs).

The government's proposals conform to the Likud party's ideological commitment to retain Judea and Samaria, and some critics are calling the prime minister a "prisoner of ideology," unable to modify his beliefs for the broader needs of national leadership.

Mr. Eban says, "The issues that divide us within Israel now coincide with those at the heart of the deadlock," between Israel and Egypt, and between Israel and the U.S. Since Mr. Sadat has recognized Israel's legitimacy, Mr. Eban asserts, Israel must face up to the question of renouncing part of its Biblical claims to occupied territories, in the context of peace.

A government that exludes the principle of West Bank territorial withdrawal, as the present one apparently has, "would find it very hard to build a bridge to America, still less to Egypt," says the former foreign minister.

LEGALISTIC HAGGLING

Opposition politicians like Mr. Eban stress the tactical errors made by Mr. Begin in alienating Israel's sole major ally, the U.S., over what many term legalistic haggling about a declaration of principles for future peace talks.

The opposition, and many foreign observers, believe that a Labor government might have avoided such a split with the U.S. at a preliminary negotiating stage. However, a showdown would be inevitable whatever the government in power if Israelis saw the U.S. as leaning too heavily toward the Egyptian position demanding near-total withdrawal from occupied lands.

Mr. Eban says President Sadat is under a "sincere illusion" that Israel's security concerns could be resolved through mere recognition, and he says the U.S. hasn't pressed the Egyptian leader to modify his views. (President Sadat has said, however, that he invites Israeli proposals for guaranteeing its future security.)

Likud politicians, rejecting U.S. criticism of Israeli intransigence, note that there is broad opposition inside Israel to a wide pullback from occupied lands. Yoram Aridor, a deputy minister close to Mr. Begin, sits in the Knesset restaurant and points a finger.

"You see those hills," he says, "How would you like to sit here and have King Hussein's artillery aimed at you from there?"

Many Israeli government officials reject the U.S. view that Israel should revert to its pre-1967 frontiers with only "minor" boundary changes. Israel must walk "a tightrope between security and making a deal toward peace with the biggest Arab nation," says Justice Minister Schmuel Tamir, a member of the Democratic Movement for Change.

MIDEAST MANHATTAN

Mr. Tamir agrees with the notion of some West Bank withdrawal for peace, but he says that Israel's physical narrowness—"about the same as Manhattan Island," he asserts, with some exaggeration—precludes a total return of territory.

Mr. Tamir worries about a peace settlement providing 10 or 15 years of tranquility, and then another war. "You are talking about a nation whose veins were dried up in the holocaust," he says. "We don't have a holocaust 'complex' but a reality, plus the reality of five wars in 30 years."

But other, more liberal, Israelis say the nation must wrench free of what leftist Knesset member Arye Eliav calls "the vicious circle of our holocaust trauma, our paranoia and all our fears" to revive the peace process. Mr. Eliav has demanded Mr. Begin's resignation over the peace stalemate and the Lebanese invasion, and claims that 20 to 30 "closet doves" in the Knesset support his position.

Mr. Eliav and some other Israelis believe that sustained U.S. pressure might yet force the Israeli government to amend its policies towards a more favorable negotiating posture. "A little pressure is very bad because we're immune to it," says David Shaham, a dovish magazine editor. "Only strong U.S. pressure could produce a reassessment of our policies. Basically, Israel doesn't want a U.S. confrontation." ●

## KEEP AMERICA VOTING

● Mr. MATHIAS. Mr. President, I would like to take this opportunity to call attention to the keep America voting program of the Mason-Dixon Council Boy Scouts and the Shawnee Council Girl Scouts Associations. It is a true display of grassroots interest and participation in our governmental processes. I want to

commend Donald R. Frush, chairman of the campaign, for his contributions in organizing this unique voter registration project in western Maryland.

A full page advertisement for the program, sponsored by the Republican and Democratic Central Committees in conjunction with interested businesses and organizations, appeared earlier this week in the Hagerstown Herald. In addition to the handsome advertisement, The Hagerstown Daily Mail carried a news story announcing the scouts' voter registration drive.

Mr. President, I would like to print the article, "Scout Council Announces Voter Registration Drive" in the RECORD, and in addition, I ask that the prospective voters mailing coupon printed in the advertisement be reproduced in the RECORD as an example of healthy political action that ought to be followed in every community in the Nation.

The article and coupon follow:

SCOUT COUNCIL ANNOUNCES VOTER REGISTRATION DRIVE

Area Boy Scouts and Girl Scouts don't plan to let apathetic citizens take the easy way out this election year.

The Mason-Dixon Council of Boy Scouts and the Shawnee Girl Scout Council—some 3,400 strong—are spearheading a campaign to get non-registered eligible voters on the voter rolls.

The scouts, with the sanction of the Washington County Election Board, secured a list of the county's registered voters.

By process of elimination the scouts will determine which eligible voters are not registered and on May 13 the scouts will canvass the homes of eligible voters and ask them to register.

Don Frush, chairman of the campaign, said that although the project has been approved by the local Democratic and Republican Central committees, the project itself is non-political, non-partisan.

Frush said that of the 85,700 eligible voters in Washington County, 43,000 of them are not registered.

On May 13, 10 election board units will be set up throughout the county where people can register. The scouts will bring registration forms to people's homes. CB operators will also be on hand to relay information from the home to the election board.

Eligible voters will also be given the opportunity to register on the spot.

The scouts, who will be accompanied by more than 1,100 adult leaders, are asking nonregistered adults to "Do it (vote) for us," Frush said.

On the project committee are representatives from the Washington County Board of Education, the local media, the Washington County Council of Churches, High Adventure, the League of Women Voters, the Washington County Parks and Recreation Department, area civic clubs and CB clubs and the local Girl Scouts and Boy Scouts councils and troops.

COUPON

Clip this coupon and mail in!!!!!

Are you registered ot vote?

If not, print in ink the following information. Application for Voter Registration will be sent to you.

## JAYCEES

● Mr. NUNN. Mr. President, it is my pleasure to recognize the accomplishments of the U.S. Jaycees and the Jaycees International for their encouragement of citizen participation in community affairs. Every year these organizations direct major efforts to find solutions to the environmental, economic, and social problems of local communities.

The Jaycees are young men between the ages of 18 and 35 who are interested in individual growth and community service. Founded in 1915, the U.S. Jaycees is the largest member of the world organization with a membership of more than 325,000. The Jaycees International is composed of over 400,000 members from more than 80 countries. Each year the Jaycees International adopts a theme for its worldwide activity focusing on a universal problem.

The Jaycees have sponsored community action programs in the areas of environmental improvement, community health, poverty alleviation, criminal justice, youth recreation, and governmental affairs. They have also supported such noteworthy projects as the special olympics for mentally retarded children and big brother programs for orphans.

For their efforts, the Jaycees have been named recipients of numerous community service awards. The U.S. Department of Housing and Urban Development recognized the Jaycees with a certificate of appreciation for their project mainstream, the country's first successfully developed people-to-people approach toward the alleviation of poverty. The National Council on Alcoholism presented its "Bronze Key Award" to the Jaycees for their realistic and positive approaches to alcohol education. The National Multiple Sclerosis Society cited the Jaycees in 1973 as the organization in the United States that had contributed the most during the year to its efforts to eradicate the dreaded disease. The National Wildlife Federation has given its "Conservation Organization of the Year" award to the Jaycees in the past for their efforts in this area.

In these days of voter apathy and nonparticipatory citizenship, the Jaycees are actively involved in developing responsible citizenship among their members. The Jaycees sponsor an annual governmental affairs leadership seminar which promotes communication among members and Federal officials. "How to Get Involved With U.S." is a Jaycee program which encourages citizen participation at the local level. During the 1976 elections, many Jaycee chapters organized "Get out the vote" campaigns in their communities.

The U.S. Jaycees' current president, Robert A. "Bob" Rushton is an outstanding example of the aggressive, committed individuals involved in Jaycee activities. A native of Georgia, Mr. Rushton holds both a BBA and a MBA degree from the University of Georgia and heads Rushton Associates, a real estate development corporation specializing in the construction of shopping centers and single-family dwellings. He was named one of five outstanding young men of Georgia in 1972. Active in political affairs, he is listed in "Who's Who in American Politics."

The U.S. Jaycees are an outstanding example of Americans helping each other. Woodrow Wilson described the Jaycee's brand of patriotism with these words:

Patriotism is not a mere sentiment. It is a fine energy of character and of conscience operating beyond the narrow circle of self-interest. Every man should be careful to have an available surplus of energy over and above what he spends upon himself and his own interest to spend for the advancement of his neighbors, of his people, of his nation.

I am proud to take this moment to bring this outstanding service organization to the attention of my colleagues and to salute the Jaycees for their dedication to public service.●

## SOIL CONSERVATION BUDGET

● Mr. CLARK. Mr. President, I am deeply concerned by the lack of adequate funding in the President's fiscal year 1979 budget for soil conservation. Last February, after the details of the President's proposals became clear, I chaired a hearing of the Senate Committee on Agriculture, Nutrition, and Forestry to look into that budget.

The conclusion from that hearing is that the department has no adequate strategy for maintaining the extremely important soil conservation programs in the face of the massive budget cuts they are recommending. As a result, I conclude that the cuts should be restored.

I am also concerned about the President's proposal to abolish the farm safety and rural development programs administered by the Extension Service.

I am recommending to Senator EAGLETON, Chairman of the Subcommittee on Agriculture of the Senate Appropriations Committee, that these cuts be restored. Mr. President, I ask that my letter to Senator EAGLETON be printed in the RECORD.

The letter follows:

COMMITTEE ON AGRICULTURE AND FORESTRY,
*Washington, D.C., April 11, 1978.*

Hon. THOMAS EAGLETON,
*Chairman, Subcommittee on Agriculture, Senate Committee on Appropriations, Washington, D.C.*

DEAR TOM: I am writing to call your attention to two areas of the President's FY 1979 budget for agriculture. In both areas, I feel that the funding requested by the President is not sufficient to carry out program goals, and that the Congress must Act to correct the situation.

The first area concerns soil conservation programs. On February 24, I chaired a hearing in the Senate Agriculture Committee to examine the President's proposals in this area. We were concerned in that hearing with six major proposals:

The Soil Conservation Service Conservation Operations Program: Increase budget $10 million to $252 million, but reduce personnel by 955 persons, or approximately 10 percent. This is the largest of our soil conservation programs. Its primary function is to provide technical services—plans and as-

sistance—to farmers and others at the local level. The slight increase in funding proposed for it is meaningless when it is coupled with the personnel reduction also proposed. The amount of assistance the program can provide in the field will be significantly reduced without sufficient personnel to carry it out, regardless of the funds available.

The Agricultural Conservation Program: Cut funding nearly in half, from $190 million to $100 million. Administered by the ASCS, this program is designed to help farmers bear the cost of installing conservation practices on vulnerable land. Current appropriations for this program are already woefully inadequate when measured against the vast amount of work that needs to be done. The reduction proposed in this budget only adds insult to injury.

The Great Plains Program: Reduce total amount of funding available for projects in the Program area by $4 million, to $18 million. This program was established to fund long-term conservation projects designed to deal with wind erosion and other specific conservation problems in the Great Plains area. As with the ACP program, the need far outweighs already available funds. (Note: the budget proposes that the Great Plains Program itself be cut from $22 million to only $8 million. However, $10 million of the ACP program's $100 million is earmarked for work in the Great Plains Program area. This means a net reduction for the area of only $4 million, in effect.)

The PL 566 Small Watershed Program: No funding for any projects not already underway. The Purpose of this program is to identify problem watersheds and lay out plans for concentrated soil treatment measures on a watershed-wide basis. It has been very effective in abating flooding and erosion problems in many areas.

The Resource Conservation and Development Program: No funding for any projects not already underway. This program also identifies particular areas with soil or water problems, but it focuses on problems and solutions that have benefits related to economic development as well as soil stabilization. It has been an extremely popular and effective program, and has been extended to about 10 new projects each year.

The Rural Clean Water Program: No funding. This is a new program, authorized by Congress last year as part of the 1977 Amendments to the Clean Water Act. Based on legislation I introduced last spring, it is intended to formally link the nation's soil conservation practices that will be required in the near future to comply with federal water quality standards. The Congress has authorized some $600 million for this program in FY 1979 and 1980.

Assistant Secretary Rupert Cutler, accompanied by officials from the Soil Conservation Service, was the Department's principal witness. Our purpose was to find out how the Department intended to meet its large and increasing obligations to maintain and improve the productivity of our soil in view of the cuts recommended for these 6 programs.

My conclusion, after evaluating very carefully the Departments answers to our questions, is that these budget cuts were made entirely on the basis of budget considerations and without regard to the impact the cuts would have on the programs themselves, or on soil conservation.

During the course of the hearing, it was observed that the General Accounting Office last year completed two important studies relating to the subject of soil conservation. The first was a February, 1977 report entitled, "To Protect Tomorrow's Food Supply, Soil Conservation Needs Priority Attention." The second was a December, 1977 report entitled, "National Water Quality Goals Cannot be Attained Without More Attention to Pollution from Diffused or Non Point Sources."

The message from both these reports is similar. The first report found that 85 percent of the farms examined are losing topsoil at a rate which greatly exceeds the five tons per year loss that can be sustained without loss of productivity. The GAO recommended that soil conservation programs be therefore better focused, and that they be strengthened. The second report concluded that efforts to control non point sources of water pollution have been minimal, and that if these sources are not controlled, non point source pollution will prevent the nation from reaching the water quality goals set for 1983. The GAO therefore recommended changes in water quality planning efforts, and development of programs with additional resources to assist in the control of non point source pollution.

With the addition of the new Rural Clean Water Program contained in the Clean Water Act Amendments of 1977, the soil conservation programs currently in place constitute a substantial set of building blocks for construction of solutions to these problems. What remains is for the Administration to organize and focus these programs, and to request the support needed to effectively implement them.

But the inescapable conclusion to be drawn from the failure to fund these programs next year is that the Administration simply intends to defer soil conservation efforts; that these efforts are all of lower priority than everything else the Department proposes to do. I believe that it is an extremely serious mistake. We are wealthy in soil and water resources. Annual soil losses are small, relative to our abundance. But we cannot defer action on these problems forever. The fact is, we are losing topsoil at an alarming rate—almost three times as fast as we are replacing it. The cumulative effect of these losses amounts to the loss of half the topsoil in my own state in the last hundred years. The intensity of our farming is increasing far more rapidly than the intensity of our soil conservation efforts. Ignoring this situation is a penny-wise, pound-foolish policy.

The objectives of our soil conservation programs simply cannot be achieved without adequate funding. I hope that your Subcommittee will agree, and take the necessary steps to strengthen these programs to effective levels.

The second area of the President's FY 1979 budget which concerns me, is the President's proposal to cut some $7 million from the USDA's Extension Service budget. The Rural Development Program and the Farm Safety Program account for some $4.5 million of this reduction.

Both these programs are making valuable contributions and should be restored. The research and development programs under Title V of the Rural Development Act of 1972 provide funding for a broad range of research projects concerned with the problems of rural people and rural communities. These projects focus on special problems rural communities have in providing community facilities and other services. They concern rural housing and the problems of developing rural industry. There is almost no comparable research underway elsewhere on these important topics. If this title is not funded, this work will be terminated and the loss will be serious to rural towns and communities.

The Rural Safety program is also a very valuable program. It is voluntary. It sponsors workshops, schools, and materials that help young people be aware of the constant dangers of machinery and chemicals in use on farms. Especially now that OSHA has no responsibility for farm safety, these programs are doubly important.

I hope your Subcommittee will review these programs very carefully and will be able to restore them to their full funding levels of earlier years.

Sincerely,

DICK CLARK.●

## ECONOMIC IMPLICATIONS OF THE PANAMA CANAL TREATIES

● Mr. CRANSTON. Mr. President, as I see it, many people still have two primary concerns about the economic implications of the new Panama Canal treaties.

First, will the Panama Canal be self-sustaining under the new treaty arrangement? That is, will the Panama Canal Commission be able to meet its operating expenses, make needed capital improvements and assure the payments to Panama out of its operating revenues?

Second, what appropriations will have to be made by Congress to cover treaty-related costs until 2000?

Having reviewed the studies completed by reliable, independent consultants, by U.S. Government agencies, and by the U.S. treaty negotiating team, I have every reason to believe that the Panama Canal will generate enough revenue to cover all of its oprating expenses and obligations.

Modest toll increases should create the revenues necessary to cover costs. They will effect only minimally worldwide commerce and will have little, if any, real impact on the delivery cost to the U.S. consumer—a small fraction of 1 percent.

A study prepared by Arthur Andersen and Co. consultants estimated that the costs of the canal—including payments to Panama and inflation—would be somewhere between $238 and $246 million in 1980 and $237 and $262 million in 1983.

The findings of International Research Associates (IRA) on future canal traffic and revenue projections showed that tolls could be increased about 100 percent before revenues would start to fall off. IRA, a nongovernmental consulting group, found that the sensitivity of canal traffic to modest toll hikes is low. For example, losses of canal traffic, on a tonnage basis, were projected to range from 2.4 percent with a 15-percent toll increase to 11.8 percent with a 50-percent increase. Our U.S. negotiators estimate than an initial toll increase of only 30 percent would be sufficient to meet all costs and would generate about $250 million in revenues in 1980 and $254 million in 1984.

Even without the new treaties, of course, toll increases would be required to meet rising costs. Governor Parfitt, in testimony before the Senate Armed Services Committee, said that toll increases in fiscal year 1981 and 1984 amounting to 19.1 percent would be necessary. He estimated that additional increases of 10 to 11 percent every 3 years after 1984 would be needed under the present treaty.

An independent consultant to the Senate Armed Services Committee, American Management Services, concluded that:

The commission needs to raise its toll rates as its costs are rising (by cutting costs or increasing tolls). If it does this, there are ample opportunities for the commission to remain solvent and to run a small surplus even if very pessimistic traffic projections prove correct.

What about the costs to the United States under the new treaties? Will appropriated funds be necessary to cover the transition in the U.S. role over the life of the treaty? The administration has testified that there will be some budgetary implications associated with the changing U.S. role through 1999, although all payments to Panama will come out of toll revenues. One-time costs such as the relocation of certain defense installations and the transfer of health facilities and functions to DOD plus recurring requirements such as the early retirement program for Canal Zone employees and incremental costs for DOD schools and hospitals will be factors in the U.S. budget. But the total projected appropriations impact is not likely to go much above $350 million over 21 years—an annual average impact of about $17 million.

To give perspective to these figures, the Defense Department has confirmed that after 1999, when U.S. forces under the terms of the proposed treaty would have been withdrawn from Panama, that DOD should save approximately $76 million a year in operational costs (in fiscal year 1978 dollars) as a result of shifting these forces from Panama to CONUS. The money saved in the first 5 years alone after 1999 would exceed the total appropriations requirements estimated over the entire treaty period.

In addition, cost savings should be realized during the life of the new treaty as the Canal Zone government is phased out as are the commercial and retail facilities on which the government has relied. The annuity payments to Panama will also cease under the new treaty arrangement. American Management Services, the consultant to the Senate Armed Services Committee, has suggested that even larger cost reductions would be realized under the new treaties than those savings foreseen by the Panama Canal Company.

As a member of the Senate Budget Committee, I, too, have been concerned about the possible financial impact of the new treaties. With the best information available today, I am satisfied that the Panama Canal will be able to generate sufficient revenue to meet its obligations under the new treaties while continuing to operate as a viable link for world commerce. The financial impact on the United States will be small over the 21-year period, particularly compared with what we will save in just a few years after the treaty ends.●

## PROPOSED ADVISORY OPINION ON USE OF SENATE LETTERHEAD

● Mr. STEVENSON. Mr. President, pursuant to title II, section 206, Senate Resolution 110, 95th Congress, with respect to its issuance of advisory opinions, the Senate Select Committee on Ethics gives notice of a proposed advisory opinion. All interested parties have 14 days to submit their written comments on the proposed advisory opinion to the select committee.

The select committee has received numerous complaints concerning the use of Senate letterheads and envelopes by non-Senate groups, reflecting a Senator's endorsement of that group and in many instances containing a fundraising appeal on behalf of the group or organization.

These letters, which in some but not all instances, carry a disclaimer that no Government funds were used in the preparation or mailing of the letter, are reproduced, along with a Senate envelope, including the "Official Business" notation, and become part of direct-mail campaigns to persons whose names appear on computer-generated lists.

The complaints received by the select committee allege that the use of facsimiles of Senate letterhead and envelopes by non-Senate groups or organizations to generate money or other forms of support lead to the erroneous impression, in the mind of the recipient, that the appeals are sponsored or endorsed by the U.S. Senate. In addition, because the customary disclaimer, when used, is printed by the organization or group in small type at the bottom of the letter, and sometimes not at all on the accompanying envelope, the recipient is led to the erroneous impression that, first, the letter has been printed and mailed at Government expense, and, second, that the envelope contains an official Senate communication, despite the fact that the envelope bears a postage stamp.

Through this proposed advisory opinion, the select committee gives notice to the Senate and other interested persons that this practice tends to reflect discredit on the Senate. The select committee does not intend to restrict a Senator's duty to communicate with members of the public, nor his right to lend his name to causes of his choice. The select committee, through this proposed advisory opinion, advises Senators and the public that the use of facsimiles of Senate stationery and the phrase "Official Business," by non-Senate organizations for nonofficial business, cannot be authorized by a Senator since such an authorization to a non-Senate group or organization would constitute "improper conduct which may reflect upon the Senate."

Mr. President, the proposed advisory opinion is as follows: It is the opinion of the select committee that it is improper conduct which reflects upon the Senate for a Senator to authorize or allow a non-Senate individual, group, or organization to use the words "United States Senate" and "Official Business," or any combination thereof, on any letterhead or envelope. The use of a Senator's name followed by the words, "United States Senate", is not hereby deemed improper.

Mr. President, interested parties should submit their comments, in writing, to the select committee. This proposed advisory opinion will become effective 60 days after the date on which it, or any amended version thereof, receives final approval from the select committee.●

## FOREIGN AGRICULTURE INVESTMENTS

● Mr. PAUL G. HATFIELD. Mr. President, we all know the inflationary impact of the huge outflow of American dollars abroad—particularly to pay for foreign oil—which continues to afflict our balance of payments. What we do not know enough about, in my judgment, is how many of those dollars come back for speculative real estate investments by absentee foreign purchasers. Nor do we know precisely how such purchases affect the farm economy and the vitality of our Nation's rural areas.

Especially where purchases of prime agricultural land are involved, the consequences of sudden, large investments by those having no intention of residing on a farm may at least inflate land prices and could have a serious impact upon the health and vitality of our rural areas and family farms. For this reason, I believe we should have full disclosure of all such investments.

This is a subject Congress will want to examine more closely following release of a General Accounting Office report on foreign agricultural investments. That report should be available later this year.

I would like to call attention to a series of articles which appeared recently in the Lee Newspapers in Billings, Butte, Helena, and Missoula, Mont., and which bear directly on this point. The result of a 6-month investigation, these articles describe how difficult it is at present to determine who is really buying our farmland, and for what purposes. As you will see, these articles represent not only hard work but a serious attempt to bring to the public's attention a situation about which we all need to know more.

I compliment the Lee Newspapers for the series and ask that they be printed in the RECORD. The articles are as follows:

FOREIGNERS BUYING MONTANA: WHO, WHY

(By Shaun Higgins and Jeannie Cross)

They are the secret sharers in our agricultural wealth: Arabs, Frenchmen, West Germans and Venezuela's richest man.

In the past five years they have acquired title or rights to some 100,000 acres of Montana and Wyoming by investing millions of dollars in U.S. real estate.

They are now being joined by other foreign nationals whose money is being lured to here by advertisements placed in European newspapers such as the International Herald-Tribune in Paris and the Frankfurter Allgemeine in Germany.

Their presence disturbs many ranchers and farmers who feel ownership of land is a sacred trust—one that should remain in U.S. hands. But others indicate that the new money assures that agriculture will remain in the hands of people who can afford additional investments in ranch buildings and equipment.

The Standard State Bureau recently completed a six-month investigation of foreign ownership of Montana farmland. Among its findings:

At least three Montana ranches totalling more than 30,000 acres are now controlled by foreign investors. Another Montana ranch of about 32,000 acres was in foreign hands

three years ago but it has since passed back into domestic ownership.

Ranches with substantial backing from non-resident foreigners appear to hold lease rights, through U.S. partners, to an estimated 15,000 acres of federal land in Montana.

A large ranch near Cody, Wyo., has been sold, apparently to West German interests. That $5 million transaction involved 17,000 deeded acres and leases to an additional 10,000 of public land, according to a Montana land salesman familiar with the transaction.

Arabs, Canadians and West Germans have inquired directly about purchasing large tracts of land in at least six counties—Beaverhead, Madison, Pondera, Teton, Big Horn and Carbon.

Other overseas investors have inquired about land purchases here through Montana real estate agencies, two of which have advertised their services in European newspapers.

Foreign buyers have acquired land by four methods—direct purchase (the transfer of deed from Montana seller to foreign buyer); stock trading (purchase of domestic ranch corporation stock by non-U.S. corporations); trust purchase (made on behalf of non-U.S. buyers by the trust departments of large, out-of-state banking firms); and, purchase by limited partnership agreements in which the principle limited partners have been non-U.S. residents.

There is, of course, nothing new in the purchase of Montana land by non-resident aliens. During the late 1800's, English and Scot cattle companies covered the state's plat maps, their owners having been drawn here by the promise of riches set forth in books like Gen. James Brisbin's "The Beef Bonanza" and Baron von Richthofen's "Cattle Raising on the Plains of North America."

But the earlier investment was a regional phenomenon, largely confined to the northern plains; today's buyers are part of a nationwide trend that is putting millions of acres of U.S. farmland into foreign hands. Another difference: The earlier transactions were usually more open than today's, which are sometimes marked by efforts to conceal not only the names but also the nationalities of buyers.

Concern over such secrecy prompted the last session of Montana's legislature to consider a bill requiring nonresident aliens to file land ownership statements with the state. But the bill failed after both its effectiveness and constitutionality were questioned.

Only one state, Iowa, requires non-resident aliens to report their acquisitions. But Iowa officials report that the law presents no real barrier to owners who sincerely desire to conceal their identities.

Why do aliens buy U.S. farm land?

The reasons are as diverse as the nationalities of the investors.

Financially, U.S. farmland is a solid investment promising excellent capital appreciation. Politically, it represents a means of sheltering financial resources from government instability or economic reforms in their own countries. Psychologically, it is a way of turning the tables on the U.S. which has long been the leader in investing capital in foreign economies.

The financial promise of U.S. farmland is compelling. Land prices . . .

Many foreign investors lease their U.S. holdings back to the Americans from whom they bought, a procedure that protects them from the risks of crop failure while they reap the benefits of land appreciation.

Here are the details of recent alien land acquisitions in Montana and Wyoming:

Kemph Land and Livestock Co. (near Custer): The Kemph ranch begins 10 miles south of Custer, part of it in Big Horn, the rest in Yellowstone County. It was sold last June to United Industries (UI), Inc., a Panamanian corporation. The sale price of the 23,000-acre ranch exceeded $1.8 million, according to Morris P. Blakeley, a Livingston outfitter who now serves as UI's chief resident officer. Blakeley discussed the purchase last year with the Billings Gazette but has steadfastly refused to disclose the names of UI's investors. However, the State Bureau has discovered that the principal behind UI is Gustavo J. Vollmer, a self-effacing multimillionaire reputed to be Venezuela's richest citizen. (See related story)

Lion Head Guest Ranch (near Big Timber): The ranch is owned by Montroy Properties, Inc., a successor company to Lion Head Ranch Syndicate, a limited partnership formed in 1968. An amended statement of limited partnership filed with the Montana Secretary of State in 1973 included the following investors and the amount of their investments: A. Al Helaissi, 24 Kensington Place Gardens, London, England ($65,000); Banque Cantonale Vaudoise, Lausanne, Switzerland ($52,500); Olayan Properties, Curacao, Netherlands Antilles ($90,000); Richard Davis, Jr., Schwalback, West Germany ($42,300); Societe Finananciere et Immobiliere Franco-Africaine (SOFIFA), Paris, France ($252,500).

General partners in the arrangement were Montroy Ranch Industries and Jacquesroy, a native of Belgium who lives in Big Timber and now serves as president of Montroy Properties.

Total foreign investment represented about half of the syndicate's $1.1 million backing at the time the limited partnership was dissolved into Montroy Properties. The ranch includes about 5,000 acres and has rights to use additional federally-owned acreage.

The Andrew Buyer Farm (East of Brady): Earlier this year a West German citizen, Peter Sandel, purchased this 1,000-acre farm in Choteau County. Sandel bought Buyer's land in his own name, making the acquisition through a Canadian lawyer in Drumheller, Alberta. According to Buyer, Sandel and his family made their money in the dry-cleaning business, operating a franchise whose territory includes Frankfurt and Munich. Sandel has leased the farm back to the Buyer family, which is operating it just as they were before they sold. Buyer said Sandel is interested in acquiring more Montana farmland and has flown over area farms looking for suitable parcels. But Sandel apparently has no plans to live in Montana: his Drumheller attorney said his German client is planning to take up Canadian citizenship.

Curtis and Skogland Two-Dot Ranch (Near Cody, Wyo.): This 17,000-acre ranch was sold three years ago by its American owners, then resold a year later, according to Charles Curtis of Cody, one of the original partners in the ranch. Curtis and a Billings real estate agent believe West German money is bankrolling the new owners. When a State Bureau reporter called the ranch to inquire about that possibility, he was referred to a lawyer for Eastdil Reality, a New York City firm which caters to foreign nationals. (Last year an Eastdil agent boasted to Saturday Review magazine that his firm had sold 200,000 acres of western U.S. farmland to aliens during 1976 and claimed he would sell more than twice that much during 1977). Eastdil's lawyer was not in his office last week and the Bureau was unable to fully confirm West German ownership in the Two Dot venture.

Fair View Ranches (between Melville and Harlowton): This 32,000-acre property was acquired several years ago by the Helbent Co., whose board of directors includes three West Germans. Helbent is successor company to the Helena Chemical Co., an agri-chemical concern based in Arkansas. The ranch has since been divided and sold to domestic owners, according to area land records. "The Germans sank a helluva lot of money into the place—fixed up the headgates, new outbuildings, the whole show—and then sold it," one real estate agent told the State Bureau. An area rancher who now owns part of Fair View's property maintains that the former owners also "lost their shirts." He estimated that $5 million went down the drain, adding that the land was sold at roughly the same price for which it was bought.

In addition to these purchases, the State Bureau estimates that an additional 100,000 acres of Montana land may now be in foreign hands. At least one large trust company specializing in acquisitions for foreigners—Northern Trust Co. of Chicago—has had some dealings in Montana, according to a Billings land broker. But the true ownership of land held by trust companies is virtually impossible to trace: The owners could be Montanans, large U.S. or non-U.S. corporations or foreign nationals.

---

BEAVERHEAD LIKES BUCKS

While many Montanans see something sinister in non-U.S. citizens buying U.S. farmland, at least one Montana rancher, John Morse of Beaverhead County, thinks foreign investment is a plus.

The son of a real estate salesman, Morse has contacts with both out-of-state and non-U.S. investors.

He says he has seen no evidence that foreign investors remove their land from production and thus contribute to agricultural unemployment. Rather, Morse says, they hire Montanans as farm managers and sink lots of new money into houses, herds, and outbuildings—all of which pumps money into local economies.

Morse told the Standard State Bureau of a German engineer who wants to pick up a ranch in Beaverhead County. Morse calls this man "Megabucks" because of the money he has earned in his Munich job and from investments in German real estate.

Since German banks are giving only two percent interest on savings accounts, Megabucks is in the market for a more lucrative investment.

That investment clearly is possible in Montana farmland, which even at $500 an acre costs only one-sixth as much as acreage in rural Germany. The U.S. inflation rate virtually guarantees that Megabucks will turn a healthy profit on a Montana ranch if he decided to sell, Morse says.

Furthermore, the German mark is valued at 30 percent more, in relation to the dollar, than it was two years ago. That means Megabucks' money goes 30 percent farther in the U.S. than in does in his homeland.

To boot, the U.S. and the Federal Republic of Germany have a tax treaty under which a German investor in the U.S. can escape capital gains taxes in both countries.

All these factors combine to put Megabucks in the market for a $600,000 to $800,000 ranch, according to Morse.

But Megabucks isn't the only one who will benefit if the deal comes through, Morse says. The German plans to hire both a farm manager and a house caretaker and intends to buy a car here for use when he visits his new property. Megabucks will deposit $100,000 with a local savings and loan association and use the eight percent interest it earns as spending money when he's visiting.

For convenience, he'll buy locally the food, furniture, clothing, and luxuries for use on the ranch.

"How can that possibly hurt the local economy?" Morse asks.

He contends that most foreign investors will not take their land out of production because that would limit property-value ap-

preciation. "If you have money"—the kind of money that will buy an $800,000 ranch—"you didn't get it by being stupid," Morse reasons.

He also contends that foreign investment's tendency to force land prices upward benefits U.S. farmers who, he feels, have long undervalued their land. While many Montana farmers decry this upward movement of prices because it jeopardizes their ability to acquire more land themselves, Morse claims it enhances their ability to borrow. "The ability to borrow is based on the market value of the land," he notes.

According to Morse, alien investment is an all-win situation: The investor shelters his money and also sees it appreciate at a good rate while the local economy benefits from an influx of outside dollars and land values rise.

---

SECRET PURCHASE TRACED TO RICHEST VENEZUELAN

(By Shaun Higgins)

HELENA.—Most Big Horn county residents don't know it but one of their major taxpayers is Venezuela's richest man.

The Standard State Bureau has confirmed that the principal new owner of the Kemph Land and Livestock Co. is Gustavo J. Vollmer, a self-effacing Caracas multimillionaire whose fortune is based in sugar, broadcasting, motion pictures and land.

Vollmer's United Industries (UI) Inc. purchased the 23,000 acre ranch—called by its former owners 'the best in the state"—last June. United Industries is a Panama "offshore" corporation financed by Vollmer.

The ranch sale has been clouded in secrecy and the Standard State Bureau was able to trace true ownership only with the help of U.S. Sen. John Melcher, the U.S. embassy in Panama, the U.S. Commerce Department and the Caracas bureau of the Associated Press.

Panama often serves as a corporate "flag of convenience" for persons wishing to conceal their identity in international financial transactions, according to officials at the Commerce Department which maintains information on all foreign firms operating in the United States.

Livingston outfitter Morris Blakeley serves as the corporation's chief resident officer.

Past newspaper reports have speculated that the owners of the Panamanian company were Arabs or Japanese.

Here's a brief history of United Industries and Vollmer as pieced together by the Standard State Bureau from sources in Washington and Caracas:

United Industries was organized in the Republic of Panama on May 31, 1972, as an "offshore corporation," not permitted to operate within Panama. U.S. State Department sources indicate the company was given initial authority to issue stocks and bonds in the amount of $1 million. On Feb. 4, 1976, that authority was reduced to $550,000. (UI paid a reported $1.8 million for the Kemph ranch, a fact indicating that its authority has recently been increased or that it has attracted limited partners to the Kemph venture.)

UI's original incorporators were three Wall Street lawyers with the firm of Sullivan and Crownwell, but a note among UI's records, dated Jan. 15, 1976, designates Vollmer as the only authorized holder of all right-to-vote shares.

Vollmer is reputed to be Venezuela's wealthiest man and Fortune magazine calculated his wealth at more than $100 million 10 years ago. There are no recent estimates on his worth, which is based on family developed and owned sugar-growing, refining and allied industries, including rum production.

Vollmer heads Groupo Vollmer, which is involved in numerous other enterprises including television and motion pictures.

A contact in Caracas described Vollmer as a third or fourth generation Venezuelan of Dutch descent "who, unlike most wealthy Venezuelans, keeps a very low profile and rarely appears in the press."

Believed to be about 55 years old, Vollmer holds an engineering degree from New York's Cornell University and is active in the world Boy Scout movement. In 1959 he became a leader in Venezuelan scouting and from 1961–65 was chairman of the inter-American Regional Committee of the Boy Scouts World Conference.

In 1983 he was elected one of 12 members of the Boy Scout World Committee and has received one of Scouting's highest awards, the Silver Buffalo for distinguished service.

Vollmer, a Catholic and father of several children, is described by associates as a "devout family man."

One associate ranked him among Venezuela's most important men and said Vollmer is usually accompanied by a personal bodyguard. On trips within Venezuela he has sometimes been accompanied by a carload of government agents armed with submachine guns, the associate said. The reason: Vollmer is considered a prime target for a terrorist kidnapping attempt.

---

SOME STATES CURB ALIEN OWNERS

Twenty states now have some form of legal restriction on alien ownership of agricultural land.

But loopholes, exceptions, constitutional mandates, and treaty provisions limit the effectiveness of the restrictions.

The laws regulate ownership with one or more of the following provisions:

Outright prohibition of ownership by aliens except those who reside in the U.S., are applying for U.S. citizenship, or are residents of "friendly" countries.

Limitations on the amount of acreage that can be owned or on the distance it may be located from a specific city.

Limitations on the length of time the alien can hold U.S. land.

One state, Iowa, also requires aliens to report their ownership. An alien not filing the required report is subject to a $1,000 fine but only if the state can prove that his failure to report was "willful." Iowa officials say this has been difficult to do.

In 1977, 23 non-resident alien owners reported to the Iowa Secretary of State. They included 14 Germans, three Britishers, two Austrians, two Guatemalans, one Irishman, and one Canadian.

Iowa, like several other states, has a law limiting the extent of alien ownership. In Iowa's case the limitation is 640 acres. But in 1974 three different Liechtenstein corporations, apparently backed by the same man, bought parcels of land totaling 1,400 acres. The letter of the law was kept because none of the corporations held over 640 acres. Another way to evade the intent of restrictive laws is for one corporation to buy out another's stock. When this happens, the ownership of the land changes hand without the public recording of a deed.

Besides loopholes and legally-granted exceptions, there are two major constitutional limits on laws restricting alien ownership.

The U.S. Constitution requires equal protection under the law for "any person." This applies to aliens. It also applies to corporations, which are legal "persons." Past case history indicates the U.S. Supreme Court would take a dim view of laws restricting ownership purely by nationality.

In addition, the constitution grants to the federal government complete control over foreign policy. Thus, any state law which could be construed as a hindrance to U.S. pursuit of foreign policy goals also could be construed as unconstitutional.

In pursuit of those goals, the U.S. has concluded treaties with many "friendly" countries which grant citizens of those countries the right to own U.S. land. In addition, many treaties give tax breaks to those citizens who do invest in U.S. land.

The treaties also allow U.S. businessmen and investors to operate freely within the "friendly" countries. That's one reason many U.S. goods are produced in foreign nations where production costs are cheaper.

A comprehensive overview entitled "State and Federal Legal Regulation of Alien and Corporate Land Ownership and Farm Operation," produced through the U.S. Department of Agriculture Economic Research Service, concludes that "only Federal legislation could take a comprehensive approach to alien investment" because state laws could simply divert alien investment into other economic sectors or states.

U.S. Sen. John Melcher (D-Mont.) said "legislation for disclosure of ownership of land is clearly in order" along the lines of Iowa law. Melcher, a member of the Senate Agriculture Committee, said the Iowa law, though not entirely successful, "can serve as an emerging pattern for identifying foreign owners."

Melcher believes disclosure laws are constitutional and could be required by either state or federal legislation. But, he said, "only in the case of a demonstrated national urgency where the states could not effectively accomplish disclosure would Congress consider adopting it as a federal law."

"An absolute denial of foreign investment is another matter," Melcher said. "(It) would be difficult to accept or enforce."

---

FOREIGNERS FACE SELLER'S MARKET FOR MONTANA LAND

(By Shaun Higgins and Jeannie Cross)

HELENA.—As the owner of The Shining Mountains land development near Ennis, Pann Mallas has seen buyers come and go. But there are some who remain fixed in his memory.

"There was this one fellow," Mallas recalls. "He came in a trailer and was dressed in a dimestore cowbody outfit—if a rancher had seen him, he'd have laughed him out of state. He said he was buying ranches for some Germans."

Mallas couldn't help him; he sells only five to 30-acre parcels, designed for retirement and vacation homes.

Mallas also couldn't help the carload of West Germans—"They were, indeed, in a Mercedes Benz"—that showed up at his office on another day. Mallas explained to them, as he had to the rhinestone cowboy, that he just didn't have the kind of acreage they were interested in. But as they talked, he learned that the group had flown from Germany to San Francisco, then rented the luxury car to take a leisurely tour of the United States in search of land investments. They planned, they told Mallas, to end their trip some weeks later in Florida.

Mallas is only one of many Montanas approached in the last few years by aliens or their representatives seeking prime agricultural land in the Big Sky Country.

Many of those approached strongly oppose the idea of alien ownership.

One such person is Joyce Robinson of Choteau. A Canadian came to her spread last July and offered to buy it without even looking it over. "He said he knew everything about it, down to the last blade of grass," she recalls. But she and her children wouldn't sell despite the "large offer" he made.

An active member of the American Agricultural Movement, Robinson says she and her AM colleages are "trying to prevent this valuable land, this US of A, from being sold to West Germans and Japanese." They want to preserve the family farm.

"When you own the land, you own the country," she added.

Robinson's sentiments are common among the state's ranchers and farmers, although some think foreign investment provides great benefits for local economies and will boost land values while keeping farms in production.

The State Bureau has learned in a six-month investigation that encounters with alien representatives have occurred in at least six Montana counties during the last year. In addition, some 100,000 acres of prime ranchland in Montana and Wyoming have been sold recently to predominantly foreign-controlled investment firms.

Although the acreage sold is only a minute percentage of Montana's 50 million acres of privately owned land, aliens are eyeing the remainder as it becomes available. Furthermore they are willing to pay $500 and more an acre to get it.

"If you want to sell foreign, you can sell all you can find," on Missoula real estate broker said.

One firm which wants to sell foreign is Hall and Hall Realty in Billings. It has advertised its services in the International Herald-Tribune, a Paris-based newspaper with circulation throughout Europe. The agency has a special division that specializes in alien land investment and, according to one source close to the firm, has worked hand-in-glove with the Northern Trust Co. of Chicago—reputed by national media to be a major conduit through which foreign money acquires U.S. farms.

Hall and Hall is not the only Montana firm advertising in Europe. Morse Land Co. of Absarokee has been in the international market for 15 years and advertises its services in several European papers, including the Frankfurter Allgemeine of Germany.

One Montana broker explained that other firms probably will follow these companies' leads.

"It (selling abroad) is necessary," he told the Missoulian State Bureau. "An agency has an obligation to its clients to obtain the best possible price for land, and if the client wants to keep the land in one piece, we have to look for a buyer that will keep it together."

Foreign buyers "have the money to buy and pay the best price," he explained. "Most Montana ranchers can't pay as much—and wouldn't if they could.

"The alternative to large-scale corporation and foreign millionaire investment is subdivision. Most Americans want a quick return on their investment, and they're not going to be happy with the 3 or 4 percent from ranching. That's why they subdivide. But most of the foreign buyers are people whose wealth has been based in land and that's where they want to keep it. They don't care about high returns; they're comfortable just owning the land."

But another broker who specializes in the international market disagreed with his competitor. He said he had an order for land from a Greek he spoke with in Geneva. "He wanted to get into ranching but wanted a 27 percent return on his investment," the broker said. "Ranching can't do it. I told him he'd have to find something else."

There's no question that foreign investment is a seller's market. Inquiries outnumber available properties by a 100-to-1 margin, according to a Big Timber broker who says he won't deal with aliens.

But in some cases, land purchases by aliens have not resulted in the hoped-for profits. A case in point: Fair View Ranches, Inc. near Harlowton. The ranch was put together from smaller ranches purchased from local owners about three years ago by a group with West German connections.

According to area residents, the investors pumped a lot of money into the operation and also lost a lot of it. One rancher, who bought a portion of Fair View when the alien owners sold out, said he wasn't surprised.

"They (non-resident aliens) can't compete with people who are willing to work 14 to 15 hours a day for peanuts," he said. "If this country would allow a family farmer to make an honest living farms would stay family farms."

## PROPOSED REGULATIONS PURSUANT TO FOREIGN GIFT AND DECORATIONS ACT (5 U.S.C. 7342)

● Mr. STEVENSON. Mr. President, the Select Committee on Ethics on April 13, 1978, tentatively approved regulations pursuant to the Foreign Gifts and Decorations Act (as amended). Interested parties, including Members, officers, or employees of the Senate and the general public, will have 14 days from the date on which these proposed regulations are printed in the CONGRESSIONAL RECORD to submit their comments in writing to the select committee. These proposed regulations will become effective when finally approved by the Select Committee on Ethics after consideration has been given to any comments received.

Mr. President, I ask that a copy of the proposed regulations be printed in the RECORD.

The material follows:

PROPOSED REGULATIONS

1. Purpose of act and regulations:

(a) The U.S. Constitution (Art. I, Sec. 9, Cl. 8) prohibits a federal official from accepting any gift from a foreign government without the consent of Congress.

(b) The Foreign Gifts and Decorations Act ("the Act") (5 U.S.C. 7342) sets forth those gifts which Congress consents to being accepted by federal officials. The Act prohibits any officer or employee of the government, or his or her spouse or dependent, from:

(1) Requesting or otherwise encouraging the tender of a gift or decoration; or

(2) Accepting such gifts other than in accordance with the provisions of the Act as implemented for Members, officers, and employees of the U.S. Senate by these regulations. (5 U.S.C. 7342(b)).

(c) Under the Act Congress consents to:

"(1) The accepting and retaining by an employee of a gift of minimal value tendered and received as a souvenir or mark of courtesy; and

"(2) The accepting by an employee of a gift of more than minimal value when such gift is in the nature of an educational scholarship or medical treatment or when it appears that to refuse the gift would likely cause offense or embarrassment or otherwise adversely affect the foreign relations of the United States, except that—

"(A) a tangible gift of more than minimal value is deemed to have been accepted on behalf of the United States and, upon acceptance, shall become the property of the United States; and

"(B) an employee may accept gifts of travel or expenses for travel taking place entirely outside the United States (such as transportation, food, lodging and incidental entertainment) of more than minimal value if such acceptance is appropriate, consistent with the interests of the United States, and permitted by the employing agency and any regulations which may be prescribed by the employing agency. (5 U.S.C. 7342(c)).

(d) The Select Committee on Ethics is authorized by Title 5 U.S.C. Sections 7432 (a) (6) and (g) to prescribe such regulations as may be necessary to carry out the purposes of the Act. The purpose of these regulations is to establish standards and procedures for the acceptance and disclosure of decorations, gifts of more than minimal value and gifts of travel or expenses for travel taking place entirely outside of the United States when such are tendered by foreign governments to Members, officers and employees of the U.S. Senate.

2. Definitions:

(a) "Member, officer, or employee of the U.S. Senate" includes the spouse of such individual (unless such individual and spouse are legally separated or the spouse is also a federal employee) or a dependent of such individual (as defined in section 152 of the Internal Revenue Code) (5 U.S.C. 7342 (a)(1)(G));

(b) "Foreign government" means—

(1) any unit of foreign governmental authority, including any foreign municipal, local, State and national government; (examples: National Government—Dominion of Canada; State—Province of Quebec, Dominion of Canada; Municipal—City of Montreal, Province of Quebec, Dominion of Canada, etc.).

(2) any international or multinational organization whose membership is composed of any unit of foreign government described in subparagraph (1); (examples would include the United Nations, the Organization of American States, etc.).

(3) any agent or representative of any such unit of such organization, while acting as such; (examples would include the Secretary General of the United Nations, Secretary General of the Organization of American States, etc.) (5 U.S.C. 7342(a)(2)).

(c) "Gift" means a tangible or intangible present (other than a decoration) tendered by, or received from, a foreign government. (5 U.S.C. 7342(a)(3));

(d) "Decoration" means an order, device, medal, badge, insignia, emblem, or award tendered by, or received from, a foreign government; (5 U.S.C. 7342(a)(4));

(e) "Minimal value" means a retail value in the U.S. at the time of acceptance of $100 or less. (5 U.S.C. 7342(a)(5)).

(f) "Employing agency" means the Select Committee on Ethics of the Senate, for Members, officers and employees of the Senate; (5 U.S.C. 7342(a)(6)(B)).

3. Acceptance of gifts:

The Act and these regulations permit Members, officers or employees of the Senate to accept the following gifts under the following circumstances:

(a) Gifts of Minimal Value. Members, officers and employees of the Senate may accept gifts of minimal value from foreign governments tendered and received as a souvenir or a mark of courtesy. Minimal value is defined as having a fair market in the U.S. of $100 or less. If a Member, officer or employee is in doubt as to the value of an object, then he shall obtain an appraisal. (5 U.S.C. 7342(c)(1)(A)). Any estimate by an appropriate embassy official will be sufficient appraisal unless the Member, officer or employee believe such is inadequate. In that case an appraisal may be obtained from any commercial firm qualified to give an estimate as to the fair market value of the object in question.

(b) Gifts of more than minimal value. A Member, officer or employee may accept tangible gifts of more than minimal value when refusal would be deemed likely to cause offense or embarrassment or otherwise adversely affect U.S. foreign relations. Guidance as to whether or not refusal is deemed likely to give offense or cause embarrassment will be provided by the State Department. Any such tangible gift is deemed to have been accepted on behalf of the U.S. and

upon acceptance becomes the property of the U.S. as hereinafter explained in Section 6 (5 U.S.C. 7342(c)(1)(B)).

(c) Gifts of Education, Scholarship or Medical Treatment. Members, officers or employees of the Senate may accept scholarships and medical treatment of more than minimal value from a foreign government. (Example: (1) emergency medical treatment provided to a Member, officer or employee by a foreign government; (2) educational scholarship provided by any foreign government as defined in Section 2).

(d) Travel or Expenses for Travel Taking Place Outside the U.S.:

(1) A Member, officer or employee of the Senate may accept from a foreign government gifts of travel or expenses for travel of more than minimal value taking place entirely outside of the United States (such as transportation, food, lodging and incidental entertainment) if such acceptance is appropriate and consistent with the interest of the U.S. Such travel is considered appropriate and consistent with the interests of the U.S. only when such travel or expenses for travel (which include transportation, food, lodging and incidental entertainment) relate directly to the official purpose of the trip or refusal would give offense. The travel or expenses for travel so accepted need not be for the same purpose as the original trip which brought a Member, officer or employee to a particular country. For instance, an individual can under this regulation, go to a particular country for one purpose and also travel elsewhere for an on-site inspection, briefing, etc., which is also in the interests of the U.S. and is for a different purpose than that of the original trip.

Travel (or expenses for travel) which takes place outside of the United States must be incidental to official business in a foreign nation(s). One may not travel to a foreign country for the purpose of accepting a trip provided by a foreign government which is unrelated to official business.

(2) A spouse or dependent of the Member, officer or employee may accept such travel or expenses for travel which takes place wholly outside of the United States. If the spouse is also a federal official, then the spouse's acceptance must be approved by the spouse's employing agency. (5 U.S.C. 7342(a)(1)(6)).

4. Acceptance of decorations:

(a) Congress has consented to Members, officers, or employees of the Senate accepting decorations in recognition of service in combat and other outstanding or unusually meritorious services, subject to the approval of the Select Committee on Ethics. Without prior approval by this Committee, any decoration is deemed accepted on behalf of the United States, and shall become the property of the United States and within 60 days shall be deposited with the Secretary of the Senate. (5 U.S.C. 7342(d)).

5. Gifts or decorations to spouses and dependents:

(a) Any gift or decoration tendered to a spouse and/or dependent of any Member, officer or employee of the Senate must be disclosed and reported in accordance with Section 7 of these regulations. This statute and these regulations apply in situations where it is apparent that the gift or decoration would not have been offered to the spouse and/or dependent but for that individual's relationship to the Member, officer or employee of the Senate. (5 U.S.C. 7342(a)(1)(G)).

6. Disposition or official use of gifts or decorations:

(a) Whenever any gift or decoration which has been accepted on behalf of the United States is required to be deposited with the Select Committee on Ethics, the Committee will decide whether the gift or decoration will be retained by the United States Senate for official use or will be disposed of in accordance with 5 U.S.C. 7342(e). No item shall be retained for official use or display in the offices, grounds, hallways, or other areas of the United States Senate unless the Committee on Rules and Administration consents to arrange an appropriate site for such use or display. Custody of and responsibility for any deposited item shall be in such place as is designated by the Secretary of the Senate. Upon notification by this Committee that the deposited item is not being returned or retained for official use, the Secretary of the Senate shall forward the deposited item to the Administrator of the General Services for transfer, donation or disposal in accordance with the Federal Property and Administrative Service Act of 1949. (5 U.S.C. 7342 (d) and (e).) If the object is located in a United States embassy, the Secretary of the Senate shall instruct the appropriate embassy to forward the object to the Administrator of General Services for disposition.

(b) The Secretary of the Senate shall maintain a list which describes each gift and its location when the Secretary is notified by the Ethics Committee that the object is retained for official use and display. If the gift is displayed in a Member's office it shall be the duty of the Secretary of the Senate to retrieve the object when the Member leaves the Senate. Once such object has been retrieved the Secretary shall forward it to the Administrator of General Services as stated in Paragraph 6(a) above.

7. Deposit and disclosure:

(a) Deposit of Gifts and/or Decorations. Within 60 days of accepting a gift of more than minimal value or a decoration (acceptance of such decoration not having been approved by the Committee) such gift or decoration shall be deposited with the Secretary of the Senate. (5 U.S.C. 7342(c)(2) and (d)).

Any Member, officer or employee, while traveling abroad, may leave any of the two above-mentioned items with a United States Mission. The Member, officer or employee shall notify the Secretary of the Senate of the object's location in the disclosure statements discussed in paragraph (b).

(b) Disclosure Statements. Members, officers or employees must file a disclosure statement for any tangible gift of more than minimal value and for any gift of travel (or expenses for travel) which takes place wholly outside of the United States and is provided by a foreign government. No disclosure statement is required for a decoration whether accepted with or without Committee approval.

(1) Tangible Gifts of More than Minimal Value. Within 60 days of accepting a tangible gift of more than minimal value the Member, officer or employee shall deposit such gift with the Secretary of the Senate and shall also report to the Secretary of the Senate the following information:

(A) the name and position of the reporting individual and recipient;

(B) a brief description of the gift or decoration and the circumstances justifying acceptance;

(C) the identity of the foreign government and the name and position of the individual who presented the gift, if known;

(D) the date of acceptance of the gift, the estimated value in the United States of the gift at the time of acceptance; and

(E) the disposition or location of the gift. (5 U.S.C. 7342(f)(2)).

(2) Gifts of Travel or Expenses for Travel. Within thirty days of the acceptance of travel furnished by or expenses for travel paid for by a foreign government and accepted by a Member, officer or employee of the Senate in accordance with Section 3(d) of these regulations, the Member, officer or employee shall report to the Secretary of the Senate the following information:

(A) the name and position of the reporting individual;

(B) a brief description of the gift and the circumstances justifying the acceptance; and

(C) the identity of the foreign government and the name and position of the individual who presented the gift. (5 U.S.C. 7342(f)(3)).

The 30 day period mentioned above does not being to run until the Member, officer or employee returns to the United States.

8. Publication of disclosure function. The Secretary of the Senate shall receive the disclosure statements required by these regulations and compile by January 31, 1979 and each January 31 thereafter a list of all statements filed during the preceding year by Members, officers and employees of the Senate. After compiling the above described lists, the Secretary shall transmit the list to the Secretary of State who shall publish a comprehensive list of all such statements in the Federal Register. Once published in the Federal Register the filings for that year may be destroyed by the Secretary of the Senate. (5 U.S.C. 7342(f)).

9. Exclusions. This Act does not apply to grants and other forms of assistance to which Section 108A of the Mutual Education and Cultural Exchange Act of 1961 applies nor does this Act apply to travel permitted under paragraph 4 of Senate Rule 43. (5 U.S.C. 7342(k)).

10. Violations and penalties. Allegations of violations of the Foreign Gift and Decorations Act which come to the attention of the Select Committee on Ethics will be referred to the Attorney General in accordance with the provisions of 5 U.S.C. 7342(g)(2)(A).

11. Effective dates. These regulations are effective ———. No filings are necessary for foreign travel approved by this Committee prior to the effective date of these regulations.●

Mr. PROXMIRE. Mr. President, I ask unanimous consent to be allowed to proceed as in legislative session for 10 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

## MISMANAGEMENT IN THE NATIONAL STRATEGIC PETROLEUM RESERVE PROGRAM

Mr. PROXMIRE. Mr. President, Congress should not approve the Energy Department's plan to increase the strategic petroleum reserve from 500 million barrels to 1 billion barrels until the Department is able to estimate the full costs of the plan and has taken steps to correct the gross mismanagement in the program.

Congress passed the Energy Policy and Conservation Act in 1975 requiring the establishment of a strategic petroleum reserve equivalent to 500 million barrels.

On April 4, 1978, Congress received a plan from the Energy Department to increase the reserve to 1 billion barrels by 1985. Under the law, the plan automatically goes into effect unless the Senate or the House disapproves it.

The Energy Department estimates the cost of the 500 million barrel program at $7.5 billion to $8 billion.

It estimates that a 750 million barrel program will cost an additional $6 billion.

But the Energy Department fails to estimate the cost of a billion barrel pro-

gram. According to the agency, the cost of the fourth 250 million barrel increment in the reserve cannot be estimated because decisions have not been made regarding the type of storage facilities or the extent of Government and industry involvement in the storage.

This is like asking Congress to authorize 250 million pigs in a poke. We do not have any idea how much the pigs will cost or even the size of the poke.

The law is very clear on this point. It directs the agency to prepare a strategic petroleum reserve plan which shall include:

An estimate of the direct cost of the reserve, including the cost of storage facilities;

The cost of the petroleum products to be stored;

The cost of related facilities; and

The management and operating costs.

The agency's plan fails to provide a breakdown of these costs and should be rejected for this reason alone.

In addition, the law calls for a comprehensive environmental assessment, and the assessment in the new plan appears to me to be superficial and inadequate.

The agency should go back to the drawing board, finish its drawings and then show them to Congress.

There are other shortcomings in the program which lead me to conclude that it is being grossly mismanaged and is imposing millions of dollars of unnecessary costs on the taxpayer.

The Energy Policy and Conservation Act authorizes the use of oil from Federal offshore and onshore leases, from which the Government gets royalties, for the reserves. The act would also permit the use of the Navy's vast Elk Hills oil reserves which are being sold commercially.

Instead, the Energy Department has so far purchased oil for the reserves exclusively from foreign sources.

The General Accounting Office estimates the cost of the program can be cut by $1.1 billion if royalty oil is used for the 500 million barrel program. An additional $684 million could be saved with royalty oil for the 1 billion barrel program.

The decision to use foreign oil also seems strange in view of our balance-of-payments problems.

The Energy Department frequently admonishes the Nation to reduce oil imports partly because they contribute to the trade defict, but the Agency's decision to rely exclusively on foreign oil for the strategic reserve is running up our imports.

A year ago, the Energy Department requested and obtained congressional approval to accelerate the program from 150 million barrels by December 1978 to 250 million barrels by December 1978. Approval was also obtained to store 500 million barrels by 1980 instead of by 1982.

The Agency now has only 18.5 million barrels in storage and admits that it will not meet the December 1978 goal. The Agency claims it will have 125 million barrels stored by the end of the year, far short of the original goal.

One of the major reasons for the delay appears to be slippage in the construction of the temporary and permanent pipelines used to fill the storage facilities.

Additional delays have occured in the acquisition and testing of the salt domes and caverns that will be used for storage.

The Energy Department so far lists nine potential sites with storage capacity of 402 million barrels.

But the Government has made firm commitments for only about 275 million barrels of storage facilities. The remainder are still undergoing tests and environmental studies necessary to determine whether they can be used for crude oil storage.

The General Accounting Office has sharply criticized the Energy Department's handling of the storage facilities.

The salt caverns are formed bv brining operations in which water is injected into a salt mass dissolving the salt and forming a cavern.

To be suitable for storage the cavern must be of a desirable shape and condition so as to withstand the pressures at which crude oil will be injected and withdrawn.

But the Energy Department has been permitting the private mining firms to continue brining operations after legal acquisition and testing of the caverns.

When these caverns are actually turned over to the Government their shape and condition may have changed, and they may no longer be safe for storage.

Cave-ins of cavern roofs, cracks and leakage around pipeline casings could cost taxpayers millions of dollars through loss of crude oil and pollution of the surface above the caverns.

The Energy Department's decision to establish a wholly Government-owned and controlled reserve also raises serious questions about the management of the reserve program.

Under the act the Agency could establish an industrial reserve as part of the strategic petroleum reserve. This could be done by requiring oil importers and refiners to maintain stocks for use in an emergency.

U.S. oil companies have reported to the International Energy Agency that they already maintain oil stockpiles equivalent to 120 days of oil imports.

The establishment of an industrial reserve could result in large savings to the taxpayer and result in a more decentralized storage system.

I want to underline my support for the reserve program. Petroleum stockpiles are essential to reduce our vulnerability to another Arab embargo and to prepare for any kind of emergency.

Further, the next year or two may be the best time to fill the reserve in light of the excess supplies in the world oil market.

But haste may already have made waste. An inefficient, wasteful, unsafe program is no solution to the oil stockpile problem.

Last year's decision to accelerate the program has proven to be shortsighted.

This year's decision to double its size is premature in view of the many problems it faces.

Strategic stockpiles have often been a source of enormous waste in Government. We need to take special care that the petroleum reserve program does not add its name to this unfortunate record.

I ask unanimous consent to print in the RECORD at the close of my remarks the report prepared by the General Accounting Office entitled "Need To Minimize Risks of Using Salt Caverns for the Strategic Petroleum Reserve," dated January 9, 1978.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

NEED TO MINIMIZE RISKS OF USING SALT CAVERNS FOR THE STRATEGIC PETROLEUM RESERVE

Under the Energy Policy and Conservation Act, the Department of Energy is required to create a Strategic Petroleum Reserve to provide protection against future disruptions in U.S. energy supplies. The Department is committed to having 500 million barrels of crude oil in storage by 1980 and thus far has been storing the oil in salt caverns located in the gulf coast area.

GAO's review of the cost and feasibility of salt cavern storage raised questions concerning the need for better information to reduce risks and uncertainties regarding the suitability of caverns for storage:

Should the Department permit brining operations to continue in caverns after their testing and certifications as suitable for crude oil storage without plans for assuring that they will remain siutable for storage after brining?

Should crude oil be stored in caverns before adequate information on their long-term suitability for storage is obtained?

---

U.S. GENERAL ACCOUNTING OFFICE,
*Washington, D.C.*

The SECRETARY OF ENERGY.

DEAR MR. SECRETARY: The General Accounting Office (GAO) has been monitoring the Federal Energy Administration's (FEA)[1] plans, actions and progress in developing the Strategic Petroleum Reserve. As part of this effort, we have been reviewing the cost and feasibility of salt cavern storage. This letter discusses two issues raised during our review which warrant your consideration.

The first issue relates to permitting brining operations to continue in Government-owned caverns after the caverns have been tested and certified by FEA as suitable for crude oil storage. This concerns us from two standpoints: first, FEA does not have a formal system for controlling brine production at these caverns; and secondly, FEA does not plan to retest the caverns after produtcion ceases.

The second issue pertains to pumping crude oil into certain caverns before completing an analysis of their long-term suitability for storage. Although FEA was not certain of the continued suitability of these caverns for storage until an analysis was completed of tests recently performed on an adjacent cavern, FEA decided not to wait for test results on the adjacent cavern and began oil fill.

In our view, FEA had no assurance that the caverns in question would continue to be suitbale for storage. This lack of assurance could have led to problems in recovering oil.

---

[1] Although FEA is discussed throughout this report, our specific recommendations are addressed to the newly established Department of Energy (DOE) to which the functions of FEA were assigned on October 1, 1977, pursuant to the Department of Energy Organization Act (P.L. 95-91).

program delays, and unnecessary costs to the Federal Government.

BACKGROUND

The Energy Policy and Conservation Act (P.L. 94–163) requires FEA to create a Strategic Petroleum Reserve (Reserve), the purpose of which is to diminish U.S. vulnerability to the effects of a severe interruption in energy supplies and provide limited protection from the consequences of interruptions in petroleum product supplies. In December 1976, FEA submitted to the Congress a Strategic Petroleum Reserve Plan (Plan) which indicated that the Reserve would contain 150 million barrels of oil by December 1978 and 500 million barrels by December 1982. However, in his April 1977 energy message, the President called for an expansion of the program to 1 billion barrels. Subsequently, FEA's May 1977 Plan amendment set new storage targets for the Reserve of 250 million barrels by December 1978 and 500 million barrels by December 1980. FEA plans to further amend the Plan to expand the Reserve to one billion barrels.

FEA has determined that oil for the Reserve will be stored in caverns within salt domes and in salt and limestone mines. To date, nine potential sites—four salt domes, three salt mines, and two limestone mines—with existing capacities totaling 402 million barrels have been identified by FEA for storage. Of the four salt domes, FEA has acquired three through condemnation proceedings. Information on the salt domes obtained through condemnation is summarized below.

| | Salt dome | | |
|---|---|---|---|
| | Bayou Choctaw | West Hackberry | Bryan Mound |
| Location | Iberville Parish, La. | Cameron Parish, La. | Brazoria County, Tex. |
| Number of existing caverns planned for storage. | 10 | 5 | 4. |
| Existing storage capacity. | 74,000,000 bbl. | 60,000,000 bbl. | 63,000,000 bbl. |
| Estimated design and construction costs for existing caverns. | $126,700,000 | $62,500,000 | $52,600,000. |
| Previous operators. | Allied Chemical Co. | Olin Corp. | Dow Chemical Co. |

The existing caverns in these salt domes were formed over the years from brining operations. Brining is a process whereby water is injected into a salt mass, dissolving the salt and creating a cavern, with the dissolved salt (brine) being forced out of the cavern through injection of more water.

FEA's plans call for a series of tests to be run on all caverns selected for storage. The purpose of the tests is to determine the suitability of the caverns for crude oil storage. Such tests include a sonar survey to identify the shape of the caverns, to compute storage capacity, and to determine the condition of the cavern roof; and a casing and cavern pressure test to determine whether the casing and cavern will be able to withstand the pressures at which crude oil will be injected and withdrawn.

CONTINUED BRINE PRODUCTION IN APPROVED CAVERNS

As part of the condemnation proceedings, FEA permitted Allied Chemical Company and Olin Corporation to continue brine production at Bayou Choctaw and West Hackberry, respectively. The condemnation agreement for Bayou Choctaw does not specify the number of caverns which will be available for continued brine production; however, the project manager for Bayou Choctaw stated that the number was three. West Hackberry's condemnation agreement specifically stated that three caverns will be available. These six caverns have a storage capacity of over 62.3 million barrels, representing about 46 percent of the total existing storage capacity for the 15 caverns designated for storage in these two salt domes. At a national average composite price of $11.80 a barrel, the oil to be stored in these six caverns is estimated to cost the Government about $75 million. FEA officials told us that in order to assist in precluding further litigation which would delay the condemnation proceedings, FEA agreed to allow Allied and Olin access to caverns at Bayou Choctaw and West Hackberry for brine production. Based on the advice of the Corps of Engineers—the contractors hired to appraise the storage sites—FEA decided that depriving the chemical companies of brine supplies would subject the Government to significant damage claims. An FEA official advised us that no written documentation was prepared in support of potential damage estimates since they were so obvious.

The agreements that FEA signed with the chemical companies specify the length of time the chemical companies are to receive brine supplies. In Allied's case, it is until such time Allied develops a replacement brine supply of its own, but not beyond December 31, 1980. In Olin's case, it is until May 1, 1978. FEA officials told us that Allied's brining needs are about 30,000 barrels a day and Olin's average about 14,000 barrels a day. The agreements do not, however, specify the rate of production or the operating pressure at which the brine is to be produced.

At the same time that Allied and Olin are conducting brining operations, FEA plans to proceed with the design and construction necessary to prepare the sites for oil storage. Except for $6.2 million to be spent for drilling injection wells,[2] FEA has not determined how much of the estimated $189 million in design and construction costs for existing capacities at Bayou Choctaw and West Hackberry are attributable to the six caverns where brining operations will continue. Although we recognize that there are certain design and construction costs which will be incurred regardless of the number of caverns or barrels of storage capacity, we estimate the costs associated with the six caverns to be $87 million.[3]

FEA officials stated that there is no need to control brine production nor retest the caverns after brining is completed since they considered cavern damage to be low risk due to the experience of the chemical companies in producing brine and the small amount of brine to be produced. The contractor responsible for performing cavern tests for FEA agreed with FEA officials. However, these officials acknowledged that if a cavern is operated in excess of its maximum operating pressure, it could fracture causing it to be unsuitable for storage. For each cavern rendered unsuitable for storage, FEA would have to find a suitable replacement cavern or construct a new one. Either situation, particularly the latter, would result in program delays and additional costs. These officials stated that even with proper rates of production and operating pressures, brining could still damage the caverns. For example, if too much salt is removed from the cavern roof, the seal around the casing, through which the crude is injected and withdrawn, could begin to leak. Also fractures could develop in the caverns. Either type of change could result in the crude oil escaping to the caprock (the layer of rock strata directly above the salt dome) where it can be lost.

Officials of FEA's Strategic Petroleum Reserve Office, Office of Facility Construction, stated that they have no formal system to control the brining operations but indicated that it could be done with minimal effort and expense. We discussed the type of testing necessary to assure cavern suitability after brining is completed, length of time to retest, and costs with FEA officials and the contractor. They stated that two tests would be necessary—a sonar survey and a casing and cavern pressure test—which would take about two weeks per cavern and cost a total of about $90,000—$15,000 per cavern.

In discussing the possible loss of design and construction costs if the caverns were rendered unsuitable due to continued brine production, FEA officials stated that by delaying cavern design and construction until after brining operations are completed, the chances for loss of design and construction funds would be eliminated but other factors must be taken into consideration such as the price of oil and inflation. They added that postponing design and construction until after brining was completed would delay the program and possibly cause FEA to be unable to meet the administration's goal of having 500 million barrels of oil in storage by December 22, 1980. At the time of our review, however, FEA had not evaluated what the impact on meeting the goals would be due to delaying some or all of design and construction activity. They stated that such an analysis, although time-consuming, could be performed.

In a November 10, 1977, meeting with DOE officials to discuss a draft of this report, they disagreed with several aspects of the report relative to the continued production of brine at Bayou Choctaw and West Hackberry. These officials restated their view that cavern damage as a result of continued brining is low risk and that retesting is unnecessary. They stated that the reasons for this view are (1) caverns are being tested for the ability to withstand pressure well above the accepted industry standard pressure for brine production; (2) due to the large size of the caverns, brining at temporary short-term operating pressure will not cause the overall cavern pressure to rise to dangerous levels; and (3) DOE has re-installed blanket oil in the caverns after testing and will insure that adequate blanket oil is maintained to guard against salt being washed from the cavern roof. Furthermore, they cited the thickness of the salt roofs above the caverns as an additional factor that would guard against damage occurring.

The reasons cited above may minimize cavern damage. However, without a formal system to monitor brining operations, there is no assurance that safe operating pressures are maintained. FEA and its testing contractor have acknowledged that brining can cause cavern damage. This would appear to be substantiated by the failure of five other caverns at Bayou Choctaw, previously used for brine production, to pass casing and cavern pressure testing.

STORAGE PLANS AT BRYAN MOUND

There are five caverns at the Bryan Mound salt dome. FEA began storing crude oil in cavern 2 on October 7, 1977; in cavern 4 on November 14, 1977; and plans to use caverns 1 and 5 for storage. FEA considers the remaining cavern—cavern 3—to be too large for storage. In addition to being too large,

[2] Contractor reports estimate that it will cost an average of $692,000 to drill an injection well, and FEA plans to drill nine new injection wells in these six caverns.

[3] Design and construction costs for existing storage capacity at Bayou Choctaw and West Hackberry are $189 million—$127 million and $62 million respectively. On the basis of 135 million barrels of existing storage capacity, design and construction costs are equal to about $1.40 a barrel. This per barrel amount multiplied by the $23.5 million barrels for the three caverns at Bayou Choctaw and the 38.8 million barrels for the three caverns at West Hackberry equals a total of $87 million.

certain questions have been raised about the suitability of cavern 3 for the storage of crude oil. Although cavern 3 was not selected for storage, its suitability for storage is important because of its location in relation to caverns selected for storage. A cavern's exact location and distance are considered in cavern design analysis to determine if caverns will grow together and the impact of such growth resulting from crude oil displacement cycles. FEA is using five such cycles for planning purposes and is assuming the storage sites will have to be emptied as many as five times because of major supply interruptions. Cavern enlargement is expected to occur during each displacement cycle. FEA made an analysis of caverns at Bryan Mound to determine location and distance. In our opinion, FEA's analysis of cavern 3 prior to beginning oil fill in an adjacent cavern was not adequate to determine the extent to which cavern 3 would have compromised the other cavern's suitability for storage.

FEA first became aware of potential problems with cavern 3 in November 1976 when a preliminary design contractor submitted a report on the Bryan Mound storage caverns. The contractor's report proposed that FEA insure that no future brining operations are conducted in cavern 3 by acquiring the cavern and, if possible, perform a directional survey of the cavern. Although the directional survey is necessary to enable FEA to determine the potential for other caverns to penetrate cavern 3 and the consequences of such penetration, tests to gather information on cavern 3 were not performed prior to oil fill. The Bryan Mound Project Manager (Project Manager) told us that FEA decided testing cavern 3 was unnecessary because FEA's analysis showed it would not have any impact on the other caverns. However, we believe that questions remain as to the accuracy of this analysis which tends to be supported by the fact that FEA decided to perform further testing on cavern 3, as discussed below. FEA's analysis was based primarily on two documents; an aerial view diagram of the caverns and a table showing calculations of the effects of five displacement cycles on the diameters of Bryan Mound storage caverns 1, 2, 4, and 5. The aerial view diagram was obtained from Dow Chemical Company—the previous operator of cavern 3. While we do not disagree with the manner in which the analysis was performed, we do not believe the information used was adequate since FEA did not obtain sonar and directional survey data to verify the location of cavern 3 on the aerial view diagram.

In August 1977, both FEA and its contractor responsible for cavern testing and certification became concerned about cavern 3. In an August 23, 1977, meeting attended by FEA and the contractor, the contractor strongly advised that cavern 3 be tested. In a letter to FEA dated August 29, 1977, the contractor expressed concern that cavern 3 might be penetrated during future oil displacement from caverns 2 and 4. The contractor emphasized that an investigation of the cavern was imperative. In a letter to the contractor dated August 31, 1977, FEA asked the contractor to submit a proposal for performing sonar and directional surveys on cavern 3. The FEA letter also requested that the proposal include fluid samples from various depths in cavern 3. We were advised by the Project Manager that FEA was concerned over allegations that industrial waste had been dumped in cavern 3.

We first discussed cavern 3 with FEA on September 19, 1977. No tests had been run at that time; but, based on a discussion with the Project Manager, it was our understanding that oil would not be stored at Bryan Mound until cavern 3 had been tested and analyzed. Subsequently, the Project Manager advised us that there were never plans to delay oil fill until cavern 3 had been tested and analyzed .

As stated on page 7, FEA began storing crude oil in cavern 2 on October 7, 1977, and in cavern 4 on November 14, 1977. As of November 29, 1977, about 1.5 million barrels had been stored in these caverns. Cavern testing began on November 2, 1977, and was completed November 9, 1977. We last discussed the status of the tests with the contractor on December 13, 1977. The contractor stated that they had completed their analysis of the tests and had forwarded the test results to DOE on November 28 and 29, 1977. The analysis indicated a minimum distance between cavern 3 and caverns 2 and 4 of 300 feet. (According to the Project Manager, FEA's initial analysis indicated 500 feet.) Based on the 300-foot distance, the contractor concluded that caverns 2 and 4 would not penetrate cavern 3 after five displacement cycles. The contractor also concluded that there was no industrial waste stored in cavern 3.

We asked the Project Manager why FEA decided to have cavern 3 tested and also why FEA began oil fill before the tests were completed and analyzed. The Project Manager stated that the tests were made primarily to confirm FEA's prior analysis of cavern 3. Regarding oil fill, he advised that based on FEA's earlier analysis the risk was nonexistent. Specifically, he pointed out that FEA's calculations showed that after five displacement cycles there would still be an adequate distance between cavern 3 and adjacent storage caverns.

We asked the testing contractor if he had objected to FEA about beginning oil fill before the tests were completed and analyzed in view of his position stated in the August 1977 correspondence. The contractor stated that he did not object because he believed that caverns 2 and 4 would not penetrate cavern 3 in the short-term—i.e., the first displacement cycle. Consequently, he believed there was no reason for FEA to interrupt storage operations until after cavern 3 had been tested and the results analyzed.

We discussed the cavern 3 situation with a spokesman for the Dow Chemical Company. It was his contention that it was unlikely that cavern 3 would have any effect on the other caverns. Dow has been unable, however, to locate test documentation to substantiate this contention. Nevertheless, the Dow spokesman was able to discuss with us some aspects of the cavern's history. He stated that Dow stopped brining the cavern in November 1967 because it would not hold pressure; that is, water was being pumped in but brine was not returning to the surface. After testing the cavern in 1973, Dow concluded that it would not hold pressure because of a leak around the casing. The leak was considered to be too difficult to repair and the cavern was abandoned. The spokesman added that, to his knowledge, no industrial waste has been dumped in cavern 3.

After discussing this situation with FEA, FEA's testing contractor, and Dow Chemical, we believe that FEA proceeded with storage operations without first removing uncertainties pertaining to cavern 3. We believe that the initial analysis performed to determine the distances between cavern 3 and the storage caverns was inadequate due to lack of complete information to verify the location of cavern 3. This is further supported by the results of tests recently performed on cavern 3 indicating that the minimum distance between cavern 3 and caverns 2 and 4 is 300 feet—200 feet (40 percent) less than FEA's earlier analysis indicated. Furthermore, although it now appears that no structural damages or financial loss will result due to FEA's decision to begin oil fill before the tests on cavern 3 were performed and analyzed, we believe that FEA took an unnecessary risk in view of the structural damages and financial loss that could have occurred.

On November 10, 1977, we met with DOE officials to discuss a draft of our report. The officials still contend that there was no risk associated with beginning oil fill before performing tests on cavern 3. They stated that FEA's initial analysis was sufficient to determine the effects of five displacement cycles on the distances between cavern 3 and the storage caverns and that the tests which were recently completed were performed basically to confirm their initial analysis.

### CONCLUSIONS

FEA, after obtaining six salt caverns at Bayou Choctaw and West Hackberry, permitted the previous operators to continue production of brine after the caverns were tested and certified as suitable for crude oil storage. FEA, while acknowledging the possibility that brining can cause cavern damage, believes the risk of such damage occurring is extremely low. In line with this belief, FEA does not routinely plan to monitor the brining operations, impose restrictions on the rate of brine production and operating pressures, nor retest the caverns after brining has been completed before filling the caverns with crude oil.

Also, FEA began pumping crude oil at Bryan Mound before completing an analysis of tests recently performed on cavern 3 which would have provided reliable information on the location and any impact that cavern 3 may may have had on other caverns selected for storage. FEA determined from their previous analysis that there was adequate distance between cavern 3 and adjacent coverns and concluded risks associated with oil fill were non-existent. GAO believes that the information used by FEA to make this initial analysis was inadequate to indicate that the risks were nonexistent and, consequently, FEA should have delayed oil fill until the recent tests were completed and results analyzed. In our view, FEA did not have adequate assurance that the caverns where oil is being stored would not penetrate cavern 3. We believe FEA did not have that assurance until tests recently performed on cavern 3 were analyzed. This lack of assurance could have led to problems in recovering oil, program delays, and unnecessary costs to the Federal Government.

In order to preclude the potential problems associated with continued brining at Bayou Choctaw and West Hackberry, we believe the best alternative would be for FEA to negotiate with the chemical companies to eliminate continued brining operations. If negotiations are successful, FEA could then seek amendments to the condemnation agreements which would reflect the newly-agreed-upon terms concerning continued brining. If negotiations fail, FEA could directly petition the court for such an amendment, citing the failure of negotiations and argue that the potential serious damage the contiuned brining may cause to the caverns requires that it be eliminated. We recognize the costs for such an amendment could be substantial since it appears highly unlikely that the companies would relinquish rights to the brine production without some form of compensation in return. However, we believe FEA should explore what the costs will be and then make a determination of whether they ought to pursue negotiations.

Although FEA officials stated that they did analyze the costs for seeking such an amendment, they informed us that no written documentation was prepared in support of damage estimates since they were so obvious. If, in fact, the amendment is too costly, FEA should still make every attempt to impose controls on the chemical companies' rates of brine production and operating pressures to help assure that the caverns continue to be

suitable for storage. More importantly, as soon as brining operations are completed, we believe that FEA should retest the caverns to determine if they are still suitable for storage.

Concerning the Bryan Mound situation, we believe that FEA should not have begun oil fill until after tests on cavern 3 were performed and analyzed. We believe that there were uncertainties as to the long-range suitability of the other caverns for storage at the time FEA began oil fill and, consequently, unnecessary risks were taken by FEA in view of the possible structural damages and financial loss that could have occurred.

We recognize that tight time constraints were placed on FEA to complete the Strategic Petroleum Reserve Program and that, because of the newness and complexity of the program, some degree of risk will be involved in implementing most decisions. Whenever risk can be reduced through additional information, however. we believe such information should be obtained. Our recommendations are aimed at developing better information to reduce the risk involved in salt cavern storage. In addition to helping the Department of Energy minimize risk and uncertainty, this information should prove useful to the appropriations committees when considering requests for program funds, since it will highlight the risks involved.

RECOMMENDATIONS

We recommend to the Secretary, DOE, that in future oil fill decisions, every attempt be made to minimize risk and uncertainty, taking into consideration program delays and costs.

Specifically, with respect to Bayou Choctaw and West Hackberry, we recommend that the Secretary—

Determine the feasibility of amending the condemnation agreements to eliminate continued brining operations by the chemical companies;

Institute a formal system for controlling the brining operations if the agreements are not amended to assure that brine is not being produced in excess of safe rates of production and operating pressures; and

Retest the caverns after brining has been completed.

To minimize the financial loss to the Federal Government that could occur if any of the caverns at West Hackberry and Bayou Choctaw were rendered unsuitable for storage, we also recomemnd that the Secretary assess the feasibility of postponing some design and construction until brining is completed. In making this decision, an assessment should be made of the impact that such postponement would have on program delays and costs.

As you know, section 236 of the Legislative Reorganization Act of 1970 requires the head of a Federal agency to submit a written statement on actions taken on our recommendations to the Senate Committee on Government Affairs and the House Committee on Government Operations not later than 60 days after the date of the report and to the House and Senate Committees on Appropriations with the agency's first request for appropriations made more than 60 days after the date of the report.

We appreciate the cooperation received during our review and would be glad to discuss the contents of this letter in further detail should you so desire.

Sincerely yours,

MONTE CANFIELD, Jr.,
*Director.*

## ARGUMENTS AGAINST THE GENOCIDE TREATY ARE INVALID

Mr. PROXMIRE. Mr. President, for the last 11 years, it has been my privilege to argue for a treaty which protects the most fundamental of human rights, the right to live. I am, of course, referring to the Genocide Treaty, which prohibits the intentional destruction of national, ethnic, racial, or religious groups.

The treaty is very specific in its enumeration of acts which are to be considered genocide. Nevertheless, some opponents of the treaty have expressed concern over the provision that "causing * * * mental harm to members of a group" be included as an act of genocide. It has been argued that this phrase is unnecessarily vague, and encourages specious charges and propaganda efforts. I am happy to report that such fears are ill founded.

It must not be forgotten that article II of the treaty stipulates that an intent to destroy a group must be present before anyone can be found guilty of genocide. Thus, for example, it would be wrong to assert that a public official would cause mental harm to a minority group by refusing that group a permit to assemble in a public area, and thereby be guilty of genocide because of that action. The necessity of proving "intent to destroy" would eliminate most of the spurious examples that opponents of the treaty advance.

Moreover, it is clear that the term "mental harm" refers only to serious alterations in mental faculties. This point has been clarified by a proposed understanding to the treaty that has been adopted by the Senate Foreign Relations Committee. The understanding states:

That the U.S. Government understands and construes the words "mental harm" appearing in article II(b) of this convention to mean permanent impairment of mental faculties.

Surely, we want to prohibit actions causing such permanent impairment.

The treaty and our proposed understanding clearly protect our citizens, as I have demonstrated. The article I have been discussing has withstood thorough scrutiny, as have all other articles of the treaty. There is no justifiable excuse for our continued failure to ratify the Genocide Treaty; and I hope the Senate will join me in seeking immediate ratification.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. MATSUNAGA). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

## AUTHORIZATION FOR CERTAIN ACTION DURING RECESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that during the recess over until Monday, the Secretary of the Senate be authorized to receive messages from the other body and from the President of the United States, and that they may be appropriately referred.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that during the recess over until Monday, the Vice President, the President pro tempore and the Acting President pro tempore be authorized to sign all duly enrolled bills and joint resolutions.

The PRESIDING OFFICER. Without objection, it is so ordered.

## AUTHORIZATION TO FILE REPORT UNTIL MIDNIGHT SATURDAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Budget Committee may have until midnight Saturday to file its report on the First Budget Resolution.

The PRESIDING OFFICER. Without objection, it is so ordered.

## REFERRAL OF A COMMUNICATION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that a communication from the Secretary of Commerce relative to amending the Fishery Conservation and Management Act of 1976 to include the Northern Mariana Islands be referred jointly to the Committees on Commerce, Science, and Transportation and Foreign Relations.

The PRESIDING OFFICER. Without objection, it is so ordered.

## ORDER FOR RECESS TO MONDAY, APRIL 17, 1978

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 12 noon on Monday.

The PRESIDING OFFICER. Without objection, it is so ordered.

## ORDER FOR THE RECOGNITION OF SENATORS, A PERIOD FOR ROUTINE MORNING BUSINESS AND MR. LONG TO CALL UP HIS AMENDMENT TO THE RESOLUTION OF RATIFICATION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent after the prayer on Monday Mr. PERCY be recognized for not to exceed 15 minutes, Mr. BAKER be recognized for not to exceed 15 minutes, and Mr. BARTLETT be recognized for not to exceed 15 minutes; and that there then be a period for the transaction of routine morning business for not to extend beyond the hour of 1 p.m. with statements limited therein to 3 minutes each; and at the hour of 1 p.m., when the Senate proceeds to the consideration of the resolution of ratification on the treaty. Mr. LONG be recognized to call up his amendment to the resolution of ratification dealing with the sea-level canal.

The PRESIDING OFFICER. Without objection, it is so ordered.

### ORDER FOR THE RECOGNITION OF MR. MORGAN, MR. HOLLINGS, AND MR. HEINZ ON MONDAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Monday, at any time after 3:30 p.m., the Senator from North Carolina (Mr. MORGAN) be recognized for not to exceed 1 hour.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at any time after 4 o'clock on Monday Mr. HOLLINGS and Mr. HEINZ be recognized to call up an amendment to the resolution of ratification.

The PRESIDING OFFICER. Without objection, it is so ordered.

### ORDER FOR RECOGNITION OF SENATOR MORGAN ON TUESDAY NEXT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Tuesday next, after the prayer, Mr. MORGAN be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so desired.

### EDUCATION DAY, U.S.A.

Mr. ROBERT C. BYRD. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on House Joint Resolution 770.

The PRESIDING OFFICER laid before the Senate the joint resolution (H.J. Res. 770) to authorize and request the President to issue a proclamation designating April 18, 1978, as "Education Day, U.S.A."

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the joint resolution be considered as having been read the first and second time, and that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. Without objection, it is so ordered. The joint resolution is open to amendment. If there be no amendment to be proposed, the question is on the third reading of the joint resolution.

The joint resolution was ordered to a third reading, read the third time, and passed.

The preamble was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the joint resolution was passed.

Mr. LUGAR. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

### ORDER FOR CONSIDERATION OF S. 2493 ON WEDNESDAY, APRIL 19

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at noon on Wednesday, April 19, the Senate proceed to the consideration of Calendar Order No. 575, S. 2493, the airline deregulation bill, with final disposition of the bill to be no later than 4 p.m. on Thursday, April 20, and that paragraph 3 of rule XII be waived.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

### DEADLINE FOR FILING OFFICE ACCOUNT REPORTS

Mr. ROBERT C. BYRD. Mr. President, I wish to remind Senators that part 113 of the Federal Elections Commission's regulations provide that office account reports shall be filed no later than Saturday, April 15, 1978.

The secretary of the Senate's Office of Public Records, 119 D Street NE, room A–623, Washington, D.C. (telephone numbers 224–0322) will be open from 9 a.m. to 12 noon on that day to receive such reports.

### ORDER FOR NO ROLLCALL VOTES BEFORE 2 P.M. ON MONDAY

Mr. LUGAR. Mr. President, will the majority leader yield for a question?

Mr. ROBERT C. BYRD. Yes, be glad to.

Mr. LUGAR. Could we have assurance that rollcall votes will not occur until after 2 p.m. on Monday?

Mr. ROBERT C. BYRD. Yes; I am glad the distinguished Senator from Indiana has reminded me of that.

Mr. President, I ask unanimous consent that, with the exception of any rollcall votes which may be necessary to establish a quorum on Monday, and I do not anticipate such, though nevertheless it could occur—that with that single exception, there be no rollcall votes on Monday prior to the hour of 2 o'clock p.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LUGAR. I thank the majority leader.

### RECESS UNTIL MONDAY

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the order previously entered, that the Senate stand in recess until the hour of 12 o'clock noon on Monday next.

The motion was agreed to; and at 6:05 p.m. the Senate, in executive session, took a recess until Monday, April 17, 1978, at 12 noon.

# HOUSE OF REPRESENTATIVES—*Thursday, April 13, 1978*

The House met at 11 o'clock a.m.

Dr. William B. Dublin, Jr., pastor, Reliance and Ridings Chapel United Methodist Churches, Reliance, Va., offered the following prayer:

We have struggled many years, O God, to make our Nation truly free. Help us to keep the honor and respect of those whom we serve by courageously defending and preserving our Constitution made possible by our forefathers.

Because of our inability to continually keep our sights focused upon the loving spirit best exemplified by Thy Son Jesus Christ, there are times when we may have lost true perspective of our mission in life.

With caring relationships for one another the ageless struggle for survival is possible. We pray, our Father, that solutions may be discovered for unemployment, housing, inflation, scarcity of food, energy, eradication of major disease including cancer, and continued due process of law.

May a new consciousness sweep across our land by ministering to the needs of all people that peace might prevail. Amen.

### CALL OF THE HOUSE

Mr. WRIGHT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The call was taken by electronic device, and the following Members failed to respond:

[Roll No. 217]

| | | |
|---|---|---|
| Ambro | Dent | Leggett |
| Anderson, Ill. | Diggs | Lehman |
| Andrews, N.C. | Dingell | Long, La. |
| Archer | Dornan | Long, Md. |
| Armstrong | Eckhardt | McFall |
| Ashley | Fary | McKinney |
| Baucus | Foley | Meeds |
| Breaux | Forsythe | Murphy, N.Y. |
| Burke, Calif. | Garcia | O'Brien |
| Burton, John | Harsha | Ottinger |
| Chappell | Heckler | Pursell |
| Chisholm | Hefner | Rahall |
| Clausen, Don H. | Holland | Rodino |
| Clawson, Del | Howard | Rogers |
| Clay | Jones, N.C. | Runnels |
| Crane | Kelly | Ruppe |
| | Krueger | Santini |
| Sarasin | Steiger | Waxman |
| Scheuer | Teague | Whitley |
| Seiberling | Thone | Wiggins |
| Sharp | Thornton | Wilson, C. H. |
| Skubitz | Tucker | Wilson, Tex. |
| Spellman | Udall | Young, Alaska |
| Staggers | Van Deerlin | |

The SPEAKER. On this rollcall 364 Members have recorded their presence by electronic device, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

### THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

### MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced

that the Senate agrees to the amendments of the House to the amendments of the Senate to bills of the House of the following titles:

H.R. 4979. An act to direct the Secretary of the Interior to convey certain public and acquired lands in the State of Nevada to the county of Mineral, Nev.; and

H.R. 6693. An act to amend the Child Abuse Prevention and Treatment Act to extend the authorization of appropriations contained in such act, and for other purposes.

The message also announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 2597. An act to amend title 28, United States Code, to move the place for holding court for the District Court of the Eastern District of New York to Brooklyn and Hempstead, and for other purposes.

## PASTOR WILLIAM B. DUBLIN, JR.

(Mr. ROBINSON asked and was given permission to address the House for 1 minute.)

Mr. ROBINSON. Mr. Speaker, I would like to acknowledge and thank Pastor William B. Dublin, Jr., for our opening prayer today. Dr. Dublin serves as pastor of Reliance and Ridings Chapel United Methodist Churches in the Winchester District of the Virginia Annual Conference of the United Methodist Church.

He is also the interim director of the Lord Fairfax Interchurch Council, a five-county ecumenical program devoted to ministering to the needs of our people.

Dr. Dublin holds bachelor of science and master of recreation education degrees from Brigham Young University in Provo, Utah, a master of divinity degree from the Memphis Theological Seminary in Memphis, Tenn., and a doctor of ministry degree from Southeastern Baptist Theological Seminary in Wake Forest, N.C.

He is married and the father of four girls, one of whom served as a page in the Virginia House of Delegates in Richmond earlier this year.

Dr. Dublin has a keen interest in governmental affairs, and it is always a pleasure to visit with him about how best we here in the Congress can go about shaping wise public policies for the good of our Nation.

I might add, Mr. Speaker, that I am delighted that Dr. Dublin's wife, Mary Virginia, who holds a Ph. D. degree in botany from BYU, as well as his daughters and his mother from California, have been present to share with us his inspiring contribution to today's session of the U.S. House of Representatives.

## PERMISSION FOR COMMITTEE ON THE BUDGET TO FILE REPORT

Mr. GIAIMO. Mr. Speaker, I ask unanimous consent that the Committee on the Budget may have until noon, Friday, April 14, 1978, to file its report on the first budget resolution for fiscal year 1979.

The SPEAKER. is there objection to the request of the gentleman from Connecticut?

There was no objection.

## WHITE HOUSE PERSONNEL AUTHORIZATION

Mr. DODD. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1127 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1127

*Resolved*, That upon the adoption of this resolution it shall be in order to move, clause 7 of rule XIII to the contrary notwithstanding, that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11003) to clarify the authority for employment of personnel in the White House Office and the Executive Residence at the White House, to clarify the authority for employment of personnel by the President to meet unanticipated needs, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Post Office and Civil Service, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. DODD. Mr. Speaker, I yield 30 minutes to the gentleman from Illinois (Mr. ANDERSON) for the purpose of debate only, pending which I yield myself such time as I may consume.

Mr. MICHEL. Mr. Speaker, will the gentleman from Connecticut yield?

Mr. DODD. I yield to the gentleman from Illinois.

(By unanimous consent, Mr. MICHEL was allowed to speak out of order.)

### LEGISLATIVE PROGRAM

Mr. MICHEL. Mr. Speaker, I have asked to speak out of order for the purpose of inquiring of the distinguished majority leader the program for the balance of the week and next week, if he will be good enough to advise us.

Mr. WRIGHT. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman.

Mr. WRIGHT. I thank the gentleman for yielding.

The program for the balance of this week will be the adoption of the rule and the bill under present consideration, White House authorizations.

We will postpone the Zuni Indians Court of Claims case until next week. Likewise, it is anticipated that the EPA measure will go over until next week.

There will be no session on Friday.

Let us talk briefly about next week. It will be my purpose at the conclusion of our colloquy to ask unanimous consent that we may come in at noon on Wednesday next for the express purpose of concluding next week's business on Thursday.

The House will not be in session on Friday the 21st out of respect for those Members of the Jewish faith who desire to be in their places of worship or with their families prior to sundown on Friday.

The precise schedule we anticipate for next week is as follows:

On Monday the House will meet at noon. There will be the Consent Calendar, and there are four bills scheduled for suspension:

H.R. 3489, Merchant Marine Academy nominations;

H.R. 10822, National Sea Grant Authorization Act of 1978;

H.R. 10823, authorizations for National Advisory Committee on Oceans and Atmosphere;

H.R. 11465, Coast Guard authorization. In addition, there will be H.R. 11495, providing for FAA R. & D. authorization for 1979. This comes under a 1-hour open rule.

On Tuesday the House will meet at noon. There will be the Private Calendar. There will be two bills under suspension, H.R. 8588, establishing Offices of Inspectors General, and S. 2452, the Humphrey Institute and Dirksen Center Act.

Following that on Tuesday we will take up H.R. 3787—Zuni Indians Court of Claims; and H.R. 11400—National Science Foundation Act for 1979. Both bills come under open rules in 1 hour of general debate.

On Wednesday, if unanimous consent is granted, we will come in at 12 noon and consider H.R. 8494, Public Disclosure of Lobbying Act of 1978, subject to the granting of a rule. The express purpose of coming in at noon is in order that we may conclude that bill on Wednesday and not have it spill over into the following day.

On Thursday we would meet at 11 o'clock and take up two bills. H.R. 11302. EPA authorizations for fiscal year 1979, with an open rule, 1 hour, and H.R. 11504, Agricultural Credit Act of 1978, subject to the granting of a rule.

Mr. MICHEL. I would just like to ask this further question: There are only five bills scheduled on Monday and four on Tuesday. Would there be any possibility of others being added to that list, and, if so, would we be given advance warning?

Mr. WRIGHT. Yes; there is that possibility and, yes, if it is done, we will give such advance warning as we are able to have ourselves.

Mr. MICHEL. Might we suggest this be put off until Tuesday, rather than Monday. I think the Members having a little bit of notice would appreciate it.

Mr. WRIGHT. That seems not an unreasonable suggestion, in that there are more on Monday than on Tuesday.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Speaker, I wonder if the gentleman from Texas can tell the House what happened to the congressional ethics bill, which seems to have miraculously disappeared?

Mr. WRIGHT. Mr. Speaker, if the gentleman will yield, it has been temporarily postponed.

Mr. BAUMAN. Until any particular date?

Mr. WRIGHT. That is not certain at this time, but we do expect to take that bill up and we expect that the bill will pass.

Mr. BAUMAN. Mr. Speaker, I thank the gentleman from Texas.

Mr. MICHEL. Mr. Speaker, one further question. In view of our hope to conclude business next Thursday, Members should be prepared to work beyond 5:30 on Thursday if it takes an extended period of time to conclude consideration of the bills scheduled; is that correct?

Mr. WRIGHT. Mr. Speaker, if the gentleman will yield, yes, that is possible, because I think all of us want to accommodate our colleagues who want to be at home for the Passover.

Mr. MICHEL. Mr. Speaker, I thank the gentleman from Texas and I thank the gentleman from Connecticut for yielding.

HOUR OF MEETING ON WEDNESDAY, APRIL 19, 1978

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that on Wednesday next the House shall convene at 12 o'clock noon.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. DODD. Mr. Speaker, House Resolution 1127 provides for the consideration of H.R. 11003, the White House personnel authorization bill. This resolution provides for an open rule with 1 hour of general debate to be equally divided and controlled by the chairman and ranking minority member of the Committee on Post Office and Civil Service. Furthermore, it waives all points of order against clause 7 of rule XIII, and it provides for one motion to recommit.

The report accompanying the bill is only in technical violation of clause 7 of rule XIII insofar as the committee failed to officially approve the cost estimate provided by the Congressional Budget Office before it was included in the report.

Mr. Speaker, H.R. 11003 authorizes the appropriation of such sums as may be necessary each year beginning in fiscal year 1979 for expenses of the White House, the Executive Residence, the Office of the Vice President, the Domestic Policy Staff, and the Office of Administration. Included within this authorization are specified maximum levels of employment and rates of compensation for employees grade GS–18 and above. The bill also authorizes the Comptroller General to verify the validity of certain expenditures of the President and Vice President, and report his findings to the Congress.

This bill for the first time would provide a unified authorization for personnel and operations of the White House Office, the Executive Residence at the White House, the executive duties and responsibilities of the office of the Vice President, the Domestic Policy Staff and the Office of Administration.

Heretofore, language authorizing personnel and administrative expenses for these White House units has been included in annual appropriation acts. The inclusion of such authorizing language in an appropriation act subjects the entire appropriation act to a point of order on the floor under House Rule XXI, which states in part that no appropriation shall be reported in any general appropriation bill for any expenditure not previously authorized by law.

Mr. Speaker, under present practice, each President has requested and usually received whatever funds he feels are necessary to employ however many individuals he deems appropriate at rates of pay he alone determines.

While the bill retains the President's ability to hire unlimited staff at certain salary levels, the bill does establish limits on the numbers of individuals who can be employed at the highest staff levels. Under the bill, the President is authorized to appoint and fix the pay of not more than 25 employees at rates of pay not to exceed the rate of basic then currently paid for level II of the executive schedule; 25 employees at rates not to exceed level III of the executive schedule; and 50 employees at rates not to exceed the maximum rate of basic pay for GS–18 of the general schedule.

These provisions are simply ceilings on the number of employees at these levels that the President is authorized to employ and does not represent an increase in White House personnel at these levels being requested for fiscal year 1979.

Mr. Speaker, H.R. 11003 was ordered reported by the committee on March 8, 1978, by unanimous voice vote. The bill was brought to the floor under suspension of the rules on April 4, 1978, and failed to obtain the two-thirds majority for passage.

Mr. Speaker, I request that we adopt House Resolution 1127 so that we may proceed to the consideration of the bill.

Mr. ANDERSON of Illinois. Mr. Speaker, I yield myself as much time as I may use.

Mr. Speaker, House Resolution 1127 provides for the consideration of H.R. 11003, the White House personnel authorization. The rule provides for 1 hour of general debate followed by an open amendment process. The only waiver in the rule is of a technical nature; the rule waives clause 7 of House rule 13 which requires a committee cost estimate in each report. The report of the Post Office and Civil Service Committee on this bill does contain a cost estimate from the Congressional Budget Office on pages 12 through 14 of the committee report, but there is no indication that this has been adopted as the committee's cost estimate. While this could be assumed, the Chair has ruled in the past that the committee must explicitly state this. So this waiver is necessary and I think it can be considered a technical waiver. The CBO estimate, by the way, is that this bill would cost an additional $48.7 million through fiscal year 1983.

Mr. Speaker, my colleagues will recall that this bill originally came up in the House on April 4 under suspension of the rules. It failed to receive the two-thirds majority vote necessary for passage under that procedure by 57 votes—207 to 188. While the bill did receive a simple majority, I think it failed the necessary two-thirds because Members were disturbed that such an important, and somewhat controversial bill was being brought up under that closed amendment procedure, with very limited debate. A number of Members did have serious amendments which they had wanted to offer. Under this rule they will now have that opportunity.

Mr. Speaker, I cannot let this moment pass without noting the irony in considering a bill to increase White House personnel and their salaries just 2 days after the President delivered his get-tough, anti-inflation speech. You will recall that in that speech the President said:

> The Federal Government must also act directly to moderate inflation,

And he went on to say:

> I am determined to take the lead in breaking the wage and price spiral by holding Federal pay increases down.

The President pledged to put a 5.5 percent cap on Federal pay increases this year, and, moreover, to—

> freeze the pay of all executive appointees and members of my senior staff.

And yet here we have before us today a bill which would permit the President to almost double the number of executive level and supergrade aides on his personal White House staff, from 55 to 100. It would also give the President open-ended authority to hire an unlimited number of consultants and borrow detailees from other agencies, and increase the executive and supergrade allotments for the Vice President, Domestic Policy Staff, and Office of Administration.

All this, keep in mind, being sponsored and pushed by a President who ran on the promise to reduce the size of the White House staff and to deimperialize the Presidency. All this from a President who just 2 days ago promised to take the lead and set the example in fighting inflation by freezing the White House staff. Oh, how quickly the spring thaw has come.

Oh, how quickly new bulbs are sprouting in the White House garden. One can almost hear the President singing those memorable lines from Gilbert and Sullivan's "Mikado": "The flowers that bloom in the spring, tra la, have nothing to do with the case."

Mr. Speaker, in the spirit of this beautiful springtime day I urge adoption of this rule so that the authors of this White House personnel authorization can explain and defend their blooming bill.

Mr. DERWINSKI. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Illinois.

Mr. DERWINSKI. Mr. Speaker, I am most impressed by the eloquence of my friend, the gentleman from Illinois (Mr. ANDERSON), and I take it he will remain on the floor so that those of us who are supporting this measure can convince him that he should act properly and follow us in voting for final passage of the bill.

Mr. ANDERSON of Illinois. Mr. Speaker, actually I had planned to have some color photographs taken amid the

splendor of the cherry blossoms on the Tidal Basin, but in view of the gentleman's request, I shall indeed remain in the Chamber.

Mr. Speaker, I have no further requests for time, and I reserve the balance of my time.

Mr. DODD. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I would not even begin to try to top the eloquence of the gentleman from Illinois (Mr. ANDERSON) and his blooming speech.

I would just like to point out that this particular bill will for the first time set levels. We have never had this in the past; we have always in the past had to deal with this matter under appropriations legislation. I think this is a good step forward, and I urge adoption of the rule and passage of the bill.

Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore (Mr. MURTHA). The question is on the resolution.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. ROUSSELOT. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 395, nays 1, present 1, not voting 37, as follows:

The Clerk announced the following pairs:

Mr. Foley with Mrs. Burke of California.
Mr. Teague with Mr. Krueger.
Mr. Dent with Mr. Howard.
Mr. Udall with Mr. de la Garza.
Mr. Murphy of New York with Mr. Rodino.
Mr. Thornton with Mr. Rahall.
Mr. Jones of North Carolina with Mr. Dingell.
Mr. Ambro with Mr. John Burton.
Mrs. Meyner with Mr. Ashley.
Mr. Van Deerlin with Mr. Roncalio.
Mr. Baucus with Mr. Del Clawson.
Mr. Tucker with Mrs. Heckler.
Mr. Whitley with Mr. Pursell.
Mrs. Spellman with Mr. Sarasin.
Mr. Breaux with Mr. Crane.
Mr. Holland with Mr. Thone.
Mr. Jenkins with Mr. Railsback.
Mr. Meeds with Mr. Runnels.

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

Mrs. SCHROEDER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11003) to clarify the authority for employment of personnel in the White House Office and the Executive residence at the White House, to clarify the authority for employment of personnel by the President to meet unanticipated needs, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentlewoman from Colorado.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 11003, with Mr. NATCHER in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentlewoman from Colorado (Mrs. SCHROEDER) will be recognized for 30 minutes and the gentleman from Illinois (Mr. DERWINSKI) will be recognized for 30 minutes.

The Chair at this time recognizes the gentlewoman from Colorado (Mrs. SCHROEDER).

Mrs. SCHROEDER. Mr. Chairman, I really feel this is a little bit of déjà vu, that we were just here before, but in the springtime madness let me deal with some of the criticism of this bill that we heard last week when it was under the suspension of rules.

Mr. Chairman, H.R. 11003 amends various provisions of title 3, United States Code, which provide staff assistance to the President. The provisions are quite outdated. They now only permit the President 14 assistants.

Much of the criticism we noted last week under suspension of the rules was

based upon an unfounded presumption that H.R. 11003 would double high level White House Office staff. The bill contains authorization for 50 executive level and 50 supergrade employees when there are now 25 executive level and 30 supergrade employees at the White House Office. But there are authorization levels, not appropriation levels, in a permanent, not a year-to-year authorization bill.

Right now, the President could take the $18 million he has and by dividing it up differently, under his lump sum appropriation, hire 360 employees at $50,000 per year, or executive level. I fail to see how placing a lid well below his present opportunity level is going to promote any more than what he is doing now. Indeed the President's 1979 fiscal year budget request comes in at a quiet similar level to last year's.

Presidents have for years employed more than 14 assistants and have for years obtained authority for such hiring through legislative language in annual appropriation acts. However, any such language in an appropriation act is subject to a point of order on the floor of the House. Rule XXI, clause 2, provides that no appropriation shall be reported in any general appropriation for any expenditure which is not previously authorized by law. In recent years, points of order have been offered on the House floor. Although the Senate has restored the funds, and the funds have been retained through conference committee, less accommodating action by the Senate would leave a President with little or no staff.

H.R. 11003 is one sense a housekeeping measure. It will permit the House once again properly to consider appropriations for White House staff, within the limits it authorizes. All of my colleagues on the committees with legislative jurisdiction should have a good idea of what it contains since they all from time to time have acted on a similar bill for an agency within their jurisdiction.

Mr. Chairman, because H.R. 11003 does not deal with any old entity in the executive branch, my colleagues must consider the implications in the bill beyond its neatening up of the legislative process.

An authorization bill, much more so than an appropriation bill, establishes mechanisms for control and accountability. Certain provisions of H.R. 11003 will impose upon the President standards of reporting on his staff which have never before existed. New section 113, for example, will require the President to report to Congress on his employment of experts and consultants and long-term detailees from other agencies. Other provisions limit the amounts he may pay employees. Another section requires him to report on expenditures from his unanticipated needs funds. These provisions are all limitations upon the President's discretion to hire and spend. Right now, there are no effective limits on what he can pay employees, or how many employees he can employ. He does not have to tell anyone about his expert and consultant hiring. He can borrow, without paying for them, any number of detailees he might wish, and there is no oversight on his expense accounts. The bill changes all of this.

The central issue before us, in this regard, is whether the Congress should acquiesce in, and by implication, approve of, having Presidents who are unaccountable for their funds and their close staff. To oppose this bill is to oppose placing limitations upon the President's staff and to ignore the duty and power of Congress under article II, section 2, clause 2, of the Constitution to provide from time to time positions in the executive branch. This provision is one of the tensions which the Founders of our Nation put into the structure of the Federal Government. It must not be compromised by our inaction. It must be conscientiously exercised.

I believe that the provisions of H.R. 11003 are an appropriate exercise of this responsibility. Very simply, the bill places permanent limitations upon the President as to the taking of certain actions which have in the past been subject to abuse. Any employment of persons for unlawful activities, or personal use of Presidential funds would be subject to oversight. Moreover, Presidents will not be able to hide the true size of their staffs through the use of detailees, experts, and consultants. They will show up on the White House books.

The controls placed upon the President do not, however, represent a blunderbuss approach. The committee bill does not burden the President with writing us a letter every time he hires or fires an employee. It permits him to hire whom he wishes, and it permits, within generous boundaries, good wages to be paid. In essence, it places upon the President about the same criteria as we ourselves have for our own congressional staffs. Its system of controls on executive level and supergrade employees, with the numbers of lower level employees to be set by appropriations, is quite similar (with the exception that all the employees are statutorily excluded from the civil service appointment and compensation laws) to those which an executive branch agency or departmental head must contend. Consequently, there is sufficient leeway in the bill for any President in the foreseeable future to have effective help.

Mr. Chairman, I will offer only one further note on this bill. President Carter has personally reviewed it and fully supports it. It has taken a year of hearings, discussions, and drafting to develop H. R. 11003. I believe that the work which has gone into this bill has paid off in an effective and comprehensive bill.

I urge my colleagues to support H.R. 11003.

Mr. Chairman, I first want to yield to the gentleman from Virginia (Mr. HARRIS) who has been very interested in this bill and who is one of the originators of the bill and who has worked very hard on the legislation.

Mr. BAUMAN. Mr. Chairman, I wonder if the gentlewoman from Colorado (Mrs. SCHROEDER) would yield to me first before yielding to the gentleman from Virginia (Mr. HARRIS) so that I might ask the gentlewoman a few questions?

Mrs. SCHROEDER. Mr. Chairman, I would be delighted to yield to the gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. Mr. Chairman, I thank the gentlewoman for yielding to me. Let me say that, first, I have read over the hearings on this bill held last year and this year and also the committee report, and have read the brief debate that we held last week and I still find it difficult to find the exact number of persons who are on the current White House staff including consultants, detailees, supergrades, and so on. I know that there were in excess of 500, according to the hearings, under President Ford, and under the current administration it is claimed there are 300 and some, but I do not think that takes care of those who were transferred away to the other offices but are still available to the White House. So I would ask the gentlewoman from Colorado (Mrs. SCHROEDER) how many actual employees of all types on the Government payroll are working for the White House now.

Mrs. SCHROEDER. If the gentleman from Maryland (Mr. BAUMAN) will look at part II of the hearings, on page 27 we have broken down the detailees from May 1, 1977, to February 1, 1978, and there were 44 people who were there for 1 month or less up to 1 person who was there for 9 months but less than 10 months.

If the gentleman would like, I will be glad to show it to him.

Also on page 50 we talk about the Office of the White House, the Office of Management and Budget, and the White House Office, and we indicate 3 in the Office of the Vice President, 139 in the Office of Management and Budget, and 134 in the Office of the White House.

I think the problem is, and the gentleman has put his finger on it, it is just like if we tried to compare my staff and the gentleman's staff. Each President has their own way of doing things, putting different labels on things and rearranging their offices, so that we want to be sure that we are not comparing oranges and apples and I believe this bill will try to get us to the point where it will be much easier to make comparisons. I also believe that all of us are a little bit demagogic about this and are playing politics on each side, and trying to make the other party look like their President had less employees and the other President had more employees, and so forth and so on.

I will be happy to show the gentleman these reports. This is about the people that we could break out on the staff all told that we have at the current time.

Mr. Chairman, I now yield to the gentleman from Virginia (Mr. HARRIS).

Mr. HARRIS. Mr. Chairman, the House today has a historic opportunity to place in law for the first time real controls on top-level staffing in the White House and to reaffirm our cabinet form of Government.

H.R. 11003 has three major provisions:

First, it places numerical ceilings on the number of top-level officials, exec-

utive levels and supergrade, on the White House staff;

Second, it requires the White House to reimburse agencies that detail employees to the White House, closing a funnel that could lead to adding staff out of funds other than those appropriated for the White House; and

Third, it requires full reports to Congress on the number and cost of detailees and consultants in the White House.

NOT A STAFFING INCREASE

There has unfortunately been some misunderstanding in the House on the issue of whether the bill increases the White House staff. The answer is no. The bill authorizes top limits; the current law limit is 14, dating back to 1939. Congress has over the years been routinely appropriating funds for the White House staff and operations without a sufficient authorization. Such a practice is in violation of our rules which provide that no appropriation for any expenditure not authorized in law can be in order.

Thus, effectively, there has been no staffing limit. We put in law executive level and supergrade staff limits for all other Federal agencies. We should do so for the White House and stop ignoring the defects in current law and abrogating our own rules.

The White House, in testimony and other communications with our committee, has advised us that there are no plans to increase staff in the units covered by the bill. In fact, there has been a dramatic 28 percent cut in the number of White House staffers and the House has already in essence approved this by approving the reorganization of the Executive Office of the President on October 14, 1977 when we approved House Resolution 688. I applaud the President for this cutback and for carrying out a campaign promise he made to the American people.

At this point, I would like to share with my colleagues a table showing staffing for the President since 1934, which will place this bill in its proper perspective.

WHITE HOUSE STAFF, 1934 TO PRESENT

| Fiscal year | Total [1] | Detailed employees [2] | Real total |
|---|---|---|---|
| 1934 | 45 | 120 | 165 |
| 1935 | 45 | 127 | 172 |
| 1936 | 45 | 115 | 160 |
| 1937 | 45 | 112 | 157 |
| 1938 | 45 | 119 | 164 |
| 1939 | 45 | 112 | 157 |
| 1940 | 63 | 114 | 177 |
| 1941 | 62 | 117 | 179 |
| 1942 | 47 | 137 | 184 |
| 1943 | 46 | 148 | 194 |
| 1944 | 47 | 145 | 192 |
| 1945 | 48 | 167 | 215 |
| 1946 | 51 | 162 | 213 |
| 1947 | 190 | 27 | 217 |
| 1948 | 245 | 23 | 268 |
| 1949 | 220 | 26 | 246 |
| 1950 | 223 | 25 | 248 |
| 1951 | 257 | 40 | 297 |
| 1952 | 252 | 31 | 283 |
| 1953 | 262 | 28 | 290 |
| 1954 | 250 | 23 | 273 |
| 1955 | 272 | 41 | 300 |
| 1956 | 351 | 59 | 392 |
| 1957 | 364 | 59 | 423 |
| 1958 | 352 | 51 | 403 |
| 1959 | 354 | 31 | 385 |
| 1960 | 355 | 33 | 388 |
| 1961 | 342 | 134 | 476 |
| 1962 | 309 | 123 | 432 |
| 1963 | 318 | 111 | 429 |
| 1964 | 306 | 125 | 431 |
| 1965 | 294 | 154 | 445 |
| 1966 | 256 | 219 | 478 |
| 1967 | 251 | 246 | 497 |
| 1968 | 250 | 206 | 456 |
| 1969 | 314 | 232 | 546 |
| 1970 | 345 | 287 | 632 |
| 1971 | 555 | 17 | 572 |
| 1972 | 550 | 34 | 584 |
| 1973 | 496 | 24 | 520 |
| 1974 | 506 | 47 | 553 |
| 1975 | 533 | 27 | 560 |
| 1976 | 474 | 25 | 499 |
| 1977 | 446 | 17 | 463 |
| 1978 | 351 | [3] 10 | [3] 361 |

[1] Total employees includes full-time employees and special projects employees. Full-time employees are the average number of employees as printed in the actual budgets for 1934 through 1962.
[2] Detailed employees are as of June 30 of each year.
[3] As of Mar. 1, 1978.

Finally on the question of a staffing increase, I would remind my colleagues that authorization measures set outside, upper limits. Appropriations actually determine number of staffers. The Treasury-Postal Service-General Government Appropriations Subcommittee, chaired by my distinguished colleague from Oklahoma, Mr. STEED, gives very close scrutiny to staffing patterns. And I am sure they will continue to do so. And we, through our votes on appropriations can continue to exercise our judgment on whatever staff level we think is appropriate. Appropriations measures in reality are the final controls.

COST INCREASES NOT INEVITABLE OR MANDATED

The cost estimates in the committee report, prepared by the Congressional Budget Office, warrant some explanation. The cost estimate for 1979 is $29.5 million for current staff levels in all five units. The comparable 1979 budget request is $31.7 million. CBO has also provided other estimates to show what cost increases would occur if ond only if staffing levels were upped to the maximum limits. But again, I repeat, the administration has no plans to increase to these upper limits.

Thus, a vote for this bill is not a vote to increase the White House staff. It is not a vote to increase White House spending. It is a government reform vote, going to the very fundamental principles of our form of government, reaffirming our Cabinet Government.

A TOUGHER BILL THAN PREVIOUS ONES

It has also been alleged that H.R. 11003 is weaker than White House authorization bills considered by Congress in the past. On the contrary, it is a tougher bill. Here are a few examples. In the last Congress, H.R. 6706 authorized 65 executive level positions for the President; H.R. 11003 authorizes 50; H.R. 6706 authorized 7 supergrades for the Vice President; this bill authorizes 3. For the Domestic Council, H.R. 6706, authorized 7 executive level positions; this bill authorizes 6.

Importantly, H.R. 11003 has a tougher requirement on the reimbursal of detailed employees by requiring reimbursal for all detailees who work in these units, out of their own agency, for a cumulative period of 180 days. H.R. 6706 in the last Congress required reimbursal for detailees who performed full-time continuing duty for any period over 6 months. This meant that employees could "go in and out" indefinitely and the White House or other units could avoid reimbursing the agencies. We have closed a real loophole. Finally, H.R. 11003 has a tougher requirement regarding GAO certification of expenditures. GAO must certify this certification to Congress; the previous bill did not have this requirement.

A 6-YEAR EFFORT

H.R. 11003 represents over 6 years of effort which I would like to summarize at this point. The Post Office and Civil Service Committee's interest in White House staffing patterns began in the early 1970's and resulted in a 1972 report prepared by Congressman UDALL entitled, "A Report on the Growth of the Executive Office of the President, 1955–1973." This report notes that the Executive Office of the President was created by reorganization plan 1, April 25, 1939; the order implementing that plan stated:

In no event shall the Administrative Assistants [to the President] be interposed between the President and the head of any department or agency.

The Executive Office of the President was in no way to subordinate or usurp the Cabinet Departments. The report details the gradual growth in staffing over 18 years and notes that "over 50 percent of the increase in the Executive Office of the President has occurred since 1970."

The committee's research also revealed that the law is deficient and obsolete. Briefly, the "current" law, dating back to 1939, authorizing six administrative assistants and eight other secretaries or assistants to the President. There is no requirement to reimburse agencies for employees detailed to the White House and many expenses of the White House are not authorized in law.

93D AND 94TH CONGRESSES

In both the 93d and 94th Congresses, White House staffing legislation was considered. H.R. 14715 in 1974 died in a conference committee; H.R. 6706 in 1975 died in the Senate. In the 94th Congress, in the Post Office and Civil Service Committee and in the House I offered a number of amendments to strengthen the bill.

On July 17, 1975, I offered an amendment to H.R. 8597 which contained appropriations for the White House in an effort to curb nonreimbursable details to the White House; the amendment failed. However, on September 1, 1976, I offered an amendment to H.R. 14886, the Presidential Transition Act amendments, which required that all detailees be paid from transition funds. This amendment was adopted.

Additionally, on June 14, 1976, I raised a successful point of order against the 1977 White House appropriations because I believed the appropriations violated House rule XXI which provides that no appropriation for any expenditure not authorized in law can be in order. Similarly, on June 8, 1977, I made another

successful point of order against the 1978 White House appropriation on the same ground. Both times, the Senate restored the funds. Clearly the rules of the House had been circumvented.

THE 95TH CONGRESS

Since we began the current Congress still without appropriate authorization in law, I introduced H.R. 6236 on April 19, 1977, after seeking the views of the administration. Hearings were held on April 26, 1977, and administration officials testified that they could not address the specific provisions of the bill until the President's reorganization of the Executive Office of the President was completed. A second hearing on my bill was held on September 3 1977. At this hearing, administration officials testified that a bill was being drafted. Reorganization plan No. 1 was approved by the House on October 14, 1977.

Over the next 5 months I and my fellow subcommittee members met numerous times with administration representatives and gradually developed H.R. 10657 which I introduced on January 31, 1978, cosponsored by Representatives UDALL, SCHROEDER, DERWINSKI, LEHMAN, SPELLMAN, and STEED. Hearings were held on this bill on February 7 and the administration testified, "President Carter strongly supports this White House Authorization Bill." The subcommitee approved the bill on a 6-to-1 vote on February 16, and reported a clean bill, H.R. 11003. The full committee ordered H.R. 11003 to be reported on March 8, 1978, by a unanimous voice vote.

In short, it has been a long, intense effort.

CONGRESS AND THE ADMINISTRATION HAVE NEGLECTED

The House of Representatives, despite several serious and notable attempts, has shirked its responsibilities. We have tolerated appropriation bill after appropriation bill without a legal authorization in place. I have and will continue to question the wisdom of spending public funds for purposes not specified in law. Clause 2 of House rule XXI prohibits legislation in appropriations bills. In this area, we have ducked our responsibility by approving spending measures without first determining with precision for what purposes these funds can be spent. I strongly believe it is wrong to write "blank checks" with taxpayers' money. The challenge here for Congress is one of legislative responsibility and integrity.

So today, this House and this administration are directly undertaking mutual responsibilities to get the central power base of our Government back on the right track.

WHO RUNS THE GOVERNMENT?

Mr. Chairman, my effort has not been a game of pointing a finger at any President or quibbling about numbers of staffers, be they 100 or 1,000. Staff growth is not inherently bad; as the problems of the seventies become more complex, surely staffing needs must adjust. The President needs flexibility. The fundamental point here is to make sure power is in the hands of accountable people: the Cabinet. Executive advisers and special assistants to the President have their proper advisory role. But our form of government does not vest in them unlimited powers. They are unelected and sometimes inaccessible. Quite simply, our Government should not be run by, and our President should not depend on, a "palace guard."

Centralized power in the hands of a few "anonymous" individuals is contrary to a democracy. This bill is a very fundamental policy measure reaching to the heart of our Government.

Mr. SYMMS. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Idaho.

Mr. SYMMS. I thank the gentleman for yielding.

My question is pertinent to the gentleman's comments with respect to the constitutionality of the separation of powers doctrine of this Government. In 1977 Mark Siegel was sent by the present Executive White House staff to North Carolina to set up a lobbying operation to lobby for the passage of a constitutional amendment in the North Carolina Legislature. I personally do not believe that anyone from the White House staff should be paid for by the taxpayers, authorized under the Executive White House budget, and then sent down to a State legislature to lobby for a constitutional amendment, no matter what the subject of the amendment is. I wonder if the gentleman would care to comment on that.

Mr. HARRIS. Mr. Chairman, I would be pleased to comment with regard to my colleague's question. This is exactly the type of situation that should receive proper overview by the committee that authorizes the staff. It is because we do not have an authorizing bill that we do not have the proper overview and these questions have not been properly explored. What we have to do when this question is raised in the proper substantive committee is to ask what part of the White House is served, how do we justify this with regard to White House staffing. I think this bill is the first step that has to be taken if we are going to have the proper type of overview which my colleague has suggested.

Mr. SYMMS. Mr. Chairman, I thank the gentleman very much.

Mr. DERWINSKI. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, some 9 days ago when this legislation was called up under suspension of the rules it created a good deal of frustration because of the inability of Members to offer amendments and a fair amount of rhetoric resulted.

As a cosponsor of H.R. 11003 I urge my colleagues on both sides of the aisle to view this legislation in a nonpartisan and objective manner.

Granted there were some thinly veiled partisan objection when in the 94th Congress attempts were made to legislate White House staffing authority under the Ford administration. But I suggest to you that we lay those feelings aside and proceed in our most unbiased manner to provide the necessary staffing authorization for the most important governmental executive office in the world.

I think it is imperative that we give the President, regardless of his party affiliation, sufficient flexibility in determining what his needs are in the way of White House staff. Given the awesome responsibilities of the office, a President has to have considerable leeway in selecting and compensating responsible staff personnel.

I know the temptation is great to retaliate in kind against our friends on the other side of the aisle for their partisan opposition to the modest increase in staff request by President Ford. But it is my hope we will use this opportunity to show the public we can react in a positive, statesman-like manner.

Three years ago, when we considered similar legislation under a Republican administration, it was my position that the President should use full authority—and the responsibility and flexibility—to determine the nature of his White House staff.

It is heartening to see many Members on the other side of the aisle swinging to this philosophy and relaxing their legislative grip on the White House staff.

I hope we will not engage in quibbling over the size of the President's staff, for I believe it is pointless. H.R. 11003, as far as it goes, provides a good basic foundation for White House staffing. I urge the House to pass this legislation so that we can once and for all cease the charade of raising and then waiving points of order against White House appropriations.

H.R. 11003 deals with the White House staffing issue in a practical manner and deserves our approval.

Mr. Chairman, I now yield 5 minutes to the gentleman from New York (Mr. GILMAN).

Mr. GILMAN. Mr. Chairman, I am pleased that H.R. 11003, the White House authorization bill, is back on the House floor under an open rule that permits all Members the opportunity to offer perfecting amendments to this important legislation.

I intend at the conclusion of all debate on this measure to offer two amendments to strengthen the accountability of the use of White House staff.

I believe that these two amendments are urgently needed if Congress is to undertake proper oversight on the utilization, the employment and the pay of the White House staff.

My amendments will do two things: First, they will require the President to transmit annual reports to the Congress disclosing all vital staffing information, and secondly, will limit the permanent statutory authorization contained in this bill to a straight 4-year authorization, beginning October 1, 1978.

Mr. Chairman, I urge my colleagues to support these strengthening amendments.

Mrs. SCHROEDER. Mr. Chairman, it is with great pleasure that I now introduce the chairman of the Subcommittee on Appropriations, the gentleman from Oklahoma (Mr. STEED), who probably has lived with this more than any person

here and has been very supportive of what we have been trying to do.

I yield such time as he may consume to the gentleman from Oklahoma (Mr. STEED).

Mr. STEED. Mr. Chairman, I just do not believe any Member of this body is as happy to have this bill here as I am, because I have had to live with the lack of it for the last 18 years. In the last few years it has become a very difficult burden for our subcommittee to try to cope with this part of our bill.

As of now, without this bill and under the House rules, we have for the last 4 years operated with this situation. We have had absolutely no power at all to deal with the work force of the President of the United States. We have been at the mercy of what the other body would put in the bill, and then we could bring whatever its decision was back in disagreement and let the House vote on it. The only way we can escape from that situation is to enact this legislation today.

Let me explain to the Members what this bill does. This bill puts into law all those things that have through long experience been determined to be necessary for the President to carry out the most difficult job on the face of the Earth. I think the House should be reminded again that a large portion of the work the President has to perform and the reason he needs the manpower that is contained in this authorization comes about because the Congress of the United States has enacted 5,100 bills-plus which have language in them saying, "The President shall do" certain things.

So when we constantly place more and more work upon this office, it is totally incomprehensible to me that any Member of this body would then quibble about giving the President whatever manpower he needs to carry out those mandates.

The figures contained in this bill are limitations. As for any Members who have any concern about the numbers of people involved, let me assure them that when the appropriation bill comes on the floor, it will be subject to amendment, and if any Member thinks that the sums are too large or the numbers are too large, that Member will have a full and free opportunity, just as with all other items, to offer amendments to change them.

So if there is anything that any Member would reasonably want to say or do about the work force of the President of the United States, there is nothing in this bill that would take away that opportunity. As a matter of fact, this would be the first time that the Members of this House will have had the authority or an opportunity to make their wishes known in this field.

We are faced here with a very important issue. This is where the comity between the legislative and administrative branches of our Government comes into focus, and it is inconceivable to me that this House would want to belittle and demean itself by denying the President of the United States those tools of office which are necessary and which affect the lives of all the American people, as well as in many ways the affairs of people throughout the entire world.

So, Mr. Chairman, I do not think that we are so concerned here with numbers as we are making sure that the man who fills this awful responsibility has all the tools he needs to carry out these responsibilities.

Mr. HARRIS. Mr. Chairman, will my colleague, the gentleman from Oklahoma, yield?

Mr. STEED. I yield to the gentleman from Virginia, a member of the committee.

Mr. HARRIS. Mr. Chairman, if I may say this to my colleague, I want to express my appreciation for his patience and diligence in this matter. It is a most important constitutional question.

The problem with regard to the White House staffing has been a real problem for the past generation, not just for one term or another. I know something about the effort the gentleman from Oklahoma has made with respect to this matter. I know of the patience he has had to exercise on the floor.

I know of the hard work and the special efforts the gentleman from Oklahoma (Mr. STEED) has exerted to get this type of authorization bill to the floor, and I would like to say bluntly and publicly and for the record that this bill would not be here if it were not for the gentleman's diligence. This bill could not be passed if it were not for the firm support the gentleman from Oklahoma has given it.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. STEED. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, I appreciate the gentleman's yielding.

I, too, would like to express my appreciation to the gentleman from Oklahoma (Mr. STEED) for his patience as the chairman of the Subcommittee on Treasury-Postal Service-General Government Committee on Appropriations. The gentleman has had to deal with this problem continually over many years without really having any legislative direction from the House.

I have been one of those Members who have been critical of the Committee on Appropriations for being lenient many times on what I thought were unnecessary appropriations for salaries in the White House. This was especially true, as far as the gentleman's own party is concerned, during the Nixon and Ford years. There was great criticism over how many people were or were not there, and the gentleman from Oklahoma was very patient in trying to provide that delicate balance in the area of what control this House would have in determining the number of people authorized.

I would like to ask a question of the gentleman, because I know he has been very close to this subject.

In this bill we raise the number of executive level positions from 25 to 50, which is a fairly substantial increase. Would the gentleman comment on that and tell us, on the basis of his experience, whether that kind of an increase is needed?

We had great criticism from the gentleman's side of the aisle, as we know, during the Ford and Nixon years that they had ballooned the number of people in these higher positions in the White House.

Does the gentleman feel, on the basis of his years of observation, that those kinds of numbers are needed?

Mr. STEED. That is more than is currently being requested with the bill now before my subcommittee. But in the spread of the thing, there can be times when this many could be usefully used, and there are other times when a considerably smaller number could be used. It does fluctuate. If they do not have this authority, they would be forced under certain crisis conditions to go into the departments and borrow people in the departments to fill in. So I think you do not really save anything by curtailing this particular part of the President's staffing, because if there is any place on Earth where the top experts are needed, it is certainly here. This is, I think, the very inner part of the heart of the Government, to have the President to have this particular group of helpers.

Mr. ROUSSELOT. As the gentleman knows, there was a substantial amount of discussion on this issue every time the appropriation came up. And I do realize that many other Presidents have gone to the various agencies and then just had the desired personnel detailed to him for 2, 3, or 4 months. And that, as the gentleman has explained, is the issue which has been circumvented.

Mr. STEED. As the gentleman knows, all these years I have worked with Presidents of both parties, and I have always taken the same attitude toward all of them. If they needed this help, I thought it was incumbent upon us to help them get it. I have never known of a President to misinform us or to ask us for any consideration that was not justified. But we were always in a situation where, there being no meets and bounds and no authorization law, there was no way to have a starting point. This bill will give us that.

For the information of the gentleman, who intends to offer an amendment, I assure him that, with or without his amendment, all of the things that it will provide for will have to be done, and they are now being done before the Committee on Appropriations.

On this numbers game they are talking about, we are now in the process of trying to put in our hearing this year and in our report the information that so many Members around here want. And I think the present incumbent in the White House brought most of that on himself. We are just going to let the record speak for itself, whatever it is. When the bill comes on the floor for the appropriation, I am sure all of the information will be made available to us.

Mr. ROUSSELOT. I appreciate that. That was the next point I was going to make. Our current President made this a major issue in his campaign. He kept talking about the fact that he intended to reduce the staff. And now we find, in

fact, that there has been an increase of one-third. It was not really the gentleman or me who raised this issue; it was the President himself, as a part of his campaign promise.

Mr. STEED. As part of the problem, each President does some shifting around.

Mr. ROUSSELOT. This is certainly a major shift.

Mr. STEED. Nomenclature changes somewhat, and right now we are trying to put the figures in the proper slots so that we can have a proper comparison. But the reorganization that has been going on down there right now, we are making rechecks on it before we mark up the bill so that we know exactly what we are doing and where the funds are going and how they compare with what was there before. So we have no intention of trying to do anything except to give the House all of the information that we can dig up. And we are having, I must say, the fullest cooperation downtown. We have always had it. We had it from President Nixon, we had it from President Ford, and we had it from President Johnson. That is not the problem.

The problem has been that there has been no law on which to make any determination. And this is why this bill today is so utterly important.

Mr. ROUSSELOT. Mr. Chairman, I will not belabor the point. I, too, want again to express my thanks to the gentleman from Oklahoma for his effort in trying to be fair on this issue with all Presidents. It is difficult because there is a division-of-power issue that is before us whenever we consider this.

The chairman of the Committee on Appropriations has always tried to deal with this matter very openly, very candidly.

Mr. Chairman, I am delighted to hear that this admiinstration has been more than helpful in trying to explain what they need by way of adequate personnel to carry out its functions.

Mr. SEIBERLING. Mr. Chairman, will the gentleman yield?

Mr. STEED. I yield to the gentleman from Ohio.

Mr. SEIBERLING. Mr. Chairman, I would like to commend the gentleman from Oklahoma (Mr. STEED) not only for what he has said, but to say that from my own experience I know that he has always approached this matter in a nonpartisan way.

When I was a relatively new Member of this House and he had an appropriation bill before us dealing with the Presidential staff—and I was not exactly enthusiastic about President Nixon for various reasons, and he and I got into a little off-the-record discussion of the subject—he took the position that the President of the United States should be given whatever he needs to do his job.

I know he was not exactly a fan of President Nixon, and yet he took the position, which I think is the only position that we should take as Members of Congress, that whatever the President says or does, and whether he says he even wants the people that we authorize, we should at least make sure that he has the tools. That is our obligation, to give him the tools; and then from that point on it is his responsibility.

Again, Mr. Chairman, I want to commend the gentleman from Oklahoma (Mr. STEED) for approaching this bill in the spirit of what is good for the country and not in a partisan spirit. I think we all owe him a debt of gratitude for that reason.

Mr. STEED. Mr. Chairman, I want to take this opportunity to say a word of commendation for the members of the subcommittee who have brought this bill here today. I personally know that the chairman and the ranking minority member and the gentleman from Virginia have done a tremendous job in bringing together all the points and all the issues and all the difficulties.

Mr. Chairman, I think they have done an outstanding job, and they have brought a very fine bill here today. I would certainly hope that the Members of this House would show their appreciation to the members of the subcommittee for having done such a difficult job and such an important job by supporting them today in the adoption of this bill.

Mr. ROUSSELOT. Mr. Chairman, I yield 5 minutes to the gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. Mr. Chairman, I asked a question earlier in this debate of the gentlewoman from Colorado (Mrs. SCHROEDER), and I did not receive an answer directly, nor have I received an answer in any of the subsequent debate that has occurred. How many people work at the White House?

So far as I can tell by reading from a memorandum which was prepared by the staff of the committee, there are now 662 employees at the White House, including the White House office, the Executive Residence, the Vice President's office, the Domestic Policy Staff and the Office of Administration.

Also, so far as I can tell from the hearings, reports and this memorandum, there are an unknown number of detailees working at the White House, in excess of 100. This is a sizable increase over the staff of former President Ford and former President Nixon during their administrations.

Mr. Chairman, in reading the hearings that were held on this legislation in 1977, I came across an interesting article which appeared in the New York Times on May 2, 1977, by Mr. William Safire, and from that I quote as follows:

> For over two years on the campaign trail, Mr. Carter railed at the swollen size of the White House staff. In his Feb. 2 fireside chat, he warmed our hearts with the report that "I am reducing the size of the White House staff by nearly one-third."
>
> The White House staff he inherited consisted of 510 people. Since his "nearly one-third" was translated into a directive ordering a 30 percent cut, the number—by his own announcement—should now be 357.
>
> Don't hold your breath. According to the White House press office, the size of the White House staff as of last week was not the targeted 357, not the Ford level of 510, but 608.

Mr. Chairman, I think that the White House has the same obligation to meet the standards of personnel requirements that any other agency has. I grant that it is a special situation, and I understand the need for flexibility.

I compliment the committee for their professed objective, but I have questions about whether their objective is being met by the pending legislation.

For instance, Mr. Chairman, we have the suggestion that instead of the present 55 supergrade and executive level employees, this legislation will create 100.

Now, the only comments that I have heard in the way of justification for that enormous increase in these high paid jobs at the White House is that from Mr. Hugh Carter—he of worm farm fame—that perhaps World War III might have come upon us and they might need the flexibility under those circumstances.

Yesterday's Washington Star carried a New York Times dispatch by Martin Tolchin, which I hope the committee members have read, because there he details specific plans to rearrange the White House staff considerably, and I assume from the gist of the story the plan is to increase the number of the top level aides; saying in essence that the White House now feels that it does not have enough help to do the job.

Well, if they need this, Congress ought to vote it for them. But I think they also ought to have to justify these added jobs. My concern is that in setting extremely high limits such as this bill sets—and indeed they are limits where none now exist—we may be setting them so high as to allow an open-ended invitation to the President and his staff to go literally hog wild in increasing jobs. The pending legislation authorizes a large amount of discretionary funds available to the President, and he could indeed use them to greatly increase his staff numbers.

I know there was a great deal of concern about the "imperial Presidency" under previous administrations. I and others offered similar amendments when our party's incumbents were in the White House, and I do not feel such amendments are necessarily partisan. All agencies ought to live within some restrictions and limitations.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Virginia.

Mr. HARRIS. Mr. Chairman, I wanted to help my colleague a little bit on the numbers he is referring to.

Mr. BAUMAN. I appreciate that.

Mr. HARRIS. The increase he talks about is simply not substantiated by the White House request for 1979. The 1979 request from the White House is for $16,907,000, and that compares to $17,162,000 which was requested and actually appropriated in 1977. So this year's request is actually decreased from that of 2 years ago.

The CHAIRMAN. The time of the gentleman from Maryland has expired.

Mr. ROUSSELOT. Mr. Chairman, I yield 2 additional minutes to the gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. I might just at that point suggest to the gentleman that he would perhaps like to explain what I understand to be the Congressional Budget Office estimate that this bill now pending before us could, over a period of time, increase the White House budget to a level of about $39 million annually.

Mr. HARRIS. I think it is a complete misconception to indicate that and leave off the phrase, "If all these positions were filled."

Mr. BAUMAN. Yes, and that could happen.

Mr. HARRIS. The point the gentleman I am sure is cognizant of is that this does not fill new positions. This allows the Appropriations Committee to look at these positions in some sort of orderly fashion, and for the gentleman and our colleagues on the floor to pass on those positions in an appropriation bill. The 1979 request is for 351 personnel.

Mr. BAUMAN. Let me be more specific. If we take the unanticipated needs fund allowed the President in this bill together with the authorization for 100 supergrades—the highest level of pay in the Federal Government—it is conceivable that the President could use those funds to employ up to 100 supergrades. Is that not a possibility?

Mr. HARRIS. I do not want to correct the gentleman on this, but there is no authorization for 100 supergrades in this bill. The authorization is for 50 supergrades and 50 executive level positions.

Mr. BAUMAN. Excuse me, but rhetoric sometimes allows us to escape the point. On page 2 there are 100 executive level employees, one part of which is 50 supergrades.

Mr. HARRIS. We have two categories here with regard to top level staffing, and they are very important categories. We have executive level, which is executive level V through II. Then, that category of 50 requires that only 25 can be as high as executive level II. One can say that only 25 can be executive level II. One can put a cap on it, and they cannot take them and move them to executive level II.

I think, if my colleague would yield further, that between those two we have two categories, supergrades and executive level.

The CHAIRMAN. The time of the gentleman from Maryland has again expired.

Mr. ROUSSELOT. Mr. Chairman, I yield 2 additional minutes to the gentleman from Maryland.

Mr. BAUMAN. I thank the gentleman for yielding to me.

Mr. Chairman, I understand the sophisticated arguments presented by the gentleman from Virginia, and the distinctions that are made in job classifications. The fact of the matter is that for a taxpayer in Maryland or suburban Virginia, $57,000 or $42,000 annual salaries for Government employees are all enormous amounts of money, and our taxes must pay those amounts. Whether we call them executive level I, II, III, or supergrades, this bill indisputably increases the number of this type of employee from the current number authorized under law to 100.

The President, for all I know, based on the Star story yesterday, is going to use them all.

We have a constitutional responsibility. After all, article 1 of the Constitution created the Congress of the United States and article 2 is the one that set up the Presidency, and that ought to give us some hint of the way the Founders viewed this. So I do not think the President should be discomforted if the Congress tries to cut down on White House spending. I will offer such an amendment to reduce the executive level of spending for these employees.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, the gentleman from Virginia says we are only authorizing and we do not necessarily have to fill the positions, but tell me any agency of the Government, including the White House, that does not take full advantage of any allowance the Congress gives them. That occurs very seldom, as the gentleman knows from being on this committee. I am not saying they always do, but that they generally do it.

Another point is that this President has said he was going to reduce the White House staff, but he is doing the opposite. However, that should not be a surprise to those of us who have realized that he is not keeping other promises either.

Mr. BAUMAN. The old siren song that it is only an authorization and not an appropriation is being repeated here, but that theme is the rock on which the balanced budget usually founders. That expenditures rise to meet income is one theory, and that expenditures rise to fill the authorizations is a proven theory.

Mr. ROUSSELOT. If the gentleman will yield further, I believe that we ought to keep the authorizations down to the level we consider appropriate for actual appropriations. The administration says "give us the authorization but we will not use it." I would remind Members that is what President Nixon said about wage and price controls, but he used them.

Mrs. SCHROEDER. Mr. Chairman, I have the great and distinguished honor of yielding now to a very famous author of a very distinguished bill around this House, the gentleman from California (Mr. KREBS).

Mr. KREBS. I thank the gentlewoman from Colorado, the chairman, for yielding.

Mr. Chairman, I would like to point out to the distinguished chairwoman of the subcommittee that I would just as well forget about the raisin bill, at least for the next 24 hours.

Mr. Chairman, I urge this committee to approve this bill. I voted against this bill the last time around when it came up under a suspension of the rules because I just did not feel it should have come up under suspension. However, on the substantive merits of the bill, I believe this bill would for the first time give us an opportunity in a business-like fashion to make decisions on White House staffing, a decisionmaking process that in the past gave those who were so inclined an opportunity to engage in legislative mischief making.

I urge approval of this bill.

Mr. BRINKLEY. Mr. Chairman, will the gentleman yield?

Mr. KREBS. I yield to the gentleman from Georgia.

Mr. BRINKLEY. Mr. Chairman, I thank the gentleman for yielding to me. I appreciate the remarks made by the gentleman from California (Mr. KREBS). I believe he has hit upon an essential point. I believe that this legislation will provide the President with the tools he will need. It also provides a maximum which will enable the White House to address itself to the enormous administrative work that it must do and for which it is responsible.

I wish to support the legislation. I thank the gentleman for his remarks and join him in them.

Mr. KREBS. Mr. Chairman, I thank the gentleman for the remarks he has made and I yield back the balance of my time.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. ROUSSELOT).

Mr. ROUSSELOT. Mr. Chairman, I yield 2 minutes to my distinguished colleague, the gentleman from California (Mr. DELLUMS).

Mr. DELLUMS. Mr. Chairman, I thank my distinguished colleague the gentleman from California (Mr. ROUSSELOT) for yielding to me in view of the fact that we do not have much time remaining on this side of the aisle.

Mr. Chairman, I would simply like to point out to my distinguished and very sophisticated colleague the gentleman from California (Mr. ROUSSELOT) that it would seem to me that he has been in political life much too long to believe in the promises made by politicians.

Mr. ROUSELOTT. The gentleman is right. I accept that.

Mr. DELLUMS. No. 2, since the gentleman has consistently raised the question of President Carter's promise to reduce his staff, I would also like to point out at this time that President Carter also promised to reduce the military budget by between $5 and $7 billion.

Mr. ROUSSELOT. I remember that also.

Mr. DELLUMS. However, once President Carter became President and gained experience he has announced he can only cut it by $2 billion and the gentleman said, "Aha, now that he has gained experience he has moved beyond that promise."

Mr. ROUSSELOT. I did not say anything about that. The gentleman never heard me talk about him that way on military defense. He cut it by $2 billion, he did all sorts of things that you have agreed to.

Mr. DELLUMS. I am simply pointing out that when he gained experience as the President he changed from his original promise to reduce the military budget by $7 billion, and many people on your side of the aisle who are making this argument now, you said he now has the benefit of experience.

Mr. ROUSSELOT. You have heard me complain about the military defense of our country.

Mr. DELLUMS. All right, let us get past that one.

Mr. ROUSSELOT. Yes, let us get to another area.

Mr. DELLUMS. The point is, no one who has not ascended to the high office of the Presidency except one who is the incumbent and has been reelected, understands the tremendous magnitude of what it takes to be the President of the United States.

Mr. ROUSSELOT. Amen.

Mr. DELLUMS. Will the gentleman agree with me on that?

Mr. ROUSSELOT. Certainly.

Mr. DELLUMS. Once a person becomes the President what happens is that through the rationale of logical reasoning based upon the experience that the President obtains he then moves from the campaign promises because they do not make that much sense. I believe we ought to be in a position to support the President because once he attains the experience it certainly is a clear indication that expanding his staff may be essential.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ROUSSELOT. Mr. Chairman, I yield 2 additional minutes to the gentleman from California (Mr. DELLUMS).

Mr. DELLUMS. Mr. Chairman, I thank the gentleman for yielding me the additional time.

Mr. Chairman, one last comment.

Mr. ROUSSELOT. Does the gentleman want me to respond to that?

Mr. DELLUMS. Yes.

Mr. ROUSSELOT. I believe he should keep his campaign promises if he really feels that that was a principle, or an idea whose time had come.

Now, what I was trying to say is that I admired him when he said that he was going to attempt to reduce the size and cost of Government, and especially the Federal bureaucracy. I believe that to be the issue that we have before us today. And I really sincerely believed he was going to do that, and I wanted to support him in that stand. I was merely saying that today he has surprised me because he has turned around on that one issue, an issue that he made a very big point out of during the campaign in various places around the country. Of course he has every right to reverse himself. I am not saying he does not have the right to reverse himself. I just think he made a mistake.

Mr. RHODES. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I will be glad to yield to my colleague the distinguished minority leader in one moment but first I wish to yield further to my distinguished colleague the gentleman from California (Mr. DELLUMS).

Mr. DELLUMS. Mr. Chairman, again I thank the gentleman for yielding to me. I would like to make just one comment and then I will yield to my colleague on this side of the aisle if I have the time.

Mr. Chairman, let me say that the fact of the matter is that there are many arguments that could be made for using the taxpayers' money to raise the staffs of our offices, say from a 50 people staff to a 70 staff, but, remember, this is one of the most powerful nations in the world, one that is faced with complex international and domestic issues that our Government must address. The executive branch of Government is an important part of that. I am sure the gentleman will stipulate to that.

Mr. ROUSSELOT. Yes.

Mr. DELLUMS. I think it is false economy to come to the floor of the Congress and talk about saving a few taxpayers' dollars on staff people when that should not be the principal question. The principal question cught to be, Can the President function in the rapidly changing, very insecure world that we live in? He ought to have the necessary staff to do his job. It is not a high principle to say, Reduce the staff. That has no intrinsic value, isolated from any of the other realities of life.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ROUSSELOT. I would be delighted to yield 1 additional minute to the gentleman from California (Mr. DELLUMS).

Mr. DELLUMS. I thank my distinguished colleague.

Mr. BRINKLEY. Mr. Chairman, will the gentleman yield?

Mr. RHODES. Mr. Chairman, will the gentleman yield?

Mr. DELLUMS. I yield to the gentleman from Georgia and then I will yield to the distinguished minority leader.

Mr. BRINKLEY. I thank the gentleman for yielding to me. The gentleman almost read my mind as I was going say that the issue before this Congress today is not what has transpired in the past, but the issue is what it will take over there to do a good, efficient job, one which we expect. Therefore, the issue is whether or not the slots which we are proposing are needed. We think they are, and we should address that head-on.

I think that when candidate Carter said he would reduce the bureaucracy, including the White House staff, it was a very valid goal. I think he intends to maintain that goal, but he must balance it against the actual work requirements. Just this morning it was mentioned at the leadership meeting that a White House deficiency in working with Congress was that of personnel.

Mr. DELLUMS. I agree with my colleague.

I now yield to the distinguished minority leader.

Mr. RHODES. I thank the gentleman from California.

I recall to the mind of the gentleman one of the most quoted political axioms. It is that every person elected to office should have two qualities. One is integrity, and the other is wisdom—the integrity to keep every promise that one makes, and the wisdom not to make all those foolish promises.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ROUSSELOT. I yield 2 minutes to my colleague from Arizona.

Mr. RHODES. Mr. Chairman, I suggest to my friend, the gentleman from California (Mr. DELLUMS) that if we were to follow the line that I think he is suggesting, then we would be saying to the American people that never again must we trust the campaign promises of anybody running for the office of President of the United States. I do not think the gentleman means that, but I am under the impression that the impression gained by the people is just as I stated.

Mr. DELLUMS. That is not the point I was making. The question of how large a staff should be at the White House to me is not a matter of high principle. It is a technical question. It is an administrative issue. It seems to me once one becomes the President, then one looks at the realities and the dynamics of the world we live in, and what he has to do, and develops his staff on the basis of that reality, not in some vacuum.

Mr. RHODES. Of course, the gentleman from California knows full well that the thing that the gentleman from California (Mr. ROUSSELOT) and I are trying to point out is that I think the people on the other side have adopted a double standard. I remember very well when President Ford's appropriation was up—his authorization bill. There were many people who thought that he was asking for much too much, and there were great cries for economy from the other side of the aisle. I think it is important that there be those cries of economy. I think that we should do our very best to make sure that any President operates efficiently and operates for as small an amount as he possibly can.

Mr. DELLUMS. Mr. Chairman, will the gentleman from Arizona yield briefly to me?

Mr. RHODES. I yield to the gentleman from California.

Mr. DELLUMS. I thank the gentleman for yielding.

I think the gentleman has raised a good point, because certainly when President Nixon and President Ford were in office, there were many of us on our side of the aisle who were rather skittish as a result of the Watergate scandal. I think that many of us, if we did vote that way, voted so because the vote was dictated by our skittishness with respect to the whole issue of a President trying to steal.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ROUSSELOT. I yield 1 additional minute to the distinguished minority leader.

Mr. RHODES. I might say to the gentleman from California (Mr. DELLUMS) his argument falls on rather deaf ears over here. I suppose that there are a lot of Republicans who are worried about the Marston case, the Lance case, and some other incidences we could mention, which would also bear on whether or not we want to take the Executive's absolute word.

Mr. SYMMS. Mr. Chairman, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from Idaho.

Mr. SYMMS. I thank the gentleman for yielding.

I think it should be repeated here that it was in February 1977 when President Carter went on national television with a fireside chat and told the American

people that he had reduced the White House staff by one-third. That was not candidate Carter.

Mr. RHODES. That is correct, and it was stated as a fact that there had been a certain percentage reduction which, if it ever occurred, I am at a loss to find.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from Virginia.

Mr. HARRIS. I thank the gentleman for yielding.

I would like to read from the Executive Office of the President Budget, page 63, under "The White House Office," the number of personnel and total number of permanent positions.

Mr. RHODES. Mr. Chairman, I yield to the gentleman from Virginia, but very reluctantly.

Mr. HARRIS. Mr. Chairman, I appreciate the courtesy of the minority leader. I was about to quote from page 63 of the White House Office, Executive Office of the President, on the total number of positions. The total number of positions in 1977, which is Mr. Ford's budget, was 485. That was actual.

The 1978 estimate is 351, and the 1979 estimate is 351.

Full-time equivalent of other positions is 15 in all 3 years.

The average paid employment was 446 in 1977 and 371 in 1978.

The 1979 estimate is 351.

The average GS grade was 8.35 in 1977 and 8.90 in 1978 and estimated at 8.90 in 1979.

The average GS salary is $15,000, $18,000, and $18,000, respectively, for all 3 years.

Mr. ROUSSELOT. Mr. Chairman, I yield myself 1 minute.

Mr. Chairman as the gentleman from Virginia knows, one of the reasons for those attractive figures is that in the early stages of this administration there was substantial detailing from other agencies, whereas President Ford was very up front with the number of people he had on the White House staff and, in many cases paid full-time salaries.

I think that is one reason for the necessity for this bill to put a better handle on identification of where the personnel are, where they are going to be, how many are being detailed. That is why I will support an amendment by my colleague, the gentleman from New York, which will require even greater accountability on this subject.

Mr. SYMMS. Mr Chairman, will the gentleman yield?

Mr. ROUSSELOT. I am delighted to yield to the champion of the farmer.

Mr. SYMMS. Mr. Chairman, this is one of the reasons I voted against the authorization bill, because I know that the White House dispatched under their executive appropriations bill a lobby team, if you will, to go to North Carolina to lobby for a constitutional amendment. This may be a way through the authorization bill that the Congress can direct the White House that we do want them to represent their staffing needs correctly.

Mr. ROUSSELOT. Mr. Chairman, that was not a constitutional amendment, but they made a constitutional effort on the way down.

Mr. SYMMS. I think we will make an effort to give the President some guidance and direction on the things he has to do.

Mr. ROUSSELOT. That sounds like a worthy amendment to me.

Mr. Chairman, I yield 2 minutes to the gentleman from California (Mr. GOLDWATER).

Mr. GOLDWATER. Mr. Chairman, I would rise in reluctant opposition to H.R. 11003, and find it incredible that the President strongly supports enactment of this legislation.

Not only has our President promised to reduce the White House staff by 30 percent if he were elected, but we now have a staff 30 percent larger than during the Ford administration. As of May 1977, the White House office had 565 people on the rolls, including detailees—people on the payroll of other agencies, but working at the White House. President Carter's explanation for his inflated staff was his enormous volume of mail, that required a temporary staff increase. However, of the approximate 129 detailees, only 31 are working in the mail room. What are the rest of these detailees doing?

Now President Carter wants more. If this bill passes, it would double the number of GS–16's at the White House and would cost the taxpayers $8.6 million a year. He would be able to employ an unlimited number of staffers below the GS–16 level, and borrow as many people from other agencies as he wants.

Tell it like it is, Mr. President, it is not the mail volume, but as your aide, Hugh Carter, Jr., so eloquently stated:

We wanted to have plenty of flexibility, in the event of an emergency like World War III or something.

Come to think of it, the way he is handling foreign policy, I can understand why he feels he needs to be prepared.

After the President's extremely tough anti-inflation speech the other day, I think the Congress owes it to the President by taking him seriously. And, even though he prepared his White House staff levels and budget requests before he decided what his policy would be on inflation, I think this is an excellent place to begin the war on inflation.

Mr. ROUSSELOT. Mr. Chairman, I yield back the balance of my time.

Mrs. SCHROEDER. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

H.R. 11003

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That (a) sections 105 and 106 of title 3, United States Code, are amended to read as follows:

"ASSISTANCE AND SERVICES FOR THE PRESIDENT

"SEC. 105. (a)(1) Subject to the provisions of paragraph (2) of this subsection, the President is authorized to appoint and fix the pay of employees in the White House Office without regard to any other provision of law regulating the employment or compensation of persons in the Government service. Employees so appointed shall perform such official duties as the President may prescribe.

"(2) The President may, under paragraph (1) of this subsection, appoint and fix the pay of not more than—

"(A) 25 employees at rates not to exceed the rate of basic pay then currently paid for level II of the Executive Schedule of section 5313 of title 5; and in addition

"(B) 25 employees at rates not to exceed the rate of basic pay then currently paid for level III of the Executive Schedule of section 5314 of title 5; and in addition

"(C) 50 employees at rates not to exceed the maximum rate of basic pay then currently paid for GS–18 of the General Schedule of section 5332 of title 5; and in addition

"(D) such number of other employees as he may determine to be appropriate at rates not to exceed the minimum rate of basic pay then currently paid for GS–16 of the General Schedule of section 5332 of title 5.

"(b)(1) Subject to the provisions of paragraph (2) of this subsection the President is authorized to appoint and fix the pay of employees in the Executive Residence at the White House without regard to any other provision of law regulating the employment or compensation of persons in the Government service. Employees so appointed shall perform such official duties as the President may prescribe.

"(2) The President may, under paragraph (1) of this subsection, appoint and fix the pay of not more than—

"(A) 3 employees at rates not to exceed the maximum rate of basic pay then currently paid for GS–18 of the General Schedule of section 5332 of title 5; and in addition

"(B) such number of other employees as he may determine to be appropriate at rates not to exceed the minimum rate of basic pay then currently paid for GS–16 of the General Schedule of section 5332 of title 5.

"(c) The President is authorized to procure for the White House Office and the Executive Residence at the White House, as provided in appropriation Acts, temporary or intermittant services of experts and consultants, as described in and in accordance with the first two sentences of section 3109 (b) of title 5—

"(1) in the case of the White House Office, at respective daily rates of pay for individuals which are not more than the daily equivalent of the rate of basic pay then currently paid for level II of the Executive Schedule of section 5313 of title 5; and

"(2) in the case of the Executive Residence, at respective daily rates of pay for individuals which are not more than the daily equivalent of the maximum rate of basic pay then currently paid for GS–18 of the General Schedule of section 5332 of title 5.

Notwithstanding such section 3109(b), temporary services of any expert or consultant described in such section 3109 (b) may be procured for a period in excess of one year if the President determines such procurement is necessary.

"(d) There are authorized to be appropriated each fiscal year to the President such sums as may be necessary for—

"(1) the care, maintenance, repair, alteration, refurnishing, improvement, air-conditioning, heating, and lighting (including electric power and fixtures) of the Executive Residence at the White House;

"(2) the official expenses of the White House Office;

"(3) the official entertainment expenses of the President;

"(4) the official entertainment expenses for allocation within the Executive Office of the President; and

"(5) the subsistence expenses of persons in the Government service while traveling on official business in connection with the travel of the President.

Sums appropriated under this subsection for expenses described in paragraphs (1), (3), and (5) may be expended as the President may determine, notwithstanding the provi-

sions of any other law. Such sums shall be accounted for solely on the certificate of the President.

"(e) Assistance and services authorized pursuant to this section to the President are authorized to be provided to the spouse of the President in connection with assistance provided by such spouse to the President in the discharge of the President's duties and responsibilities. If the President does not have a spouse, such assistance and services may be provided for such purposes to a member of the President's family whom the President designates.

"ASSISTANCE AND SERVICES FOR THE VICE PRESIDENT

"SEC. 106. (a) In order to enable the Vice President to provide assistance to the President in connection with the performance of of functions specially assigned to the Vice President by the President in the discharge of executive duties and responsibilities, the Vice President is authorized—

"(1) without regard to any other provision of law regulating the employment or compensation of persons in the Government service, to appoint and fix the pay of not more than—

"(A) 5 employees at rates not to exceed the rate of basic pay then currently paid for level II of the Executive Schedule of section 5313 of title 5; and in addition

"(B) 3 employees at rates not to exceed the rate of basic pay then currently paid for level III of the Executive Schedule of section 5314 of title 5; and in addition

"(C) 3 employees at rates not to exceed the maximum rate of basic pay then currently paid for GS–18 of the General Schedule of section 5332 of title 5; and in addition

"(D) such number of other employees as he may determine to be appropriate at rates not to exceed the minimum rate of basic pay then currently paid for GS–16 of the General Schedule of section 5332 of title 5; and

"(2) to procure, as provided in appropriation Acts, temporary or intermittent services of experts and consultants, as described in and in accordance with the first two sentences of section 3109(b) of title 5, at respective daily rates of pay for individuals which are not more than the daily equivalent of the rate of basic pay then currently paid for level II of the Executive Schedule of section 5313 of title 5.

Notwithstanding such section 3109(b), temporary services of any expert or consultant described in such section 3109(b) may be procured under paragraph (2) of this subsection for a period in excess of one year if the Vice President determines such procurement is necessary.

"(b) In order to carry out the executive duties and responsibilities referred to in subsection (a), there are authorized to be appropriated each fiscal year to the Vice President such sums as may be necessary for—

"(1) the official expenses of the Office of the Vice President;

"(2) the official entertainment expenses of the Vice President; and

"(3) the subsistence expenses of persons in the Government service while traveling on official business in connection with the travel of the Vice President.

Sums appropriated under this subsection for expenses described in paragraphs (2) and (3) may be expended as the Vice President may determine, notwithstanding the provisions of any other law. Such sums shall be accounted for solely on the certificate of the Vice President.

"(c) Assistance and services authorized pursuant to this section to the Vice President are authorized to be provided to the spouse of the Vice President in connection with assistance provided by such spouse to the Vice President in the discharge of the Vice President's executive duties and responsibilities. If the Vice President does not have a spouse, such assistance and services may be provided for such purposes to a member of the Vice President's family whom the Vice President designates.".

(b) The items relating to sections 105 and 106 in the table of sections at the beginning of chapter 2 of title 3, United States Code, are amended to read as follows:

"105. Assistance and services for the President.

"106. Assistance and services for the Vice President.".

Mrs. SCHROEDER (during the reading). Mr. Chairman, I ask unanimous consent that section 1 of the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentlewoman from Colorado?

There was no objection.

COMMITTEE AMENDMENTS

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

"Committee amendment: Page 5, strike out the period in line 3 and insert in lieu thereof the following: ", except that, with respect to such expenses, the Comptroller General may inspect all necessary books, documents, papers, and records relating to any such expenditures solely for the purpose of verifying that all such expenditures related to expenses in paragraphs (1), (3), or (5). The Comptroller General shall certify to Congress the fact of such verification, and shall report any such expenses not expended for such purpose.".

Mrs. SCHROEDER (during the reading). Mr. Chairman, I ask unanimous consent that both committee amendments be considered as read and printed in the RECORD, and that they be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentlewoman from Colorado?

There was no objection.

(The remaining committee amendment is as follows:)

Committee amendment: Page 7, strike out the period in line 1 and insert in lieu thereof the following: ", except that, with respect to such expenses, the Comptroller General may inspect all necessary books, documents, papers, and records relating to any such expenditures solely for the purpose of verifying that all such expenditures related to expenses in paragraphs (2) or (3). The Comptroller General shall certify to Congress the fact of such verification, and shall report any such expenses not expended for such purpose.".

Mrs. SCHROEDER. Mr. Chairman, let me give the Members a brief explanation of these two committee amendments.

These amendments basically came from the Committee on Government Operations, and the first amendment would allow the Inspector General to look at the expenditures for the care and maintenance of the Executive Residence of the White House, the official entertainment expenses of the President, and the Presidential staff travel expenses. This would be solely for the purpose of verifying the expenditures were properly within the three authorized categories.

The second committee amendment is identical to the first amendment, except it allows the GAO to look at the expenses for the Vice Presidential official entertainment expenses, staff travel expenses, and, again, it would require GAO verification.

Mr. Chairman, I urge that the committee adopt these committee amendments.

The CHAIRMAN. The question is on the committee amendments. The committee amendments were agreed to.

AMENDMENT OFFERED BY MR. BAUMAN

Mr. BAUMAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BAUMAN: On page 2, line 7, strike out the figure "25" and insert in lieu thereof "15";

On page 2, line 10, strike out the figure "25" and insert in lieu thereof "20"; and

On page 2, line 13, strike out the figure "50" and insert in lieu thereof "40".

Mr. BAUMAN. Mr. Chairman, this debate has centered around the need as expressed by Members on both sides of the aisle for legislation to limit the overall numbers of employees at the White House.

It has been made clear that this type of White House authorization bill has not been enacted for a number of years. In drawing up this legislation the committee decided that the proper number of the top level staff, highest paid grades at the White House should be set at 100.

Now, the President's staff members have protested that the likelihood of filling all these positions is very remote. But as I indicated, there is evidence in the press yesterday that still another major White House staff reorganization is about to take place.

So out of an abundance of caution my amendment would amend the section on page 2, lines 5 through 16, to reduce from 100 to 75 the total number of level II, level III, and GS–18 employees who would be authorized in this bill.

I think this is a modest suggestion in view of the fact that presently employees who fall into these categories at the White House, according to the White House itself, number 55. I draw the specific limitations on each of these levels so that no current employees would have to be dismissed or downgraded. I based the exact numbers on figures that were submitted by the White House staff to the committee as of February 1, 1979, for each one of these levels.

This is simply a modest attempt to draw a lower ceiling in the bill for these types of very highest paid employees in the White House. Nobody loses his job. The amendment is in keeping with what was referred to a moment ago as the need for fiscal restraint, to meet the inflationary problems that face the country, and provide a more realistic, I would suggest, level of employment.

So I hope that the committee will accept this amendment.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from California.

Mr. ROUSSELOT. I thank the gentleman for yielding.

Mr. Chairman, I am a member of this committee, and I really do not think, on the basis of any testimony that I have heard, that this amendment would do any great damage to the present White House structure and staff. Your amendment provides a reasonable limitation. If a problem developed with some type of an emergency, I am sure we could amend it in another bill. We always have a great number of bills coming out of our committee. So we could change these ceilings. I think the gentleman is absolutely correct. It will do nothing to stifle or stop whatever the President is now doing to appropriately staffing the upper levels of his assistants.

Mr. BAUMAN. It would, of course, permit leeway, based on February 1 figures of employees at these levels, so 20 new slots can still be filled. I am not sure what the emergency would be that would require even that many more.

Mr. ROUSSELOT. I think the gentleman heard the discussion and the colloquy I had with the gentleman from Oklahoma the chairman of the appropriate Subcommittee of Appropriations that, to the best of his knowledge, it would do no great harm to anything now being recommended in the Appropriations Committee.

Mr. BAUMAN. I understand that is correct.

Mr. ROUSSELOT. I support the amendment.

Mr. HARRIS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, as we look at numbers like this, I think we can realize how frankly foolish it would be if this committee does in fact get into a numbers game in regard to the White House staffing. It is absolutely true that the 25, 25, 50 figures in the bill now are not magic figures. They are caps, they are lids that we are trying to put on for the first time in modern history. They absolutely mean nothing more than the 15, 20, 40 do under the amendment. The only difference is that we are trying to define the numbers without the basis of knowledge and experience in the bill. I very much urge my colleagues to vote against this amendment and to go with the provisions in the committee bill so that the committee can in fact get a bill passed, get it signed by the President, begin its job of overview of the White House staffing, so that if in the future these numbers can and should be reduced and these numbers should be readjusted with regard to Executive level II, with regard to supergrades 16 through 18, or what have you, the committee can make proper adjustments. What we have here are broad caps on the type of personnel to be hired. I would hope that we would not have a process in this legislation where we play a numbers game.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from California.

Mr. ROUSSELOT. I thank the gentleman for yielding.

Mr. Chairman, I do not think my colleague from Maryland is trying to play a numbers game any more than we were when we guessed 100 in the bill. I would say that at no time has any President used this many numbers. Even at the highest point of the Nixon administration, they did not use this many numbers. So the 75 is not an unreasonable number, is not an unreasonable cap.

Mr. HARRIS. Mr. Chairman, I think it is important to note here that this bill was carefully developed through the subcommittee and the full committee process. Such amendments were not made there. I have the highest regard for my colleagues on the committee who did use the restraint necessary to keep from making this same kind of a numbers game. That is why we were able to develop and why I think we find such good legislation in the full committee and in the subcommittee. This is why I think it is very unfortunate if we begin playing this kind of numbers game on the floor. There is no way one can substantiate these kinds of figures. The existing staffing levels in the White House for these categories are a great deal lower than the caps we are putting on. We are not trying to staff the White House. That is the President's job. We are trying to put top limitations on it. That is what the bill does. If we start tinkering around with numbers, reducing it from 40 to 25 or 15, there is no way to justify those numbers. If in fact they wish to interpret caps as figures, they can do it without regard to what I think are the facts of the bill.

Mr. Chairman, what we should do is to maintain the theory of this bill, establish the overview of the committee, and make sure that we can get the information through proper reporting requirements and not begin playing games as to whether the number should be 25 or 15 or 30 or what have you, with such figures.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Maryland (Mr. BAUMAN).

The question was taken; and on a division (demanded by Mr. BAUMAN) there were—ayes 20, noes 27.

Mr. BAUMAN. Mr. Chairman, I demand a recorded vote, and pending that, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. Fifty-six Members are present, not a quorum.

The Chair announces that pursuant to clause 2, rule XXIII, he will vacate proceedings under the call when a quorum of the Committee appears.

PARLIAMENTARY INQUIRY

Mr. BAUMAN. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. BAUMAN. Mr. Chairman, would it be in order to ask unanimous consent to withdraw the point of no quorum?

The CHAIRMAN. The Chair will state that at this point that request would not be in order.

Mr. BAUMAN. I thank the Chair.

The CHAIRMAN. Members will record their presence by electronic device.

The call was taken by electronic device.

QUORUM CALL VACATED

The CHAIRMAN. One hundred Members have appeared. A quorum of the Committee of the Whole is present. Pursuant to clause 2, rule XXIII, further proceedings under the call shall be considered as vacated.

The Committee will resume its business.

RECORDED VOTE

The CHAIRMAN. The pending business is the request of the gentleman from Maryland (Mr. BAUMAN) for a recorded vote.

Does the gentleman insist upon his request?

Mr. BAUMAN. I do, Mr. Chairman.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 180, noes 215, not voting 39 as follows:

[Roll No. 219]

NOT VOTING—39

| | | |
|---|---|---|
| Baucus | Heckler | Runnels |
| Bonior | Holland | Santini |
| Breaux | Howard | Sarasin |
| Burke, Calif. | Jones, N.C. | Spellman |
| Butler | Krueger | Steed |
| Chappell | Leggett | Teague |
| Clawson, Del | Mattox | Thone |
| Conable | Meeds | Thornton |
| Cornwell | Metcalfe | Tucker |
| Crane | Murphy, N.Y. | Udall |
| Dent | Pease | Van Deerlin |
| Gammage | Pritchard | Whitley |
| Hawkins | Rodino | Young, Mo. |

The Clerk announced the following pairs:

On this vote:

Mr. Butler for, with Mr. Krueger against.

Mr. Del Clawson for, with Mr. Cornwell against.

Mr. Conable for, with Mrs. Burke of California against.

Mr. Sarasin for, with Mr. Breaux against.

Mr. Thone for, with Mr. Gammage against.

Mr. Crane for, with Mr. Baucus against.

Mr. DRINAN changed his vote from "aye" to "no."

So the amendment was rejected.

The result of the vote was announced as above recorded.

The CHAIRMAN. Are there additional amendments to section 1?

If not, the Clerk will read.

The Clerk read as follows:

SEC. 2. (a) Chapter 2 of title 3, United States Code, is amended by striking out section 107 and inserting in lieu thereof the following new sections:

"DOMESTIC POLICY STAFF AND OFFICE OF ADMINISTRATION; PERSONNEL

"SEC. 107. (a) In order to enable the Domestic Policy Staff to perform its functions, the President (or his designee) is authorized—

"(1) without regard to any other provision of law regulating the employment or compensation of persons in the Government service, to appoint and fix the pay of not more than—

"(A) 6 employees at rates not to exceed the rate of basic pay then currently paid for level III of the Executive Schedule of section 5314 of title 5; and in addition

"(B) 18 employees at rates not to exceed the maximum rate of basic pay then currently paid for GS–18 of the General Schedule of section 5332 of title 5; and in addition

"(C) such number of other employees as he may determine to be appropriate at rates not to exceed the minimum rate of basic pay then currently paid for GS–16 of the General Schedule of section 5332 of title 5; and

"(2) to procure, as provided in appropriation Acts, temporary or intermittent services of experts and consultants, as described in and in accordance with the first two sentences of section 3109(b) of title 5, at respective daily rates of pay for individuals which are not more than the daily equivalent of the rate of basic pay then currently paid for level III of the Executive Schedule of section 5314 of title 5.

"(b)(1) In order to enable the Office of Administration to perform its functions, the President (or his designee) is authorized—

"(A) without regard to such other provisions of law as the President may specify which regulate the employment and compensation of persons in the Government Service, to appoint and fix the pay of not more than—

"(i) 5 employees at rates not to exceed the rate of basic pay then currently paid for level III of the Executive Schedule of section 5314 of title 5; and in addition

"(ii) 5 employees at rates not to exceed the maximum rate of basic pay then currently paid for GS–18 of the General Schedule of section 5332 of title 5; and

"(B) to procure, as provided in appropriation Acts, temporary or intermittent services of experts and consultants, as described in and in accordance with the first two sentences of section 3109(b) of title 5, at respective daily rates of pay for individuals which are not more than the daily equivalent of the maximum rate of basic pay then currently paid for GS–18 of the General Schedule of section 5332 of title 5.

"(2) In addition to any authority granted under paragraph (1) of this subsection, the President (or his designee) is authorized to employ individuals in the Office of Administration in accordance with section 3101 of title 5 and provisions relating thereto. Any individual so employed under the authority granted under such section 3101 shall be subject to the limitation specified in section 114 of this title.

"(c) There are authorized to be appropriated each fiscal year such sums as may be necessary for the official expenses of the Domestic Policy Staff and the Office of Administration.

"ASSISTANCE TO THE PRESIDENT FOR UNANTICIPATED NEEDS

"SEC. 108. (a) There is authorized to be appropriated to the President an amount not to exceed $1,000,000 each fiscal year to enable the President, in his discretion, to meet unanticipated needs for the furtherance of the national interest, security, or defense, including personnel needs and needs for services described in section 3109(b) of title 5, and administrative expenses related thereto, without regard to any provision of law regulating the employment or compensation of persons in the Government service or regulating expenditures of Government funds.

"(b) The President shall transmit a report to each House of the Congress for each fiscal year beginning on or after the effective date of this subsection which sets forth the purposes for which expenditures were made under this section for such fiscal year and the amount expended for each such purpose. Each such report shall be transmitted no later than 60 days after the close of the fiscal year covered by such report.

"(c) An individual may not be paid under the authority of this section at a rate of pay in excess of the rate of basic pay then currently paid for level II of the Executive Schedule of section 5313 of title 5.".

(b) The items relating to sections 107 and 108 in the table of sections at the beginning of chapter 2 of title 3, United States Code, are amended to read as follows:

"107. Domestic Policy Staff and Office of Administration; personnel.

"108. Assistance to the President for unanticipated needs.".

Mrs. SCHROEDER (during the reading). Mr. Chairman, I ask unanimous consent that section 2 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentlewoman from Colorado?

There was no objection.

The CHAIRMAN. Are there any amendments to section 2?

If not, the Clerk will read.

The Clerk read as follows:

SEC. 3. (a) Chapter 2 of title 3, United States Code, is amended by adding at the end thereof the following new sections:

"DETAIL OF EMPLOYEES OF EXECUTIVE DEPARTMENTS

"SEC. 112. The head of any department, agency, or independent establishment of the executive branch of the Government may detail, from time to time, employees of such department, agency, or establishment to the White House Office, the Executive Residence at the White House, the Office of the Vice President, the Domestic Policy Staff, and the Office of Administration. Any such office to which an employee has been detailed for service to such office shall reimburse the detailing department, agency, or establishment for the pay of each employee thereof—

"(1) who is so detailed, and

"(2) who is performing services which have been or would otherwise be performed by an employee of such office,

for any period occurring during any fiscal year after 180 calendar days after the employee is detailed in such year.

"REPORT ON DETAILEES, EXPERTS, AND CONSULTANTS

"SEC. 113. (a) The President shall transmit to each House of the Congress, and make available to the public, reports containing information described in subsection (b) for each fiscal year beginning on or after the effective date of this section. Each such report shall be transmitted no later than 60 days after the close of the fiscal year covered by such report and shall contain a statement of such information for such year.

"(b) Each report required under subsection (a) shall contain—

"(1) the number of individuals detailed under section 112 of this title for more than 180 days to the White House Office, the Executive Residence at the White House, the Office of the Vice President, the Domestic Policy Staff, or the Office of Administration (in the aggregate and by office);

"(2) the number of individuals whose services as an expert or consultant are procured under this chapter for service in such offices, and the total number of days employed (in the aggregate and by office);

"(3) the total amount of appropriated moneys paid to procure such expert and consultant services (in the aggregate and by office); and

"(4) the amount of reimbursements made for employees detailed under section 112 of this title (in the aggregate and by office).

"GENERAL PAY LIMITATION

"SEC. 114. Notwithstanding any provision of law, other than the provisions of this chapter, no employee of the White House Office, the Executive Residence at the White House, the Domestic Policy Staff, or the Office of Administration, nor any employee under the Vice President appointed under section 106 of this title, may be paid at a rate of basic pay in excess of the minimum rate of basic pay then currently paid for GS-16 of the General Schedule of section 5332 of title 5.".

(b) The table of sections for chapter 2 of title 3, United States Code, is amended by adding at the end thereof the following new items:

"112. Detail of employees of executive departments.
"113. Report on detailees, experts, and consultants.
"114. General pay limitation.".

Mrs. SCHROEDER (during the reading). Mr. Chairman, I ask unanimous consent that section 3 of the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentlewoman from Colorado?

There was no objection.

AMENDMENT OFFERED BY MR. GILMAN

Mr. GILMAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GILMAN: Page 14, strike out line 3 and all that follows down through line 20 and insert in lieu thereof the following:

"(b) Each report required under subsection (a) shall contain—

"(1) the number of employees who are paid at a rate of basic pay equal to or greater than the rate of basic pay then currently paid for level V of the Executive Schedule of section 5216 of title 5 and who are employed in the White House Office, the Executive Residence at the White House, the Office of the Vice President, the Domestic Policy Staff, or the Office of Administration, and the aggregate amount paid to such employees;

"(2) the number of employees employed in such offices who are paid at a rate of basic pay which is equal to or greater than the minimum rate of basic pay then currently paid for GS-16 of the General Schedule of section 5332 of title 5 but which is less than the rate then currently paid for level V of the Executive Schedule, and the aggregate amount paid to such employees;

"(3) the number of employees employed in such offices who are paid at a rate of basic pay which is less than the minimum rate then currently paid for GS-16 of the General Schedule, and the aggregate amount paid to such employees;

"(4) the number of individuals detailed under section 112 of this title to each such office, the number of days each individual was detailed, and the aggregate amount of reimbursement made for such individuals; and

"(5) the number of individuals whose services as an expert or consultant are procured under this chapter for service in any such office, the total number of days employed, and the aggregate amount paid to procure such services.

The information required under this subsection to be in any report shall be shown both in the aggregate and by office involved.

Page 13, strike out line 18 and insert in lieu thereof:

"PERSONNEL REPORT

Page 15, in the matter below line 8, strike out the item relating to section 113 and insert in lieu thereof:

"113. Personnel report.

Mr. GILMAN (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. GILMAN. Mr. Chairman, this amendment amends section 113 of H.R. 11003. I propose to delete the language of section 113(b) and substitute in its place a new subsection (b) to require the President to transmit an annual report to the Congress disclosing—

First, the total number of staff employed by the Executive Office and the aggregate amount paid to such staff;

Second, the total number of individuals detailed to the Executive Office, the number of days so detailed, and the aggregate amount of reimbursement to agencies; and

Third, the total number of experts and consultants employed by the Executive Office, the number of days employed, and the aggregate amount paid to them.

All information required by the first and succeeding reports shall be shown both in the aggregate and by Office involved. That is, White House Office, Executive Residence at White House, Office of the Vice President, Domestic Policy Staff, and Office of Administration. This report must be transmitted no later than 60 days after the close of the fiscal year covered by the preceding report.

Mr. Chairman, this amendment is really self-explanatory. The purpose for offering this amendment is to insure the integrity of the oversight function of the Committee on Post Office and Civil Service by having available to us by law on a timely basis the information necessary to carry out our duty. In addition, it is vitally important that we have the data contained in these reports so that the Members and staff of the committee can properly evaluate the continuing efficacy of this legislation.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. GILMAN. I am pleased to yield to the gentleman from Virginia.

Mr. HARRIS. Mr. Chairman, I have personally gone over this amendment, and the gentleman and I discussed the amendment in committee.

The amendment reflects the legislative requirement that reporting of the type that the committee received this year would be mandated by legislation. I had some reservations before that this might require a type of reporting that would in fact jeopardize the bill in various aspects. But upon reviewing the amendment, it seems to me, since the reporting requirements are really the same as reflected by the reporting that we have gotten from the White House voluntarily this year, that perhaps the language would improve the bill.

Mr. Chairman, the amendment is acceptable to me.

Mr. GILMAN. Mr. Chairman, I want to thank the gentleman from Virginia (Mr. HARRIS) for his remarks and for accepting the amendment. I know of the gentleman's concern for making certain that we have adequate reporting so that we can have the proper oversight in this matter.

Mrs. SCHROEDER. Mr. Chairman, will the gentleman yield?

Mr. GILMAN. I am pleased to yield to the gentlewoman from Colorado.

Mrs. SCHROEDER. Mr. Chairman, I wish to compliment the gentleman from New York (Mr. GILMAN) on his amendment. I certainly find the amendment acceptable.

Mr. GILMAN. Mr. Chairman, I thank the gentlewoman for her remarks, and I thank her for her support of my amendment.

Mr. DERWINSKI. Mr. Chairman, will the gentleman yield?

Mr. GILMAN. I yield to the gentleman from Illinois.

Mr. DERWINSKI. Mr. Chairman, since the gentleman in his logic and eloquence has managed to obtain the approval of the floor managers on the other side for his amendment, we are certainly pleased to support the amendment on this side.

Mr. GILMAN. Mr. Chairman, I thank the gentleman from Illinois (Mr. DERWINSKI) for his support.

AMENDMENT OFFERED BY MR. PICKLE TO THE AMENDMENT OFFERED BY MR. GILMAN

Mr. PICKLE. Mr. Chairman, I offer an amendment to the amendment.

The Clerk read as follows:

Amendment offered by Mr. PICKLE to the amendment offered by Mr. GILMAN: At the end of the amendment to page 14, insert the following new subsections:

"(c) In addition to the requirements of subsection (b), each report required under subsection (a) shall contain—

"(1) the name of every individual detailed to or employed in (including any expert or consultant whose services are procured under this chapter) the White House Office, the Executive Residence at the White House, the Vice President's Office, the Domestic Policy Staff; and the Office of Administration;

"(2) the amount of appropriated moneys paid to each such individual so employed;

"(3) the amount of reimbursements made for employees detailed under section 112; and

"(4) a general title and general job description for each individual so detailed or so employed."

At the end of the amendment add the following new provision:

Page 13, line 21, strike out "subsection (b)" and insert in lieu thereof "subections (b) and (c)".

Mr. PICKLE (during the reading). Mr. Chairman, I ask unanimous consent that the amendment to the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. PICKLE. Mr. Chairman, this amendment simply adds one additional requirement of the report offered by the President, that is, that the report, when it is submitted, will contain the name of the individual employee, the amount of money appropriated, the general title and the general job description.

Mr. Chairman, I am not trying to make it burdensome, since the report will have these totals. I go one step further and require that the name and the general title and job description be added to the report.

I might add that this amendment has been passed by this House on two different occasions, in 1974 and in 1975. Since the legislation never passed in the Senate, it had not become law. But we have already passed this twice before.

Mr. GILMAN. Mr. Chairman, will the gentleman yield?

Mr. PICKLE. I yield to the gentleman from New York.

Mr. GILMAN. I think the gentleman for yielding.

Mr. Chairman, I have had an opportunity to examine the amendment, and I certainly accept the amendment. It is certainly worth while in adding this language.

Mr. PICKLE. I thank the gentleman.

Mrs. SCHROEDER. Mr. Chairman, will the gentleman yield?

Mr. PICKLE. I yield to the gentlewoman from Colorado.

Mrs. SCHROEDER. I thank the gentleman for yielding.

Mr. Chairman, I also wish to compliment the gentleman, and we certainly accept the amendment as part of the Gilman amendment. I wish to commend the gentleman for watching so closely.

Mr. DERWINSKI. Mr. Chairman, will the gentleman yield?

Mr. PICKLE. I yield to the gentleman from Illinois.

Mr. DERWINSKI. I thank the gentleman for yielding.

Mr. Chairman, in the spirit of cooperation which is prevailing here, we are pleased to accept the amendment as a positive addition to the bill.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas (Mr. PICKLE) to the amendment offered by the gentleman from New York (Mr. GILMAN).

The amendment to the amendment was agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. GILMAN), as amended.

The amendment, as amended, was agreed to.

The CHAIRMAN. Are there further amendments to section 3? If not, the Clerk will read.

The Clerk read as follows:

SEC. 4. Section 103 of title 3, United States Code, relating to travel expenses of the President, is amended by striking out "$40,000" and inserting in lieu thereof "$100,000".

The CHAIRMAN. Are there any amendments to section 4? If not, the Clerk will read.

The Clerk read as follows:

SEC. 5. (a) Section 102 of title 3, United States Code, is amended by striking out "Executive Mansion" and inserting in lieu thereof "Executive Residence at the White House".

(b) (1) Section 109 of title 3, United States Code, is amended—

(A) by striking out from the section caption "EXECUTIVE MANSION" and inserting in lieu thereof "THE EXECUTIVE RESIDENCE AT THE WHITE HOUSE", and

(B) by striking out from the text "Executive Mansion" each place it appears and inserting in lieu thereof "Executive Residence at the White House".

(2) The item relating to section 109 in the table of sections for chapter 2 of such title 3 is amended by striking out "Executive Mansion" and inserting in lieu thereof "The Executive Residence at the White House".

(c) (1) Section 110 of title 3, United States Code, is amended—

(A) by inserting in the section caption, immediately before "WHITE HOUSE" the following: "THE EXECUTIVE RESIDENCE AT THE";

(B) by striking out "President's House" and inserting in lieu thereof the following: "Executive Residence at the White House"; and

(C) by striking out "White House" each place it appears and inserting in lieu thereof "Executive Residence at the White House".

(2) The item relating to section 110 in the table of sections for chapter 2 of such title is amended by inserting immediately before "White House" the following: "The Executive Residence at the".

(d) Section 202 of such title is amended by striking out "Executive Mansion and grounds" and inserting in lieu thereof "White House".

Mrs. SCHROEDER (during the reading). Mr. Chairman, I ask unanimous consent that section 5 be considered as read, printed in the RECORD, and open to amendment at any point.

Is there objection to the request of the gentlewoman from Colorado?

There was no objection.

The CHAIRMAN. Are there amendments to section 5? If not, the Clerk will read.

The Clerk read as follows:

SEC. 6. (a) The amendments made by this Act shall apply to any fiscal year which begins on or after October 1, 1978.

(b) In the case of an individual—

(1) who is an employee of the Office of Administration as of the date of the enactment of this Act, and

(2) whose position would be terminated or whose rate of basic pay would be reduced (but for this subsection) by reason of section 107(b) of title 3, United States Code (as amended by this Act),

such employee may be allowed to continue to hold such position and receive basic pay at the rate in effect on the effective date of this Act during the period which begins on such date and ends 2 years after such date so long as such employee continues as an employee of the Office of Administration.

Mrs. SCHROEDER (during the reading). Mr. Chairman, I ask unanimous consent that section 6 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentlewoman from Colorado?

There was no objection.

The CHAIRMAN. Are there any amendments to section 6?

AMENDMENT OFFERED BY MR. GILMAN

Mr. GILMAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GILMAN: On page 16, strike out line 25 and all that follows down through line 2 on page 17 and insert in lieu thereof the following:

SEC. 6. (a) (1) Except as provided in paragraph (2), the amendments made by this Act shall apply to the fiscal year beginning October 1, 1978, and to each of the following 4 fiscal years.

(2) The amendments made by section 5 of this Act shall take effect on the date of the enactment of this Act.

Mr. GILMAN (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. GILMAN. Mr. Chairman, my amendment strikes the language of section 6(a) of this bill, which authorizes for an indefinite period of time the employment of persons by the White House Office, Office of the Vice President, the Office of Administration, Domestic Policy Staff, and the Executive Residence at the White House up to the ceilings on the number and pay of Executive Office personnel imposed by this legislation.

In its place, I offer an amendment replacing the permanent statutory authorization of section 6 with a more limited 4-year authorization at the same ceilings specified in this bill. If accepted, this amendment would require the next President, consistent with the Congressional Budget Act of 1974, submit to the Congress, 1 year from the date of assuming his office, a new authorization request for Executive Office personnel and related expenses. This could easily be accomplished by the submission of legislation simply extending the time period specified in my proposed amendment. It would, however, force a President to periodically justify the size of the White House Office to the Committee on Post Office and Civil Service and to the Congress.

My amendment permits the incumbent President 4 years, or a new President a maximum of 1 year, to plan for the staff needs and expenses of his office. This, in effect, is no more than what the Committee on Post Office and Civil Service has demanded of President Carter, and I really believe, imposes no undue hardship on the President or impairs the flexibility he desires. However, without this amendment the committee's oversight function, I would suggest, will prove to be virtually meaningless in this area.

It should be noted that the strongest supporter of fixed period authorizations

and zero-based budgeting, which my amendment would certainly aid in, is the very same President who would be most immediately affected by this amendment.

Should this legislation be allowed to lapse, the current law of 1948 providing for a minimal number of staff—14—would automatically become available to the President until such time as he resubmits new authorizing legislation.

To sum up, then, this amendment—

Is totally consistent with, and in fact, aids in zero-based budgeting at the White House;

Asks no more in administrative planning by the Executive Office than is expected from any other executive agency; and

Tracks the budgetary process established by the Congressional Budget Act of 1974.

Mrs. SCHROEDER. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I reluctantly rise in opposition to this amendment because the gentleman from New York (Mr. GILMAN) is a fine member of the committee and works very hard.

However, let me explain why I feel that I hope the House, in its wisdom, will turn this amendment down.

Mr. Chairman, this amendment, in essence, is a sunset provision; and I know that many people here are very interested in sunset provisions.

I come from a State which really initiated sunset provisions and became very famous for its sunset provisions. I support sunset provisions on any program on which we might want to stop at some point in the future so that we can take a look at it and analyze it and see if we are going in the right direction. However, I have great questions about whether we should put a sunset provision on the White House.

The problem is that if this bill sunsets, then all the reporting requirements and everything in the bill would stop, and we would go back prior to the law and be where we are now.

Mr. Chairman, I can imagine that each White House, whether now or in the future, is not going to be very excited about having the legislation we are passing now and the reporting requirements we have now. Therefore, I am not sure that there will be any great enthusiasm to start another bill like this one.

Consequently, Mr. Chairman, I have real questions about whether we, as the House of Representatives, want to sunset these kinds of provisions. I understand the very deep concern of the gentleman from New York about whether or not we are going to utilize all this information that we as a committee receive, as mandated by this bill; but I honestly think it is probably going to be some of the hottest reading on the Hill. We can almost guarantee that whoever is in the White House, the other side is at least going to want to look at it.

I would find it shocking that the congressional committees would not want to look at it. We heard earlier from the Appropriations Subcommittee chairman, the gentleman from Oklahoma (Mr. STEED), when he was telling about the problems of getting information and how much he would like this kind of help. I am sure he is going to be using this also.

So I think the information is going to be utilized and utilized very heavily. I have some questions as to whether or not it is even constitutional to make a sunset provision on the White House staff but even moving beyond that I question whether it is realistic because we are not talking about an agency or program but are talking about the whole third branch of the Government.

So I would urge my colleagues to vote against the amendment.

Mr. HARRIS. Mr. Chairman, will my colleague yield?

Mrs. SCHROEDER. I will be delighted to yield to the gentleman from Virginia.

Mr. HARRIS. In joining with my colleague's remarks I think in theory that any type of termination of authorization legislation can be supported but in this case what we are doing is ending an authorization which, in fact, is a limitation on appropriations.

While my colleague refers to the law of 1948, that was actually just a codification of the law of 1939. The authorization we are dealing with is actually 50 years old, and after having moved to the point of having an authorization law with regard to this very important area, to say that we are going to terminate it in 4 years, and then go clear through the process again of convincing a White House not to oppose it vigorously, or convincing our colleagues that we do need an authorization bill, I think would be counterproductive.

I hope very much that my colleagues would vote against this amendment, and that having taken 50 years to get an authorization bill for the White House staff, that we not terminate it arbitrarily.

I appreciate my colleague yielding to me.

Mr. GILMAN. Mr. Chairman, will the gentlewoman yield?

Mrs. SCHROEDER. I yield to the gentleman from New York.

Mr. GILMAN. I thank the gentlewoman for yielding to me. I appreciate the gentlewoman's concern about the lapsing of the entire measure, but I think it is extremely important that the White House, like any other agency, be requested to come back before the Congress to justify its staffing periodically.

Mrs. SCHROEDER. I think we can do that. Again, I remind the gentleman that this is an authorization bill under which we are collecting all sorts of data, and they have to go for an appropriation every single year. So, I would hope that our committee would be very diligent in combing through that and dealing with it.

Clearly, if they ever run outside those amounts, they will have to come in for an authorization, so that in a way there is almost an assured sunset unless we see Government going in a different trend—I cannot imagine it is going to start getting smaller, although a lot of people wish that it would. At that point, they would have to come for a new authorization, but I really hesitate to see the reporting stop, because it can be a very effective tool when we get to the appropriation process, which I think is very, very important.

Mr. GILMAN. I certainly would be the last one to want to limit that concept.

Mr. DERWINSKI. Mr. Chairman, I move to strike the last word, and I rise to oppose the amendment.

Mr. Chairman, this amendment would actually conflict with the very purposes of the bill. This bill properly provides for an authorization. It would then be followed logically by an annual appropriation. We have heard the gentleman from Oklahoma (Mr. STEED) indicate that his Appropriations Subcommittee will be able to make effective use of this measure before us, and that applying a sunset provision is unnecessary.

One should also note that of all the vehicles in Government, certainly the White House will always be with us, just as there will always be an England. Presumably, there will always be a White House, and the need for an effective staff. I think it is completely impractical to apply a sunset provision in this fashion.

I would suggest that we follow through and pass the bill. We have worked our way through in a very fine fashion. I would suggest that this amendment be rejected, and the appropriation process would more than take care of the needs.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. DERWINSKI. I yield to the gentleman from California.

Mr. ROUSSELOT. I appreciate the gentleman's yielding to me. I am sure that the gentleman does not mean to imply that because we have termination dates on authorization bills, say as the Export-Import Bank, which we will soon consider here, that this automatically means that a program is terminated. My colleague from New York has not suggested that.

Mr. DERWINSKI. No.

Mr. ROUSSELOT. He has merely stated that his amendment would require that the White House return to the Congress and justify again these basic provisions of the legislation, something most everybody else has to do.

Mr. DERWINSKI. No, just a minute. I reclaim my time because the gentleman is misusing it.

I think the gentleman from California has to recognize there is a distinct difference between a malfunctioning bureaucracy and the Office of the President. The President is our Chief Executive. The President is a symbol of all the greatness, spirit, and majesty our country possesses. I really think it borders on pettiness for Members of Congress to take the position that they are going to be lord and master of the White House staff every 4 years.

Mr. ROUSSELOT. I do not think this legislation suggests that.

Mr. DERWINSKI. I think the scrutiny of the press and the scrutiny of the appropriations process will more than meet anyone's concern over how the White House is administered. I do not believe the sunset provision meets this need.

Mr. ROUSSELOT. Nobody is suggesting by this legislation that we will become the lords and masters of the White House. We are merely saying that the authorization should be subjected to review every 4 years. What is so difficult about that?

Mr. DERWINSKI. I suggest there is an annual review to be conducted by the Appropriations Committee. I also believe the Chief Executive, no matter who he is, should have the basic right to staff that office as he sees fit. If there is any criticism, if there is any abuse, do not worry, the press will take care of it. I do not believe the Congress, with its own record of administration in committees and individual offices, have knowledge of proper personnel use.

Mr. GILMAN. Mr. Chairman, will the gentleman yield?

Mr. DERWINSKI. I think I have made my logical position against the amendment clear, but, yes, I yield to the gentleman from New York.

Mr. GILMAN. I thank the gentleman from Illinois for yielding.

Certainly, I am not intending to become lord and master or for Congress to be wielding the whip over any department. However Congress does have a responsibility of authorization at the present time and of having some oversight function, and in order to properly fulfill that function, we are making a suggestion that the White House come before that authorization committee only once in 4 years, once in every 4 years, and do nothing more than the White House is suggesting that every agency in Government do.

Mr. DERWINSKI. The gentleman and I know there is an annual appropriations process to which the White House is subjected. I am certain the gentleman from New York would not want his own personal office personnel to be subject to White House scrutiny every 4 years.

Mr. GILMAN. Of course our personnel are subject to scrutiny monthly and we have to make a report and submit it for review.

Mr. DERWINSKI. The President is subjected to the appropriations process. Especially since we adopted the Pickle amendment, there will be names and titles and salaries and as clear-cut reporting as anybody could ask for.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. GILMAN).

The question was taken; and on a division (demanded by Mr. GILMAN) there were—ayes 24, noes 40.

RECORDED VOTE

Mr. GILMAN. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 171, noes 232, not voting 31, as follows:

[Roll No. 220]

NOT VOTING—31

| | | |
|---|---|---|
| Barnard | Gammage | Sarasin |
| Baucus | Heckler | Spellman |
| Breaux | Holland | Teague |
| Burke, Calif. | Howard | Thone |
| Burton, John | Jones, N.C. | Thornton |
| Clawson, Del | Krueger | Tucker |
| Cornwell | Leggett | Udall |
| Crane | Meeds | Van Deerlin |
| Dent | Murphy, N.Y. | Whitley |
| Derrick | Rodino | |
| Fraser | Runnels | |

The Clerk announced the following pairs:

On this vote:

Mr. Derrick for, with Mrs. Burke of California against.

Mr. Breaux for, with Mr. Krueger against.

Mr. Del Clawson for, with Mrs. Heckler against.

Mr. Crane for, with Mr. Sarasin against.

Messrs. GORE, STAGGERS, and WOLFF changed their vote from "aye" to "no."

Mr. LEVITAS changed his vote from "no" to "aye."

So the amendment was rejected.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. SYMMS

Mr. SYMMS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SYMMS: On page 17, following line 15, add the following new section:

"SEC. 7. No personnel or funds authorized by this Act shall be used in any official capacity to engage in any activity for the purpose of influencing members of State legislatures with regard to ratification of proposed amendments to the Constitution of the United States."

Mr. SYMMS. Mr. Chairman, this amendment is very, very simple. It is self-explanatory in its own language.

It was brought to my attention that earlier this year Mr. Mark Siegel was dispatched by the White House to set up a lobbying operation at the North Carolina Legislature to lobby on behalf of a constitutional amendment.

It is my opinion that the taxpayers of the United States should not be required to pay for White House lobbyists to go to State legislatures and interfere with State rights and State policies with respect to our constitutional form of government. This would be applicable with respect to any constitutional amendment.

I can foresee that some day, when this Congress has a President Kemp or a President Crane to deal with, and they are out trying to lobby for a constitutional amendment on limitation of taxes for the country or a balanced budget amendment, then the administration would be precluded from trying to send White House lobbyists to State legislatures.

Mr. Chairman, I think it would be in the best interest of all concerned to accept this amendment with a minimum of controversy.

Mr. MARTIN. Mr. Chairman, will the gentleman yield?

Mr. SYMMS. I yield to the gentleman from North Carolina.

Mr. MARTIN. Mr. Chairman, I want to thank the gentleman from Idaho (Mr. SYMMS) for bringing this matter to our attention regarding the lobbyists who had been sent to help the President work his will with the North Carolina Legislature.

As I understand it, though, Mark Siegel was actually the second choice. The legislature had actually wanted the President to send as his surrogate, Secretary Joseph Califano, and we regret very much that he was not able to comply with that request. He would have had a warm welcome in our State.

Mr. SYMMS. I thank the gentleman very much.

Mrs. SCHROEDER. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I think that this is clearly a constitutional issue again, and I think it is a limit on the President's ability to decide what his official duties truly are. We have the Hatch Act, which deals with employees, when it comes to anything that is partisan. But anything that is nonpartisan, when it comes to the White House staff, I think that is the President's idea and should be his prerogative to determine what they shall or shall not do. He is really the Commander in Chief of his staff, and I think, once he has been elected, he should have that option to determine that. We do not have these kinds of limitations upon ourselves in the House, and I think if we put this on the President we certainly should put it on the House.

I think there is an interesting censorship argument here, also. How are you going to define what persons did? It could be they could even make one illegal phone call during the day. There are all sorts of issues involved here, and I think it would not be very expeditious of the House to get into that at this time. I think that the President should be in charge of what his staff does, and we should be in charge of what our staffs do. Clearly, we have issues that deal with partisan things which will deal with that on another level. So I certainly hope that the House will vote down this amendment.

Mr. SYMMS. Mr. Chairman, will the gentlewoman yield?

Mrs. SCHROEDER. I yield to the gentleman from Idaho.

Mr. SYMMS. I thank the gentlewoman for yielding.

Mr. Chairman, I think the question is that the reason that this bill is before the House is that we have not heretofore had authorization for the White House budget in any direction from the legislative body. I think that the committee is to be commended for having brought this legislation forward, and what we are saying is that we want the White House to stay out of ratification battles, either pro or con ratification battles, on constitutional amendments.

Mrs. SCHROEDER. Mr. Chairman, I know what the gentlewoman is saying, but I think we should also then put those kinds of limitations on ourselves. I think the censorship issue and constitutional issues as to whether or not the legislative body can tell the President what his staff's legitimate duties should be becomes really a large question. I think we are stepping into that area, and it is very, very dangerous. I think what we are saying is, clearly, the staff is not to engage in partisan areas. But this is a nonpartisan area when there is an amendment that has nonpartisan cosponsorship. If the President sees that it is part of his duty as the Nation's leader and wants the staff to do that, they should. I would find it shocking if some Member or any Member of this House said they have never had a staff person call a State legislator or city councilperson or mayor or Governor, finding out what they are going to do. I think there is a fine line in that, and I think we should be very careful.

Mr. HARRIS. Mr Chairman, will the gentlewoman yield?

Mrs. SCHROEDER. I yield to the gentleman from Virginia.

Mr. HARRIS. I thank the gentlewoman for yielding.

Mr. Chairman, do I understand, if this amendment were adopted, that if a representative of the White House staff spoke on behalf of the President and indicated the President's support for or against the ratification of a constitutional amendment, this amendment would in effect prohibt the President from having the staff person doing that?

Mrs. SCHROEDER. That certainly is my understanding of the issue, that the staff people are muzzled in certain things; and we, the Congress, are going to define the staff people's duties rather than having the President do it.

Mr. HARRIS. I do not think it is constitutional for us even to try to do that.

Mrs. SCHROEDER. I agree with the gentleman from Virginia.

Mr. SYMMS. Mr. Chairman, will the gentlewoman yield?

Mrs. SCHROEDER. I yield to the gentleman from Idaho.

Mr. SYMMS. Mr. Chairman, the exact language in the amendment is "in any official capacity." Therefore, this could not limit anyone from a personal point of view, but it would limit the President's taking someone and putting him on the taxpayers' payroll and going to North Carolina to lobby.

Mrs. SCHROEDER. Mr. Chairman, I would reclaim my time and say that that is the official capacity at the present time.

Mr. BAUMAN. Mr. Chairman, I move to strike the requisite number of words.

I think it is well to observe at this point the double standard the House is engaging in today. You talk a good game about wanting to cut back on inflation and spending, and yet you go right ahead and authorize more supergrades and more money.

You talk about wanting the White House staff not to engage in various sorts of activities under one administration, and you feel it is acceptable in the next.

Mr. Chairman, I can recall very well my predecessor from the First District of Maryland, who served with great distinction in this House and in several positions in the Cabinet of the President of the United States, and was appointed a counselor to the President of the United States on the White House staff. Because he supposedly was engaging part time in actions, regarding political matters, he was forced from the White House staff by many of the people who are opposing this amendment and other amendments today. They called for his dismissal, saying he was engaged in politics and the taxpayers' funds could not be used.

Mr. Chairman, if Rogers C. B. Morton could not be a counselor to the President of the United States because he might possibly engage in some political act during the course of his White House stay, it seems to me the restriction of the amendment of the gentleman from Idaho is not at all unreasonable. We know the White House has been using taxpayers' funds to advance political causes, and part of this has gone for promoting the ratification of various amendments to the Constitution.

If the President wants to do that on his own, that is his right; but he should not use the funds of taxpayers for political purposes. That is what the majority party of this House said a few years ago. If it was right then, it is right now.

Mr. GARY A. MYERS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to ask the gentleman from Idaho (Mr. SYMMS) a question or two on this subject. Is it the gentleman's interpretation of this amendment that, an administration—and I am not making a suggestion that this administration would do this—but is it the gentleman's interpretation that if this amendment were adopted and if an administration were to use its staff to effect a boycott in the sense that it denies some States certain types of otherwise earned participation in Federal programs because of their action or inaction in response to a pending Constitution amendment, that that would violate this provision of the law?

Mr. SYMMS. Mr. Chairman, if the gentleman will yield, I thank the gentleman for bringing up that question.

I think that is something that would go beyond the scope of what this amendment would be able to do.

All this amendment would be able to do would be to prohibit engaging in bona fide lobbying activities with respect to constitutional amendments by State legislators in trying to advance their point of view.

With respect to what goes on right now, as the gentleman is suggesting when he

mentions that approach, I do not think we could stop everything. However, we could stop someone from going to North Carolina and setting up lobbying operations to lobby on behalf of or against a certain constitutional amendment.

Mr. GARY A. MYERS. It seems to me that this rather fair amendment does not go quite far enough, then. Certainly there are powers within the administration to deny the appropriate participation in Federal programs to those States which do not knuckle under on a particular administration's attitude with respect to a constitutional amendment.

I happen to personally feel that both the National Republican Party and the National Democratic Party erred in taking a national view of a particular constitutional amendment because I believe that in respect to the proper amending process of the Constitution, the Federal Government had already performed its function, and that the rest ought to be left up to the individual States. Therefore, I happen to differ with both my party and with the other party with respect to trying to totally federalize the procedure for amending the Constitution. Furthermore, I am concerned that some administration at some point in time might decide that it is a proper course to deny States their rightful participation in Federal programs if certain State legislators do not fall in line with a current administration's thinking on a constitutional amendment.

Further I am concerned that many Members will cast their votes on this particular amendment based on their opinions of the merits of the constitutional amendment currently pending before the States rather than the broader question of the proper use of Federal facilities in attempting to deny or supersede the States constitutional rights.

I would hope the Symms amendment would pass. I would hope that the proper interpretation would mean that any lobbying effort, direct or indirect, whether done in the State or outside the State by a Federal Government administration, would be illegal.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Idaho (Mr. SYMMS).

The question was taken; and on a division (demanded by Mr. SYMMS) there were—ayes 34; noes 64.

RECORDED VOTE

Mr. SYMMS. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 85, noes 320, not voting 29, as follows:

[Roll No. 221]

NOT VOTING—29

| | | |
|---|---|---|
| Barnard | Holland | Spellman |
| Baucus | Howard | Teague |
| Burke, Calif. | Jones, N.C. | Thone |
| Clawson, Del | Krueger | Thornton |
| Cornwell | Leggett | Tucker |
| Crane | Meeds | Udall |
| Dent | Murphy, N.Y. | Van Deerlin |
| Gammage | Rodino | Whitley |
| Giaimo | Runnels | Wiggins |
| Heckler | Sarasin | |

Mr. YOUNG of Texas and Mrs. SMITH of Nebraska changed their vote from "aye" to "no."

So the amendment was rejected.

The result of the vote was announced as above recorded.

The CHAIRMAN. If there are no additional amendments, under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. NATCHER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 11003) to clarify the authority for employment of personnel in the White House Office and the Executive Residence at the White House, to clarify the authority for employment of personnel by the President to meet unanticipated needs, and for other purposes, pursuant to House Resolution 1127, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. DERWINSKI. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 265, nays 134, not voting 35, as follows:

[Roll No. 222]

NOT VOTING—35

| | | |
|---|---|---|
| Barnard | Heckler | Runnels |
| Baucus | Holland | Sarasin |
| Burke, Calif. | Howard | Skubitz |
| Clawson, Del | Jones, N.C. | Spellman |
| Clay | Krueger | Teague |
| Cornwell | Luken | Thone |
| Crane | Mazzoli | Thornton |
| Dent | Meeds | Tucker |
| Emery | Mitchell, Md. | Udall |
| Foley | Murphy, N.Y. | Van Deerlin |
| Gammage | Pepper | Whitley |
| Giaimo | Rodino | |

The Clerk announced the following pairs:

On this vote:

Mr. Krueger for, with Mr. Gammage against.

Until further notice:

Mrs. Burke of California with Mr. Giaimo.
Mr. Dent with Mr. Thornton.
Mr. Teague with Mr. Runnels.
Mr. Udall with Mrs. Spellman.
Mr. Murphy of New York with Mr. Rodino.
Mr. Pepper with Mr. Cornwell.
Mr. Van Deerlin with Mr. Baucus.
Mr. Foley with Mr. Tucker.
Mr. Jones of North Carolina with Mr. Clay.
Mr. Whitley with Mr. Del Clawson.
Mr. Luken with Mr. Emery.
Mr. Howard with Mr. Crane.
Mr. Barnard with Mrs. Heckler.
Mr. Mitchell of Maryland with Mr. Mazzoli.
Mr. Meeds with Mr. Skubitz.
Mr. Holland with Mr. Thone.

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

## GENERAL LEAVE

Mr. HARRIS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and include extraneous matter on the bill, H.R. 11003, just passed.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

## AUTHORIZING CLERK TO MAKE CERTAIN CORRECTIONS AND CHANGES IN ENGROSSMENT OF H.R. 11003

Mr. HARRIS. Mr. Speaker, I ask unanimous consent that the Clerk may be authorized and directed to make such changes in section numbers, cross references, and other technical and conforming corrections in the engrossment of H.R. 11003 as may be required to reflect the actions of the House.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

## PERSONAL EXPLANATION

Mr. FOLEY. Mr. Speaker, on the last vote, I was unable to gain the Chair's attention. If I had been recognized, I would have voted "yea."

## PROJECTS FOR IMPROVEMENTS OF RIVERS AND HARBORS BY CONTRACT

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 7744) to amend the acts of August 11, 1888, and March 2, 1919, pertaining to carrying out projects for improvements of rivers and harbors by contract or otherwise, and for other purposes, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 2, line 21, after "fleet" insert "fully".

Page 2, line 21, after "operational" insert ", as determined by the Secretary,".

Page 4, lines 11 and 12, strike out "or replacement".

Page 4, lines 23 and 24, strike out "or replacement".

The SPEAKER. Is there objection to the request of the gentleman from Texas?

Mr. DON H. CLAUSEN. Reserving the right to object, Mr. Speaker, and I do not intend to object, would the gentleman from Texas be kind enough to explain this legislation to the House?

Mr. ROBERTS. If the gentleman will yield, Mr. Speaker, the purpose of this bill is to establish the policy that dredging work associated with Corps of Engineers navigation projects should be performed by contract if private industry has the capability to do the work and it can be done at reasonable prices and in a timely manner. The bill also clarifies the procedure to be used in preparing the Government estimate of the cost of doing a particular job.

The requirement that work shall be done by contract is to be phased in over a 4-year period. By the end of the 4-year period all work, other than that reserved for the minimum fleet, will be advertised for bids. As private industry demonstrates its capability to perform the work, the Corps' dredge fleet will be gradually reduced to a minimum fleet capable of performing emergency and national defense work. The Corps of Engineers is authorized to exempt work from the provisions of the bill and assign it to the minimum fleet so as to keep that fleet operational. The Corps can retain as much of the fleet over and above the minimum fleet as it determines necessary, for as long as it determines neces-

sary, in order to insure the combined Corps-private industry capability to meet national dredging needs. For this additional fleet, however, work may not be exempted from the provisions of the bill.

This bill passed the House by an overwhelming majority on September 27 of last year. The Senate made two minor amendments to it. One, of a technical nature, makes it clear that the minimum fleet is to be kept fully operational and that the determination of the amount of work necessary to accomplish this will be determined by the Secretary of the Army. The other amendment provides that in determining either the comparable cost of performing dredging work by Government plant or the cost of a well equipped contractor doing the work, a proper charge for depreciation, rather than for depreciation or replacement, will be taken into account. Our Committee has no objection to these amendments.

Mr. Speaker, I urge passage of H.R. 7744 as amended by the Senate.

Mr. DON H. CLAUSEN. Mr. Speaker, under my reservation of objection, I want to state that we, on the minority side, concur with the statement which the gentleman from Texas (Mr. ROBERTS) has presented.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

A motion to reconsider was laid on the table.

## GENERAL LEAVE

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the legislation just considered.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

## PERSONAL EXPLANATION

Mr. PEPPER. Mr. Speaker, I reached the floor just as the last vote was concluded. Had I been present, I would have voted "aye."

## PRIVILEGED MOTION RELATING TO CLOSING TO THE PUBLIC CONFERENCE COMMITTEE MEETINGS ON H.R. 5289, RELATING TO NATURAL GAS REGULATION

Mr. MOFFETT. Mr. Speaker, I offer a privileged motion.

The Clerk read the motion as follows:

Mr. MOFFETT moves, pursuant to rule XXVIII 6(a) of the House rules that the conference committee meetings between the House and the Senate on H.R. 5289, relating to natural gas regulation, be closed to the public, provided however, that any sitting Member of Congress shall have the right to attend any closed or open meeting.

The SPEAKER. The gentleman from Connecticut (Mr. MOFFETT) has presented a privileged motion, and has control of the time.

The gentleman from Connecticut is recognized for 1 hour.

Mr. MOFFETT. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the motion before the House obviously relates to the processes being followed by the conference committee on energy. I want to say at the outset that I have been extremely proud to be a member of the conference, and have felt a great deal of respect for the way the Ad Hoc Committee on Energy was put together by the Speaker, and chaired by the distinguished gentleman from Ohio (Mr. ASHLEY). We know that everyone wants an energy policy to vote on, and the sooner the better, for political reasons, for international economic reasons, and for many other reasons. We all have different views about what that policy should be, especially with regard to the difficult issue of natural gas pricing.

This is not a motion that in any way intends to inhibit or prohibit any informal discussions in which no substantive conclusions are reached. But, this has clearly become a closed conference in violation of the House rules.

Rule XXVIII 6(a) reads:

Each conference committee meeting between the House and Senate shall be open to the public except when the House, in open session, has determined by a rollcall vote of a majority of those Members voting that all or part of the meeting shall be closed to the public.

Mr. Speaker, the conference on energy has met for many, many hours this year, members of the conference from both parties. There has been approximately 1 hour of discussion that has been open to the public and the press. Some Members have been excluded from the meetings. I am not one of those Members. I have taken part in some of those closed discussions.

Before Easter I told the distinguished chairman of the conference and the distinguished and able chairman of the Committee on Interstate and Foreign Commerce, on which I am proud to serve, that I felt I had to continue to raise objections to closed meetings, and that I was going to take my objections before my colleagues in the House. I think the issue here is, are we in violation of the House rules? I think the answer is clearly yes. Are we setting a dangerous precedent? The answer is clearly yes.

Let me present a chronology of the committee activities. On November 1, the conference committee completed action on most of the conversation proposals. Up to that point, most of the sessions had been held in public, with the minority having a good deal of participation. On November 11, the coal conversion portions were approved. On December 1, the utility rate reform portions were approved, and natural gas deliberations were begun.

During the first week of December the conference committee met in public session on December 1, 5, 6, and 7. The conference committee also met in public session on December 12 and 21. Since that time, December 21, there has been one public meeting of the conference committee. That occurred just before the Easter recess, on March 22, in which we had about an hour, all told, of discussion before the public, and where we did not have the opportunity, because of the brevity of the session, to ask important questions about the proposals before us.

It is so easy to say, Mr. Speaker and colleagues, that we need a bill so badly that if secret sessions will produce that bill, we ought to go that route.

We all yearn for a policy. But to have 1 hour of discussion before the public, when the intent of this body has been clear that we should do things before the public in the conference, unless there has been a vote of this body, is clearly I think a violation of the House rules. We have to abide by those rules and resist any attempt to institutionalize a secret conference by moving the conference downtown, which has happened in the last few days.

Clearly for the President to call the conferees or even key conferees to the White House is permissible and not something we want to discourage. Clearly it is proper for the President to exhort and recommend or even plead or scold conferees and that is not something we would seek to prohibit. But when the President moves the conference into the Roosevelt Room of the White House, out of view of the public and out of the view of many other conferees, we clearly have given up something in the legislative branch and set a bad precedent and moved the conference downtown.

So this has gone beyond the President taking an active role and saying, "Here are the parameters I could accept." We have Dr. Schlesinger there laying down proposals while the key conferees are sitting in the room. That is holding the conference in secret even though they have the key conferees in. It is not as though there are not alternatives. I in fact have moved in the small amount of time we have had in public conference that we report out the conservation pieces. But I don't intend to dwell on that approach nor do I intend to use time today to discuss my views on gas prices. That is not my intent and I do not think the intent of the gentleman from Ohio (Mr. BROWN) who is cosponsoring this with me.

Those who argue that secrecy is best must explain what secrecy has done for us in the past 5 months. What has it produced? We produced the coal and utility and conservation pieces, in public sessions and I know that the natural gas is tougher, but in 5 months of secret sessions the conference has not come any nearer to solution, so we are not that much closer. Members are not that much more informed and neither is the public.

I think open sessions would be more and not less helpful, but that is not the issue. But whether they are or are not more helpful, the House rules need to be upheld.

Mr. Speaker, I yield 30 minutes to the gentleman from Ohio (Mr. BROWN).

Mr. BROWN of Ohio. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, as I think all of my colleagues know, and all of my friends on

the other side who are colleagues of both the gentleman from Connecticut and myself know, the two of us do not often agree on issues of a basic philosophical nature, although we are good personal friends, but on this issue we see exactly eye to eye.

This body, the House of Representatives, which flows almost directly from the British Parliament, has certain physical characteristics that institutionalize world political history. One of the significant physical characteristics we meet in this room is the gallery where the press can come, along with the general public, and watch what we do, listen to what we say, and hold us accountable for the way in which we perform.

As a matter of fact, a few years ago, there was some disruption in the country and it was suggested that the gallery be closed off with glass or plastic or something that might protect us in case somebody in the public would decide he wanted to do us physical harm. To the credit of a previous Speaker and other leaders of Congress, the idea has never been put into effect. The gallery is open, and if our arms were long enough to reach, we could shake hands with the public in the gallery. And we could talk to the people in the press, as we do, and they could talk to us, although the rules suggest that is not appropriate.

We are all in the same room sharing the responsibility of Government.

There is another thing that is very significant in this room and that is the podium here from which the President or other heads of state speak when we meet in joint session. It is lower than the position of the Speaker of the House who represents us all in this body; lower than the chair that is brought in for the presiding officer of the Senate. And it is from that lower podium that the President of the United States, when he is invited—and only when he is invited—speaks to us as representatives of the people. He cannot come here at his own request. In the tradition of the British Parliament, the King or the Queen has no place in the parliamentary body. If invited, of course, he can come and present to us his views. And, constitutionally, the President must be welcomed to tell us about the state of the Nation at least once in each Congress.

That is symbolism but it is important.

The gallery is symbolism because we cannot get all the American people in here. But it is important.

What I see going on right now is that the conferees of this body and the other body have been taken down to the White House. Not all of them, just a few, just the selected ones. Whoever they are, they have been taken down there to craft some kind of an agreement between two opposing views that represent a compromise of some on the Senate side and a compromise of some on the House side the two versions do not agree and each body rejected the other's viewpoint. Now they have been brought down to the White House to the Roosevelt Room.

Now if some member of the press or some member of the public wanted to go to the Roosevelt Room in the White House he would be stopped immediately by one of the guards. He could not go in if he wanted to.

The press can go into the press room at the White House if they have the proper credentials but they cannot go into the Roosevelt Room so they cannot know what is going on.

I made the mistake of going into the Roosevelt Room the other morning when we as a group on my side of the aisle went to the White House to ask the President if he needed help from us in getting an agreement among the conferees, since progress seems to have been elusive for him by the method that has been used for the past months.

This process that has been used, the "behind closed doors" meetings among only selected conferees, has so far not been terribly productive of an agreement by the conference to give us anything that could provide us with an energy bill.

The gentleman from Connecticut (Mr. MOFFETT) is more fortunate than I. He could have participated in the closed conference. Perhaps he is also a little bit more stalwart than I because, as a matter of conscience, he chose not to do so. I would like to have been included because I was designated by this body as a conferee. I would like to be in on the agreement reached. I think any other Member who has ever been designated on a conference would like to feel that he had the right to sit in on the crafting of the agreement. Why not? It is our responsibility as Members of the Congress, majority or minority, when we are put on the conference to undertake such a responsibility.

As I say, maybe this was not a conference, maybe this was just a group meeting.

But presiding over this group, as I understand it, since I was not there, is the man who was designated chairman of the conference; my chairman, HARLEY STAGGERS, chairman of the House Committee on Interstate and Foreign Commerce.

Now, the gentleman from West Virginia (Mr. STAGGERS), presided over the first open conference we had on the energy issue, the EPAA bill. I served on that conference right after the Arabs embargoed the oil, and we had to act on the problem quickly. But we had an open conference. It was a different administration, but the conference was open. I dare say, had that administration, however, said to the chairman of the conference, "You bring some of the conferees down to the White House and we will work this out," that my chairman would have objected.

I would have objected, and so would the other members of the conference.

Mr. MOSS. Mr. Speaker, will the gentleman yield?

Mr. BROWN of Ohio. I yield to the gentleman from California.

Mr. MOSS. I thank the gentleman for yielding.

As another member of that conference, I would say that if the gentleman from Ohio had not objected, I would have done so most vigorously.

Mr. BROWN of Ohio. Of course the gentleman would have. I know that is true, because the gentleman from California is one of the leaders in the Committee on Government Operations and was, before I ever came to this Congress, a proponent of sunshine legislation.

If this process were going on in a State capital, say, Columbus, Ohio, where I served as the president of the Sigma Delta Chi chapter, the professional society of journalists, I would have had that chapter meet, and we would have passed a resolution against this kind of behavior by a governor, Democrat or Republican, or a legislature that would submit to such things.

What has gone on here is more than a vamp meeting. The chairman of the conference is presiding. The ranking Senator on the conference is present, and some others. The Secretary of the Department of Energy is sitting in on the meeting and, as I understand, the chairman of an independent regulatory commission, the Federal Energy Regulatory Commission (set up to be independent) is also involved. The public? No. The press? No. The rest of us who are on the conference? No. Other Members of the Congress? I think they could probably get into the White House, but it might be a little embarrassing unless they were cleared that morning to get in to participate in the conference.

This is wrong. It not only is wrong but it raises serious questions of precedent for the future. It raises serious questions of propriety. It is not appropriate for deals to be made and an agreement to be crafted, and a majority of the conference to be put together and then have the rest of us told that we are being presented with a fait accompli.

The Republicans have been invited to come to a couple of such closed-door meetings and told what the agreement was that the House conferees would present to the conference. We have said that we could not support it. But, we did go to the closed meeting, so maybe we are slightly tainted.

Let me ask the Members, if it were the Committee on Appropriations and it was unable to reach agreement between the House and the Senate, and the President said, "Well, come down to the White House and we will talk about it—not all of you on the conference, now, just some of you. We will talk about what you are interested in and what I am interested in. Maybe we can work some things out here, and come to an agreement." How would the Members feel about that? Would they think that the Committee on Appropriations was fully working in the national interest? Or would they think some of the members of conference of the Committee on Appropriations were having a little more influence than some of the others on the conference. The Members might feel, and I might feel, very suspect at the product that came out of such a conference.

Both the gentleman from Connecticut (Mr. MOFFETT) and I oppose closing the conference, but the motion is only the formal vehicle for bringing these matters to the attention of the House. I vigorously protest the destruction of legitimate, open legislative processes. I think this is wrong. This resolution is the only

vehicle I can think of for us to bring it to the full House and let the House vote on whether it wants an open or closed conference. If you want an open conference, you must vote "no" on the resolution that has been presented. Then, hopefully, by being either a unanimous or overwhelming majority vote, we can say to the conferees, "Come back up here on the hill where the House of Representatives and the Senate belong, in the U.S. Capitol Building where the Executive can come only when invited, where the public can watch what we do, and the press can quote what we say." Then, whatever the results—whether the gentleman from Connecticut (Mr. MOFFETT), is satisfied with the results or whether I am, or whether we are both dissatisfied or whether we are pleased together on the results—at least the people will have some idea about how that occurred. They will know our arguments and they will make a decision about us, about the process, about the institution itself. We have some judgments being passed on this institution and its Members and about our products, the legislation that we pass. That is, pardon my saying it, the American way, a tradition that has been established over a long, historic struggle in many other nations of the world. It has been won over the years and brought us to the point where we have these rules and regulations now. It is either worth preserving the fruits of that struggle or it is not worth it. For me, it is worth it clearly. I could not let this process of secret meetings go on and simply ignore it. The issue is more important than even the energy bill itself.

Mr. MOFFETT. Mr. Speaker, I yield 2 minutes to the gentleman from California (Mr. STARK).

Mr. STARK. Mr. Speaker, I rise to ask you to vote no on the resolution introduced by the gentleman from Connecticut and tell you at least what I think it means to those of us who are not conferees. In my case, I worked for some time on the tax portions of the bill in our committee. For many months, since that time, the bill has been a major topic of conversation. Now, as we come closer to a compromise, I think we've got to realize that, whether we like or dislike the compromise, it's going to come to the House floor like a whistle in a high wind, with minimum warning, and with pressure on all sides to pass it quickly.

If you recall with me, we debated that bill at least 3 days on the floor of the House. When it comes out of conference, we will get an hour. One hour. If the press and interested Members have not even been allowed to attend the negotiating sessions, I do not see how we can discharge our responsibility of making a sound judgment. Whether we ought to support the bill or parts of the bill or none of the bill, there just would not be enough time even to know what the bill says—let alone to decide whether we agree with it.

The question is raised, do I not trust the people negotiating? I have to say to my friends on the opposite side of the aisle that I did not trust Mr. Schlesinger when he was on their side, during the Vietnam war, and I do not believe that recruiting him into our camp lends him any certificate of honesty.

I think, obviously, we ought to have his views, and I think we should also get those of the oil industry. I don't trust them, either, but I would like to read the debate, study the compromises, and know how to vote when we finally see the bill. The only way I can do that is if the negotiations for compromise take place in the sunshine.

Mr. Speaker, I urge that we vote no and send the White House and the selected conferees a message, that we would like to know what is going on and make this activity a part of the deliberations of the whole House of Representatives.

Mr. MOFFETT. Mr. Speaker, I yield 3 minutes to the gentleman from New Jersey (Mr. MAGUIRE).

Mr. MAGUIRE. Mr. Speaker, like my colleagues, the gentleman from Connecticut and the gentleman from Ohio who are sponsors of this resolution, I am a member of the Subcommittee on Energy and Power of the Committee on Commerce. Those of us who have worked on energy issues over the last several years are dismayed over the turn of events we have had in the conference and the secret nature of negotiations surrounding the natural gas section of the National Energy Act.

We realize, of course, this is a very complicated issue involving highly technical questions, and that the close division of views on the Senate side has undoubtedly made the negotiation process very difficult.

We also appreciate the patience of the conferees, and the persistence that has been demonstrated by the conferees over the past several months in seeking to work out a reasonable compromise.

We also understand that closed caucuses are often necessary so that different sides can more freely explore policy or strategy options.

In nearly 4 months, however, as the gentleman from Connecticut indicated, there has only been one open conference session. And it was brief. It did not provide any opportunity for either a complete explanation or a discussion of the proposals that were offered. Since that time there has not been another session to which all conferees have been invited, although we understand there have been frequent meetings involving select groups of conferees.

Now, I, and I think I share these views with quite a number of other Members, feel that it is essential now that any further work be done in public session.

This is especially important because some of the House conferees have endorsed proposals that vary greatly from the House bill, and we are going to be dealing with these proposals when they come back to this body without a record of public debate if this process continues. We would expect a record of public debate to be available when we are asked to consider these matters on the floor.

What is at stake here is whether we are going to conduct the public business in public. We have had reforms in recent years providing that we should not finalize legislation behind closed doors. But that is what is going on here. We should not have the doors open only when it is convenient and only when it is not important. Those doors should be open, especially when matters of such urgency as these and of such national importance as these are debated and decided on.

So, Mr. Speaker, I plead with this House to support the notion of open conferences and of providing an open conference in this case.

Mr. MOFFETT. Mr. Speaker, may I inquire as to how much time I have remaining?

The SPEAKER. The gentleman from Connecticut (Mr. MOFFETT) has 19 minutes remaining, and the gentleman from Ohio (Mr. BROWN) has 18 minutes remaining.

Mr. BROWN of Ohio. Mr. Speaker, I yield 3 minutes to the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Speaker, I take this time to salute the effort that is being made this afternoon by the gentleman from Connecticut (Mr. MOFFETT) and the gentleman from Ohio (Mr. BROWN) to call attention to the manner in which the conference sessions of the Ad Hoc Committee on Energy have been conducted for the most part during the current session of Congress.

We do not want to use the term just employed by the distinguished gentleman from New Jersey (Mr. MAGUIRE). We do not want this Congress to go down in history as the "closed-door Congress" in which decisions were made without the full knowledge and participation of all those who ought to be entitled to participate in the deliberations of this body or of the committees of this Congress.

We all realize that it is necessary from time to time for committees to hold formal meetings and for various Members to get together in their offices or on the telephone to discuss developments as they relate to legislation or the business of the conference committee. However, it seems that in the practices of the Ad Hoc Committee on Energy we have begun to institutionalize the process. The kind of meetings that have been conducted has become so frequent, and the deliberations that have been conducted have become institutionalized by their frequency and by the importance of the decisions that are apparently being made.

I would suggest, Mr. Speaker, in closing that there is one still more important and further reason why it is important that we call a halt to this business that has been described. It may be necessary to take this action to save the ratification of the Panama Canal treaties. I do not know whether this will gain votes for or against the motion now pending, but I have just noted on the wire a statement by the junior Senator from South Dakota that he has called the White House to warn that he and other Senators opposed to deregulation may actually withhold their votes on the treaties and kill the treaties unless secret bargaining sessions on the energy bill are opened up to the press.

So I would suggest that there are some very important ramifications that

can flow from a continuation of these present practices.

Again, Mr. Speaker, I emphasize that I support this effort, and I would call for a "no" vote on the motion.

Mr. CHARLES WILSON of Texas. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Texas.

Mr. CHARLES WILSON of Texas. Mr. Speaker, I am trying to get some clarification of the parliamentary situation here.

I would interpret this as indicating that a vote for the Moffett motion could be construed to be a vote against the Panama Canal treaties. Would the gentleman agree with that interpretation?

Mr. ANDERSON of Illinois. Mr. Speaker, after some of the conclusions that were drawn with respect to several votes that I cast in this body in recent years as they relate to a recent primary, that could be entirely possible.

Mr. MOFFETT. Mr. Speaker, I yield 2 minutes to the gentleman from Florida (Mr. FASCELL).

Mr. FASCELL. Mr. Speaker, I want to join the bipartisan effort of the gentleman from Connecticut (Mr. MOFFETT) and the gentleman from Ohio (Mr. BROWN) on this motion, and I urge a "no" on the motion.

Like the rest of us, I hope this conference will be settled. Since it has not been settled in closed session, maybe if we open it up, we will do better.

Furthermore, considerable doubt and frustration has crept into what the conferees are negotiating. What trades are being made as they individually or in subgroups either officially or unofficially try to perform their duties as conferees. This is very unfortunate. The public and the Congress are frustrated and suspicious about what the end product will be if any.

The conference must immediately act to reassure both its colleagues and the public that the negotiatons and tradeoffs are openly arrived at and understood.

Otherwise the situation certainly will be worse than it is. And the other thing that is serious, and that is that a very important principle has really been twisted. I do not think we ought to allow that to happen. We should not by technical indirection subvert the clear intent of the rules of the House. In a matter as sensitive as this has been in the Congress, it does not need the added burden of suspicion and more frustration than already exists. This conference and its negotiations ought to have the very careful and thorough scrutiny of the press and the public. I am not being derogatory about the conferees or their ability to negotiate. They can negotiate as well as we can. I think the important thing is the principle involved here, and I think the time has come to call a halt to an undesirable practice. In the next session, we ought to take a look at those rules and decide what the definition of a conference committee should be and perhaps we should require the Speaker to discharge conferees when there is a clear violation.

The argument is made that the conferees have met "formally" only once and that meeting was in public. But everyone knows that the conferees have been "meeting" for 4 months and have not been able to resolve the matter, therefore there have been no further "formal" meetings.

This is an unhappy circumstance and the rationale of rules compliance has been stretched.

The rule should be followed and "meetings, conferences, or discussions," of conferees should be "formal".

The results of the negotiations obviously will be made public but the public is also entitled to know, as much as it is in our power to do so, what underlying arguments and reasons were put forth, who advocated them and why a particular compromise was agreed to. This should occur not in the report of the conferees or by leaks to press, but in open session.

I urge a "no" vote on the resolution.

Mr. BROWN of Ohio. Mr. Speaker, I yield 3 minutes to the gentleman from Vermont (Mr. JEFFORDS).

Mr. JEFFORDS. Mr. Speaker, as we all know, this past fall the Congress was placed in the position where we had to do something about energy. As a result of that, the House and the Senate did come forward with their legislative versions of a solution. Under our rules, we vested great authority in what is referred to as the conference committee. What we did not do is to sanction a conference committee of the conference committee. And that is what it has created. When one considers all of the vast powers that a conference committee has, to revest that in another body, unsanctioned and illegal under our circumstances, it becomes a serious situation which this body cannot tolerate. That is why I rise in opposition to the resolution. Let us look at what that conference committee has done, the one we have vested the power in this year. It has met once for 3 hours to do nothing but distribute two propositions as to what might be voted on. It has done nothing other than that. That is not what we intended it to do. What it has done by its action to lose the confidence of the people. It has also lost the confidence of this body as to its ability to do anything. We have heard so much about open government; and open government does have the function of building confidence in the public and the people.

Secret meetings behind closed doors by a few unsanctioned members to determine our destiny destroys confidence. If it did meet now, it could do something constructive. It could spin off those things which were already referred to by the gentleman from Connecticut which it has accomplished. It can allow those things to go forward, because if we do not do at least that, serious repercussions will result.

I have discussed this with the president of the Solar Energy Industries Association and found, alarmingly, that as a result of inaction, sales and requests for solar energy equipment have dropped precipitously from inaction. Everyone is waiting to see what is going to happen—are they going to get tax credits, are they going to get subsidized loans. This inaction results in a serious impediment to the development of the very thing we need to end the crisis, alternative sources.

Mr. Speaker, I would urge the Members to oppose this resolution.

Mr. GARY A. MYERS. Mr. Speaker, will the gentleman yield?

Mr. JEFFORDS. I yield to the gentleman from Pennsylvania.

Mr. GARY A. MYERS. Mr. Speaker, the other day in the Committee on Science and Technology we had some solar industry representatives testifying on a bill. The solar industry representatives testified that the thing that would most rapidly stimulate the development of solar and renewable sources of energy was the immediate deregulation of prices for natural gas and oil.

Would the gentleman support that particular philosophy?

Mr. JEFFORDS. I would suggest that certainly if we precipitously raise prices on fossil fuel, naturally, it is going to stimulate alternate sources of energy. I do not necessarily agree with that proposition, however. It is the wrong way to approach the problem.

Mr. GARY A. MYERS. If the gentleman will yield further, that was the conclusion of solar industry representatives with respect to the developing of sources of solar energy. They testified before the Committee on Science and Technology. That was their opinion.

Mr. JEFFORDS. I am sure the gentleman is making a correct statement, for the current period. But prices of alternative energy technologies are dropping rapidly. They will continue to drop, and why we have to jack up gas and oil prices—and bleed the consumer even further than he has been bled would be a hard thing to justify.

I am concerned that the unresolved questions about natural gas pricing and the crude oil tax facing you have delayed enactment of the substantial body of provisions upon which you have already agree. The significance of the completed work on energy conservation, electric rate reform, coal conversion, as well as major noncontroversial sections of the tax provisions, is of such magnitude that we believe the time has arrived to move those already-completed agreements to the floor for action.

Every day that we delay implementation of these provisions retards the Nation's ability to reverse our dangerous dependency on foreign oil and resulting outflow of dollars. As you know, it has been estimated that these portions of the legislation comprise more than 90 percent of the total energy savings possible under the national energy plan. Although we all recognize this legislation will not in itself provide a final solution to the Nation's energy dilemma, the agreements already achieved should rightly be acknowledged as a major legislative success.

I particularly would like to stress the importance of separating out those parts

of the tax provisions which the conferees are close on and are relatively noncontroversial. The Nation is anxiously awaiting the tax credits for residential insulation and solar and wind projects, and there has been widespread reluctance on the part of homeowners to purchase these materials and devices before passage of the act. Passage now would end the logjam that the fledgling solar industry currently is experiencing.

It is abundantly clear that decisions concerning natural gas and the crude oil tax will not be moved forward at any greater pace as a result of holding the rest of the package in abeyance pending these decisions. Yet failure to pass the very significant agreements already achieved would be a disaster for all of us.

I urge that the motion be defeated. It can only help. We need action.

Mr. MOFFETT. Mr. Speaker, I yield 2 minutes to the gentleman from California (Mr. Moss).

Mr. MOSS. Mr. Speaker, this resolution ought to be voted down and this House ought to tell its conferees that they should meet publicly so that we know what is going on and the public knows what is going on.

There is no way in which a conference report from this conference committee can be brought to this floor without a special rule because so many things have happened that are not in either the House or the Senate versions of the bills that were sent to conference.

It is important that we not be faced with a rush at the very last and be asked to act and act after having only a few days to study a very complicated piece of legislation. We should be able to follow it; but more importantly, we ought to insist on the integrity of the rules of this House. These rules bind the conferees and should be observed in good faith. There should be no getting around the letter and spirit of the rules by asserting that some of the meetings are just informal discussions when, in fact, they have every characteristic of a conference.

We should also insist that conferences take place here on this Hill where they can be controlled by the legislative branch and not the executive. We are not lackies. We are not subservient to the executive. We ought to insist on the full rights of the House, and the other body should make the same insistence on behalf of its Members.

After all, we are but trustees for the people, and our powers are basically their powers. Furthermore, we should not—must not— make them subservient to the executive.

Mr. BROWN of Ohio. Mr. Speaker, I yield 1 minute to the gentleman from North Carolina (Mr. MARTIN).

Mr. MARTIN. Mr. Speaker, I want to say that I support the coalition which has brought before us here a resolution to authorize secret meetings of this executive committee of the Democratic Caucus of the conference committee on the energy legislation.

I would also join my colleagues in voting against the resolution which they have presented to us here this afternoon because I oppose what is taking place in the House—for instance, the sunshine and sunset laws, except where they pertain to the White House itself.

However, Mr. Speaker, it strikes me as curious in one other respect. We have heard several Members talk about the off-the-record meetings that are taking place. The gentleman from New Jersey, who spoke just a few moments ago, expressed his interest in being able to get a look at the record of the talks that were taking place there.

Mr. Speaker, I would want to ask the gentleman from Ohio (Mr. BROWN) whether he is aware of any evidence for or against the proposition that these meetings are, in fact, secret and are not subject to recordings.

The SPEAKER. The time of the gentleman from North Carolina (Mr. MARTIN) has expired.

Mr. BROWN of Ohio. Mr. Speaker, I yield 1 additional minute ot the gentleman from North Carolina, and I would ask him to yield so that I may respond.

Mr. MARTIN. Mr. Speaker, I would certainly yield to the gentleman from Ohio because I think if we can clarify this matter, it may help to sober up some of the discussions that have taken place.

Mr. BROWN of Ohio. Mr. Speaker, I never knew in any White House whether the substance of the conversation was being recorded.

I have been in this White House and I felt under the table, but I do not know that there is any evidence that any record is being made.

Mr. MARTIN. Is the gentleman sure?

Mr. BROWN of Ohio. I agree with the gentleman from New Jersey that it would be nice if we had a record of the debate that was going on on the compromises so that we might look at the record and see whether we agree with the arguments or not.

Of course, if they were up here in open conference, they might have been recorded and subject to public printing, but in the White House I do not suppose they are.

Mr. MARTIN. Mr. Speaker, I think the gentleman from Ohio (Mr. BROWN) and the gentleman from Connecticut make a good point. I intend to join with them in voting against the resolution.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield?

Mr. MARTIN. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Speaker, I have been listening with interest to all of this discussion. We hear this sort of thing all the time.

The SPEAKER. The time of the gentleman from North Carolina has again expired.

Mr. BROWN of Ohio. Mr. Speaker, I yield 1 additional minute to the gentleman from North Carolina (Mr. MARTIN).

Mr. ASHBROOK. I would like to know for the record, who is it that is more equal than the rest of us? We have not had any names. Who is down there? Could my good friend from Ohio tell me who it is that is going to the White House?

Mr. MARTIN. We do not know for a fact that there is anyone actually meeting there.

However, I will yield to the gentleman from Ohio for a further reply.

Mr. BROWN of Ohio. I have to say I do know for a fact that there is someone actually meeting there, because the other morning, when the Republican conferees from the House—the eight of us—went down to tell the President that if he needed help from us to get a bill out, we were available to offer that help and would like to go to the conference meetings, I was accidentally directed to the Roosevelt Room. I opened the door to the Roosevelt Room, and here were some of my colleagues, whom I recognized, with papers around the table, discussing the matter. But, I was so embarrassed at being in a place where I was obviously not welcome that I cannot identify anyone.

The SPEAKER. The time of the gentleman from North Carolina has again expired.

Mr. BROWN of Ohio. Mr. Speaker, I yield 1 additional minute to the gentleman from North Carolina.

Mr. MARTIN. I thank the gentleman.

Mr. BROWN of Ohio. They did not have stockings over their faces or anything like that. I cannot identify precisely who they are, but I suppose if I had the opportunity to go down there again, I would make better notes.

Mr. MARTIN. This is all very curious, and I am even more persuaded that the gentleman from Connecticut is correct.

Mr. SYMMS. Mr. Speaker, will the gentleman yield?

Mr. MARTIN. I yield to the gentleman from Idaho.

Mr. SYMMS. I was wondering if the gentleman from Ohio might make an inquiry and see if they have any tape recordings down there.

Mr. MOFFETT. Mr. Speaker, I yield 2 minutes to the gentleman from New York (Mr. DOWNEY).

Mr. DOWNEY. Mr. Speaker, oftentimes when we debate issues like this, we lose sight of some fundamentals about our Government. We govern with the consent of the governed, and unless they know what we are doing it is pretty tough to lead them or represent them in any practical manner.

I am upset and concerned that, whether we vote this motion down or not today, that the meetings will continue the way they have been continuing in an unofficial manner. Is there anyone here—and perhaps the gentleman from Connecticut could answer my question—or if the gentleman from Ohio, who is an important member of the House conference, could possibly answer this question for me I would greatly appreciate it: Whether or not if this resolution is defeated, will these meetings in the White House persist?

Mr. ASHLEY. Mr. Speaker, will the gentleman yield?

Mr. DOWNEY. I will be happy to yield to the gentleman from Ohio.

Mr. ASHLEY. The meetings in the White House, as they are characterized, have in fact been moved back to the Capitol, at least for the time being.

Mr. DOWNEY. So, are we to understand that the gentleman will open these meetings to the public, and that this will be a conference following rule XXVIII 6(a) of the House rules?

Mr. ASHLEY. Now, the gentleman would be mistaken or ill advised to assume that.

Mr. DOWNEY. Is the gentleman aware of the history of this rule? The author of the House rule is with us today, and I coauthored that with him. I have some understanding that this rule was instituted to prevent this situation. We were concerned that the House Armed Services Committee meeting with the Senate and dealing with matters of great import and tremendous sums of money, were meeting behind closed doors. It was our intention to insure that this did not happen in the future.

Why should the energy conference committee be exempt from this particular rule? Could the gentleman possibly answer why the energy conference should be in any way different or exempt from this rule?

Mr. ASHLEY. Speaking for myself, I do not believe that the conference is exempt from the rules of the House in any manner whatsoever. I think we are operating within the rules of the House, certainly as I understand them. Some of us have been here for a good period of time——

Mr. DOWNEY. Then, if I understand the gentleman correctly, tomorrow if myself and several of my colleagues would like to attend the conference committee, we will be welcome?

Mr. ASHLEY. What the gentleman does not seem to understand is that this conference has broken down and the conference on the national energy plan has not met in some several weeks, nor is it meeting these days. What is going on is that there are informal discussions among some of the Senate conferees and some of the House conferees. Those that represent the House are not a majority of the House conferees.

So what I think we are trying to get at or I am trying to get at is the distinction between a conference committee meeting and the informal discussions that are going on in an effort to reach the kind of preliminary possible areas of agreement that could lead us back into the sunshine of an open conference session.

Mr. DOWNEY. Well, the gentleman strikes a curious position. How is this to prevent every conference from meeting informally and then at some final date adopting at a pro forma session of the conference what the agreements have been? To do what the gentleman is doing today and has been doing for several weeks leads us down a very dangerous road where the precedents are that there shall be no more open formal conferences.

Mr. ASHLEY. If I can respond to that, I think the process that is being followed is consistent with the rules of the House, and if I may say so is the only opportunity, offers the only opportunity for us to act on a national energy plan during this session of Congress.

Mr. BROWN of Ohio. Mr. Speaker, I would like to be able graciously to yield more time to my respected colleague, the gentleman from Ohio (Mr. ASHLEY), but I have a request for time from the minority leader and of course I must honor that.

I would have to say first, if I could take 1 minute of my own time, that it is the argument we always get when there are closed meetings, that this is just a preliminary group, a rump group—I think I know where that expression comes from.

And the other problem we have is that this conference broke down because some of the wheels—and I do not mean a double meaning here—some of the conferees that were supposed to be on the conference were never used, that is the Republican members were never really given the opportunity for these private meetings that have been held, and while I do not want to characterize the Republicans as wheels in this conference, it is part of the difficulty that they could have been used if the majority cared to use them.

Mr. Speaker, I yield 3 minutes to the gentleman from Arizona (Mr. RHODES).

Mr. RHODES. Mr. Speaker, I have thoroughly enjoyed this debate. I want to compliment the gentleman from Ohio (Mr. BROWN) and the gentleman from Connecticut (Mr. MOFFETT) for bringing this situation to a head.

Actually the rules of the House were not promulgated lightly. The rule which we are talking about was promulgated not only because of the desire to inform the American public as to what was going on, although that certainly is a worthy desire, but also to stop the kind of machinations which we have seen so frequently in conferences between the House and the Senate which have resulted in no legislation or bad legislation. It seems to me the thing that has happened on the energy bill is a perfect example of the reason why this rule was adopted. It would be my hope that the gentleman from Ohio, the chairman of the conference committee, would insist that the rules of the House be obeyed.

One of the reasons I was so much in favor of that rule when it came about was because of the number of years I spent on the Appropriations Committee. This is a great committee, but every time we passed a bill and the Senate passed a bill, we came to the conference and we sat there looking at each other for days because of some reasons that were possibly good and some reasons that were possibly bad, and quite often rather devious, as to why agreement could not be arrived at. Now those reasons would disappear—and have disappeared—if they were given in the light of day because there is no Member of the House or the Senate who is going to give an unworthy reason for a position he takes when the meeting is open to the press and to the public.

So I suspect—I could not prove this, of course, Mr. Speaker, but I suspect that there are some reasons why this conference has broken down that are somewhat less than worthy, that are reasons that probably would not be given or would not be adhered to if they really were in the open. I suggest, Mr. Speaker, that if the Members of this House really are sincere about wanting to have an energy bill—and I hope that we are—the best way to do it is to start right now with sessions, open sessions of all of the conferees, and let all of them have something to do with bringing out this bill.

Obviously the other way of doing it in the dark, and doing it in small groups, has not worked, it has not produced legislation. Why do we not try—and I repeat, why do we not just try to abide by the rules of the House which obviously were not put together without reason?

I have every confidence that the Members of the House when they really want to legislate, when they want to abide by the rules, can do so. I am satisfied that if this were accomplished, if we were to actually get down to some real sessions between the conferees on both sides that the result would be a bill in a very short period of time.

So again, Mr. Speaker, I support the gentleman from Ohio (Mr. BROWN) and the gentleman from Connecticut (Mr. MOFFETT) for bringing this up. I hope that the motion will be voted down.

Mr. MOFFETT. Mr. Speaker, I yield 2 minutes to the gentleman from Michigan (Mr. CARR).

Mr. CARR. Mr. Speaker, as the author of this particular rule that is under discussion here, I thought maybe the Members might be interested in some of the history behind the enactment of this rule.

At the time that this rule was offered before the beginning of this Congress, and indeed in the debate, particularly before the House Democratic Caucus, in support of this rule, I was mindful of the problem that we have here today. That there would be an attempt to evade the rule and go around the rule by "rump" sessions subcommittees, or whatever you want to call them. And that was part of the original rule that I wanted to introduce.

After consultation with a number of people, including people in the leadership of my party, people who have had a great deal more experience with parliamentary procedure in this House than I have had, and also after I talked to the Parliamentarian's office, I was informed that that was really unnecessary and that a conference committee is a conference committee whether you divide it in half, whether you divide it in sixths, or whether you divide it in quarters, a conference committee is a conference committee, and that rule says that conference committees shall meet in public.

The point is that the rule is being violated now by meetings between conferees of the House and the Senate. That is what the rule says.

Now if the House conferees want to get together informally and plan their strategy, that is not covered, but any time you get Senate and House Members who are members of the conference committee conducting conference committee business that is a conference committee and it seems to me that this rule applies. That certainly was the intent of this person who authored the resolution which was adopted by the House and is now part of the House rules. It seems to me,

Mr. Speaker, that we ought to insist on the observance of the rule by the distinguished chairman of the House conference committee on energy.

Mr. ASHLEY. Mr. Speaker, will the gentleman yield?

The SPEAKER. The time of the gentleman has expired.

Mr. MOFFETT. Mr. Speaker, I yield 1 additional minute to the gentleman from Michigan (Mr. CARR).

Mr. ASHLEY. Mr. Speaker, will the gentleman yield?

Mr. CARR. I yield to the gentleman from Ohio.

Mr. ASHLEY. Mr. Speaker, let me say that I fully appreciate what the gentleman from Michigan (Mr. CARR) has just said. There is a basic and fundamental difference as to the interpretation of the rule, namely what constitutes a meeting of the conference. It is my absolute conviction that the meetings that have been transpiring are not meetings of the conference but are informal expressions between Members on both sides in an effort to advance—I will concede—in an effort to advance the business of the conference, but as I read the rule, as we meet in the sessions we have had, we are not meeting in a conference meeting. The conference broke down—if the gentleman is interested—the conference broke down because one member of the conference, who did not want an energy bill, insisted that he have the opportunity to ask 75 questions and he proceeded to ask those questions.

All I am saying is that those meetings in open conference have not been quite as productive as has been suggested by previous speakers. It was because we went to an open conference, to an actual conference meeting under the gentleman's rule, that we are debating here today.

The SPEAKER. The time of the gentleman has expired.

Mr. MOFFETT. Mr. Speaker, I yield 2 minutes to the gentleman from Massachusetts (Mr. MARKEY).

Will the gentleman yield?

Mr. MARKEY. I yield to the gentleman from Connecticut.

Mr. MOFFETT. I thank the gentleman for yielding.

I want to take serious issue with the gentleman from Ohio (Mr. ASHLEY) in saying that the conference broke down because a Member had 75 questions. The distinguished chairman of the full conference, the gentleman from West Virginia, (Mr. STAGGERS) has it perfectly within his rights to give Members 5 minutes here and 5 minutes there. I think it is really unfortunate to say that the conference has broken down when the conference has not in fact broken down. It has been referred to in the newspapers, by the gentleman from Ohio and others, as the "conference" and the "conferees" right long.

Mr. MARKEY. I would like to call upon the distinguished gentleman from Ohio (Mr. ASHLEY) to answer another question. If the House this afternoon votes no on the motion to close the conference committee, will the chairman continue to hold meetings in the private manner which he has been following for the past 4 months? In other words, are we now engaging in a futile effort as far as he is concerned?

Mr. ASHLEY. If the gentleman will yield, I do not know whether I would characterize it as futile or not. I am trying to indicate in my response to the previous colloquy that there is a serious disagreement as to what constitutes a conference meeting for purposes of interpreting the rules by which we operate, so that if a majority vote no on this motion, I will not feel constrained to terminate the efforts that are going on at the present time to reach some tentative agreement which can be presented to the conference. Those efforts hardly constitute a formal conference.

Mr. MARKEY. The gentleman will not feel bound by what the House of Representatives is about to do here? The gentleman does not think that by voting no on this motion that the House is saying to the gentleman, sending a message to the chairman that the House wants the conference to meet on Capitol Hill, in the open, in public and now? I hope this is not what the gentleman is saying, for if it is, then we will continue to formulate vital public policy with the majority of the Members of this House and the citizens of this country not only underrepresented but unrepresented.

The SPEAKER. The time of the gentleman has expired.

Mr. MOFFETT. I yield 2 minutes to the gentleman from California (Mr. MILLER).

Mr. MILLER of California. I would just like to add to the comments, Mr. Speaker, that the issue is not whether it is difficult to conduct a conference in an open session, but the issue is that the House rules demand that the conference be conducted in an open session.

We have conducted conferences around here that are very difficult, and we have just rejected a farm bill because the House did not participate in it. I suggest that the grounds for rejecting the energy bill may be that the House did not participate in it. I do not think that is the manner in which we put together a coalition when we know that we are dealing with a subject that has such diverse interests and such opposite interests because of the geography of this country. Because our people come from different sections—people who consume and people who produce—that brings about the widest discussion, and it is necessary to reach an agreement which this Congress can live with and, more importantly, which this country can live with. There will be no conference. There will be no moral equivalency of war. There will be no solution where the American people can believe that this Congress has led them in the right direction if it is done behind closed doors. I dare say that the Chairman by his answers to the gentleman from Massachusetts is suggesting that we have no alternative but to instruct the conferees to meet in open, because I think, as the author, the gentleman from Michigan (Mr. CARR) has pointed out, the purpose of this rule is to have conference meetings in the open, and always in the open. Unless the Congress as a whole decides otherwise, that probably will not be done, so the rule must be carried out not only when it is easy, not only when it is convenient, but all of the time unless the Congress as a whole speaks in the opposite direction. I do not think that will be done.

I urge my colleagues to oppose the motion.

Mr. MOFFETT. I yield 2 minutes to the gentleman from Michigan (Mr. KILDEE).

Mr. KILDEE. Mr. Speaker, in my 14 years of legislative work I have always believed that the public's business should be conducted publicly, and the public has serious reason to worry when that is not the case. I, in every instance, have walked out of illegal, secret meetings, and while I was absent, nothing ever advancing the public interest took place. But I do know certain things advancing certain special interests took place in some of those meetings which took place while I served in the Michigan Legislature.

I supported the President on his energy package when it passed this House. I wanted an energy package then, and I want one now, but I want one that I can support. My primary loyalty lies not with the President of the United States, not with the conferees, but with the public. For that reason I want these conferences to be open.

Since it appears that the conferees are either abandoning the House position on the deregulation of natural gas, or at least are unable to reach agreement, I would hope that the three other parts of the bill would be separated and sent to us so that we could act on them.

We were told almost a year ago that the energy crisis is the moral equivalent of war. It has taken us almost a year to declare war. I would hope by separating this package we could soon act upon those three parts. I would urge a no vote on this resolution.

Mr. MOFFETT. Mr. Speaker, I yield 1 minute to the gentleman from Iowa (Mr. BEDELL).

Mr. BEDELL. Mr. Speaker, I yield to the gentleman from Kansas (Mr. GLICKMAN).

Mr. GLICKMAN. Mr. Speaker, I strongly support a no vote.

Mr. Speaker, there are two issues involved in this debate. Openness in Government is one issue, and for that reason we must open the conference.

But even more important is the substantive issue—passing an energy bill. This country is being ridiculed by the rest of the world for not passing an energy bill. This lack of energy bill is doing incalculable damage to this country, why no bill? Perhaps it is because of petty personality conflicts between Members, perhaps it is because of a failure in the exercise of Executive leadership, perhaps it is because of the complexity of the issues raised in the whole energy debate.

Whatever the cause, it is a national shame that we do not have a bill. Perhaps opening the conference to the public will help expedite the process—it is a little bit like chicken soup when you are sick; it may not help, but it sure would

not hurt. At a minimum, an open conference will produce responsible open democracy on this, our most important issue.

There is no other alternative; the conference must be opened to the public and a responsible bill passed quickly.

Mr. BEDELL. Mr. Speaker, I would like to address a question to the distinguished chairman of the conference committee. If there were a chairman of a conference committee who wanted to hold his own special conference committee so he could say that the committee was deadlocked and then invite to the committee meetings only those who he wanted to have there, including people not members of the conference, or even Members of the House, what would we need to do to prevent that—that is, those of us who think it is not proper to have that kind of operation in the House? Would the chairman have a suggestion of what action we should take if some of us think it is wrong?

Mr. Speaker, I think that the distinguished gentleman from Connecticut (Mr. MOFFETT) and the distinguished gentleman from Ohio (Mr. BROWN) have raised a very significant issue which should be thoroughly discussed by the House and brought to the attention of the American public.

For over a year, the Congress has been deadlocked on the policy issue of the deregulation of natural gas prices. Both the Senate and the House voted on this question, and, as part of the National Energy Act, it was referred to a conference committee for resolution.

We are all aware of the inability of that committee to reach a consensus on the natural gas pricing issue. However, what many of us—and most of the American public—may not be aware of is the nature of recent attempts to break the impasse.

In recent weeks, an unofficial group of select conferees has been meeting in secret with Secretary Schlesinger and other administration officials in an effort to cut a deal on this highly significant economic issue. In so doing, they have consciously excluded certain appointed members of the conference committee from these deliberations and included individuals who are in no way connected with the Congress.

House rule XXVIII states that—

> Each conference committee meeting between the House and the Senate shall be open to the public except when the House in open session has determined by roll call vote of a majority of those Members voting that all or part of the meeting shall be closed to the public.

The House has taken no such vote, and a select group of conferees has been meeting behind closed doors in contravention of traditional congressional procedure. In fact, in the past 3 months, the energy conferees have met in public session only once—on March 22, for less than 2 hours—and they adjourned with no resolution of pending disagreements.

This procedure is not only a violation of the rules of the House; it is also no way to make public policy. If we are ever to restore public confidence in the operation of Congress and democratic government, we must insist that congressional proceedings which do not involve national security issues are conducted in full public view.

Mr. Speaker, I am outraged at the way a select group of conferees have been attempting to resolve the impasse over the deregulation of natural gas prices. Their behavior is a clear violation of House rules. It contradicts the basic tenets of open government and the democratic process. And it is an affront to the American people.

The SPEAKER. The time of the gentleman from Iowa (Mr. BEDELL) has expired.

Mr. MOFFETT. Mr. Speaker, I yield 1 minute to the gentleman from California (Mr. PANETTA).

Mr. PANETTA. Mr. Speaker, obviously the choice that is here before the House is a choice of deciding between a rule regarding openness and the need to get an energy bill out. Unfortunately, there really is no choice. We have to stand by our rules. I regret that we have reached this point, however, because we are being diverted from the principal issue here, which is to get an energy bill out. This country needs an energy bill. That has to be the principal goal of the Congress and of the country. So, yes, let us vote down this motion. Let us get the conference out in the open; but for God's sake, let us get an energy bill out for this country.

Mr. BROWN of Ohio. Mr. Speaker, I yield 1 minute to the gentleman from Florida (Mr. YOUNG).

Mr. YOUNG of Florida. Mr. Speaker, in the rays before government in the sunshine and before we had real legislative reapportionment, I had the privilege of serving in the Florida State Senate, which was controlled by a group of senators who called themselves "Pork Choppers". They represented about 10 percent of the people of the State of Florida, but they controlled the senate. One of the Pork Choppers was chairman of the senate finance committee. Most of the important legislation reported came from that committee, but they seldom had a meeting in public. The reporters could never find where the senate finance committee was, yet this committee was constantly reporting legislation to the floor. One time a reporter asked the chairman, "Senator, where does your committee meet?"

He said, "We meet in the mole hole."

I think that pretty well describes it. I hope the Federal Government is not going to be reverting to mole hole government like we had in Florida at one time. One way not to have mole hole legislation is to vote no on the resolution before the committee today.

Mr. MOFFETT. Mr. Speaker, I yield 1 minute to the gentleman from Pennsylvania (Mr. KOSTMAYER).

Mr. KOSTMAYER. Mr. Speaker, I do not think the energy bill is the question here anymore. I think, as the gentleman from Massachusetts (Mr. MARKEY) pointed out, the central question is: Is the House going to follow the rules?

I am disappointed and dismayed that my friend, the distinguished gentleman from Ohio (Mr. ASHLEY), is apparently not going to be responsive to the vote which will, I think, be overwhelming this afternoon.

Why do we have rules if we are not going to obey them?

Why do we have rules if we are not going to follow them?

Why are we here? "Big deal. Who cares?"

Why are we going to even vote if the gentleman from Ohio (Mr. ASHLEY) is not going to be responsive? I think that is the question here.

Mr. Speaker, I urge the Members to support the gentleman from Connecticut (Mr. (MOFFETT) and the gentleman from Ohio (Mr. BROWN) and vote "no" and let us open this thing up so that the people and the press can view it and so that we in the Congress can finally resolve it.

The SPEAKER. The Chair will state that the gentleman from Connecticut (Mr. MOFFETT) has 1 minute remaining and the gentleman from Ohio (Mr. BROWN) has 1 minute remaining.

Mr. BROWN of Ohio. Mr. Speaker, I yield myself the remaining time at my disposal.

Mr. Speaker, I think it is very clear that we have involved here a fairly fundamental principle. The vote should be "no" on the motion offered by the gentleman from Connecticut (Mr. MOFFETT) so that we can clearly send a message to the conference leadership and to the White House saying that we think the conference ought to be conducted in public, with all the Members of the conference able to participate so that we will get legislation on which we at least feel we had a fair chance.

If we continue to meet in secret under the leadership of the executive branch and at its whim, Mr. Speaker, it seems to me that we do raise serious questions about the legislation.

Mr. MOFFETT. Mr. Speaker, I yield my remaining 1 minute to the gentleman from Oregon (Mr. WEAVER).

Mr. WEAVER. Mr. Speaker, behind the desire for secrecy lies the assumption that we must have an energy bill at any price, and that is precisely why the deliberations of the conference must be exposed to the public.

The record of this debate is clear. Any meeting of any number of conferees on the energy bill will be bound by whatever the House votes, and if the House votes "no," then that will, by this record, bind the energy conference committee and its members.

Mr. MOFFETT. Mr. Speaker, will the gentleman yield?

Mr. WEAVER. I yield to the gentleman from Connecticut.

Mr. MOFFETT. Mr. Speaker, I thank the gentleman for yielding.

In the few seconds remaining, Mr. Speaker, I want to say it is critical that we vote this motion down and reaffirm our belief in open conferences.

This has been a conference, there has been no question about that. Resolutions, amendments, and concepts have been offered on paper and negotiated. This is everything that a conference appears

to be, and I urge a "no" vote on the motion.

● Mr. ASHLEY. Mr. Speaker, there can be no question that formal meetings of the energy conference committee should have been and will be fully open to the public.

Let's look at the history of the energy conference to date. It was in open conference that the House and Senate conferees resolved some 1,400 separate issues in dispute between the House and Senate with respect to the conservation, conversion, and utility rate reform parts of the energy package.

After the conferees had completed work on these parts of the energy plan, it was in open conference that efforts were made, beginning last December, to resolve the enormously difficult, complex and emotional issues relating to natural gas. But let's face the facts, Mr. Speaker. It was in open conference that efforts to resolve the natural gas differences between the House and Senate broke down completely. The most recent efforts to resolve the natural gas issue in open conference resulted, by any honest assessment, in a complete debacle. Those who say that an open conference can always produce results should look at the record. It simply is not so in every instance.

When a conference breaks down, as in the instant case, it may be necessary in order to make it possible for the conference to pursue its business, for informal discussions to take place—discussions aimed at narrowing the differences between the House and Senate positions sufficiently that some hope for progress in open committee sessions is germinated.

The meetings which have been criticized during this debate are an attempt to be constructive at a very difficult and delicate juncture. In point of fact, they are necessary if there is to be a natural gas pricing law. Put another way, they are an attempt by certain members of the conference to draft tentative proposals for submission to, and consideration by, the full conference in open session. In my judgment, Mr. Speaker, these sessions are entirely consistent with the rules of the House of Representatives, and particularly the rule with respect to open conference sessions.●

The SPEAKER. All time has expired.

Without objection, the previous question is ordered on the motion.

There was no objection.

The SPEAKER. The question is on the motion offered by the gentleman from Connecticut (Mr. MOFFETT).

Under the rules of the House, this vote must be determined by the yeas and nays.

The vote was taken by electronic device, and there were—yeas 6, nays 371, not voting 57, as follows:

[Roll No. 223]

Mrs. SMITH of Nebraska, Messrs. CARTER, TSONGAS, and CONYERS changed their vote from "yea" to "nay."

Mr. STUMP changed his vote from "nay" to "yea."

So the motion was rejected.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

## GENERAL LEAVE

Mr. ROSTENKOWSKI. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the motion just defeated.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

## DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY NEXT

Mr. ROSTENKOWSKI. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule on Wednesday of next week be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

## AUTHORIZING CLERK TO RECEIVE MESSAGES AND SPEAKER TO SIGN ENROLLED BILLS AND JOINT RESOLUTIONS NOTWITHSTANDING ADJOURNMENT

Mr. ROSTENKOWSKI. Mr. Speaker, I ask unanimous consent that notwithstanding the adjournment of the House until Monday, April 17, 1978, the Clerk be authorized to receive messages from the Senate, and that the Speaker be authorized to sign any enrolled bills and

joint resolutions duly passed by the two Houses and found truly enrolled.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

## ADJOURNMENT TO MONDAY, APRIL 17

Mr. ROSTENKOWSKI. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

## FLOOR REMARKS OF THE HONORABLE CARROLL HUBBARD ON THE NEED TO SIMPLIFY INCOME TAX REPORTING

(Mr. HUBBARD asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. HUBBARD. Mr. Speaker, April 15 has long been a day of dread for millions of American taxpayers shouldering their burdensome tax responsibilities. First, they must face the shock of their income tax liability. Second, they must grope their way through a labyrinth of confusing instructions and reporting requirements. This year, the day of dread has been changed to April 17. The miserable task of understanding our byzantine tax forms remains essentially the same, however, despite the enactment of so-called "tax reform and simplification" legislation. I fear that by using the terms "simplification and reform," Congress has shown itself to be as guilty as the Internal Revenue Service in deceiving and frustrating the American people.

Last night, I spoke with an eminent attorney from Louisville, Ky., who had just given up trying to prepare his own tax form, and in exasperation had turned to his accountant for help. The complexity of our income tax structure and our income tax forms not only boggles many of the best minds in the Nation, it apparently boggles the Internal Revenue Service. The General Accounting Office released a report last month showing that only 87 percent of the questions asked of IRS telephone-aid personnel were answered correctly. Leading tax specialists in the most reputable firms simply cannot comprehend the recent changes in estate taxation. They find themselves without guidance from the statutes Congress enacts or the regulations the IRS promulgates, if such regulations are promulgated at all.

The piecemeal approach Congress has taken toward income tax reform and simplification is not working. Repeated changes serve only to confuse people. This year, more than half of all taxpayers will seek help in filling out their Federal income tax forms. In light of the work now being done on a comprehensive tax reform bill by the House Ways and Means Committee, I implore my House colleagues to press for meaningful change in our tax structure and tax forms.

Federal taxes are already too high, and going higher. This is a painful fact in itself. It is senseless for Congress to sanction the continuation of a tax system which exasperates the American taxpayer who is honestly trying to bear his painful tax responsibilities.

## ALARMING DEVELOPMENTS IN NATIONAL DEFENSE PROCUREMENTS

(Mr. LUKEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LUKEN. Mr. Speaker, I would like to bring to the attention of my colleagues in the House a most alarming matter.

The Department of the Navy has neglected its responsibility to maintain a secure mobilization base, and has allowed a Russian firm, Stankoimport, to produce machine tools used to build a tender for the U.S. missile carrying submarine, the Simon Lake. I would also like to remind my colleagues that the Department of the Army has recently awarded a contract for the production of the machine tool system for the new, secret XM–1 tank to the Mitsubishi Corp. of Japan.

These two contract agreements, one with the Soviet Union, the other with Japan, dramatizes the Armed Services utter neglect of the domestic machine tool industry—an industry which is critical to any mobilization plan, yet is plagued by increasing imports.

These are only two instances; once in 1976 and again in 1978. We do not know how many other instances have occurred. Nobody knows how many other occurrences exist in which vital and even classified defense weapon systems are produced by foreign-made machine tools. No one knows how dependent we are on Russia, Japan, China, or other non-NATO countries for our defense readiness. The terrifying fact is that no one will know until the mobilization alarm sounds, and then, it will be too late.

Although the Russian contract has been completed, we now have the opportunity to prevent a recurrence in the Mitsubishi contract. Surely, all of you will agree that in tank production, the engineering and technology for major machine tools should not reside in foreign countries. Also, the United States has the capability for this engineering and technology, yet we are relying on foreign-made machine tools for defense.

For this reason, I am proposing legislation to fight this award, and future awards of defense machine tool contracts to foreign countries. I will fight for this legislation to insure the health of our domestic machine tool industry, and the strength of our mobilization base.

## THE LATEST KILLING OF DOLPHINS BY JAPANESE FISHERMEN

(Mr. CONTE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CONTE. Mr. Speaker, it is with regret that I must again rise to express my outrage over the latest killing of dolphins in the waters of Japan. Two weeks ago, I watched the report of this bloody activity on a national network news program, which again offended my sense of rationality, as well as most of those watching. This time, the killing occurred in the prefecture of shimane, located in the Sea of Japan. The "kill" this time was 100 of these intelligent sea mammals. This compares with the 1,010 killed off the Japanese island of Iki 2 months ago. Mr. Speaker, I took the floor at that time to express my disgust over this needless, bloody activity. It was hoped that the vocal outcry of some Members of Congress, along with world opinion, would be effective in persuading the Japanese Government to utilize more humane methods of protecting their fishing industry. Indeed, the Japanese fishermen of Nagaski have employed a method whereby they catch the dolphins alive and transport them away from the immediate area of the domestic fishing activity. Why cannot this be universally employed? It seems to be the question that the Japanese officials cannot answer. Instead of encouraging this humane method, as well as other proven means of clearing the fishing area of dolphins, the Japanese officials persist in perpetuating this bloody activity, by issuing the permit and then paying the fishermen a bounty for each of their innocent dolphins they brutally slaughter. This not only disgusts and offends me and a number of my colleagues, it makes one question the real motive of the Japanese officials. Why don't they encourage, or actually subsidize, the humane transfer of these intelligent sea mammals? They are already subsidizing their killings. Such cruel, inhumane and bloody activity sanctioned by a civilized country must cease. What does it take for the Japanese to realize that the world opinion is mounting against them on this issue? What does it take for them to correct this situation?

As one Member of this body, I can assure the millions of concerned individuals throughout the world, who are offended by such repeated acts of irresponsible cruelty, that I will not ease up on my efforts to see that this activity is terminated. I only hope that the Japanese officials react quickly before this incident becomes a major, divisive, issue.

## THE CRUSHING OF THE EMERGENCY FARM BILL IS A SETBACK FOR THE NATION

(Mr. MOORE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MOORE. Mr. Speaker, yesterday this body crushed the emergency farm bill.

This action has no doubt brought glee to President Carter, but it will, I predict, be a real setback for our country.

This farm bill was the result of months of hard work by many Members of Congress. It started as a Republican initia-

tive, first in the other body by Senator BOB DOLE of Kansas, and then was embraced by the House Republican Task Force on the Agriculture Emergency. Later it was introduced by a number of Republican and Democratic Members of the House.

Still later in the legislative process it was materially amended and finally emerged from the conference committee in a modified form carrying several key amendments by Democratic Members of this body.

Perhaps it was this Republican brand that was just too much for the Carter administration to swallow. Perhaps it was perceived as a threat to the "cheap grain—cheap food" policy that is the core of this administration's economic strategy. Perhaps it was something else.

But for whatever reason, the administration's heavy hand fell on House Democrats yesterday. By over a 2 to 1 margin the majority party stomped this bill. Clearly the President's threatened veto is what caused the measure's defeat and all responsibility for this defeat is on his doorstep. As an example of his undue influence, 101 Democrat Members voted "no" on this emergency farm bill who voted "yes" on April 22, 1975 on the emergency farm bill considered on that day while only 6 Republicans made this change.

In any event, I know thousands of farmers will share their disappointment in the political process that leads them on with large quantities of sympathy and promise, but fails to deliver when it counts.

Yes, we tried, and I am proud that we tried. And we will try again to structure our national farm programs in a way that will encourage the development of a market economy which rewards the producers of agricultural wealth in the market * * * a policy which rejects the "cheap food" philosophy because that ill-conceived notion is not only unfair but is ultimately impractical as well.

## WE MUST STOP FEDERAL AGENCY GUN CONTROL, LEST WE SURRENDER LEGISLATIVE POWER TO THE EXECUTIVE BRANCH

(Mr. ASHBROOK asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. ASHBROOK. Mr. Speaker, on March 21, the Bureau of Alcohol, Tobacco and Firearms issued a "proposed rulemaking" amounting to Federal firearms registration, which, the Carter administration has embraced as theirs. I say this, because the responsible administrator is a political appointee who, during congressional briefings, informed my staff that discussions had been conducted with responsible persons elsewhere in the administration before the BATF rule was announced.

There is an insidious movement about that should disturb every Member of Congress be they gun control advocates or not. Presidential power, funneled through the rulemaking process could serve to create a new power structure in this country. By issuing administrative directives through Federal agencies, the President could threaten to usurp the congressional legislative power authorized in the Constitution.

Whether a Federal "data bank" of firearms owners should be created in the United States is a question of policy that has stirred controversy for many years. It is a question which belongs in the Congress, subjected to the democratic give-and-take that it deserves, not tucked away in some bureaucracy, where it would be out of the sight of a concerned public. Additional Government supervision over actions of private citizens should be given the thought and consideration of Members of Congress in a public forum.

For the head of an administrative agency to move to implement a program requiring a Federal registration of firearms is a violation of article I of the Constitution and poses a threat to the liberties of the citizens of this country. The Congress has spoken loudly and clearly on the question of Federal registration of gun owners. Americans are opposed to any scheme that smacks of "big brotherism."

### CRITICISMS OF BATF RULE

First. Only Congress should decide whether any form of Federal registration of firearms sales should be permitted. On at least seven previous occasions, Congress has voted against registration and centralized recordkeeping.

Second. "Data bank" collections of information about citizens should be avoided if at all possible.

Third. Tracing of illegal firearms has been effective under present law.

Fourth. Cost of computerization. Thirty-five to 40 million transactions per year will be entered into Federal computers.

Fifth. Criminal penalties for dealers who fail to report gun thefts will be more severe than those imposed upon the thief.

I urge all of my colleagues to join me immediately in registering your disapproval. Congressmen SYMMS, WEAVER, SANTINI, and VOLKMER have joined in this effort, and have offered to sponsor similar resolutions to the one which I am introducing today. You may join us as cosponsors by contacting my office. Through the good efforts of Senator JIM MCCLURE, this cause will be fought in the other Chamber. The Senator and I hope to complete our work in the next 2 weeks as the agency deadline for completion of the public comment period is May 22.

I urge you to submit a letter to the Secretary of the Treasury protecting the BATF action.

### PREVIOUS HOUSE OF REPRESENTATIVES ACTION AGAINST GUN REGISTRATION

The House of Representatives defeated three proposals to require the registration of firearms during consideration of the 1968 Gun Control Act.

First. An amendment requiring all handgun purchasers to complete a registration form at time of purchase, said form to be filed with the Secretary of the Treasury, and all existing handguns to be registered in the same manner, was defeated on July 19, 1968, by a vote of 168 to 89;

Second. An amendment to the previous amendment, extending its terms to all firearms, was defeated the same day by a vote of 172–68;

Third. An amendment requiring a license to purchase a firearm, said license to be issued by federally licensed firearms dealers and to contain the person's name, address, photograph or fingerprints, with the information susbequently to be forwarded to the Secretary of the Treasury, was defeated on July 23, 1968, by a vote of 170 to 84.

### PREVIOUS SENATE ACTIONS AGAINST GUN REGISTRATION

The Senate defeated four proposals to require the registration of firearms during consideration of the Gun Control Act of 1968:

First. An amendment providing for the registration of all firearms, virtually identical to a combination of the first two amendments rejected by the House of Representatives, was defeated on September 17, 1968, by a vote of 55 to 31;

Second. An amendment requiring the States to establish a registration system and forward the information obtained from the system to the FBI, was defeated on September 18, 1968, by a vote of 48 to 35;

Third. An amendment requiring the registration of firearms at both the local and Federal level, and establishing a firearms inventory in the Treasury Department with the information obtained from the registration system was defeated on the same day by a vote of 53 to 31; and

Fourth. An amendment requiring all firearms purchasers to exhibit a federally approved State permit or a Federal gun license was defeated 49 to 35 on the same day.

### TEXT OF CONCURRENT RESOLUTION DISAPPROVING BATF RULEMAKING

Whereas, the Bureau of Alcohol, Tobacco, and Firearms of the Department of the Treasury has proposed regulations which, although called "quantity reporting of firearms disposition," would constitute centralized Federal registration of firearms; and

Whereas, the Congress has specifically rejected Federal gun registration and centralized recordkeeping in the 1968 Gun Control Act and on repeated occasions since then; and

Whereas, there has been no claim that the Bureau of Alcohol, Tobacco, and Firearms has been unable to trace firearms successfully under the present tracing system; and

Whereas, the increased paperwork, computerization, and cost of manufacture would be overburdensome to the taxpayer and the consumer; and

Whereas, the proposed regulations are an attempt to accomplish by regulation what Congress has refused to authorize by legislation: Therefore, be it

*Resolved by the United States House of Representatives (the Senate concurring)*, That the Bureau of Alcohol, Tobacco, and Firearms regulations proposed by the Department of the Treasury in the March 21, 1978, Federal Register, requiring the reporting of all firearms transactions in federally licensed commerce to be centrally maintained by the Federal Government, the placing of additional serial numbers on all firearms, and the implementation of certain other proposed changes, exceed powers con-

ferred on that Department by the Congress, and that the proposed regulations be withdrawn.

---

DEAR SECRETARY BLUMENTHAL: I want to register my strenuous objection to the consideraton of proposed rule changes to 27 CFR, Parts 47, 178, and 179, which were published in the Federal Register by the Bureau of Alcohol, Tobacco and Firearms on March 21, 1978.

In requiring a centralization of all firearms sales to the BATF, the agency would set in motion a course of events that have already been debated and rejected by the Congress. The BATF proposes that computerization of firearms sales at all levels be implemented. The BATF, during congressional briefings stated that authority for this proposal derives from the language of the 1968 Gun Control Act, Section 926(g), and that the BATF would be legally authorized to collect the names of all firearms purchasers.

This announced interpretation of BATF authority is a dangerous move against previously documented Congressional legislative intent. On occasions, during gun control debate on the House and Senate Floors, as well as during Committee sessions, the question of whether the identity of firearms purchasers should be revealed was submitted to a vote. On each occasion, the separate Houses resolved the issue in the negative.

Whether or not a federal computer bank of firearms owners should be created in the United States is a question of policy that has stirred controversy for many years. It is a question which rightfully should be debated in a forum of elected public officials subjecting the issue to the democratic give-and-take that it deserves.

For an administrative agency to move to implement a program that even remotely resembles a federal firearms registry should clearly signal the need to the Department of Treasury to submit to Congress their plan for such a recordkeeping program. The additional governmental supervision over actions of private citizens, and the cost of implementing such a massive program should be given the thought and consideration of Members of Congress.

I oppose the continued consideration of these proposed regulations, and respectfully request that you instruct the BATF to cease its efforts to develop further its keeping of records of firearms purchasers.

Sincerely,

JOHN ASHBROOK,
*Member of Congress.*

---

## THE PRESIDENT'S PROPOSED DECISION ON THE NEUTRON BOMB

The SPEAKER pro tempore (Mr. KILDEE). Under a previous order of the House, the gentleman from Alabama (Mr. DICKINSON) is recognized for 60 minutes.

Mr. DICKINSON. Mr. Speaker, I take this special order today, on which I have contacted my colleagues on the Committee on Armed Services and the Subcommittee on Defense of the Committee on Appropriations, to discuss the weapons system, the so-called neutron bomb and to express my concern over what is apparently happening to this country of ours today so far as disarmament is concerned. I, therefore, think it is a matter of some grave concern and something that we should pay some attention to.

GENERAL LEAVE

Mr. Speaker, I ask unanimous consent that all Members may have 3 legislative days in which to revise and extend their remarks on the subject of my special order today.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Alabama?

There was no objection.

Mr. RUDD. Mr. Speaker, will the gentleman yield?

Mr. DICKINSON. I am happy to yield to my colleague the gentleman from Arizona (Mr. RUDD).

Mr. RUDD. Mr. Speaker, I thank the gentleman from Alabama (Mr. DICKINSON) for yielding me this time. I would like to compliment him very highly for his interest in this subject which has become a matter of real concern for our Nation.

Mr. Speaker, you would think that a new weapon that could be precisely targeted against enemy forces and limited in its destructiveness—but which would be totally effective—would be highly popular among policymakers and the public.

The neutron warhead is such a weapon.

We call it a bomb, but it is not really a bomb. Neutron critics injected that word into the debate in order to generate unnecessary emotionalism over the weapon.

The neutron warhead is a conventional nuclear device that can be used primarily as an enhanced artillery shell or missile against enemy tanks or emplacements.

If enemy forces have control of a building or village, a neutron weapon can be sent in to destroy them without killing innocent civilians and destroying property to the extent that is impossible to avoid with current weapons.

The fact that it is so effective is a primary reason to support the neutron weapon.

The fact that it can be used against enemy forces and installations in a limited way, without spreading unnecessary radiation and destruction among the civilian population of a war zone is further reason to deploy the neutron warhead.

The fact that its deployment would immediately put the United States and our Allies on a more equal footing with the Soviet Union and the Warsaw Pact is the major reason why we must go ahead with this weapon.

Mr. Speaker, with the neutron warhead, the United States will be able to deter hostile action or war initiated by the Soviets in Europe.

With the neutron warhead, we have a fighting chance to defeat the enemy if fighting or war should break out in Europe. But without it, there is little chance that Europe could be saved.

This is not scare talk. It is the facts.

Every strategic expert on our side recognizes that Soviet forces deployed in Europe are far in excess of what would be required either to deter an attack by NATO, or to assure continued servility on the part of their Warsaw Pact allies, the Iron Curtain countries of Communist Europe.

Changes in Soviet deployments over the past decade in Eastern Europe have substantially increased the Soviet potential for offensive operations in NATO territory.

The forward deployment of Soviet forces in East Germany, the deployment of large supplies of ammunition, fuel, and spare parts in forward Warsaw Pact depots, and the substantial increase in the number of Soviet-backed troops and equipment have all served to reduce the potential warning time available to NATO to prevent or stop a Soviet-Warsaw Pact mobilization.

We need the neutron warhead just to put us on a more equal footing to meet this threat.

We certainly do not have the manpower, tanks, and other weaponry to help save Europe in the event of a Soviet offensive without neutron weapons.

Just look at the current comparative strength of U.S.-backed NATO forces and Soviet-backed Warsaw Pact forces in Europe.

These are the most recent strength figures from the Library of Congress, which I received today from the Congressional Research Service's Foreign Affairs Division:

| | Nato | Warsaw Pact |
|---|---|---|
| Personnel | 1,408,000 | 1,600,000 |
| Number of divisions | 61 | 90 |
| Medium tanks | 7,400 | 22,000 |
| Tactical aircraft | 2,085 | 2,600 |
| Medium intermediate range ballistic missiles | 0 | 550 |

The comparative United States-Soviet component of the NATO and Warsaw Pact forces in Europe is as follows, according to the Library of Congress:

| | U.S. | Soviet Union |
|---|---|---|
| Personnel | 275,000 | 730,000 |
| Number of divisions | [1] 28 | 59 |
| Medium tanks | 4,300 | 18,000 |
| Tactical aircraft | 300 | 1,050 |
| Medium / intermediate range ballistic missiles | 0 | 550 |

[1] The 28 U.S. divisions comprise all U.S. forces, active and inactive, throughout the world. The 59 Soviet divisions in the Warsaw Pact, on the other hand, comprise only those Soviet forces actually locaed in Europe.

Mr. Speaker, the important question about the neutron warhead is, "what makes this enhanced radiation weapon different from any other weapons?"

First, it seems to frighten the Russians. How else can we explain the strong, almost hysterical opposition to deployment of the neutron warhead that has been officially voiced by the Kremlin?

With the almost 3-to-1 military advantage currently enjoyed by the Soviets in Europe, the only conclusion to be reached from this Soviet reaction to the neutron weapon is that the Soviets are afraid that it will stop or alter their already planned aggression there.

Second, possible deployment of the neutron weapon by the United States might actually cause the East European Warsaw Pact nations to think twice about an armored attack in central Europe.

This possible eventuality, which would interfere with current Soviet military intentions, is another reason for concern and pressure from the Kremlin.

The obvious answer for the United States to test the true intentions of the Soviet Union.

President Carter should formally inform the Soviets of our intention to deploy the neutron warhead, unless the Soviet Union agrees to reduce its forces to approximately the level of NATO Forces—a purely defensive posture—and to remove its poison gas weaponry.

If the Soviets refuse to do this, they will have publicly acknowledged their true hostile intentions, and deployment of the neutron warhead by the United States will be mandatory.

Mr. Speaker, I am pleased to join with my colleagues in urging the President to proceed with the production and possible deployment of enhanced radiation weapons.

We must test the true intentions of the Soviet Union.

Surely, if they fail the test, to deny our forces and those of our NATO allies the newest, most advanced weapons systems possible would be not only incomprehensible, it would be truly immoral as well.

Mr. DEVINE. Mr. Speaker, will the gentleman yield?

Mr. DICKINSON. I am pleased to yield to my colleague the gentleman from Ohio (Mr. DEVINE).

Mr. DEVINE. Mr. Speaker, I thank the gentleman from Alabama (Mr. DICKINSON) for yielding to me. I also want to commend the gentleman for taking this time to have a special order on this very important subject. A lot of my constituents have written me expressing discomfort and alarm at the posture of the President in again taking a position where he is either reviewing or phasing out the neutron warhead because it reminds them of what he did on the B–1 bomber and the Minuteman Missile III, and they wonder if he is following a posture of unilateral disarmament or, to put it another way, doing great violence to our traditional American position of peace through strength.

I think the Members of this House would do well to pay attention to the remarks of the gentleman from Alabama (Mr. DICKINSON) who is so devoted to our American tradition of peace through strength.

Mr. DICKINSON. Mr. Speaker, the art of war, as it has often been called, is sometimes brutal, sometimes subtle. Trojan horses, loud noises, even trickery are sometimes more effective than the latest armaments. The outcome of a battle can be as readily influenced by what an opponent thinks he sees as by what is actually happening to him.

Psychology, or should I say psychological warfare can and does win battles. Take the case of the so-called neutron bomb. It has been depicted as the real estate agent's dream. It destroys people, but it does not damage property. Some would have us believe that the neutron bomb would replace the eviction notice.

How many Members are aware of the tremendous propaganda effect and effort that the Soviet Union has mounted to attempt to discredit this weapons system? The House Committee on Armed Services received 15 pounds—15 pounds—of petitions signed by what purported to be every schoolchild in Communist Germany, asking the United States not to manufacture the "neutronen bomben." Our colleagues on the Committee on Armed Services who recently returned from Russia stated their surprise at the intensity of the diatribe that they heard from the very high level Soviet officials on the U.S. proposal to build the so-called neutron bomb.

What is the neutron bomb, if it is a bomb, and what is wrong with it? The generic name for such systems is enhanced radiation-reduced blast nuclear weapons. They are thermonuclear, that is, fusion weapons systems, which produce far more neutrons when exploded than the ordinary fission weapons. This huge flux of neutrons interacts with matter and causes material changes. Believe it or not, the first enhanced radiation-reduced blast nuclear weapon entered the stockpile of the United States in the very early 1970's. It was the Sprint missile. Sprint and Sparton were the two parts of the U.S. antiballistic-missile system. Sparton was designed for use above the atmosphere. The Sprint weapon was for use up to 100,000 feet. It was designed to destroy an incoming enemy reentry vehicle by enveloping its fissile material and electronic components in a cloud of neutrons. This so altered the composition of the affected parts that the reentry vehicle warhead would no longer function. Why was the Sprint weapon so designed? It was going to be detonated over U.S. soil; that is why it was so designed. The entire game plan was, one, to keep the enemy weapon from detonating and destroying U.S. people and property, and, two, to assure that the collateral damage from our own weapons was at an absolute minimum. That collateral damage from our own weapon was averted by the development of this weapons system. A citizen who gets nuked by our own weapon, not by theirs, is dead just the same.

The Sprint, by the way, was called a strategic defense weapon. Neutron weapons designed for battlefield tactical use—be they rocket warheads or artillery shells—are necessarily of lower yield than an ABM weapon for a very simple reason. Tactical weapons are used very close to the ground, where collateral or undesired damage is assured, unless total yield is minimized while still obtaining the desired effects from the weapon.

Mr. KEMP. Mr. Speaker, will the gentleman yield?

Mr. DICKINSON. I yield to the gentleman from New York.

Mr. KEMP. I thank the gentleman for yielding.

I want to congratulate the gentleman from Alabama on his efforts for bringing the attention of this House and this body to this very important issue. The gentleman is talking about tactical weapons in Europe particularly. At this point I want to ask the gentleman: Is it not true that the Soviets have deployed a mobile intermediate range SS–20 missile which is aimed at targets in the NATO Pact countries?

Mr. DICKINSON. In very large quantities.

Mr. KEMP. Is it not true, according to the gentleman's knowledge—which is extensive in this area—that the Soviets have somewhere between 2½ to 3 times the number of tanks in the Warsaw Pact countries as opposed to the NATO countries?

Mr. DICKINSON. It is my recollection—and I could be wrong—that it is more than 3 to 1 compared to what the NATO countries can field, and they are more modern with their T–72's, and more effective than our most modern tanks, which we hope to have coming off of the assembly line in 1982.

Mr. KEMP. So in the face of this type of threat that NATO faces from the Warsaw Pact countries, it seems to me the gentleman is right on target in suggesting that the enhanced radiation weapon is a neutralizer against the tremendous odds that are now building up on the border of NATO by the Warsaw Pact countries. Is that not the gentleman's conclusion?

Mr. DICKINSON. It is. Whether we are talking about intermediate range missiles, whether we are talking about tanks, whether we are talking about artillery tubes, whether we are talking about people—put them in almost any category of 2, 3, or 4 to 1. I plan to develop this a little further, later. But, yes, if we are going to be faced with massed tanks, as the Soviet battle plan calls for, and as we have seen them deployed in the past in wave after wave, if we cannot match them 1 to 1, we must find some way to defend ourselves at least long enough so that troops and reinforcements from this country can reach NATO where the battle will be fought.

Mr. KEMP. Just to take it one step further—and I appreciate the gentleman's yielding because he is making a very important contribution to the public's understanding of this issue, and I commend him for it—it seems to me that while we are negotiating MBFR's—mutual balanced force reduction—and we are negotiating SALT, there is a pattern building up of kind of unilateral negotiations. Our negotiations are give and take. With the Soviets we give; they take. We unilaterally reduce and restrain ourselves.

There does not seem to be any parallel restraint on the other side; so it seems to me that in the least sense of the word if we are going to slow down or stop the production of the enhanced radiation weapon, it seems to me we should have gotten something for it. There should have been some equal or reciprocal reduction of the threat from the Warsaw Pact countries, in this case perhaps a dismantling or a nondeployment of the SS–20 or a reduction of this tremendous force that they have opposing the NATO Pact countries. Would

the gentleman agree that we should have gotten something for this?

Mr. DICKINSON. I agree 100 percent and the gentleman from New York is making a real contribution to my efforts here, because the gentleman does serve on the Subcommittee on Defense that deals with this. I will develop this later, but whether we are talking about cancellation of nuclear carriers, this is all since 1972, most since 1977, the cancellation of the B–1 bomber, the cancellation of the new full-fuzing option bomb, stretching out research on the ICBM or the MX and on and on, it seems to me there should be some quid pro quo, that we should not be surrendering or giving up our rights unilaterally and receiving nothing in return. When, as a matter of fact, we all know, and I see the very distinguished chairman of the Armed Services Committee, the gentleman from Illinois (Mr. PRICE), who has been intimately involved with this since the first bomb was built. That gentleman knows how we are concerned in our committee that we are getting nothing in return.

We have been told that at one time the Soviets even offered to cancel their Backfire bomber if we, in turn, would cancel the B–1. We refused in the previous administration. Now this administration canceled the B–1 and the Russians are building their Backfire bomber and they have a capability with fueled or nonfueled vehicles to reach any part of the United States.

Mr. Speaker, I am pleased to see our chairman here. I yield to the gentleman from Illinois (Mr. PRICE).

Mr. PRICE. Mr. Speaker, I appreciate the gentleman from Alabama yielding. The gentleman was an important and most knowledgeable part of the Committee on Armed Services. I want to commend the gentleman for the points the gentleman is making and the fact that the gentleman is trying to bring out this present matter of the so-called neutron bomb, which is an enhanced radiation weapon. As the gentleman mentioned a moment ago, some of our Members on the committee just returned from a trip to the Soviet Union. I do not know of anything that was more thoroughly discussed on that trip than the enhanced radiation weapon. Very little was said of the SS–20, the new Russian weapons system. No offer was made that they would trade that off against the neutron weapon, the enhanced radiation weapon.

My greatest concern is that we have given away a bargaining point. I am not adverse to disarmament. As a matter of fact, I favored about every disarmament program that has come along. I think the gentleman in the well has also supported them; but there should be, as the gentleman said, a quid pro quo. There should be a give and take. This is the latest weapons system in our arsenal. Before we even have a chance to find out what the other side might bargain for, we have given away that option.

Mr. Speaker, I personally regret that. I hope that perhaps the Soviets may still consider the fact that we have taken such action and might, out of the goodness of their hearts, give up their latest weapons systems.

Mr. DICKINSON. Mr. Speaker, I thank the eminent chairman of the Armed Services Committee for his contribution, and I agree with everything he said. As I mentioned before, the committee chairman is a very distinguished Member of the House. He serves as chairman of the Committee on Armed Services, and he was also chairman of the Joint Committee on Atomic Energy while that committee existed. The gentleman from Illinois (Mr. PRICE) has been knowledgeable in this field for many, many years and certainly knows whereof he speaks.

Mr. Speaker, as far as the enhanced weapon system is concerned, I think it is a misnomer to call it a neutron bomb. Everybody visualizes this bomb as similar to that which was dropped on Nagasaki or Hiroshima, but in fact what we are talking about here is a small nuclear device that can be fitted into an artillery shell or can be fitted into a short-range missile that will detonate and, hopefully, kill any incoming tanks rather than destroy them by heat or blast by the use of neutrons.

The United States and its NATO allies realize that any probability of war in Europe equates to a war starting on NATO territory. The major Soviet tactic is to attack with massed tank armies and armed personnel carriers. When you are outmanned, outgunned, and outtanked by four or more to one, direct confrontation is possibly hazardous to your health. The NATO plan is to meet any attack with conventional forces, probably head-on. But what can be done when numerical superiority starts to take its toll? The answer would be enhanced radiation-reduced blast weapons—artillery or rocket—from which the neutrons will destroy the tank crews. The reduced blast and sharply reduced heat will minimize damage beyond the radius of lethality to enemy forces. Our allies economic structure and population could survive that kind of nuclear battle. Now can you understand why the Soviets fear neutron weapons and why it would not make any sense for them to have neutron weapons?

Mr. DOWNEY. Mr. Speaker, will the gentleman yield?

Mr. DICKINSON. I yield to the gentleman from New York.

Mr. DOWNEY. Mr. Speaker, I thank my friend, the gentleman from Alabama, for yielding.

Rather surprisingly, I suspect, I support the gentleman's basic thrust that the enhanced radiation warhead is something that should be produced.

One thing that concerns me is this, however: I would just like to clarify my impression of what the neutron bomb would do, assuming it would be used against advances of Soviet armor. I think we run a real risk of identifying this weapon as a miracle weapon. It clearly is not a miracle weapon, because it is not going to stop Soviet advances.

If anything, this is a marginal improvement over the tactical or strategic balance that we already have in Europe.

Let me ask the gentleman if he would not agree that the best way to stop a Soviet advance would be through conventional methods and through either the deployment of tactical weapons or the use of something other than the neutron bomb.

Mr. DICKINSON. Mr. Speaker, I would say that if we had the capacity to do that, I would agree. The question is: Do we have the capacity to stop an onslaught in full battle array of Soviet tanks, artillery, APC's and planes with the conventional arms and weaponry that are either preplaced in NATO countries or weaponry that could be brought to bear?

Yes, the gentleman and I have no differences there. I think that would certainly be desirable. I think that if we have that capacity, then, these new weapons would never be employed.

One of the falacies that to me is ridiculous is that the people who shriek the loudest about our development of a neutron bomb which has a lethality through radiation rather than blast or heat do not consider the alternatives.

We know that all weapons kill. But if we would be doing the reverse, that is to say, if we had clean weapons there now and wanted to replace them with dirty weapons, the opposite of what we want to do now, I cannot imagine the outcries.

At least, if there is such a thing as humaness in a weapons system, I think the neutron weapon is somewhat better than what is already in place.

Mr. DOWNEY. I agree with the gentleman. If the gentleman will indulge me one more minute, I would simply suggest, though, that when we discuss the enhanced radiation warhead, we understand that it is an improvement over existing capability, but in no way is it going to alter the tactical or strategic balance of either country. I think people have a misunderstanding that without the neutron bomb we are helpless pawns in Europe to the Soviets.

No. 1, I do not buy that; and, No. 2, the neutron bomb may help, but it is not going to stop in any material way Soviet advances, if that is what they are intent upon.

Mr. DICKINSON. I think there is a divergence between the gentleman's opinion and mine. I think it is a very creditable weapon. It has created problems and will create more problems for the Soviets and it will give them more cause to pause than anything we have been developing recently. I think we are foolish not to go forward with the production of it.

I do not say we necessarily have to deploy it at the present time. I think we are certainly very shortsighted to think that the Soviets are not going forward in this area, as they are in many other areas where we are outclassed in numbers of three, four or five to one. To unilaterally and arbitrarily throw this away even as a bargaining chip I think is being shortsighted indeed.

Mr. ICHORD. Mr. Speaker, will the gentleman yield?

Mr. DICKINSON. I yield to the gentleman from Missouri.

Mr. ICHORD. I thank the gentleman for yielding.

Mr. Speaker, I wish to commend the gentleman in the well, who is a ranking member of the Armed Services Research and Development Subcommittee,

for taking the floor of this House to discuss this very important subject which should be discussed and debated by all Americans.

As the gentleman in the well knows, the Research and Development Committee deals with this weapon and also many other programs to defend our country. We on the committee are well aware that our NATO forces are out gunned, they are outmanned, and they are outtanked, as the gentleman has so accurately stated.

I must differ to some degree with the gentleman from New York. I think he is right in many respects. I think the enhanced radiation weapon does have more capability than the gentleman from New York thinks that it will have. Certainly, we would be in a better position to use the enhanced radiation nuclear device.

I would state to the gentleman from Alabama that I was a member of the delegation which recently visited Russia, and I heard the diatribe delivered by a minister of the Supreme Soviet against our country particularly because we were building, as he stated, the neutron bomb. The minister quoted an article which I have not read. If the minister accurately quoted the article, written by Walter Pincus, I think that Mr. Pincus has done a great disservice to his country. The minister of the Supreme Soviet cited to us this article stating that the neutron bomb was designed to kill Russians. As the gentleman also stated, the Soviet Union does have a very strong propaganda campaign not only directed to NATO and the entire world, but also directed to their own people, using this article written by Walter Pincus that the neutron bomb was designed to kill Russians as a vehicle to spread that propaganda. Members of the U.S. Embassy and a journalist in Moscow, an American journalist in Moscow, told me that they had experienced several incidents where Russian friends came to them with tears in their eyes, handing them letters to be mailed to the President of the United States, and asking them to exert influence upon the President of the United States not to build the neutron bomb to kill Russians.

There is a very effective propaganda campaign going on.

I pointed out to the Supreme Soviet Minister that the neutron bomb by no stretch of the imagination was designed to kill Russians and that it would only be used to kill Russians if they constituted an invading aggressive army that would not be directed offensively against Russians or anyone else because it is purely a defensive weapon, as the gentleman well knows.

I am greatly concerned, as is the gentleman in the well, with the cancellation of the B–1 bomber and now the delay in the production of an enhanced nuclear radiation device.

Mr. Speaker, I would state to the gentleman in the well, and I am sure the gentleman from New York would concur, that I can well understand the frustration of the President of the United States at the failure of many of our allies to come to the front and speak out in the open in favor of the building of this enhanced radiation nuclear device. I think that some of our allies have been remiss in not speaking out because they are the ones most likely to be involved in a possible conflict between NATO and the Warsaw Pact and are the ones who certainly have more to gain than anyone else.

I hope that this is merely a delay and that we proceed as rapidly as we can to the production of this weapon.

Mr. DICKINSON. Mr. Speaker, I thank the gentleman very much for his contribution; and I certainly agree with what he says.

Mr. Speaker, if I might just finish a few prepared remarks, I will be glad to enter into any additional colloquy with Members present.

At this time, I would like to point out the obvious: All nuclear weapons cause damage—collateral or planned. All nuclear weapons produce three prompt, direct, potential sources of lethality and a few delayed, indirect sources. The direct effects are blast, heat, and nuclear radiation. The indirect effects which are possible are fallout and residual radiation. These latter two can be avoided if the explosion takes place high enough above the ground.

Let me make one point extremely clear—no matter how desirable or necessary an enhanced radiation weapon would be in the heat of battle, it will not be used without prior Presidential approval. Battlefield commanders and supreme commanders, including Gen. Al Haig, cannot unilaterally and independently order the use of any nuclear weapon. That order comes from the President of the United States, the Commander in chief.

The United States and its NATO allies realize that any probability of war in Europe equates to a war starting on NATO territory. The major Soviet tactic is to attack with massed tank armies and armored personnel carriers. When you are outmanned, outgunned, and outtanked by four or more to one, direct confrontation is possibly hazardous to your health. The NATO plan is to meet any attack with conventional forces, probably head on. But what can be done when numerical superiority starts to take its toll? The answer would be enhanced-radiation, reduced-blast weapons—artillery or rocket—from which the neutrons will destroy the tank crews. The reduced blast and sharply reduced heat will minimize damage beyond the radius of lethality to enemy forces. Our allies' economic structure and population could survive that kind of nuclear battle. Now can you understand why the Soviets fear neutron weapons and why it would not make any sense for them to have neutron weapons?

Let me repeat that it is only the President who can approve the use of any nuclear weapon, no matter how the battle might be progressing.

There are now tactical nuclear weapons—artillery and rockets—available to NATO forces. The artillery shells are not well matched to the new artillery tubes coming into inventory. New systems are needed and new systems should be developed, produced, and deployed. And they should be enhanced-radiation systems so that the Soviet and Warsaw Pact forces would want to give careful consideration before starting massive armored attacks.

Let me touch on the world around us. It is common knowledge that the Soviets have literally hundreds of intermediate-range ballistic missiles with megaton-yield warheads targeted on NATO. If the Soviets want to destroy Europe and take the chance of being destroyed in return, so be it. But if the Soviets hope to force capitulation of NATO and the capture of Europe through the use of superior armor and troop numbers, the enhanced-radiation weapons will give them pause to reconsider.

Now that I have expounded on why this country and its NATO allies need enhanced-radiation weapons, I might try to examine the other side of the coin to see why we might not need them. The other side of the coin is blank.

I would like to consider one other point that has been prominent in the media. That is the idea that enhanced radiation weapons could be used as a "bargaining chip" against some Soviet system. Let us examine the record of what the Soviets have fielded since SALT I was signed in 1972.

Four new ICBM systems, much larger than the ones they are replacing. One system, the SS–16, is a mobile system.

The new mobile IRBM system, the SS–20, aimed at NATO.

The backfire bomber with a refueled range that can easily reach the United States.

The IL–76 supercargo plane outfitted as a tanker. (The IL–76 is bigger than the USAF C–141.)

This is conjectural, but it seems that another ICBM system, a fifth-generation system, is about to be fielded.

What has the United States done since SALT I was concluded in 1972, mostly since 1977:

Canceled a few nuclear carriers.

Canceled the B–1 bomber.

Canceled the new full fuzing option bomb, the B–77.

Stretched out the research on a new ICBM system, the M–X.

Tried to lock the United States into a permanent second place (or maybe third place) with SALT II.

Now we hear that the enhanced radiation weapon has been offered as a "bargaining chip" for some yet unannouced future Soviet "draft" choice.

Through the years, efforts have been made to outlaw weapons. In recent times biological weapons have been outlawed by treaty. An effort is underway to outlaw chemical weapons. But how many people know that the Pope once outlawed a weapon? The following is from Lynn Montross' book, "War Through the Ages" (page 133). This is during the period of the crusades:

To these advantages may be added the development of an effective new weapon in the arbalest, or crossbow. Simply a ballista on a small scale, with the cord drawn back by a winch and released by a trigger, the crossbow shot bolts which pierced the best Eastern armor. More powerful than the ordinary bow of the

day, it differed also in that it could be fired from a reclining position, and the bolts were cheaper and less bulky than arrows. The crossbow was slower, however, since the winch must be wound while placing one foot on the steel arm supplying the force of propulsion.

The weaopn is mentioned at the battle of Hastings, but it remained a novelty until the Crusades. And even at this early date we have an example of the timeless horror of new fighting tools, resulting eventually in the prohibition of the crossbow by several Popes. There would seem to be little choice between being transfixed by a steel bolt and an ordinary arrow; but every age, including the present, has its prejudices. Despite this abhorrence of military change, no restriction has ever yet succeeded in abolishing a weapon which once proved its worth on the battlefield.

Under the Carter administration, the United States seems to be backing off from every reasonable chance to enhance our military posture so as to somehow counter the fantastic Soviet armaments buildup. We all realize that unilateral disarmament is a road to surrender. How many people realize that the path which this administration is taking—unilateral unarmament—could lead to the same conclusion—surrender or subjugation?

Mr. Speaker, the question is, Are we in danger of losing our democracy?

Mr. BADHAM. Mr. Speaker, will the gentleman yield?

Mr. DICKINSON. I yield to the gentleman from California, a fellow member of the Committee on Armed Services.

Mr. BADHAM. Mr. Speaker, I thank the gentleman for yielding.

I would sincerely commend the gentleman from Alabama (Mr. DICKINSON) for taking a special order on this most important subject to bring to the attention of the American people as to what the so-called neutron bomb is and what it is not.

Probably one of the most unfortunate misnomers of current events and current history is to call this enhanced radiation weapon a bomb at all.

But, while we know that, and my distinguished colleague knows that, and the members of the committee know that, the American people seem to be somewhat confused. We can bet our bottom dollar that the Soviet leaders know exactly what the neutron bomb is, and exactly what the neutron bomb can do. For that reason, while they know what it is, they would love to see this thing surrounded with a cloud of neutrons themselves so that the American people might think that this is some horrible new inhumane weapon, which it actually is not.

I think an important fact that we must point out is the fact that if it were the other way around and we had enhanced radiation weapons on station now in the European field, and we wanted to replace those with dirty weapons, as has been brought out by my distinguished colleague, a real and legitimate howl should go up. The real howl against this weapon, which is an excellent weapons system, which is a defensive weapons system, which is a weapons system that must be used for deterrence, is the fact that it is a weapons system that is wholly defensive in character, and would be used for that purpose only.

Mr. Speaker, a total lack of understanding is prevelant among some of the people of this great Nation as to what the so-called neutron "bomb" is and what it is not.

As I have already said, the first misnomer that must be corrected is that the neutron "bomb" is not a bomb at all, but rather an enhanced radiation-reduced blast nuclear weapon designed for use as a battlefield artillery shell. Although this weapon will produce all four lethal effects of nuclear explosions: blast, heat, radiation, and fallout, it will only produce about one-tenth the blast, heat, and fallout of conventional nuclear weapons, and being more precise than conventional nuclear weapons, the radius of its effects is more limited. Thus, the indiscriminate slaughter of innocent civilians that has so often accompanied war will be greatly diminished.

Despite this knowledge, the Soviets have been preaching about the inhumanity of the neutron weapons. I am pleased the Soviets have taken note of the potential of these weapons; however, I question the labelling of these weapons as inhumane. The Soviets should know by now that the United States has no intention of using this weapon unless given no alternative by an aggressor. Therefore, I contend that the neutron weapons are not weapons of inhumanity, but weapons of deterrence. If one takes the time to study this country's successful foreign policy over the last 15 years, he would discover that deterrence is the name of the game.

One other misnomer that should be cleared up is that the neutron weapons are not designed to give the United States and her allies a status of military superiority over the USSR. To the contrary, these weapons are designed to compensate for the massive Soviet arms build-up, especially in tanks, which has taken place over the past decade. These weapons would be the most effective defense for our allies against such armor, and it is truly the best way to offset our current disadvantage.

The President's decision, or more properly his indecision, to defer production of the enhanced radiation-reduced blast warhead is one that has already had severe repercussions, as witnessed by our now faltering relations with our ally, West Germany. I suggest we, as Members of Congress, exhibit the leadership that is needed, yet lacking from the White House, and push for deployment of the enhanced radiation-reduced blast warhead.

Mr. DICKINSON. I thank the gentleman.

Mr. MONTGOMERY. Mr. Speaker, will the gentleman yield?

Mr. DICKINSON. I am very pleased to yield to my distinguished colleague from Mississippi, a member of the Armed Services Committee, who has just returned from Russia.

Mr. MONTGOMERY. Mr. Speaker, I would also like to join my colleagues in commending the gentleman from Alabama for taking this special order and giving Members the opportunity to comment on the neutron weapon.

As the gentleman in the well said, I have had the privilege of going, with the House Armed Services Committee, to Russia. Incidentally—and it might have been said here already—this was the first military committee from the Congress ever to be permitted to go into Russia. We did not see much military equipment or personnel, but we did meet with political leaders and military leaders of the Soviet Union. Every time we met with them, they were quite concerned about the neutron weapon.

After coming back to the United States, we learned that President Carter had considered, or had moved in delaying the building of the neutron weapon. That was quite disturbing to me, a fact which I brought to the attention of the House several weeks ago—my total concern—because if the Russians are so worried about the neutron weapon, it seems to me that this would give us a bargaining chip to work out a better solution to our military problems with the Soviets.

We canceled out the B–1 bomber, as I am sure has been mentioned here today, and now we are slowing down the building of the neutron warhead. I think it should be brought to the attention of the American people, that the main thing that our Soviet counterparts wanted to talk about was the neutron weapon. Now, we have slowed that down, and we have thrown away, in my opinion, a good bargaining chip.

Mr. DICKINSON. Well, let me reply to that, not meaning to cut the gentleman off.

Since 1972, the record shows that the Soviets have fielded four new ICBM systems much larger than the ones they were replacing. One system, the SS–16, is a mobile system.

The new mobile IRBM system, the SS–20, is aimed at NATO; the Backfire bomber, with a refueled range that can easily reach the United States; and the IL–76 supercargo plane outfitted as a tanker, which is bigger than our C–141. This is conjecture, but it seems that another IBM system, a fifth generation system, is about to be fielded.

So while we seem to be floundering and lacking a sense of direction and canceling one major system after another, the Soviets are not arguing about what they are doing: They are doing it.

Mr. MONTGOMERY. We have tried to point out that the neutron weapon was not aimed at the Soviet Union. It would be used against whoever happened to be, as my colleague the gentleman from Missouri pointed out, on the battlefield at the time. We tried to show the Russians that, as we all know, the Warsaw Pact tanks and personnel have greatly outnumbered the NATO forces. Actually the neutron weapons would be a balance and maybe would keep the Soviet Union from considering attacking and pushing our forces into the sea.

We tried to point out in our dialog with the Soviets that the SS–20's, which the gentleman mentioned, the great nuclear weapon or bomb or missile that the Russians have, are aimed today at the NATO forces, and the neutron warhead is not aimed at any city in Russia.

But I appreciate very much the gentleman giving me this opportunity. I want to leave this thought though, that I think after going to Russia, I believe they realize, as we realize, that if they were to have the first strike, the initial strike against the United States, that we would have the second strike against them, and we could virtually destroy both nations. I got the feeling from the Soviets that we must try to continue to talk and try to negotiate.

Mr. DICKINSON. The gentleman is right, but let me interrupt and say that if he is talking about the intercontinental ballistic missile exchange or a strategic strike by bombers, yes, this is true. But we are talking about with the neutron weapons, and what they are intended to do, is for tactical use on the battlefield to be used, if necessary against conventional forces as a defensive weapon. And because there comes a point when the credibility of an exchange between two superpowers no longer exists because they know we are not going to fire first and we believe they will not fire first, then anything we do short of triggering a strategic nuclear war would have to be withstood with nonstrategic means, and that is what this weapon is designed to do if necessary.

Mr. MONTGOMERY. I agree with the gentleman. I was in fact just finalizing my thoughts and remarks, that the Soviets do realize that we virtually could destroy both of the superpower nations. I guess my point to the gentleman in the well is that we are going to have to deal from a strong military defense in the United States, and our record is good in that we have not gone around jumping on and attacking people, and that we still need to keep the door open and we still need to continue to talk to the Soviets and work out some fair solution for both nations that will keep the peace of the world.

Mr. DICKINSON. I thank my colleague for his contribution, which is very meaningful.

Mr. Speaker, I have already gotten general consent for all Members, and at this time I yield back the balance of my time.

● Mr. PRICE. Mr. Speaker, I want to commend my esteemed colleague, Mr. DICKINSON, on his lucid statement on the factors involved in the consideration of the enhanced radiation weapon. His views and support have always been greatly valued in the Armed Services Committee on critical matters concerning our Nation's defense and security.

I understand and appreciate the President's desire to further the Nation's efforts toward the goal of arms control and peace throughout the world. I also believe the President sincerely believes that the cause of peace might be advanced by his proposed deferral of the production phase of this new development in the nuclear weapons field. On the other hand, I believe that after consideration of all the facts related to this matter, our interests would be better served if we proceeded with the production of these weapons. As the Secretary of Defense stated last Sunday, the actual availability of such weapons which, of course, requires entry into the production phase, best serves the Nation's military objectives. In addition, the clear defensive nature of these weapons cannot be questioned. Our potential adversaries, contrary to their published statements, understand this. This fact, along with the positive indication of our commitment to do whatever we consider necessary to assure our security should, in my view, further efforts by the Soviets to attain real disarmament objectives.

I believe the views set down in our recent letter to the President express the principal considerations relative to this matter. I would like to include this letter at this point in the RECORD.

The letter follows:

COMMITTEE ON ARMED SERVICES,
*Washington, D.C., April 5, 1978.*

The Honorable JIMMY CARTER,
*The White House, Washington, D.C.*

DEAR MR. PRESIDENT: On April 3, 1978, a delegation of members of the House Committee on Armed Services returned from a visit to the Soviet Union and to Geneva, Switzerland. Our members had the very rare opportunity to exchange views with high-level officials of the Soviet Foreign Ministry and the Ministry of Defense. We also had the opportunity to exchange views with members of the Soviet military establishment on numerous issues which are now the subject of bilateral and multilateral talks.

It was with a great deal of concern that, on the day of our return to the United States, we read newspaper accounts reporting that you had decided not to produce reduced blast/enhanced radiation weapons. The newspaper accounts indicated that you would make a formal decision on this matter later this month.

Mr. President, it is common knowledge throughout the free world that the leadership of the Soviet Union has mounted extensive worldwide propaganda campaigns against the so-called "neutron bomb," along with the cruise missile, Missile X, and any other improved strategic weapon intended for the arsenal of the United States. These propaganda campaigns, which also accuse the United States of unreasonable delays in concluding a SALT II agreement, and of sole responsibility for an arms race, are also aimed at the Soviet people. The gigantic Soviet buildup in conventional and nuclear arms aimed at NATO, and the introduction of new Soviet ICBMs and SLBMs during the period of SALT I, are explained away by simple quotations of Chairman Brezhnev to the effect that Soviet arms are intended only for "peaceful purposes." During our visit to the Soviet Union, and in our conversations with Soviet negotiators in Geneva, the rhetoric did not vary.

Based upon our experience during our visit to the Soviet Union, as well as the history of United States and Soviet arms control negotiations, we believe that a negative decision with respect to reduced blast/enhanced radiation weapons at this time would be a grave mistake. Such a decision would not only signal to the Soviets that they have won their propaganda battle, but it would also signal a loss of national will to our allies throughout the world. The confidence of our NATO allies, which you hoped to bolster through your Wake Forest speech, would be shaken if it became evident that the United States is not prepared to protect NATO forces in any contingency by the best means possible.

The undersigned are also Members of the Subcommittee on Intelligence and Military Application of Nuclear Energy and as such have participated in extensive hearings and discussions related to reduced blast/enhanced radiation weapons. We are aware that these weapons are tactical battlefield weapons that would reduce collateral damage if their use should become necessary. We do not believe such weapons would reduce the nuclear threshold.

Mr. President, this Committee, and the Congress, overwhelmingly supported your position on this issue last year. It is our judgment that a similar position would be supported again. There is everything to gain and very little to lose among our allies or domestically by a decision to proceed with production of these weapons. We, therefore, respectfully urge you to announce an affirmative decision at an early date.

Sincerely,

Melvin Price, Chairman; Bob Wilson, Ranking Minority Member; Samuel S. Stratton; G. V. (Sonny) Montgomery; Charles H. Wilson; and Marjorie S. Holt, Members of Congress.●

● Mr. MICHEL. Mr. Speaker, first it was the B–1 bomber. Now it is the neutron bomb. They are different weapon systems but their fate, so far as I can see, is the same. Each is essential to our national defense and the defense of the free world. Each provides a service that no other weapon or weapon system can provide. Yet each has been cast aside by President Carter without getting anything in return from the Soviet Union.

I realize that the official version of the President's decision is that we are holding off production in hope the Soviet Union will make a concession. But now we learn that the Secretary of Defense is saying the neutron bomb is "not vital." I believe we are being given a very strong hint as to where the administration is leading us.

There are hundreds of learned documents, thousands of hours of arguments, and many, many experts involved in this debate. But what it has come down to is the view of President Carter as to what is best for this country.

As much as I wish I could agree with him, the facts of the matter are, to me, absolutely compelling: NATO forces without the neutron bomb will be pushed back to the sea in a matter of days if the Soviet Union, with its overwhelming lead in tanks, decides to invade the West.

The Soviet Union's massive, well coordinated propaganda campaign against the neutron bomb and the advice of some of the President's senior officials have carried the day.

I wish I could say that this incident is one that can be written off as an accident, a mistake in judgment. But I fear it is not. I fear that it accurately reflects the Carter administration's views on national defense. The President evidently believes that if you make enough unilateral concessions to the Soviets, they will make concessions in return.

If that idea were not so tragic in its implications I would laugh.

The question is no longer one about the B–1 or the neutron bomb. The question is one about the competence, the philosophy, and the will of the administration in matters of national security.

Mr. Speaker, we are in trouble. Period.●

● Mr. CARR. Mr. Speaker, the course which President Carter has followed with respect to the neutron warhead is not

that which I recommended. In an individual letter I sent to him shortly before his decision, I urged him to proceed with production of the weapon at full speed, while at the same time inviting the Soviets to offer us an arms control proposal which would give us an incentive to trade it off.

Mr. Carter has not followed my advice. But it seems to me the course he has chosen does capture the essence of what those of us who supported the enhanced radiation warhead were trying to do. The initial stages of the program will now proceed at a vigorous pace. If the Russians respond by offering a satisfactory tank reduction or termination of the SS–20, we will be able to negotiate a termination of our neutron program. If they do not, we can and presumably will proceed to convert our new warheads to the neutron configuration.

Since Mr. Carter appears to have captured about 90 percent of the best of both worlds, it is my view that criticism of his decision on the grounds of weakening the defense of Europe, or of giving in to the Soviets, is inappropriate and not based on reality.●

● Mr. MITCHELL of New York. Mr. Speaker, it is with pleasure that I rise to express my concern with President Carter's decision to shelve the neutron bomb. That is cause for great alarm because it was to be a defensive weapon, a weapon to help compensate for the awesome numerical advantage of Warsaw Pact tanks. NATO forces are badly outgunned and outmanned.

I wonder who the President is listening to? The top defense and foreign policy advisers in the administration all favor continuing the program. Our key NATO allies share this view. So do I.

The Carter approach to defense seems to be to cut, cut, and cut some more.

Cancellation of the neutron bomb is a reversal of his recent warning to the Soviets when he said, "We will not allow any other nations to gain military superiority over us."

However, it is consistent with several recent defense cutbacks:

First, scrapping the B–1 bomber—America's only hope for a modern, effective penetrating bomber this decade;

Second, production of the M–X missile placed on the back burner;

Third, production line of the Minuteman III closed;

Fourth, funds for the *Nimitz*-class aircraft carrier and other ships cut severely; and

Fifth, removal of American troops from South Korea.

If the United States is unwilling to use its tactical nuclear weapon technology in defense of the NATO strategic doctrine, and this policy is recognized by the Soviet Union, the credibility of NATO's nuclear deterrent would be seriously imperiled. The effect of the neutron warhead is so concentrated that it can be used on the front lines without danger to friendly forces or civilians. If we have credible weapons then we have deterrence. If we do not have deterrence, then we may end up being forced to use the vastly more destructive weapons. By avoiding indiscriminate destruction, the neutron warhead represents a moral improvement in the conduct of war, rather than a regression. To deprive ourselves of this tactical weapon which would serve to deter Soviet encroachment would in effect result in deterring ourselves from responding to aggression.●

● Mr. DAN DANIEL. Mr. Speaker, I join with my colleagues in commending the gentleman from Alabama (Mr. DICKINSON) for taking this special order today.

I also believe that President Carter has been led into a grievous mistake. The decision against producing neutron weapons, coming as it did in the midst of an unprecedented Russian propaganda campaign, can only harm our relations with our allies.

The decision, unfortunately, not only tends to indicate a lack of resolve on our part, but it will give the Russians a reason to redouble their propaganda efforts against us on the cruise missile, SALT, and other matters.

In fact, Mr. Speaker, the decision on neutron weapons has caused adverse editorial comments from most major newspapers in the United States and in the NATO countries.

Even Tass, the Soviet Government's press agency, reacted in a negative way, as was the case with the B–1 cancellation. Tass described the decision as "a tactic without significance" by which President Carter is "attempting to gain concessions in other nonrelated matters."

It seems, Mr. Speaker, as if we now have the worst of both worlds—the confusion of our allies and the condemnation of the Soviet Union.

The Soviets are free to continue their worldwide propaganda campaign against defensive neutron weapons, using the U.N. Conference on Disarmament next month. However, we have seen no strong condemnation from the Carter administration of the Soviet move to deploy the offensive SS–20 against European cities.

We should be aware of two facts concerning this matter.

First, the purely defensive battlefield weapons now deployed in NATO would create neutron radiation in amounts equal to the so-called "neutron weapons," but with significant collateral damage.

Second, the purely offensive Russian SS–20 recently deployed against the NATO countries is thousands of times more destructive than the defensive neutron weapons the President has decided not to produce.

[From the New York Times, Apr. 1978]

SOVIET SCOFFS AT U.S. BOMB DECISION

Moscow, Reuters.—The Soviet Governments press agency, Tass, today dismissed President Carter's decision to postpone stockpiling the neutron bomb as a tactic without significance.

The agency carried Moscow's first reaction to the announcement yesterday that the United States would not produce the bomb for now. The Americans portrayed the delay as a challenge to Moscow to restrain its deployment of new weapons like the SS–20 mobile missile.

But Tass said in a dispatch from Washington that Mr. Carter's move "did not represent a significant renunciation of the neutron weapon." It added that Mr. Carter wanted to "gain concessions in other nonrelated matters, attempting to link renunciation of the weapon with measures to strengthen Soviet defense facilities."

"From the explanation of White House spokesmen, it is also clear that one of the main motives of the decision is the desire of the United States Government to create a maximum favorable atmosphere in public opinion for future deployment of the neutron weapons in Western Europe." Tass said. The decision, it added, was intended to "curb the powerful wave of protest against creation of these weapons, which increase the danger of nuclear war." ●

● Mr. SYMMS. Mr. Speaker, I would like to associate myself with the remarks of my colleagues in this special order and commend our colleague BILL DICKINSON for his efforts.

There has been so much confusion and misinformation and lack of information about the "neutron bomb" or "enhanced radiation" weapon that some clarification is necessary; if not for the administration, at least as a reference for some of my colleagues and those involved in the field of political-military science.

What is upsetting to me about the President's decision to defer the development of the neutron warhead is that for the first time in many years the United States had a weapon system that could be used in Western Europe to counter the massive armor component possessed by the Eastern bloc. The Soviet tanks, armored personnel carriers, and troops are designed and equipped to survive in a chemical and biological warfare environment, while U.S. and NATO forces are not so equipped. The enhanced radiation warhead through the use of high-energy neutrons could penetrate this specially equipped Soviet armor and affect the enemy troops within 10 minutes to an hour after the explosion; and due to the accuracy of the weapon and the fact that its residual effects are minimal an hour after the blast, the civilian population in the area would remain unharmed. Consequently, the enhanced radiation weapons provide the U.S.–NATO forces with the means of overcoming the Soviet-Warsaw Pact advantage and checkmating the ability of the Communist bloc to launch a nerve gas "blitzkrieg" against Western Europe.

The most frustrating aspect of this decision is that while we are weakening our strategic nuclear capabilities, we are at the same time depriving ourselves of any tactical deterrence capability. If these trends continue and we allow our NATO allies to become even more vulnerable to the massive buildups of Warsaw Pact forces in Europe, we will not only make the NATO alliance a worthless organization but we will encourage nuclear proliferation throughout Western Europe. And I believe this is exactly what the administration should be trying to prevent.●

● Mr. LIVINGSTON. Mr. Speaker, I feel it necessary to speak out on President's Carter's decision not to produce the neutron weapon. I believe that the President dealt another blow to America's national security in making this decision. In my opinion, this could prove

disastrous to our defense of Europe and disturbing to our NATO allies.

The bomb, though branded by its opponents as a weapon that destroys people, not buildings, is actually not a bomb, but a replacement warhead for nuclear artillery shells.

Neutron warheads are highly effective weapons against an attack by a massed tank formation. Their intense radiation would penetrate armor that otherwise might resist a blast.

However, neutron radiation is limited, so that ground forces could move in quickly behind the neutron warheads to continue the attack. Surrounding areas would be much less affected than by conventional nuclear weapons.

The President's wavering on the bomb decision—and his final word that he will not continue its development—had led to confusion and concern among our NATO allies. They expect leadership from America, not waffling, especially when it comes to defense of Europe.

NATO is known for its lack of tank power. While NATO forces can only deploy 6,755 tanks, its enemies in the Warsaw Pact nations can put 1,570 tanks in the field. This gap could be overcome by the use of neutron warheads.

The failure of the President to produce the neutron weapon is just one more in a series of episodes that weakens America's position in bargaining with the Soviet Union.

First, President Carter decided to cancel the B–1 bomber. Then he said he would reduce the range of the cruise missile. And he cut $1.1 billion from Navy shipbuilding funds, showing that he does not consider it important to have a strong Navy in case of conflict.

At the same time, the Soviets have started deploying a new air-defense system that will make us dangerously vulnerable to Soviet air defenses by 1985.

These decisions mean that, when the administration goes to negotiate arms control with the Soviets, it will be negotiating from a position of weakeness. We as a country can not afford that weakness.

These decisions, or lack of them, tell me—and the rest of the country—that President Carter is simply not the leader he portrayed himself to be during the 1976 campaign. He can not make the hard and fast decisions about national policy—and foreign policy—that must be made if we are to remain a world leader.

The President's mishandling of the neutron weapon decision is only the last in a series of fumbled opportunities to provide strong leadership in the world.

I am very much afraid that unless the President acts, and acts soon, America will lose its position of leadership and our allies will have nowhere to turn in their search for protection from the Soviet threat, not only in Europe, but throughout the world.

And I would hope, Mr. Speaker, that the Congress does not stand idly by while the decisions are taken—or not taken—that will bring about this loss of leadership for America.●

● Mr. McDONALD. Mr. Speaker, the subject of this special order today—the delay in the production of the neutron bomb—is extremely important in itself, but the significance of the Carter pronouncement goes far beyond that. We have sent the Soviet Union yet another message that we are on the road to strategic disarmament. Certainly Moscow does not need any more signals to confirm the trend. President Carter shut down the Minuteman II production line. He slowed down the production of the Trident submarine. He cancelled production of the B-1 bomber and has shown no urgency in proceeding with M–X missile. to name just a few of his more significant actions in that regard.

It is my belief that President Carter, by this particular decision also sent our Allies in Europe and around the world another sort of message—do not depend on the United States. This new weapon could have given us a chance at knocking out a possible Soviet blitzkreig of the West with minimal damage to Europe. These new small warheads are in reality "reduced blast weapons." While achieving the equivalent total high energy neutron output, the blast and heat can be reduced to one-tenth that of currently stockpiled NATO battlefield weapons. Due to the greatly reduced blast and heat effect, the new warhead can be used closer to friendly troops and civilian areas.

Specifically, it takes about 65 pounds per square inch of pressure to disable a modern Soviet tank. This is the equivalent to a wind of 1,000 miles per hour. To knock out tank armies with a standard blast type of weapon would mean tremendous damage to buildings, farms and civilians. The neutron warhead changes that.

The President stated he has elected to make a bargaining chip out of this weapon. The Soviets must be laughing all the way to the next Politburo meeting. Their worldwide propaganda campaign was successful beyond their wildest dreams. They will certainly use this delay to develop their own neutron bomb and then ask us what it is we wanted to negotiate.

If the Congress does not here today and now start standing up and exercising its constitutional duty to "provide for the common defense," we will go the way of Carthage and other past empires which would not make the necessary sacrifices to preserve freedom. Let us learn from the past and be prepared. The "neutron bomb" should be built now. President Carter's decision was wrong.●

## TREATY OF TEXAS ANNEXATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. COLLINS) is recognized for 30 minutes.

Mr. COLLINS of Texas. Mr. Speaker, President Jimmy Carter has moved expeditiously in renegotiations of foreign treaties. He has placed before the Senate at this time his revision which terminates the 1903 Treaty with Panama. It is anticipated this new treaty will be concluded next week by the Senate. I have written the President regarding the next appropriate treaty for review. In 1845 the United States annexed the Republic of Texas under a treaty after long heated and divided opinions.

I have reviewed the newspaper comments at that time. Their objective viewpoint states that this treaty was an overbearing move by the United States and represented a violation of human rights. With the State Department experience in working to return the Canal Zone to Panama, they can follow up smoothly with the Texas Treaty.

Let me quote for you some specific references from the foreign press as well as leading newspapers in the United States. These are direct quotes from the newspapers published reports of 1844 and 1845 on the Treaty of Annexation of the Republic of Texas.

London Britannia, April 1844: declared that the proposed take-over and absorption by the U.S. was ". . . one of the most flagrant offenses ever committed by a nation professing a respect for human rights."

London Times, October 1844: declared that it could "find no experessions too strong to convey our opinion of the enormous misstatements, the excessive bad faith, and the deplorable impolicy" of those who arranged the Texas Treaty, and deemed the annexation "the triumph of everything that is worst in American life."

London Morning Post, January 1845: "The designs of the United States upon Texas are merely a development of the savage instinct of the strong to tyrannize over the weak."

London Times: "One cannot view without pain the falsehood and the disregard of law chargeable to some Americans in this affair."

"Human nature itself has been lowered by the depravity of the Americans . . ."

". . . the extraordinary injustice of the annexation treaty is, if possible, surpassed only by the matchless impudence of the arguments used in defense of it." February 1844.

". . . as the territory proposed to be annexed had been acknowledged by foreign powers, the United States possessed no right to absorb it." June 1844.

Mr. Speaker, the American press of the day also took the lead in sounding off against the questionable manner in which the Texas Treaty was enacted to take advantage of the smaller country:

New York Tribune: "an unprecedented and unwarrantable outrage, a cheap, selfish speculation growing out of bonds and scrip, and out of land claims which would be dubloons or dimes according to the result." May 1844.

Newark Advertiser: "to take Texas . . . would violate our treaty obligations, which is wrong and dishonorable . . . the scheme is now urged for personal aims; the subject has not been fully considered and passed upon by the people; the whole course of the negotiations has been undignified and degrading . . . it would be an act of cowardice and oppression against a weaker nation." May 1844.

National Intelligencer: "the unauthorized and almost clandestine manner in which our government had approached Texas humiliated the nation." 1844.

Boston Atlas: denounced the Treaty of Annexation as a "mad project . . . irrational . . . preposterous . . . a contemptible scheme." March 1844.

Boston Post: "We would infinitely rather Texas would remain as she is . . . an independent nation." March 1844.

The Liberator: denounced the Texas Treaty as ". . . an amount of hypocrisy and villainy, of treachery and oppression, unexampled in the criminal history of any na-

tion, either in ancient or modern times. Truly, monsters rule over us." May 1844.

Mr. Speaker, there has been strong question as to the validity of the Texas annexation agreement itself. Unlike the Panama treaty revision today, where the House has been kept from voting, it carried by a joint resolution passing the Senate 31–14 and the House 141–56. The noted historian Arthur M. Schlesinger, Jr., has said of the Texas annexation effort:

Constitutional arguments were unavailing . . . the administration determined to avoid public debate over the acquisition of Texas, tried to sneak a treaty of annexation through the Senate in executive session . . . the government had withheld information from Congress and the people.

This questionable approach did not go unnoticed by the great Statesmen of the day. A careful reading of the CONGRESSIONAL RECORD of the time, in the January 1845 Congressional Globe reveals the statements of concern and outrage from Congressmen and Senators regarding the ratification of the Texas annexation treaty. The following are actual excerpts from the statements of the great leaders who spoke with such sincere conviction on the floor of Congress in early 1845:

Rep. J. R. Ingersoll (Pa.): "The annexation of Texas . . . would be the greatest calamity ever to occur to the rights of the individual on this planet."

Senator Miller (N.J.): "We have met this treaty . . . detected its fraud and denounced its object . . . all in the name of human liberty."

Rep. Winthrop (Mass.): "The proposed act of annexation is a scheme monstrous beyond all power of expression, a project contrary to the law of nations and in violation of the good faith of our own country."

Rep. Hudson (Mass.): "It (annexation) would be a foul stain upon our national character, and degrade us in the eyes of the Christian world."

Senator Pollock (Pa.): "Consummate this act (of annexation); trample upon the Constitution of our country, violate every principle of international law, disregard the plighted faith of the nation, tarnish her honor, insult the moral feelings and sentiments of a large portion of the American people, and record for posterity our nation's error and our nation's shame."

Rep. Rathburn (N.Y.): "Congress has no constitutional authority to annex Texas."

Rep. Dale Owen (Indiana): "This projected annexation is but an act of rapine, a trampling under foot of justice, morality, good faith, and international law."

Rep. McIlvain (Pa.): "The annexation is absurd . . . it is a mockery."

Rep. Severance (Maine): "The annexation of Texas . . . would be derogatory to the honor, injurious to the interests, and dangerous to the peace of both nations."

Mr. Speaker, the historical record clearly illustrates the suspicious and questionable manner in which Texas was taken over through U.S. "imperialism." Today under President Carter we have the open-mindedness of the United States as expressed through its policy of correcting past treaty inequities. This fresh approach following up after the Panama Canal Zone will eliminate the double standard with regard to the people of Texas. So I call upon the President to have Secretary of State Cyrus Vance review the 1845 Treaty to determine the rights and needs that may exist as to the reestablishment of Texas sovereignty.

There may be some question about the stand of today's citizens of Texas on whether they still prefer the U.S. presence and U.S. participation in Texas business and internal affairs, so I am calling on President Carter to receive the views and expressions of Texas citizens following the precedent established in Panama. For this top priority in the Human Rights campaign, we should provide a plebiscite in Texas asking whether the citizens of Texas want to continue as one of the States of the U.S. Federal Government or whether they prefer reversionary status to the free and independent Republic of Texas. No spokesman can speak for the people of the great Southwest area of Texas, but in President Carter's desire for human rights and a complete reevaluation of all past treaties, this plebiscite would provide the people's own expression of will, which is America's prime concern today with the United States' warm heart of deep understanding for international fair play and justice.

I cannot predict what the agenda will be for the negotiating team, but I know that the generous character of Texans would be most reasonable in the discussions.

Texas has the quality and strength needed as an independent nation. Its wonderful geographic diversity provides it with crops as divergent as wheat and citrus. It has the broadest ethnic base of whites, blacks, hispanics, Indians, and people of all backgrounds that live in any area in the world. The Republic of Texas would be slightly larger than France, and have a population comparable to Czechoslovakia or Kenya.

Renegotiation of the treaty with Texas should present none of the difficulties that have arisen in discussions on the Panama Canal Zone. No money was paid to Texas at the time the State was annexed into the United States. The United States did not absorb any of Texas' debts nor did they make any payments. Therefore, in this transition there would be no responsibility for any type of cash remuneration by the United States to the Republic of Texas. With the warm and close relationship that the people of Texas have with their neighbors in the other States, a permanent mutual defense pact would be welcomed with the joint security of airfields and ports.

I am asking that a U.S. negotiating team be appointed immediately to proceed completely independent of our humanitarian statesmen now clarifying the Panama Canal Treaty. I would ask that a plebiscite within the area of Texas be held of Texas citizens to determine if they desire to be a part of the union of United States or to again reestablish the Republic of Texas. And in conclusion, if Texas citizens favor the establishment of the Republic of Texas, I would ask that both the Senate and House in the U.S. Congress be provided the opportunity to confirm this transfer of authority to the Republic of Texas.

## EXPORT CONTROL AND ANTIBOYCOTT BUDGET

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 10 minutes.

● Mr. WHALEN. Mr. Speaker, I had the privilege of testifying before the Appropriations Subcommittee on State, Commerce, Justice and the Judiciary on April 20, 1978, along with Congressman BINGHAM. We expressed our strong support for the administration's funding request for Commerce Department programs to implement and enforce export control and antiboycott requirements under the Export Administration Act.

On that occasion I referred to the International Relations Committee concern that Commerce be enabled to conduct the thorough reexamination of technology transfer, multilateral export control and other policy areas which we spelled out in the legislation.

I also pointed out that we in the Congress engaged in long and arduous negotiations to come up with fair and workable policy solutions to problems of boycotts intruding on American interests. I would hate to see a tough enforcement program fall by the wayside for lack of adequate resources in the Commerce Department. Anything less than full funding for the antiboycott policy implementation would be a disastrous signal to the U.S. business community and to the world at large. The U.S. Government would be perceived as carelessly disregarding its much fought-over laws and regulations. The money has a political importance which far transcends its apparent budgetary weight.

At this point I would like to insert the testimony of my colleague Mr. BINGHAM which I commend to all my fellow Representatives.

REMARKS OF HON. JONATHAN B. BINGHAM

Mr. Chairman, I appear before this Subcommittee today in support of increased funds and personnel requested by the Department of Commerce for programs to implement and enforce export control and antiboycott requirements under the Export Administration Act of 1969. As you know, the Subcommittee on International Economic Policy and Trade, which I chair, has jurisdiction over that Act. I am pleased to be joined by our colleague from Ohio, Mr. Whalen, ranking minority member of the Subcommittee. With your permission, Mr. Chairman, I would propose to yield some of my time to Mr. Whalen at the conclusion of my brief remarks.

The Department seeks additional positions to implement the improvements in export administration mandated by Title I of the Export Administration Amendments of 1977, and the foreign boycotts provisions of Title II of those amendments.

With regard to Title I positions, I think the main point to emphasize is that the number of Commerce Department employees engaged in export administration has declined over the years, while the number and complexity of export-licensing cases has increased. In 1971, the Office of Export Administration had 215 people, it now has 162. Yet these people have to handle a constantly increasing caseload. The Department now receives more than 60,000 license applications every year. That works out to over 200 per working day.

And these applications are getting more complex all the time. At the height of the cold war, under the old Export Control Act of 1949, there was little trade between the United States and the communist countries, so the task of the export licensers was relatively easy. Now, under the Export Administration Act of 1969, it is the policy of the United States to foster trade with the East consistent with the national security, foreign policy, and economic health of the United States. That mandate requires complex interagency calculations involving strategic capabilities, probable end use, likelihood of diversion, foreign availability, and other factors involved in the tradeoff between trade promotion and strategic controls. And the technological sophistication of the equipment proposed for export to communist countries is growing all the time, placing still further demands on the Department and its advisory agencies.

Mr. Chairman, the Department is not coping well with these increasing burdens on its diminishing staff resources. With respect to the large, complex cases, involving export of advanced technology to the East—major sales with a significant impact on jobs and our balance of trade—I would have to characterize the export-licensing system as being in a shambles. Only 70 percent of the communist country applications are decided within the statutory 90 days. There is currently a backlog of 596 cases which have been pending over 90 days, and that number is growing. Major sales go to our foreign competitors while our government sits on applications—and while we suffer a growing trade deficit which may reach a record of $35 billion this year. Requests by our allies for U.S. concurrence with their proposed exports to the East, which they voluntarily submit to us under the COCOM arrangement, are stalled in our bureaucracy for months. Distrust and dissatisfaction with the export control process on the part of U.S. business and our allies is increasing—not because of any lack of appreciation of the need for these controls, but because of a feeling that they are neither fairly nor efficiently carried out.

I would not pretend to this Subcommittee that more people alone will solve the problem. And if I believed that the proposed personnel increases were going to be used merely to perpetuate the old inefficiencies, I would not recommend them to you. But I believe we now have administrators of this program, in Mr. Weil and Mr. Marcuss, who are committed to the necessary reorganization and reform of the system. I think we should give them the tools they need to do the job. Cutting the staff in an attempt to force efficiencies has not worked before, and it will not work now.

Turning now to the Title II positions requested, the 1977 amendments added a major new dimension to the trade regulation and compliance responsibilities of the Commerce Department—namely, enforcement of provisions prohibiting American compliance with secondary aspects of foreign trade boycotts.

Prior to 1977, the law required only that American firms report to the Commerce Department requests received to comply with foreign boycotts. It was possible for the Department to assign a handful of existing staff to the processing of these reports and to limited compliance efforts.

With the Middle East Oil embargo, the historic growth of Arab oil wealth, and consequently increased Arab consumption of goods and services from the U.S., the number of reports coming into the Department grew from a trickle of about 5,000 in 1970 to a flood of more than 100,000 in 1976. This increase in the impact of the Arab boycott on Americans and American business led the Congress in 1977 to decide that reports were not enough—that we had to take action to protect American businessmen from foreign embargoes. With the support of the new administration, legislation was enacted in 1977, and is now in effect on the basis of detailed and carefully formulated regulations prohibiting American compliance with foreign boycotts.

The public, the Administration, and the Congress are clearly committed to fully implementing the new law. But the regulations are extremely complex, and the task of enforcement difficult. A maximum effort in the next 18 months seems to me essential to assure broad compliance, to resolve ambiguities in the legislation, and to find any loopholes or problems that will have to be addressed by the authorizing committees. The Department now requests of you the substantial resources required for this effort. Based on my consultations with the Department, I am convinced that the Department will be able promptly to recruit and put to work qualified people during the remainder of 1978 and the first half of 1979.

Mr. Chairman and members of the Subcommittee, I urge you to give the Department the funding it needs to show the world that this country is determined to enforce this law, and to protect its people from the discriminatory effects of foreign boycotts.

Thanks you for hearing me. ●

## FEDERAL AGENCIES ARE ATTEMPTING TO RESTRICT THE EXERCISE OF FREE SPEECH AND TO RIG THE COMPETITION OF IDEAS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KEMP) is recognized for 10 minutes.

● Mr. KEMP. Mr. Speaker, ideas have consequences. For better or for worse, ideas rule the world. The recognition of that by our forebears lays at the very foundation of our history and traditions. It is reflected throughout the bill of rights and our legal framework.

It is the competition of ideas which brings forth public opinions. And, as a product of the force of ideas, those opinions are in a state of change, some gaining and others losing ground.

But now a move is afoot to rig the marketplace of ideas, to weigh one set of ideas against another, to give one set an unfair advantage over the other.

And who is at the heart of this attempt to rig that marketplace of ideas? Agencies of the Federal Government.

Mr. Justice Hugh Black, commenting on what freedom of speech really means, said:

> My view is, without deviation, without exception, without any ifs, buts, or whereases, that freedom of speech means that you shall not do something to people either for the views they have or the views they express or the words they speak or write.

Yet, these Federal agencies are attempting to "do something" against a major segment of American life. Why? Who really knows, but from everything I can gather, because the free speech the segment which is to be restrained is exercising is critical of Government or the policies it seeks to make dominant. In other words, free speech as an abstraction might be all good and fine to those within these Federal agencies, but the specific exercise of free speech in the form of criticism of Federal policies and programs or in the offering of alternatives to reliance upon the Federal Government is quite another matter.

The classical notion of government within a democratic society is that the government is made up of the people themselves, that it is an embodiment of those people. Yet what the recent actions of the Federal Government to rig the marketplace of ideas reflect is that those who would rig that marketplace see government as an entity unto itself, as a structure set off and distinct from the people. I abhor that kind of vision of government; it is exactly the kind of perspective which can bring forth despotic government.

What are these attempts to rig the marketplace?

They are:

First, an Internal Revenue Service ruling disallowing, for deduction purposes, expenses for advertising which gives the advertiser's point of view on public policy or legislative issues, and so forth.

Second, a Federal Trade Commission attempt to force advertisers to pay for commercials representing viewpoints opposed to those advertisers without any corresponding requirement for those opposing viewpoints.

Third, a Federal Communications Commission ruling that the Fairness Doctrine must be applied to public policy questions.

All of this is bound to have a "chilling effect" on all issue and image advertising, that "telltale chilling effect" which the Supreme Court of the United States has told us to watch for as a sign of abridgment of a freedom.

Why is this a rigging of the marketplace?

First, while the IRS will argue that all it is doing is disallowing the deductibility of such expenses, deductions being a matter of "legislative grace" and not constitutional or statutory right, the IRS has let remain in place all those regulations and rulings which allow the deductibility of expressions of noncorporate points of view. For example, an individual can still claim a full deduction for contributions to charitable, educational, and so forth, foundations and organizations, which then devote substantial amounts of their time and effort to directly and indirectly effecting public opinion. Thus, a major foundation could come out with a study and all contributions for its research, publication and distribution would be deductible, whereas a corporate response to that would not be. And contributions to government, which are often used for expressions of points of view, are deductible.

The IRS seems to be badly misinformed about the constitutionality of its position, too, at least that is my reading of the Virginia Pharmacy Board case on which the U.S. Supreme Court only recently handed down a decision. In this case, the high tribunal declared:

> . . . Speech does not lose its first amendment protection because money is spent to protect it, as in a paid advertisement . . .

In recent responses to press inquiries on its ruling, the IRS all but admitted that it had not thought through the ramifications of its ruling. Yet it was

made. And the Commissioner of IRS has announced a crackdown on companies and trade associations who might dare seek the same treatment for dealing in public policy questions that IRS gives to other points of view.

This is really an attempt to restraint the role of the private sector in the formulation of policy, a restraint initiated by its competitor quite frequently in that formulation, the public sector. Thus, Government has become both player and umpire, and that is not fair. I cannot find any footnote in the Constitution which says that the right of free speech is protected only for those promoting the public interest.

While this was going on at the IRS, the FTC said that it will be doing more to force advertisers to pay for commercials representing contrary viewpoints.

Why is this rigging the marketplace? Because while advertisers would have to pay for their own points of view, then turn around and also pay for opposing points of view, those opponents, if they ran commercials—and contributions to those opponents would be fully tax deductible in many situations, would not have to pay for the advertisers points of view to be presented. Thus the advertiser pays for both, while the opponents pay only for their own. And, of course, if the advertiser were paying for the opponents, the opponents would not have to pay for any of their own.

Last year the FCC ruled that Washington's WTOP-TV had violated the Fairness Doctrine by broadcasting an oil company's commercial against breaking up the oil companies. The FCC forced the station to air—without charge—30 spots by Energy Action which not only countered the commercials, but also attacked oil industry participation in other forms of energy and equated oil executives with muggers. My point here is not on the merits; The oil company or Energy Action may or may not be right.

But the point is that the FCC action rigs the marketplace of ideas in at least two ways. First, by having the advertiser pay and the opposing viewpoint not pay. Second, since the station and not the advertiser had to absorb the cost of the 30 free spots, it has had a restraining effect upon other TV stations accepting advertisements on public policy questions from advertisers. Thus, the FCC decision has had a chilling effect on the exercise of that form of free speech.

In order to comprehend truth, we must first hear all forms of speech, and the offering of those forms of speech must be on an equal footing. It is morally unfair, financially inequitable, and of questionable constitutionality to do otherwise.

If Federal agencies do not like being criticized, they should deal with it like anyone else—by better articulating their cases, not attempting to eliminate the competition.

Is it not unbelievable hyprocrisy that a government which says its actions are taken to preserve competition in our economy must resort to the restriction of competition in the marketplace of ideas in order to have hopes of prevailing with its points of view.

What shall we do?

If the IRS ruling were based on a provision of the code that restricts that advertising, we should change the code. We should incorporate a "reform" of that provision of the code in this year's tax reform bill.

If the agencies persist in issuing these kinds of regulations, we should enact title II of H.R. 3260, my Executive Agencies Reorganization and Operations Reform Act. That title would require all such regulations to be sent to Congress and Congress to act on them before they become binding.

There appeared in the April 3 issue of Barron's magazine a superb article on what is happening in the Federal Government to restrict the exercise of free speech. Written by that magazine's Washington correspondent, Shirley Scheibla, I commend it to the attention of all my colleagues:

GETTING THE MESSAGE

(By Shirley Scheibla)

WASHINGTON.—A Senate subcommittee has just launched a hunting expedition aimed against advertising which gives corporate views on controversial issues. It also includes ad campaigns designed to improve the corporate image. Specifically, the Senate Subcommittee on Administrative Practice and Procedure has subpoenaed mountains of material, much of it confidential and some involving trade secrets, from four major oil companies, Exxon, Gulf, Mobil and Texaco, and their four advertising agencies, Benton & Bowles; Doyle, Dane, Bernbach; McCaffrey & McCall, and Young & Rubicam. The chief executive officers of the eight firms have been ordered to appear, with the material, before the Subcommittee this Friday.

Stated purpose of the investigation is vague. According to Subcommittee Chairman James Abourezk (D., S.D.), it's to see whether the Internal Revenue Service, Department of Energy, Federal Communications Commission and Federal Trade Commission are carrying out their duties with regard to such advertising and exercising proper coordination in doing so. In fact it looks like a thinly disguised attempt to see whether the Subcommittee can find anything to pin on the oil companies in their effort to get across to the public their side of issues. On this score, of course, their position tends to differ from that of Chairman Abourezk, who last year co-sponsored legislation to break up 18 major oil companies. The Subcommittee reportedly also plans to extend its ad investigation to such food processors as General Foods, General Mills and Pillsbury.

Whatever the purpose of the Subcommittee's probe, it is bound to have a chilling effect on all issue and image advertising. The specter of subpoena of confidential information may haunt all future dealings with Madison Avenue. Among other things, the Subcommittee wants all tapes and movies for broadcast commercials and tearsheets for printed ads since 1973, tax records involving the ads, minutes of boards of directors' meetings and corporate correspondence setting advertising strategy. Thus, compliance in itself would be punitive, even if the Subcommittee finds nothing wrong. Contrariwise, failure to honor the subpoenas would involve substantial legal expense, as well as perhaps risking a finding of contempt of Congress.

Ominous enough in itself, the Subcommittee is only part of a growing and multifaceted federal attack on advertising, one which bodes ill for future freedom of expression. It also seems to run counter to several recent U.S. Supreme Court decisions, notably that involving the Virginia Pharmacy Board, in which the high tribunal declared: ". . . Speech does not lose its First Amendment protection because money is spent to protect it, as in a paid advertisement. . . ."

However, more than free speech for advertisers is involved. After all, the press keeps watch on government. To carry out that mission, it needs the financial support of advertisers (who obviously don't control it, or they wouldn't spend their ad money to express contrary views). Taken altogether, the federal attacks on advertising strike some observers as an attempt to undermine the financial foundations of the free press.

Over on the House side, the Subcommittee on Commerce, Consumer and Monetary Affairs is in the midst of an investigation of advertising; it expects to hold hearings later this month. The House effort is concentrating on what it views as the illegality of deducting issue and image advertising as a cost of doing business.

Peter Barash, staff director of the House Subcommittee, estimates that corporations spend $1 billion or more a year on advertising and mass mailings aimed at influencing public opinion on legislative matters. He cites particularly the ads of Mobil, the utility and shipping industries and mass mailings which seek to influence stockholders and/or employes. Many companies, he said, don't realize that because they constitute so-called grass roots lobbying, such expenses are not deductible. (Mobil told Barron's it takes no tax deductions for its political ads.) Barash adds that the Subcommittee so far has found inadequate IRS enforcement and significant non-compliance with the law.

IRS has gotten the message. Commissioner Jerome Kurtz, wrote the General Accounting Office last December that the agency will audit half the returns filed by large trade associations (and perhaps large firms later) to see if they are violating Section 162 of the Internal Revenue Code on issue and image advertising. Kurtz added: "We recognize our responsibility to audit this area because of its public policy implications, even though its revenue producing potential may be less than other issues."

Section 162 of the Code involves thorny issues concerning the difference between indirect lobbying, educational material and free speech. (The Code exempts the press.) It permits lobbying to be deducted as a business expense when it involves direct contact with the legislature, but stipulates that this "shall not be construed as allowing the deduction of any amount paid or incurred in connection with any attempt to influence the general public, or segments thereof, with respect to legislative matters, elections or referendums."

Stuart Siegel, chief counsel of IRS, told Barron's that so far as he knows, this has never been challenged constitutionally. Tax deductions, he said, are a matter of legislative grace. We pointed out, however, that the press is specifically exempted from Section 162. Doesn't this indicate that First Amendment rights are involved? "That is an interesting point; I really haven't thought it out," he replied. Siegel added, however, that newspaper and magazine stories and editorials deal with matters involving the public interest, whereas mass mailings, issue advertising and other forms of indirect lobbying deal with issues in the self interest of business, not the public interest. The Constitution, however, doesn't guarantee free speech only to those promoting the public interest.

Conceding gray areas in the Code, Kurtz wrote that IRS will publish clarifying rulings; it has issued four. These hold, in es-

sence, that corporate expenses are not deductible if they seek to influence legislation through stockholders (mailing testimony of a corporate president, for instance) or through newspaper and magazine ads. An association may deduct the expense of urging its members (but not prospective ones) to contact their Congressmen. It must not deduct the cost of urging its members to contact their employes and customers on legislative matters.

Uncle Sam already has financed propaganda against advertising through the National Endowment for the Humanities. It paid for a blistering tirade in one installment of Courses by Newspaper, the gist of which was that advertising is ripping off the public and should not be tax deductible as a business expense. While we read it in The Washington Post, some 400 newspapers publish the Courses, and over 250 colleges give credits to those who read them and pass tests on them.

Here's just one of the installment's many controversial statements: "The advertising subsidy that supports and guides the cultural industry is extracted through a levy on the price of all advertised goods and services. Some call this private taxation without representation. The price is hidden in the price of soap; I pay when I wash, not when I watch TV or read a magazine."

Such views, of course, run counter to elementary economics. Advertising is essential for large volume, which in turn, permits lower prices because of economies of scale. And advertising also encourages competition. The results, needless to add, have been a standard of living that is the envy of the world.

Spending all of one's adult life as a Washington journalist means encountering a lot of tortured reasoning. But our prize, one lollipop, goes to a 346-page study by the staff of the Federal Trade Commission, which persuaded the commissioners to vote unanimously for a rule-making proceeding to consider prohibiting or regulating advertising of sugared products on TV commercials aimed at children. A lot of money is involved, since FTC estimates expenditures of all kiddie commercials are around half a billion dollars a year. By law, the Commission has authority only to regulate unfair and deceptive trade practices. Accordingly, the study found that televising sweets commercials to children is unfair because it persuades them to consume products which are cariogenic (close in sound, but not in meaning, to the scare word, carcinogenic).

The study was especially concerned about the naivete of the extremely young. But two- and three-year olds don't go shopping on their own. That leaves it up to their parents. The staff said, however, that denying requests of babies for candy and such injures the parent-child relationship. If this establishes the precedent that the government has the obligation to step in to prevent parental discomfort in denying any request of a child, the implications are mind-boggling.

At the Commission meeting in late February, just before it voted to proceed with the rulemaking, it heard arguments from its staff. Liberally lacing their conversations with warnings about cariogenic dangers from sweets, staffers warned emotionally that tooth decay is growing pandemic because most recent surveys indicate that 20 million Americans have full sets of false teeth. What they neglected to mention in the oral presentation is that the "most recent survey" was taken in 1962.

FTC Director of Policy and Planning Robert Reich says that his agency will be doing more to force advertisers to pay for commercials representing contrary viewpoints, as well as "corrections." A case involving whether FTC can force the marketers of Listerine to pay for corrective commercials now is on its way to the U.S. Supreme Court.

Last year the FCC ruled that Washington's WTOP-TV violated the Fairness Doctrine by broadcasting a Texaco commercial against breaking up the oil companies. As a result, the station aired without charge 30 TV spots by Energy Action which not only countered the commercials but also attacked oil industry participation in other forms of energy and equated oil executives with muggers. According to William Hesse, president of the American Association of Advertising Agencies, "Our members feel restrained because of the Texaco thing."

Well they might—and because of other aspects, too, of the federal attack on advertising. Much soul-searching reportedly is going on now in corporate board rooms and executive suites over how to meet the onslaught. Like most inroads on freedom, the moves ostensibly have a noble purpose. What could be finer, for instance, than protecting children? What could be more popular than attacking Madison Avenue? But is it really chipping away at the financial foundations of the free press and threatening freedom of speech? If such attacks proliferate, questions like these someday may have a hard time finding their way into print.●

## THE STRATEGIC PETROLEUM RESERVE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. CONTE) is recognized for 5 minutes.

● Mr. CONTE. Mr. Speaker, I was encouraged the day before yesterday, with the responsible actions of the Senate Energy Committee. The committee formally recommended the rejection of the Department of Energy's amendment No. 2, to the strategic petroleum reserve program. The amendment was necessitated when it was learned that the original plan excluded a reserve facility in the Northeast, whose residents were concerned over the obvious lack of a regional storage facility to assist our heavily import dependent region in the event of a severe disruption of this imported oil supply. The original plan called for the siting of this storage facility to be in the gulf area, where there are abundant salt domes which are ideal for this purpose. However, since the Northeast is almost totally dependent on imports of Petroleum products, unlike the rest of the country, we are in a particularly vulnerable position in the event of a disruption. In their most recent response to this serious situation, the Department submitted the second amendment which was unanimously rejected by the Senate committee, that amendment, still did not satisfy that vital need, since it places the storage facility in Canada, outside of our control. Thus, the Department was saying that, in order to free us from the unilaterial actions of one oil producing country, we are going to establish a reserve supply in another independent country. The situation really becomes silly. The intent of the act is to establish a reserve, within the jurisdiction and control of the United States, from which we can draw on in the event of an emergency. Currently, our relations with Canada are excellent. However, we cannot predict the outcome of events in that country, which may have a detrimental effect on the United States-Canadian relations. Thus, as the Senate committee concurred, we should not deliberately establish a future risky situation in our good-faith efforts to remove ourselves from our current risky situation. I hope the full Senate will concur in the Energy Committee's recommendation probably later today. I trust the Department will draft another amendment which truly reflects the intent of the act. We need to establish reserves within our boundaries, especially in the immediate region of the highest demand for this expensive foreign oil, in order to truly free ourselves from the whims of the oil production nations.●

## PANAMA CANAL GIVEAWAY: A LAWYER'S REPLY TO EDITORIAL DISTORTION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 5 minutes.

● Mr. FLOOD. Mr. Speaker, since the signing on September 7, 1977, of the two proposed giveaway treaties for the Panama Canal, interest in the subject has steadily increased with people of the United States overwhelming opposed to the surrender. In recent weeks, public interest has been animated with a steady flow of thoughtful letters to editors.

Among such letters was one on April 5, 1978, to the editor of the Oregon Journal of Portland, Oreg., by Bernard B. Kliks, a leading attorney of that city with a background of naval service during World War II.

Mr. Speaker, because of the timeliness and professional character of the indicated letter, I quote it as part of my remarks:

PORTLAND, OREG.,
*April 5, 1978.*

EDITOR,
*Oregon Journal,*
*Portland, Oreg.:*

Your lead editorial on April 5th concerning the Canal Treaty (the second one) literally screams for an answer and correction. You say "this country as much as stole the Panamanian strip" from Panama and urge the "giveaway" to "correct a grave heavy-handed American misdeed". Like most Americans you have probably been exposed to the State Department's revision of history over the last decade. I suggest you read the Encyclopedia Britannica's version. As a matter-of-fact, the Canal Zone is the most expensive piece of real property we ever purchased—More so than Alaska, the Gadsden Purchase, the Louisiana Purchase and the Virgin Islands combined. We paid the French 40 million dollars for their rights, 10 million to Panama, 25 million to Colombia, 400 million to build the Canal and approximately 6 billion dollars since. In addition to that we bought up every piece of private property within the Zone, even squatter's rights, and have thousands of deeds on record in Washington to prove it. This was not Colonialism. We took nothing from Panama, but have been giving to Panama constantly ever since. The Canal literally made Panama and turned it from a disease infested swamp to the highest standard of living in Central America and second in all of Latin America. We are not taking their assets, lumber, oil, or anything else. We are performing a reasonable service for all nations and have done so on a fair basis for 70 years. Our rates are half that of the Suez Canal, which is only a water level canal, not encumbered by expensive locks.

Since when is reference to the Constitution an effort "to muddy the waters by insisting that the House of Representatives have some say in the disposal of Federal property". Article 4, Section 3, Clause 2 of the Constitution provides "The Congress (both Houses) shall have the power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States". (Sioux Tribe vs. U.S., 316 U.S. 317 confirms that Congress exclusively has this power).

That we have the ownership and title has been held by the highest Court in Wilson vs. Shaw, 204 U.S. 24. As late as 1971 it was held "The Canal Zone is a unincorporated territory of the United States." (U.S. vs. Roach, 453 F.2d 1054 at 1057.)

Nor is it muddying the waters to state that "The treaty is financially too costly". We are asked to give away a 7 to 9 billion dollar asset, and pay 2½ billion over the next 22 years to Panama for that privilege. Sounds more like an unconditional surrender after a total military defeat than a treaty—complete even with reparations!

The people should also know that the new Treaty states: (b) "during the duration of this Treaty, the United States of America shall not negotiate with third states for the right to construct an inter-oceanic canal on any other route in the Western Hemisphere, except as the two Parties may otherwise agree".

Your readers are entitled to know these facts as well as your opinion.

Yours truly,

BERNARD B. KLIKS.●

## CONGRESSMAN BURKE TO RETIRE FROM HOUSE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

● Mr. ANNUNZIO. Mr. Speaker, the Honorable JAMES A. BURKE, the Congressman who has been representing the 11th District of Massachusetts for the last 20 years, has announced that he will retire at the end of the current 95th Congress. JIM BURKE has been my friend since I was elected to Congress in 1964, and I was sorry to learn, as so many of his friends, constituents, and acquaintances were, of his decision to retire from the Congress.

JIM has served his constituents and the people of this Nation wisely and with distinction and devotion. JIM BURKE'S long and distinguished career of public service will always be remembered by all of us who had the good fortune of knowing him and working with him.

Congressman BURKE became a self-educated expert on the social security system during his service in Congress as chairman of the Social Security Subcommittee of the House Ways and Means Committee. His outstanding dedication to high standards is an inspiration to his friends and fellow citizens, and his record of excellence and creative accomplishment is most commendable.

Mr. Speaker, I am proud to have worked with JAMES A. BURKE in the House of Representatives, and I shall always cherish the good counsel and advice that he has always so generously extended. An article from the April 10 edition of the Boston Herald on Congressman BURKE'S decision to retire follows:

BURKE: A JOB WELL DONE

Since he lost his right foot a year ago in a battle with diabetes, U.S. Rep. James A. Burke has displayed courage and determination in performing his duties in the Congress.

Confined to a motorized wheelchair, the Milton Democrat answered roll calls every day and fought for legislative goals close to his heart, such as using general revenue to finance part of the Social Security System and for "just" tax revisions.

In the past he has fought for Medicare and Medicaid, and he saw both programs implemented. To the elderly, he was a champion, and he won consecutive elections in 20 years in the Massachusets 11th Congressional District.

When he announced the other day that he will retire at the end of this year, the ailing 68-year-old former Boston city official and Massachusetts legislator chose the chambers of the U.S. House Ways and Means Committee to make the announcement.

In two decades Jimmy Burke rose to become the ranking Democrat on the powerful House Ways and Means Committee, Chairman of joint Internal Revenue Committee and Chairman of the House Social Security Committee. The man has done his Job and deserves praise for his performance and his statesmanship.

House Speaker Thomas P. O'Neill, Jr. spoke for all members of Congress when he told Burke, "You stood up with courage regardless of what the issue was. I have known no man who is more popular and held in higher regard by your colleagues than you."●

## LEGISLATION TO EXTEND COUNTERCYCLICAL REVENUE SHARING

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from New York (Ms. HOLTZMAN) is recognized for 5 minutes.

● Ms. HOLTZMAN. Mr. Speaker, countercyclical revenue sharing is one of the most important methods by which the Federal Government has provided fiscal relief to State and local governments Because the present countercyclical program is scheduled to expire on September 30, 1978, I am introducing today a bill to reauthorize the program for 3 more years.

If the countercyclical revenue-sharing program is not extended, many States and localities will be faced with a cutoff of Federal funds specifically designed to help them deal with the sluggish national economy and soaring inflation. New York City alone will lose $94 million next year if the program is not reauthorized.

My bill also changes the present formula so that States and local governments will continue to qualify for countercyclical revenue sharing even if the rate of unemployment goes down, as it is expected to do. Under present law, countercyclical revenue-sharing funds are available only if national unemployment is above 6 percent. My bill allows countercyclical funds to be distributed as long as the national unemployment is above 5 percent. Since unemployment is expected to fall below 6 percent next October, the program will come to a halt unless the national unemployment trigger is changed.

These Federal funds added by my bill will save jobs and prevent reductions in police, fire, education, and other essential services. At a time when many of our cities including New York, are experiencing serious fiscal difficulties, it would be irresponsible for the Federal Government to withdraw this critical program.

President Carter called for an extension of this program in his urban policy. The administration, however, has not yet drafted its legislative proposal.

I strongly urge my colleagues' support for this legislation.

The text of the bill follows:

H.R. 12122

A bill to extend countercyclical revenue sharing for three years and to revise the unemployment percentage required for authorziation of such program

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 202 of the Public Works Employment Act of 1976 is amended—

(1) by striking out "five succeeding calendar quarters (beginning with the calendar quarter which begins on July 1, 1977)" in subsection (b) and inserting in lieu thereof "twelve succeeding calendar quarters (beginning with the calendar quarter which begins on October 1, 1978)";

(2) by striking out "6 per centum" in subsection (b)(2) and inserting in lieu thereof "5.0 percent";

(3) by striking out "the five successive calendar quarters beginning with the calendar quarter which begins July 1, 1977, exceed $2,250,000,000"; and inserting in lieu thereof "any fiscal year which begins on or after October 1, 1978, exceed $1,900,000,000"; and

(4) by striking out "6 percent" each place it appears in subsection (d) and inserting in lieu thereof "5.0 percent".●

## ISRAELI SETTLEMENTS NOT "CLEARLY ILLEGAL"

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. DRINAN) is recognized for 5 minutes.

● Mr. DRINAN. Mr. Speaker, the U.S. State Department and the President have called the Israeli settlements in the Sinai and on the West Bank of the Jordan "clearly illegal." This posture has served only to harden the Arab States in their belief that the United States can pressure Israel into yielding all land occupied after the 1967 war, a step which would constitute a severe threat to Israel's security. The American pronouncements on the settlements also encourage the Arab heads of state in their persistence on a commitment to total withdrawal as a precondition to peace talks. They perceive the United States as viewing any Israeli presence in these areas as illegal.

Procedurally, then, in terms of fostering negotiations, the U.S. interpretation of the settlements is counter-productive. If real negotiations on the salient issues are the goal, then the U.S. position should be to encourage the Arab States to adopt the Israeli position that everything is negotiable—and everything includes the settlements—rather than fostering within the Arab States the notion that Israel will accept major pre-

conditions to any negotiations—a notion which is false, and deservedly so.

But beyond the effects of the U.S. view of the Israeli settlements lies a more fundamental issue: According to international law, are these settlements clearly illegal? A careful reading of the law and the facts of this unique situation leads one to the conclusion that the legality of the settlements remains an open question, one upon which well-intentioned individuals with great expertise in international law can and do differ. The U.S. position on this issue is, therefore, both bad policy and bad law.

Before proceeding to an analysis of the legal issues, one must underscore one central fact: On no issue, including the settlements in the Sinai, Gaza, and West Bank, is the Israeli Government saying, as do the Arab States, "Take it or leave it; this is our position and it cannot be negotiated." On the contrary, the Begin government has repeatedly made it clear that the presence or absence of settlements is, like all other issues, fully negotiable. By labeling the settlements illegal, the United States, inadvertently or otherwise, places Israel in the position of the intransigent party. In reality, it is the Arab nations, with their insistence on major preconditions to further negotiations, who pose the obstacles to peace.

The Sinai settlements pose a somewhat different problem from those on the West Bank and in Gaza. Prime Minister Begin has already offered Egypt total sovereignty over the Sinai, including the few settlements in the Rafiah salient. He has done what no prior Israeli Prime Minister has done in removing the insistence on Israeli sovereignty over the port of Sharm al-Sheik, Israel's lifeline to the South, whose closing by Egypt was one of the acts of war which led to the 1967 hostilities. All Israel is asking in the Sinai is the right to defend a few settlements in the extreme north, whose area comprises roughly 2½ percent of the Sinai. In December, President Carter cited this policy as "a constructive approach and a long step forward."

Under every tenet of international law, Israel has the right to insist upon border rectifications in any peace treaty, since Israel's presence in the Sinai was the direct result of Egyptian aggression—the closing of the straits of Tiran—in 1967. But Prime Minister Begin did not insist upon such rectifications. He insisted only that the few settlements in the Rafiah area have the right to defend themselves. Nor did he insist on the exact number, character, or even existence of settlements on a permanent basis, as his position on this issue, like all others, is that it is open to discussion and modification during face-to-face negotiations with Egypt. These are not the policies of an expansionist or obstructionist government.

Let us turn now to the more difficult issue of the territories on the West Bank of the Jordan. A central fact, often forgotten, is the very real question of sovereignty over the West Bank after the dissolution of the Palestine Mandate. The Arab States categorically rejected the partition of the area as set forth by the United Nations. This rejection was manifested in acts of violence by the Arab States 12 hours after the U.N. General Assembly ratified the partition plan in November 1947.

After the Israelis repulsed the Arab attack of 1948, Jordan occupied the West Bank and in 1950 asserted sovereignty over it. Is is highly significant that only two nations, the United Kingdom and Pakistan, recognized this claim of sovereignty, which resulted from an aggressive war over the rejection of a United Nations partition plan which never was implemented or gained actual force. The other Arab States joined the rest of the world in denying Jordan's claim of sovereignty. Its annexation of the West Bank was unilateral.

As the use of force by the Arab States in a clearly aggressive war against Israel was patently illegal, it follows that such a war could not yield to the aggressors valid legal title to territory. The legal principle is succinct: "Ex injuria jus non oritur"—There cannot flow rights from a wrongful act. The armistice lines which resulted from the 1948 war thus remained precisely that: an agreement which was part of the termination of hostilities but which did not confer sovereignty. This was clearly the view of the Arab League, as stated on April 13, 1950:

> Annexation of Arab Palestine by any Arab state would be considered a violation of the League charter.

Prior to the Arab invasion in 1948, thriving Jewish communities existed in the West Bank. After the aggression by what was then known as Transjordan, Jews were expelled from the West Bank. It is illogical to apply the principle of "nonacquisition of territory by force" to a defensive war fought by Israel in 1967 and not an offensive war fought by Transjordan in 1948.

To put the matter simply, there is no clear answer to the actual legal status of the West Bank. A strong case can be made that Jordan has, legally, never enjoyed anything more than the status of a belligerent occupant. Jordan itself, ironically enough just 1 week prior to the commencement of the 1967 war, stated in reference to the West Bank:

> There is an armistice agreement. The agreement did not fix boundaries. It fixed the demarcation line. The agreement did not pass judgment on rights, political, military, or otherwise. I know of no boundary. I know only of a situation frozen by an armistice agreement.

The situation was "unfrozen" a week later when the Arab nation undertook acts of war against Israel. The task at hand now, as the Israeli Government has reiterated, is to fix secure and just borders, without preconditions and without stubborn insistence on non-negotiable demands based upon the rigid application of principles of international law whose relevance to the situation is unclear.

If one accepts the fact that Jordan was never a legitimate sovereign, then it follows Jordan's ouster did not confer upon it the panoply of rights enjoyed by a sovereign nation displaced from its territory.

Title to the West Bank is further clouded by the nature of Jordan's role in the 1967 war. There is no dispute that Jordan, after having received assurances from Israel that it would not be the subject of military action if it did not join with Egypt and Syria in their aggression, nevertheless invaded Israel on the morning of June 5, 1967. King Hussein himself has stated that Jordan initiated the hostilities.

Prof. Steven Schwebel, deputy legal adviser to the U.S. Department of State, said in 1970:

> Having regard to the consideration that Israel acted defensively in 1948 and 1967, and her Arab neighbors acted aggressively in 1948 and 1967, Israel has better title in the territory of what was Palestine than do Jordan and Egypt.

These points of international law could be argued almost endlessly, especially in view of the fact that title to territory is normally not based on a claim of absolute validity, but rather on one of relative validity. In a relative sense, it is the view of many that Israel's title to the West Bank is of a nature to permit the establishment of Jewish settlements, or, more accurately, the reestablishment of Jewish settlements destroyed by the Arab invasion of 1948.

Legal arguments aside, the fact now is that there exists an opportunity for peace in the Middle East which may never come again. With regard to the settlements as with regard to all other issues, the Israeli Government says, come, let us negotiate these issues, face-to-face, with no preconditions and no absolute demands. By branding the settlements illegal, the United States retards this process by fostering the impression that preconditions and absolute demands are legitimate; that Israel must concede totally on these points. Such a position might be understandable if the legal issues were clear-cut but, as we have seen, they are not. The presumption that Israel's settlements are illegal per se, as adopted by the United States, the putative neutral party acting to foster negotiations, cannot help but encourage the Arab States in their hope that the United States will wrest from Israel this and other key concessions before bargaining even begins.

Once again, it would seem, principles of international law are applied one way for Israel and another way for the other nations of the world. Once again, Israel is unfairly put on the defensive by being asked to defend the settlements, when the real obstacles to peace are the Arabs' refusal to negotiate without preconditions and their refusal to permit Israel to have the secure and recognized borders to which, after 30 years of aggression by her neighbors, she is entitled. The settlements, like everything else—in Israel's view—are subject to negotiation. The issue of total withdrawal and of a Palestinian state, in the Arab view, are nonnegotiable. By focusing on the narrow issue of the illegality of the settlements—a view which is open to dispute—the United States does a disservice not only to Israel, but also to the continuing search for peace in the Middle East.●

## NEEDED: A GREEN LIGHT FOR UPDATING MASS TRANSIT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. SOLARZ) is recognized for 5 minutes.

● Mr. SOLARZ. Mr. Speaker, New York City has one of the oldest rail mass transit systems in the country. Its first passengers were carried in October of 1904—and to hear some of my constituents some of that equipment is still riding around—dilapidated, dirty, uncomfortable, and unsafe.

The Congress will soon be considering the reauthorization of Federal aid to our highway and mass transit programs. As the Representative of a district dependent on mass transit for their daily activities, I would like to urge some improvements in the existing Federal programs.

This country desperately needs joint local and Federal planning that would develop rational transportation priorities that reflect the real needs of local communities and their citizens. As enlightened Federal transportation program would not force highway construction on communities that really would perfer to update and improve their mass transit systems, but do not want to lose any of their Federal funds. If Federal highway grants were 100 percent transferable to either highway or mass transit improvements, local governments would be free to choose which program would best meet the needs of their citizens for safe, efficient, and economical transportation. Full transferability would assist older cities like New York, Chicago, and Boston, to name a few, who are now hard pressed for funds to upgrade and improve their existing mass transit systems.

The current formula for operating subsidy assistance also hurts our older and larger systems. New York City's subways carry over 3.5 million passengers a day on 6,000 train trips. Yet with over one-third of the Nation's total passengers, NYC receives only 10 percent of the operating subsidies provided by the Urban Mass Transportation Administration. A new operating subsidy formula must be adopted that would provide subsidies on a more equitable basis—if New York has one-third of the passengers, then it should receive one-third of the subsidy. These subsidies were provided by the Government to assist operating transit systems to hold down fares and increase maintenance activities so that ridership can be maintained, and hopefully even increased.

The Congress should greatly expand the capital grant program to allow improvements and modernizations of existing systems. Transit riders today expect escalators, ramps, elevators, and well-lit train stations. This improved access would also benefit our senior citizens and handicapped who should be able to use our Nation's transit systems on a 24-hour-half-fare basis, instead of the current off-peak-hour half-fare system.

If we are serious about our desire to cut energy usage, to reduce traffic congestion and air pollution in our cities, then we must update and modernize our transit systems to attract additional riders and to improve the service already existing. An infusion of Federal funds is needed to replace wornout and dilapidated equipment, to upgrade safety systems and communication equipment, to reconstruct track beds and improve rights-of-way, and to extend existing service so that passenger rides will be both swifter, safer, and quieter.

In my district, as in many parts of this country, the subway lines are elevated and the noise both inside and outside the trains has become unbearable as old equipment passes over aged track and worn switches. A greatly expanded noise abatement effort is needed and a special office should be established within UMTA to spearhead that effort. Expenditures for research and development of noise-abatement equipment, particularly for devices to retrofit our Nation's fleet of older buses and trains, must be tripled. UMTA should provide grants to apply existing noise-abatement technologies to our older systems. Such grants would give a real boost to our older systems and their riders, to say nothing of what noise abatement would mean to the residents of areas served by elevated lines who now suffer daily from the screeches and groans of our outdated equipment. Some of our citizens are outraged that one branch of our Government tells them that subway and el noise are bad for their health and safety, while another branch tells them there are no funds to do anything about the problem. Surely a society that can put men on the moon can protect the hearing and sanity of its transit riders and those who must live alongside its tracks.

It is time for the Congress to signal the green light to our Nation's mass transit systems. The legislation which emerges from this Congress must no longer penalize cities like New York, Chicago, Boston, and Cleveland, to name a few, which have taken their responsibility to provide economical, efficient, and inexpensive mass transit seriously. For over 70 years the cities of this country carried the full burden of providing the transit systems which made the economic, social, political, and cultural life of this country possible. Now, due to the changes in our Nation's economy these older cities look to the Federal Government for a comprehensive program that will allow them to continue to provide first-rate mass transit. Let us work together for that goal.●

## STATEMENT OF CHAIRMAN ULLMAN, COMMITTEE ON WAYS AND MEANS, WITH RESPECT TO THE RULE TO BE REQUESTED ON H.R. 12050, THE "TUITION TAX CREDIT ACT OF 1978"

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Oregon (Mr. ULLMAN) is recognized for 5 minutes.

● Mr. ULLMAN. Mr. Speaker, on April 12, 1978, the Committee on Ways and Means ordered H.R. 12050, the "Tuition Tax Credit Act of 1978," favorably reported to the House. The bill would provide a 25-percent tax credit for tuition paid at a college or post-secondary vocational school, with a maximum credit of $100 for 1978; $150 for 1979; and $250 for 1980.

I take this occasion to advise my Democratic colleagues as to the nature of the rule that I will request for consideration of H.R. 12050 on the floor of the House. The Committee on Ways and Means specifically instructed me to request the Committee on Rules to grant a modified closed rule for consideration of H.R. 12050 which would provide for:

The following three amendments, which would not be subject to amendment, if printed in the CONGRESSIONAL RECORD and if offered on the floor:

First. An amendment by Mr. Vanik to include elementary and secondary schools;

Second. An amendment to increase the credit from 25 percent to 50 percent of tuition expenses; and

Third. An amendment in the nature of a substitute by Mr. MIKVA providing for the deferral of income taxes for certain tuition expenses, rather than a tuition tax credit;

Committee amendments which would not be subject to amendment;

Pro forma amendments for the purpose of debate only;

Two hours of general debate, to be equally divided;

Waiving all necessary points of order; and

One motion to recommit with or without instructions.

The committee intends to officially report the bill and file its report on Monday, April 17, 1978. It is our intention to request a hearing before the Committee on Rules as expeditiously as possible.●

## "HANDS OFF"

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. HALL) is recognized for 5 minutes.

● Mr. HALL. Mr. Speaker, the chairman of the House Committee on Veterans' Affairs RAY ROBERTS of Texas, has taken a strong lead in the battle to prevent cutbacks in Veterans' Administration medical programs. Newspapers and magazines all over the Nation have published his warnings that the entire VA system is in danger.

Mr. ROBERTS is well-known to all of us as a fiscal conservative. We know he looks carefully at every Federal spending bill. But concerning the administration's fiscal year 1979 VA budget, Mr. ROBERTS asks, "Why is it always veterans who are asked to sacrifice when they start tightening the screws?"

Mr. Speaker, I do not think it is overstating the case to say that we are witnessing an uprising by America's veterans. We are in the middle of it. We need seek no further for its reasons than an interesting article by Chairman ROBERTS which appeared in the March issue of the Veterans of Foreign Wars national magazine. It is titled "Hands Off" and I recommend that Members

study it to discover why the volume of their mail from veterans is increasing and why so much of it is acrimonious:

HANDS OFF

(By Representative RAY ROBERTS)

If the welfare aristocracy establishes control of veterans' programs, veterans will gradually be lumped in with welfare recipients. VA hospitals, pensions and education programs will be opened to the needy.

You have heard these warnings before. The V.F.W. sounded the alert several years ago when an attempt was made to close some VA hospitals. Outstanding V.F.W. Commanders-in-Chief had the vision to foresee where the trends at that time were leading.

They said veterans' sacrifices and special service to their country had set them apart, that being merely poor should not serve as a qualification for right and entitlements granted to veterans.

This is a war without a final victory. A new generation of welfare aristocrats has decided to test the will of veterans, their organizations and friends in Congress.

Welfare aristocrats exercise great power in the government, yet they have no head or no membership list or by-laws, but they know each other on sight. Their public statements are nearly identical. They may be of either political party, from any region, of any race or religion.

Understandably, the VA medical program tempts them most. At a fraction of the cost per bed charged by private hospitals, VA's 172 hospitals provide health care second to none. VA researchers lead the world's scientific community in developing new methods of medical treatment. The VA has responded to the medical needs of the aging by constructing comfortable and humane nursing homes that are a model for the world. VA outpatient clinics are staffed and organized to assure effective treatment with a minimum of disruption to the veteran's life.

One can readily understand why such a system would stand as a constant affront to the welfare aristocrats who created the Medicare monstrosity, with its vast overpayments to physicians, payments to ineligible recipients and fraud at all levels. The scandal is so enormous that its dimensions can be only estimated.

The current campaign to control the VA system began with a recommendation by the National Academy of Sciences (NAS) that it be dismembered and merged with private and community hospitals. Ironically, this report was paid for by the VA.

The Committee which I chair had listened to testimony from the V.F.W. and other organizations requesting more and better staffing for VA hospitals. The VA said its medical facilities were adequately staffed. Because of these conflicting views, we decided an evaluation should be made by a qualified outside group. We authorized the VA to contract for a study. After being awarded the contract, NAS seized the opportunity to attack the VA system.

The Chairman of the Medical Facilities Subcommittee, Rep. David Satterfield III (Va.), has rejected the study in its entirety and asked for an audit to determine whether some of the $6 million the VA paid for it might be recovered by the government. Rep. Satterfield also dug out the relationship between NAS and the Department of Health, Education and Welfare.

"We learned that the staff director of the NAS study was a former employee of HEW," he said. "We also learned that an employee of NAS drafted guidelines for health systems agencies that were later proposed by the Secretary of HEW. The interrelationship of HEW with NAS raises in my mind serious questions about the objectivity of any position taken on health care matters by NAS and that part of the private medical care sector it represents."

We are dealing with a subtle force that appears in unexpected areas. The man President Jimmy Carter appointed Chairman of the Civil Service Commission, Alan K. Campbell, has recommended curtailing veterans' preference in federal employment. We have also learned that Campbell's staff is considering recommendations to reduce the retirement benefits of veterans who are federal employees by the amount they receive in compensation or pension payments.

If any VA program is immune from attack by welfare aristocrats, it should be GI education. Its success is well documented and widely acknowledged. But Rep. Olin E. (Tiger) Teague says the first shot already has been fired in a campaign to discredit this commendable VA effort. Rep. Teague believes attacks on GI education originate with representatives of institutions of higher learning who want veterans' tuition paid to them directly rather than to the veteran. Like the VA medical system, this cleanly administered program also stands as a silent rebuke to those who have made an incredible jumble of federal aid to higher education. Billions of dollars in federal funds are disbursed each year without rhyme or reason. HEW's scandalous student loan program has become the subject of newspaper exposes. There is no real federal policy or central coordination to guide aid to education.

To their everlasting shame, those who covet veterans' programs have gone so far as to attack Rep. Teague and ridicule his war record. Imagine directing diatribes against a seriously disabled combat veteran, the most decorated man in Congress and Chairman of the House Veterans' Affairs Committee when most of these VA programs were formulated and funded.

If you choose not to fight for these programs, you may find that VA hospitals along with your other rights and entitlements are not there when you need them. Here is how you can protect veterans' programs. Know your Congressman and continue writing letters to the Congressman who represents you in Washington. Posts and their auxiliaries should formulate goals and objectives, then write out their ideas in easy-to-understand language. Those letters are read and heeded in Washington. Participate at the Post level in discussions on the points I have raised here. This month your Department officers are meeting in Washington to present the V.F.W.'s legislative program to the Congress. Make sure they know how you feel. Make your voices heard.

You may be thankful that you have leaders equal to this new challenge in Dr. John Wasylik, Eric Sandstrom and Howard Vander Clute. Your organization also has knowledgeable, expert staffs in the Kansas City National Headquarters and in your Washington Office. Julian Dickenson and Cooper Holt have earned the respect of Congress. I recommend that you follow their advice and answer their call with strength and enthusiasm.

What is required in these times is a mighty voice from the towns, cities and states across this nation that will warn the grasping welfare aristocrats away from veterans' programs and medical facilities. The message is simple: "Hands Off."●

## "FIREMAN OF THE YEAR" AWARDS GIVEN TO THREE CALIFORNIA FIREMEN

(Mr. BADHAM asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BADHAM. Mr. Speaker, it is my pleasure once again to invite the attention of my colleagues to the outstanding and dedicated services given by three firemen to three cities in the 40th Congressional District of California.

The men will be honored April 20, 1978, by the Newport Harbor, Costa Mesa Board of Realtors at the annual "Fireman of the Year" awards ceremony for their activities during the past year in the cities of Newport Beach, Irvine, and Costa Mesa.

Chosen for their distinguished service to the public are Jerry Strom of the Newport Beach Fire Department, Jerry Schorr of the Orange County Fire Protection Agency serving the city of Irvine, and Bob McClelland of the Costa Mesa Fire Department.

It is an honor for me to inform my fellow Members of the activities of these three outstanding citizens, who have demonstrated their interests in the public welfare for years by their selfless efforts above and beyond the call of their normal fire-fighting and public safety responsibilities.

Capt. Jerry Strom, who has been a member of the Newport Beach Fire Department for more than 13 years, has been a fire science instructor, Red Cross first aid instructor, and has spent many hours in fire department-related projects both on and off duty. He was fire company officer of the year in 1975 in Newport Beach and, in 1976, was given the outstanding service award by the Vocational Industrial Clubs of America.

Gerald Schorr, a fire apparatus engineer in Irvine, has been instrumental in promoting fire prevention in the city of Irvine, spending 2 years as chairman of the Irvine area program and serving as a member of the Orange County Fire Prevention Committee as well as chairman of the countywide poster committee.

In 1977 he arranged a program for engine companies to visit schools during Fire Prevention Week with 4,300 students either viewing demonstrations, visiting fire stations, or receiving class talks by firemen. Additionally, a booth at the Irvine Harvest Festival provided contacts with 2,000 residents.

Bob McClelland, a battalion chief in the Costa Mesa Fire Department, was chairman of the City Employees United Way Campaign for 1977, registration chairman for Costa Mesa's Junior All American Football Team, an assistant coach for both football and baseball teams.

He helped develop Costa Mesa's paramedic program, helped develop Orange Coast College's curriculum on emergency medical technician training, was on the regional paramedic advisory committee, and has taken an active role in other paramedic training programs.

It is with great pride that I point out to my colleagues in this honorable body the fine work which has been accomplished by Jerry Strom, Gerald Schorr, and Bob McClelland. I am proud to know that there are such men willing to give of their time above and beyond the call of duty for the benefit of the citizens of their communities.●

## SMALL BUSINESS ROLE IN THE AMERICAN ECONOMY TODAY

(Mr. BADHAM asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

● Mr. BADHAM. Mr. Speaker, it is time, I think, to say something for the small businessmen of the United States.

Small businesses and the people who operate them, have a most important role in the American economy today and I need not remind my colleagues that it has been the private operator, the individual entrepreneur and the family business which set the pattern for the greatness of this country and, indeed, continues to show the way for all the world to see.

In our great free enterprise system, which has been under a steadily increasing level of attack by certain institutions and Government itself, the incentive, manifested in the American dream still lives on.

For in no other area of our Nation are the small businessman, private ownership, and self-employment such vivid examples and symbols of freedom, freedom for a small businessman or woman to sink or swim without fear of recrimination from any source whatever.

That is what the small businessman cherishes and that is what makes him fight even though he might be forced to acknowledge that his own flame of hope has died. Yet Americans by the millions are willing to accept the risks that go with owning and operating their own businesses. This can be seen every day in every community across the land.

Lest my distinguished colleagues in this body conclude that I am being overly effusive on behalf of the small businessman, let me recite some important factors which, taken as a whole, show the strength and vitality of small businesses and what they have done and are doing for the Nation.

By Small Business Administration definition, 96 percent of all businesses in the United States are small and the other 4 percent started small. More than half of the Nation's labor force is employed by small business and small business, directly or indirectly, provide livelihood for 100 million Americans. In this country, 80 percent of all business employs less than 10 people, yet small business accounts for 43 per cent of the gross national product and 48 per cent of the gross business product.

So it is easy to see that small busiesses are the backbone of the entire business world, because not only do they perform a vital role in our Nation's economy, a great percentage of small businesses grow up to become the successful big businesses of tomorrow. We, in government, must remember this as we mold the laws of the land.

Mindful of the important role played by small business in this country I would like to set forth a specific example for my colleagues so that we all can understand better the basic strength of the Nation's economic system.

In the city of Irvine, Calif., in the 40th Congressional District, which I have the good fortune to represent, there is an enterprising manufacturer of complex, printed circuit boards used in high reliability electronic systems which has been named the outstanding small business subcontractor for California, Nevada, Arizona, and Hawaii.

The company, Cirtel Inc., was one of the 40 small business subcontractors nominated for the award from the four-State region and by winning the award, Cirtel becomes one of the 10 outstanding small business subcontractors in the United States, and will be eligible for the top award in the country.

Cirtel's award was based on the company's outstanding record of maintaining delivery schedules, its ability to grasp and work out extremely complex technical problems and its continual growth and outstanding management since the company was started in 1972 by an engineer, a chemist, and a certified public accountant.

From the first days of the company in crowded quarters, the business has grown to occupy 30,000 square feet of space and from the original three on the payroll, now 85 gain their employment from the company.

I would like to take this occasion to rise to salute Cirtel Inc., the firm's president, M. W. Busby, and the other 84 employees and their families for their dedication in making the company successful during this short history of their firm and wish them luck in the future as they receive the award from the Small Business Administration.●

---

## FIRST NATIONAL ALL UNIONS' CONFERENCE TO SHORTEN THE WORK WEEK, APRIL 11, 1978

(Mr. CONYERS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CONYERS. Mr. Speaker, on Tuesday, April 11, I had the privilege of participating in the First National All Unions' Conference To Shorten the Work Week, which took place at the Hyatt-Regency Hotel in Dearborn, Mich. The conference was called to launch a national campaign to enact a 35-hour work week as a principal means to reduce substantially the amount of unemployment in this country. On March 22, I introduced the Fair Labor Standards Amendments of 1978 (H.R. 11784) which provides for a gradual reduction in the standard work week to 37½ hours within 2 years of enactment and 35 hours after 4 years. This bill, in addition, raises the statutory premium for work in excess of 40 hours from time-and-a-half to double time and abolishes compulsory overtime.

The Shorter Work Week Conference was a tremendous success and generated more enthusiasm than I have seen in many years. More than 700 labor leaders representing 800,000 workers from across the Nation attended. Twenty-five international unions were represented, and over 100 union locals from 20 States. Doug Fraser, president of the United Auto Workers, spoke, as did Albert J. Fitzgerald, president of the United Electrical, Radio and Machine Workers. Frank Runnels, president of Cadillac Local 22, and one of the principal organizers of the conference, delivered the keynote. The conference could not have taken place without the superb organizational work and tremendous dedication of labor leaders from around the country, especially the efforts of the All Unions' Committee To Shorten the Work Week—Frank Runnels; Charles Barton; Alice Coleman; Frank Rosen; Russell Woodrick; William Andrews; and also, Fred Gaboury of the National Coordinating Committee for Trade Union Action and Democracy, who did great work in coordinating arrangements of the conference.

If this superb organizational work and enthusiasm continues, I predict that in the not-too-distant future, Congress will enact a shorter work-week bill.

Forty years have passed since the Fair Labor Standards Act, which established the 40-hour week. The reduction in the work week during that period accounted for substantial gains in employment. There is strong reason to believe today that a similar reduction in the workweek, coupled with stronger disincentives to employers to use overtime as a substitute for hiring new workers, would generate substantial new employment.

The legislation I have introduced addresses two trends that have contributed to the continuing high levels of unemployment in the private sector. The first is the considerable erosion of production employment during the postwar period, largely due to technologically induced gains in productivity. It is estimated, for example, that 13.6 million production workers today are creating 225 percent more than 13.3 million workers had produced in 1955. In the period from 1947 to 1977, an increase of 249 percent in factory production was accompanied by only a 27-percent increase in the total number of wage and salaried workers in industry, and a mere 9-percent increase in the number of production workers. During the last recession, in the period from June 1974 economists estimate that productivity employment declined by approximately 585,000 workers. United Auto Workers economists estimate that productivity gains in the auto industry in the future will displace auto workers at an even faster rate.

The second trend involves the tendency of private industry, especially during economic slowdowns and the first stages of recovery, to increase overtime hours among their existing workforce rather than hire new workers. In May 1977, 27.4 percent of all full-time wage and salary workers (18.2 million) were employed in excess of 40 hours, and over 11 percent of the full-time workforce received premium pay. A major reason for this is that nonwage benefits to workers have increased in relation to the cost

of the overtime pay requirements and, as a result, the existing overtime rate that was intended to encourage new hiring has not proved effectual.

The inadequacy of existing overtime provisions has led the Department of Labor to reexamine the probable effect of raising the premium rate of pay on creating new employment. In the study entitled, "The Employment Impact of Overtime Provisions of the FLSA," dated December 14, 1977, the authors concluded that—

Both our theoretical and statistical work confirm the hypothesis that an increase in the overtime premium would cause a reduction in average annual overtime hours.

Their date indicates that an increase in the premium rate to doubletime would cause employment to increase between 2 and 4 percent, or by 320,000 to 640,000 workers, depending on whether industry added to the workforce, substituted capital for labor, or reduced their workforce.

There is much evidence of a growing preference among the public for increased leisure time. Prof. Sar Levitan of George Washington University, a leading authority on manpower issues, recently stated that changes in the labor force, particularly the growing number of women, growth in the number of multiple paycheck families, coupled with the decline in family size, among other factors, have combined to strengthen preferences for a shorter workweek. His studies indicate that productivity gains permit a greater sharing of the dividends among a greater number of workers, both in the form of income as well as leisure.

The provisions of my fair labor standards amendments are the following:

Raises the statutory premium for work in excess of 40 hours from time-and-a-half to double the regular hourly rate;

Requires employers to obtain the consent of employees for overtime hours;

Reduces by stages the standard workweek from 40 to 37½ hours after 2 years of enactment and to 35 hours after 4 years;

Keeps in force for their duration existing collective bargaining agreements and provides for adjustments in income standards through the collective bargaining process; and

Empowers the Secretary of Labor to waive overtime consent provisions in cases of demonstrable economic emergency.

About 12 years ago Leonard Woodcock and the UAW raised before Congress the issue of the ineffectiveness of existing overtime provisions in the Fair Labor Standards Act. There has been no critical work on this problem since then. This is one labor standards area that needs renewed attention.

The bill I have introduced goes beyond the overtime problem. It calls for a reduction in the standard workweek to 35 hours. On the average, in 1977, more than 18 million employees worked in excess of 40 hours; 3.5 million worked 60 hours or more. Another 6 million worked between 49 to 59 hours. There is a basic question of justice and equity involved in this situation. When millions are unemployed and have been over a long period, is it fair for millions of others to work 60 hours. No one wishes to curb an individual's choice of how much and for whom he or she works. But we can, at least, raise employers' incentives to hire new workers.

There is, of course, no single solution to the unemployment crisis. It will require solutions on many fronts. The bill I introduced deals with the responsibilities of the private sector to generate more jobs and the responsibility of all of us to share work with others less fortunate, whenever possible.

I regard shorter workweek legislation as one important implementing bill within the context of the Humphrey-Hawkins Full Employment and Balanced Growth Act. But this bill deals only with cyclical unemployment, the layoffs of workers as a result of business cycles, the perennial ups and downs of our economy. Of equal importance is another type of substantive employment bill that addresses the critical issue of structural unemployment—the lack of adequate job training for youth and others; the lack of relevant job skills particularly among minority workers; the lack of jobs in central cities.

At a minimum, this legislation and the great organizing work of the All Unions' Committee for the Shorter Work Week will help generate much-needed debate on how to solve the No. 1 problem of unemployment.

Mr. Speaker, I include in these remarks newsstories on the All Unions' Shorter Work Week Conference, and the text of the keynote address by Frank Runnels, president of the All Unions' Committee for the Shorter Work Week:

KEYNOTE SPEECH OF FRANK RUNNELS

Brother Andrews; Congressman Conyers; UAW International President Fraser; Michigan State AFL–CIO President Marshall; U. E. General President Fitzgerald; Wayne County AFL-CIO President Turner, Distinguished Guests, Brothers and Sisters: It gives me great pleasure to welcome you to this, the first national all unions conference to shorten the work week.

This is indeed an historic occasion. Not in my life time has there been so many union leaders from such a cross section of the unions in this country come together under one banner to hammer out a program to do something about the horrifying unemployment rate. This meeting today did not just happen. It came about through a lot of hard work by a lot of dedicated people who realize that the torch has been passed to us and the responsibility for creating jobs for the unemployed in this country falls squarely on our shoulders.

The list of those who have helped to make this conference the success that it is, is too long to give the proper credits to the individuals who deserve it. But I want to thank the officers, the steering committee, and the staff of the all unions committee to shorten the work week for the great job they've done in helping to renew this movement and in setting up this conference.

I call your attention to the banner that quotes Samuel Gompers who said, "as long as we have one person seeking work who cannot find it, the hours of work are too long." It has been ninety-one years since Samuel Gompers made that statement. But those words are just as true today as they were when they were spoken.

As we meet here today. There are almost ten million people in this country who are underemployed or unemployed. Can anyone deny that the hours of labor are too long?

The drive for shorter hours has lain dormant since the Fair Labor Standards Act was enacted in 1938, creating the forty hour week.

Yes, there has been precious little shorter hours fruits in these last forty years, and statistics on every point show what a mistake it has been to neglect this most important issue.

Anyone who doubts this, only has to look at the long lines in front of the unemployment offices. Those lines didn't just happen. They are not there because people don't want to work. They are there because there are no jobs . . . they are there because new technology and slow economic growth have combined to deny decent jobs to ten million workers in our country.

Look around, not a single industry has escaped the onslaught. No union . . . not even the largest and best established . . . has been able to fully protect their members from the massive slaughter of jobs.

Let us take the transportation equipment industry; such as the automobile, aircraft, railroad equipment and ship building . . . between 1953 and 1977 . . . production in these industries increased by ninety three percent, while the number of production workers declined by sixteen percent.

That means in June of 1977, there were two hundred forty four thousand fewer employees building transportation equipment than there were in 1953.

The story goes on in every industry. The electrical equipment manufacturing industry: Between 1969 and 1977, production increased by twenty seven percent, and production employees declined by four percent.

There is the primary metals industry which includes the production of iron and steel: Between 1953 and 1977, production increased by fifty eight percent and the number of production workers declined by two hundred eighteen thousand; that's nineteen percent of the workforce.

Yes, the story is the same sad story in industry after industry . . .

One hundred thousand jobs lost at American Telephone and Telegraph since 1974.

The longshore workforce, in the port of New York, dropping from forty thousand to less than twelve thousand between the mid-fifty's and 1977.

Coal production up seven percent while two hundred twenty seven thousand coal miners . . . some fifty five percent of the workforce . . . lost their jobs.

Oh yes, we can go on:

A drop of twenty five percent in the number of production workers employed in the meatpacking industry between 1948 and 1976.

Eight hundred thousand jobs eliminated on the railroads since the end of World War II.

An over the road truck that hauls twice as much in half the time required thirty years ago.

Nor have the trades and crafts escaped. This is shown by the record unemployment of the members of the building and construction trades unions.

Let's not forget our brothers and sisters who are involved in the manufacturing of the very clothes we wear on our backs . . . and those from the retail clerks who sell them.

Nor can we close our eyes to the massive cutbacks of public employees' jobs. There jobs too have been slaughtered.

As we said before, no industry has escaped.

Over the span of a generation, the cumulative effect of job losses because of new technological changes, has been incredible and devastating.

Look at the statistics:

According to government figures, in the period from . . . 1955–1976 . . . productivity increases made it possible for a workforce

that grew by less than three percent to more than double production.

In other words, in 1955, we had a workforce of thirteen million two hundred eighty eight thousand factory production workers. . . . In 1976 that workforce produced one hundred percent more. . . . that's a twenty-one year period mind you . . . and the workforce had only grown by three hundred and thirty seven thousand.

It doesn't take a mathematician to see that with this type of job erosion, our economy cannot sustain a forty hour work week.

We must remember that every system on earth should benefit mankind.

When those systems become obsolete and no longer benefit us, we must cast them aside.

Just as sure as you and I are here today, the forty hour system has built a wall around our jobs . . . that wall has locked out ten million people . . . it is time to tear that old wall down!

I am not saying that the labor movement has not made an attempt to protect jobs . . . we have. We have negotiated all types of programs. But those programs have not effectively reduced the unemployment rate in this country.

The forty hour wall still stands; and there is no way that we are ever going to create the jobs that we must have, until stop pussyfooting around and reduce the hours of labor.

There are no short cuts . . . there are no cheap gimmicks . . . there are no substitutes. . . . The entire labor movement must renew the battle for shorter hours and we must begin now.

We must find ways to transform the demand and desire for shorter hours into campaigns of education . . . legislation . . . and collective bargaining, with enough muscle to win the battle.

We must renew the movement that has lain dormant for forty years; and some organization must take the lead in building that movement because there can be no end until there has been a beginning. . . . and today marks that beginning!

The First National All Unions Conference to shorten the work week marks a renewal . . . marks a rebirth . . . of a national movement to reduce the hours of labor in order that we may provide a decent job at union wages and conditions for all who need and want them. . . . the movement is born again!

To accept the challenge of building a new movement requires a sober look at the paths we must follow . . . at the mountains we must climb . . . and at the difficulties we will encounter.

Make no mistake about it . . . it is not going to be an easy task. The companies are not going to just give us a shorter work week. . . They are going to fight! . . . They are the richest, the best organized . . . And the most powerful force in this country . . . With the exception of an informed, aroused and concerned people

Yes, we must arouse our people, and we can only do this by meeting the corporations face to face . . . debating them point by point.

We must focus the attention of this Nation on the fact that our present system. . . With almost ten million unemployed . . . Is not free . . . or cheap . . . It's an expensive system.

It costs over eighteen thousand dollars per year in social programs and lost revenue for every unemployed person in this country. That is over one hundred billion dollars per year that our present system is costing.

The corporations have convinced a large number of people that the cost of shorter hours will be too high. The corporations whine that it's too expensive to let their machinery sit idle one hour a day . . . One day a week . . . or whatever.

But let them answer the human question: How expensive is it to let ten million people sit idle every hour of the day. Every day of the week? Let them answer that one.

Just last Friday, the latest unemployment figures were released, and it tells a sad tale. Official unemployment rose to six point two percent. . . . That's nearly six million people . . . not trees . . . not things . . . but living breathing human beings . . . human beings who laugh when they are happy . . . bleed when they are cut . . . feel pangs when they are hungry and like you and I, cry when they are sad.

Those same figures that were released last Friday show black unemployment grew from 11.8 percent to 12.4 percent: that black youth unemployment is thirty nine percent; that black adult women unemployment rose to 11.4 percent and black men's rate of unemployment is 11.2 percent.

A few short years ago, some of our Nation's largest cities, including Detroit, were torn apart by rioting in the streets . . . and by burning and looting. That looms there as a reminder to all of us, of what can happen when a Nation closes its' eyes to the realities of life.

Those same conditions that existed then are becoming even worse today.

We must do more than take note of this fact. We must do more than pay lip service . . . We must create the jobs that are needed to give every person in this country who desires to work a job where they too can draw a paycheck and live in dignity like you and I.

After these jobs are created, we must insure that they are available to all of the people on a fair and affirmative basis.

We must find jobs for those who are presently out of work . . . then we have to find jobs that will provide employment for at least two million young people who enter the workforce every year . . . then we have to provide jobs for some two and a half million workers who are displaced by new machinery and new technology every year.

When it's all added up, we have to provide over one hundred thousand jobs every week for the next four years to even approach full employment.

Those of us who organized the All Unions Committee to shorten the work week are absolutely convinced that the key to creating these jobs is to renew the movement of legislative and collective bargaining struggles. To reduce the hours of labor with no reduction in pay.

Many will ask why doesn't the established labor movement take on this fight? Why do we need a separate organization . . . and how does the All Unions Committee fit into the picture?

I think we can provide very simple and very straight forward answers to these questions.

The people gathered here help make up the labor movement, and it's just as much yours' and my responsibility to pick up this torch as it is anyone elses'.

The very nature of our labor movement makes an independent organization necessary.

No single union can concentrate its' energies exclusively on the issue of shorter hours.

No single union can coordinate the efforts to build a national movement.

No single union can win a reduction in hours for all workers.

No single union can win legislation to extend a reduction in hours to the unorganized workers of the Nation.

All of these problems are multiplied by virtue of the fact that there is no single trade union center in the United States today. Therefore, a new organization is required in order to fire the imagination and unleash the strength of the entire labor movement and to lead the next round in the struggle for shorter hours.

I submit to you that the All Unions Committee to Shorten the Work Week is that organization.

Our purpose, and I quote from our founders' resolution is to "help initiate, develop and coordinate in every local union a national movement to create jobs by reducing the hours of labor through the process of education . . . legislation and collective bargaining."

We elaborated on this in a letter I wrote the leaders of all international unions . . . to the officers of all state AFL–CIO councils and to the leaders of one hundred fifty of the largest AFL–CIO city bodies in this country.

I quote from that letter: "Ours is a program of positive action: but it's not a new program. What is different . . . what is new . . . is that our organization is working to bring together all unions without regard to industry, craft or affiliation.

"We are attempting to do this even though we know that every international union must have the flexibility they need to apply the shorter work week to their own set of circumstances.

"It is not our intention to tell any union how their program should operate . . . nor is it our intention for this movement to become involved in inner-union politics,"

So there is a need for all the unions committee to shorten the work week. Many precedents can be cited where independent labor organizations came into being because of a need.

There was the eight hour league.

There was the CIO (Committee for Industrial Organization), that pooled the resources of several international unions to support and direct campaigns to organize workers in basic industry.

There was the AFL Committee for Unemployment Compensation that led the campaign for unemployment insurance.

There was the black lung association, that initiated campaigns to enact black lung legislation at state and national levels.

Today we have the brown lung association.

We have the coalition of labor union women . . . we have the coalition of black trade unionists.

Since October 25, 1977, there has been the all unions committee to shorten the work week.

All are based in the labor movement . . . all are independent of the formal trade union structure . . . all came into being in response to specific needs . . . all are necessary . . . all contribute to the strength and to the unity of the labor movement.

Although this organization is based at the local union levels, and is led primarily by local union officers, we consider it extremely important that we be able to work with the leaders of international unions and with the leaders of other official labor bodies.

I call upon all unions represented here today . . . yes, on all unions of this country to put aside any differences they may have and walk with us in the spirit of brotherly love and solidarity in the search for decent jobs for everyone.

Yes, the all unions committee is a part of the labor movement, but we will not be . . we will not attempt to become . . . a substitute for any existing labor organization.

Our purpose is to renew the movement for shorter hours.

Our meeting here today is in the best tradition of the labor movement. We can trace our roots, not only to the earliest struggle of the labor movement, but we can trace our roots to the earliest days of the Republic

when in 1791, Philadelphia carpenters struck to reduce the work day to twelve hours.

Yes, ours is a heritage that can trace its' roots to the "factory girls" in the textile industries of New England; the coal fields of Pennsylvania, and to the building trades unions in a dozen cities who fought for a ten hour day in the first fifty years of the 1800's.

Yes, our gathering has its' history rooted in the giant struggles for the eight hour day in the 1884 decision of the Federation of Organized Trades and Labor Unions in the United States and Canada.

Yes, this movement goes back to May 1, 1886 and on through the many years and the many struggles between then and the CIO upsurge that forced enactment of the Fair Labor Standards Act of 1938.

Times may have changed and tactics may have varied, but the objective of the shorter hours movement remained . . . and remains . . . the same; to create jobs . . . to make life better . . . to obtain a greater share of the increased production made possible by new technology.

When the books are written about this movement, historians will take note of the fact that the supporters of shorter hours were often divided among themselves, and they will record that with the founding of the All Unions Committee, this weakness was overcome.

Can anyone disagree with the All Unions Committee when we say, "to be effective, the movement for shorter hours cannot get mired down into what are essentially useless arguments about how many hours should be cut off the work week."

If someone believes it should be thirty hours, and someone else believes it should be thirty-five hours, let's not fight over that . . . let's join together . . . let's raise our voices in unity with one battle cry . . . "Begin now to reduce the hours of work with no loss of pay down to where everyone who desires to work can have a decent job!"

We must renew the movement for shorter hours in this country to fight for and win the best measure of economic security for the employed and unemployed.

When I talk about a shorter hours movement, I am talking about shorter hours with no cut in pay.

I am talking about building a movement on two fronts . . . the collective bargaining front and the legislative-political front.

I am talking about a collective bargaining demand that will create jobs and increase the purchasing power of all people . . . that will make it possible for millions of workers to have jobs that they will not get in any other way.

I am talking about a collective bargaining demand that will provide our youth with the opportunity for the meaningful jobs that they must have if they and our nation are to progress.

I am talking about a movement that will bring back into the economic life of the nation, those millions of black, Latino and women workers who have been hit the hardest by the mass layoffs in the past several years.

I am talking about fighting on the political and legislative front. . . . I am talking about a campaign to win passage of Congressman Conyers' bill, H.R. 11784.

I am talking about a campaign that will take the demand for shorter hours to every candidate running for office.

I am talking about a campaign for shorter hours that will take the principles of H.R. 11784 into every city council, into every State legislature and to every board of county supervisors in this country.

I am talking about a campaign that will win legislation that will bring shorter hours without a cut in pay to millions of public employees and to the others in the workforce that are not members of unions and are thus unable to win this demand through the collective bargaining process.

I am talking about a legislative-political movement that will elect men and women into public office who know the hell of high inflation and the sinking feeling in the pit of the stomach that comes with a layoff slip.

To win the next round in the battle to reduce the work week will require that we raise the concept of trade union unity and labor solidarity to new levels of practice. It demands that we build a movement that reaches into every shop and local union in this country.

I am convinced that together we can do all that must be done, but none of us can do it alone.

I am convinced that we can meet the challenge of creating five million jobs a year.

Of course, it's going to be difficult . . . but because of the victories of those who have gone before us, we are strong and are equal to the challenge.

Consider what we have going for us.

The Fair Labor Standards Act of 1938, which was won by the movement for the eight hour day, firmly establishes the authority of government to set limits on the hours of labor.

In 1869 President Grant, by executive order, established the principle that income standards should not be cut as the hours of labor are reduced.

We don't have a President today that is willing to take the bold step that President Grant took in 1869, but presidential orders are not as critical today, as they were in 1869. Because we have built a strong labor movement in the basic industries of this country . . . and we do not have to solely depend on the goodwill of politicians.

We do not stand alone in the struggle against unemployment. Just last week there were strikes and demonstrations by twenty-five million of our brothers and sisters in every country of western Europe.

So the fight for shorter hours has become a world-wide campaign. Many times we have read in the history of the labor movement and in the history of our country, where people gathered together to organize movements. And then some years later, it was recognized that, that seemingly insignificant meeting was not insignificant at all; but it was a momentus occasion that in many instances completely changed the country and yes even the world.

I point this out so that we might all realize that we here today, do have the power to help tear down that old forty hour wall that has kept so many of our people in poverty.

Yes, we have the power to destroy that awful monster . . . unemployment. That power is the same power that our forefathers possessed when they organized the labor movement.

That power is persuasive power. . . .

We have the power to speak out . . . the power to organize.

The power to persuade our members . . . management . . . the community leaders and the leaders of our country.

Yes we have the power to persuade this great nation that we must reduce the work week . . . so that every person desiring a job will have an opportunity to work so that they and their families may live in dignity.

Thank you.

---

LABOR URGES CUT IN 40-HOUR WEEK TO CREATE JOBS

(By Bob Calverley)

More than 700 labor leaders representing 800,000 workers from across the country met Tuesday formally to begin a fight to reduce the 40-hour workweek.

The meeting in the plush Hyatt Regency in Dearborn was characterized by table-thumping rhetoric and an enthusiastic audience that frequently interrupted speakers with standing ovations. Speakers said that reducing work hours is the only way to cut unemployment.

"Just as sure as you and I are here today, the 40-hour system has built a wall around our jobs," said Frank Runnels, president of the All Unions Committee to Shorten the Work Week and also president of Cadillac Local 22 of the UAW. "That wall has locked out 10 million people. It is time to tear that old wall down."

UAW President Douglas Fraser gave the new struggle his blessing and said it would be "won on the picket lines and the bargaining tables and not in the halls of Congress." But he tempered his endorsement by noting that the labor movement had other battles to fight as well.

"We can't do it (reduce work hours) to the exclusion of all other problems," he said, "We only go to the table every three years."

In a press conference immediately after his speech, Fraser said that reducing work hours and increasing "pensions ravaged and eroded by inflation" would probably be the two main goals of UAW bargainers in 1978.

"As sure as I stand here the American worker is going to have a four-day week," said Frazer. "It won't happen uniformly in every industry at once."

Rep. John Conyers of Detroit, who introduced legislation recently that would require employers to shorten the work week from 40 hours to 37½ hours in the next two years and to 35 hours in four years, gave what was perhaps the most colorful and well-received speech.

"I will work until hell freezes over to pass this bill," he said. "And I'll fight on the ice afterwards if necessary." Citing unemployment figures which show that blacks, especially young men, are more likely to be out of work, Conyers said reducing unemployment through short work hours was part of the civil rights struggle begun by the Rev. Martin Luther King.

"Black people had full employment up until the Emancipation Proclamation and during World War II everyone worked," he said. "How do you give everyone a job without going back to a slave economy or having another world war?"

Reducing work hours is an old cause for organized labor, as a quotation by Samuel Gompers of the American Federation of Labor, which was posted on the wall, illustrated:

"As long as we have one person seeking work who cannot find it, the hours of work are too long," Gompers said in 1887.

Labor leaders are not aiming for a specific goal, such as a four-day week, on a rigid deadline. Rather they want to shorten gradually the hours workers put in.

When asked by reporters if the four-day week could be achieved at the UAW's next bargaining session in 1979 Fraser said he thought that was too early. But he pointed to the 1976 agreement which gave workers additional paid days off as a model for other labor organizations to follow.

"Thousands and thousands of jobs were created," he said about the plan. "And thousands more could be created if we get control of the overtime."

Fraser said it was important to reduce hours in a manner that would not shut plants down.

"Everybody will work four days, but factories will work six days," he said.

---

[From the Detroit News, Apr. 12, 1978]

DO NOT COUNT ON CONGRESS FOR SHORTER WEEK, LABOR TOLD

(By Mark Lett)

Organized labor's renewed drive for a shorter work week will be easier to achieve at the bargaining table than on Capitol Hill,

according to UAW President Douglas A. Fraser.

"Don't put all your shorter work-week eggs in the legislative basket," Fraser advised about 600 delegates yesterday at the first All-Unions National Conference to Shorten the Work Week.

"The fight is going to be won on the picket lines, and not in the halls of Congress. This is the story of the American labor movement."

The one-day conference at Dearborn's Hyatt Regency Hotel was attended by leaders of local unions from 25 states and at least a dozen unions.

While he favors amendments to the Fair Labor Standards Act, which would reduce the basic 40-hour work week, Fraser said he has little confidence that Congress will support the issue.

As evidence, Fraser pointed to the stiff resistance organized labor has faced over two cherished measures—the labor law reform package and the so-called Humphrey-Hawkins full employment bill.

The Humphrey-Hawkins measure, which would commit Congress to a broad program for reducing unemployment, has been passed by the House and is likely to gain Senate approval. The labor law revisions, which would improve unions' chances in organizing drives, also has House approval, but is given only a slight edge of clearing the Senate when it is voted on later this year.

Because legislation to trim the basic 40-hour work week would have an even more sweeping effect than those two measures, Fraser said it is unrealistic to think lawmakers will endorse the concept.

Giving the idea a legislative push, however, is Rep. John Conyers Jr., a Detroit Democrat. Conyers yesterday told union delegates that he has introduced measures which would amend the 40-year-old Fair Labor Standards Act to cut the standard work week to 37½ hours within two years of passage, and to 35 hours after four years.

The amendments also would require employers to obtain worker approval before assigning overtime and to pay double-time for all hours worked in excess of 40.

Conyers' announcement was met with cheers from the delegates, who soon will begin a petition drive to collect 250,000 signatures in support of the measure. Capitol Hill observers, however, said the bill most likely will receive scant attention by lawmakers this year.

Despite the obstacles, Fraser told delegates that "as sure as I'm standing here, the American worker is going to have a four-day week."

For the auto workers—who make up about half of his 1.4-million-member union—Fraser indicated the four-day week is likely to come during the 1980's. (Other members make farm equipment and other machinery.)

The UAW took a "giant step" toward the four-day week, Fraser said, when it negotiated a plan for personal holidays during auto industry contract talks in 1976.

Improvements to that plan—which gives workers 12 more days off over two years, in addition to holidays and vacations—will be a high-priority issue when the union returns to the Big Three bargaining tables next year, Fraser said.

While the personal-holiday system provides more leisure time for workers, Fraser said it also has boosted employment in the auto industry. "There's no question that as a consequence of the 1976 negotiations, thousands and thousands of jobs were created," Fraser said.

Fraser quickly added, however, that the union will not negotiate for additional worktime reductions to the exclusion of other contract issues. For example, he said union negotiators also will seek pension improvements.

"When we leave that bargaining table, we have to be able to say to our members and retirees that their pensions will be protected from the ravages of inflation," Fraser said.

Frank Runnels, president of UAW Local 22 in Detroit and president of the All-Unions Committee, called yesterday's meeting "historic."

"Never in my lifetime has such a cross-section of union leaders come together under one banner to hammer out a program to do something about the horrifying unemployment rate (6.2 percent nationwide)," Runnels said.

Runnels said the session "marks a rebirth of a national movement to reduce the hours of labor in order that we may provide a decent job at union wages and conditions for all who need and want them.

"The movement is born again," he enthused.

Delegates attended afternoon workshops, which offered union leaders "game plans" on how to push for shorter work time through bargaining and legislation.

## LEAVE OF ABSENCE

By unanimous consent leave of absence was granted to:

Mr. JONES of North Carolina (at the request of Mr. WRIGHT), for today, on account of official business.

Mr. RODINO (at the request of Mr. WRIGHT), for today, on account of illness in the family.

## SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. LIVINGSTON) to revise and extend their remarks and include extraneous material:)

Mr. WHALEN, for 10 minutes, today.
Mr. KEMP, for 10 minutes, today.
Mr. ASHBROOK, for 15 minutes, today.
Mr. CONTE, for 5 minutes, today.

(The following Members (at the request of Mr. YOUNG of Missouri) to revise and extend their remarks and include extraneous material:)

Mr. FLOOD, for 5 minutes, today.
Mr. ANNUNZIO, for 5 minutes, today.
Mr. GONZALEZ, for 5 minutes, today.
Ms. HOLTZMAN, for 5 minutes, today.
Mr. DRINAN, for 5 minutes, today.
Mr. SOLARZ, for 5 minutes, today.
Mr. ULLMAN, for 5 minutes, today.
Mr. HALL, for 5 minutes, today.

## EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. CONYERS, and to include extraneous matter notwithstanding the fact that it exceeds two pages of the RECORD and is estimated by the Public Printer to cost $1,231.88.

(The following Members (at the request of Mr. LIVINGSTON), and to include extraneous matter:)

Mr. JEFFORDS in two instances.
Mr. FINDLEY.
Mr. COLLINS of Texas in two instances.
Mr. ANDERSON of Illinois in two instances.
Mr. DERWINSKI in two instances.
Mr. ARCHER.
Mr. RHODES.
Mr. DON H. CLAUSEN in two instances.
Mr. SARASIN.
Mr. ROUSSELOT in two instances.
Mr. LAGOMARSINO.
Mr. KINDNESS.
Mrs. HECKLER.
Mr. ASHBROOK in two instances.
Mr. SYMMS in two instances.
Mr. DORNAN.
Mr. LIVINGSTON.
Mr. CONABLE.
Mr. HOLLENBECK.
Mr. TREEN.
Mr. BROYHILL.

(The following Members (at the request of Mr. YOUNG of Missouri) and to include extraneous matter:)

Mr. BOLAND.
Mr. EDWARDS of California.
Ms. MIKULSKI.
Mr. IRELAND.
Mr. MINETA.
Mr. KILDEE.
Mr. GONZALEZ in three instances.
Mr. ANDERSON of California in three instances.
Mr. HAMILTON.
Mr. FOLEY.
Mr. HAWKINS in two instances.
Mr. VENTO.
Mr. CARNEY.
Mr. ULLMAN.
Mr. GAYDOS.
Mr. MILFORD in two instances.
Mr. CONYERS in two instances.
Mr. JACOBS.
Mr. CHARLES H. WILSON of California in two instances.
Mr. OBERSTAR.
Mr. TEAGUE.
Mr. WEISS in two instances.
Mr. EILBERG.
Mr. DRINAN.
Mr. WAXMAN.
Mr. FRASER.
Mr. WRIGHT.
Mr. BYRON.

## SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 2597. An act to amend title 28, United States Code, to move the place for holding court for the district court of the Eastern District of New York to Brooklyn and Hempstead, and for other purposes; to the Committee of the Judiciary.

## ENROLLED BILLS SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 4979. An act to direct the Secretary of the Interior to convey certain public and acquired lands in the State of Nevada to the county of Mineral, Nev.; and

H.R. 6693. An act to promote the healthy development of children who would benefit from adoption by facilitating their placement in adoptive homes, to extend and improve the provisions of the Child Abuse Prevention and Treatment Act, and for other purposes.

## ADJOURNMENT

Mr. DOWNEY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 42 minutes p.m.), under its previous order, the House adjourned until Monday, April 17, 1978, at 12 o'clock noon.

## EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

3853. A letter from the Acting Director, Defense Security Assistance Agency, transmitting a report on the impact on U.S. readiness of the Navy's proposed sale of certain defense services to Iran (Transmittal No. 78–30), pursuant to section 813 of Public Law 94–106; to the Committee on Armed Services.

3854. A letter from the Deputy Under Secretary of State for Management, transmitting notice of two proposed new records systems, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Operations.

3855. A letter from he Deputy Assistant Secretary of Defense (Administration), transmitting notice of a proposed new records system, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Operations.

3856. A letter from the Acting Director, Defense Security Assistance Agency, transmitting notice of the Navy's intention to offer to sell certain defense services to Iran (Transmitting No. 78–30), pursuant to section 36(b) of the Arms Export Control Act; to the Committee on International Relations.

3857. A letter from the Assistant Administrator, Office of Planning and Management, Law Enforcement Assistance Administration, Department of Justice, transmitting an advance copy of the ninth annual report of the Law Enforcement Assistance Administration, pursuant to section 519 of the Omnibus Crime Control and Safe Streets Act of 1968, as amended (87 Stat. 214); to the Committee on the Judiciary.

3858. A letter from the Secretary of Commerce, transmitting the annual report for calendar year 1977 on the Central, Western, and South Pacific Fisheries program, pursuant to section 4 of Public Law 92–444, as amended (90 Stat. 809); to the Committee on Merchant Marine and Fisheries.

3859. A letter from the Secretary of the Army, transmitting a Corps of Engineers report on metropolitan Omaha, Neb.-Council Bluffs, Iowa, in response to resolutions of the Senate and House Committees on Public Works adopted May 6, 1971, and July 29, 1971, respectively; to the Committee on Public Works and Transportation.

## PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of California (for himself and Mr. SNYDER):

H.R. 12106. A bill to amend the Independent Safety Board Act of 1974 to authorize additional appropriations; jointly, to the Committees on Interstate and Foreign Commerce, and Public Works and Transportation.

By Mr. ANDERSON of California (for himself, Mr. BLANCHARD, Mr. JOHN L. BURTON, Mr. CORRADA, Mr. DRINAN, Mr. FARY, Mr. FLOOD, Mr. FOWLER, Mr. HAWKINS, Ms. MIKULSKI, Mr. MOTTL, and Mr. SOLARZ):

H.R. 12107. A bill to regulate the trapping of mammals and birds on Federal lands, and for other purposes; jointly, to the Committees on Merchant Marine and Fisheries, Interstate and Foreign Commerce, and the Judiciary.

By Mr. BENJAMIN:

H.R. 12108. A bill to amend the Urban Mass Transportation Act of 1964 relating to certain operating assistance under the act; to the Committee on Public Works and Transportation.

By Mr. BOLAND:

H.R. 12109. A bill to authorize appropriations for fiscal year 1979 for intelligence and intelligence-related activities of the U.S. Government, the Intelligence Community Staff, the Central Intelligence Agency Retirement and Disability System, and for other purposes; to the Select Committee on Intelligence.

By Mr. BROYHILL:

H.R. 12110. A bill to amend the Trade Act of 1974; to the Committee on Ways and Means.

By Mr. STEIGER (for himself, Mr. JENKINS, Mr. FRENZEL, Mr. JONES of Oklahoma, Mr. CONABLE, Mr. BURLESON of Texas, Mr. ARCHER, Mr. BAFALIS, Mr. KETCHUM, Mr. DUNCAN of Tennessee, Mr. HOLLAND, and Mr. WAGGONNER):

H.R. 12111. A bill to amend the Internal Revenue Code of 1954 to provide pre-1969 tax treatment for capital gains; to the Committee on Ways and Means.

By Mr. BUTLER:

H.R. 12112. A bill designating Gathright Lake on the Jackson River, Va., as Lake Moomaw; to the Committee on Public Works and Transportation.

By Mr. CLEVELAND:

H.R. 12113. A bill to amend the Federal Water Pollution Control Act relating to clean lakes; to the Committee on Public Works and Transportation.

By Mr. CONABLE (for himself, Mr. FINDLEY, Mr. FORSYTHE, Mr. GRADISON, Mr. LUJAN, and Mr. MCCLORY):

H.R. 12114. A bill to repeal the carryover basis provisions added by the Tax Reform Act of 1976; to the Committee on Ways and Means.

By Mr. CONABLE (for himself and Mr. RANGEL):

H.R. 12115. A bill to amend the Internal Revenue Code of 1954 to provide rules for the tax treatment of employees under certain profit-sharing plans; to the Committee on Ways and Means.

By Mr. DELLUMS (for himself, Mr. DIGGS, Mr. MCKINNEY, and Mr. FAUNTROY):

H.R. 12116. A bill to amend the District of Columbia Self-Government and Governmental Reorganization Act to repeal the authority of the President to sustain vetoes by the Mayor of the District of Columbia of acts passed by the Council of the District of Columbia and repassed by two-thirds of the Council, to change the period during which acts of the Council of the District of Columbia are subject to congressional review, and for other purposes; to the Committee on the District of Columbia.

By Mr. DIGGS (by request):

H.R. 12117. A bill to transfer certain real property of the United States to the District of Columbia Redevelopment Land Agency; to the Committee on the District of Columbia.

By Mr. DUNCAN of Tennessee (for himself, Mr. SPENCE, Mr. BUCHANAN, Mr. MCDONALD, and Mr. PEPPER):

H.R. 12118. A bill to provide for a comparison study of the costs and other factors associated with the establishment of reimbursement guidelines for respiratory therapy; to the Committee on Interstate and Foreign Commerce.

By Mr. HAMILTON:

H.R. 12119. A bill to authorize the Commodity Credit Corporation to finance export credit sales of agricultural commodities and to authorize non-market-economy countries to participate in certain programs of the Commodity Credit Corporation; to the Committee on International Relations.

By Mr. HANNAFORD (for himself, Mr. PATTEN, Mr. CONYERS, and Mr. FLORIO):

H.R. 12120. A bill to amend the Department of Defense Appropriation Act, 1978; jointly, to the Committees on Appropriations, and Armed Services.

By Mr. HEFNER:

H.R. 12121. A bill to amend the Controlled Substances Act to provide increased penalties for illegal distributions of controlled substances in or adjacent to elementary and secondary schools; to the Committee on Interstate and Foreign Commerce.

By Ms. HOLTZMAN:

H.R. 12122. A bill to extend countercyclical revenue sharing for 3 years and to revise the unemployment percentage required for authorization of such program; to the Committee on Government Operations.

By Mr. JOHNSON of Colorado (for himself, Mrs. SCHROEDER, and Mr. MIKVA):

H.R. 12123. A bill to amend title 23 of the United States Code, relating to highways, to authorize a program to separate rail-highway crossings in certain impacted cases; to the Committee on Public Works and Transportation.

By Mr. LEHMAN (for himself, Mr. ASHLEY, Mr. ROGERS, Mr. PEPPER, Mr. FASCELL, and Mr. ROSENTHAL):

H.R. 12124. A bill to encourage broader utilization of the condominium form of homeownership, to provide minimum national standards for disclosure and consumer protection for condominium purchasers and owners and tenants in condominium conversions, to encourage States to establish similar standards, to correct abusive use of long-term leasing of recreation and other condominium-related facilities, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

By Mr. MILFORD for himself, Mr. MATHIS, Mr. JOHNSON of California, Mr. BOWEN, Mr. DAVIS, Mr. STEED, Mr. BURGENER, Mr. JONES of North Carolina, Mr. WON PAT, Mr. ROBERT W. DANIEL, JR., and Mr. GILMAN):

H.R. 12125. A bill to provide that Federal assistance under the Federal Housing Administration will not be denied for housing solely on the basis that such housing is located in an area identified by a Federal agency as an area subject to the highest noise level resulting from the air transportation conducted in connection with the operation of a nearby civilian or military airport, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

H.R. 12126. A bill to amend title 38 of the United States Code to provide that the Veterans' Administration will not deny financing assistance for the purchase of residential property solely because the property is located in an area identified by a Federal agency as an area subject to the highest noise level resulting from the operation of aircraft at a nearby civilian or military airport; to the Committee on Veterans' Affairs.

H.R. 12127. A bill to amend title XVIII of the Social Security Act to authorize payment under the supplementary medical insurance program for the cutting and removal of corns, warts and calluses and the reduction of club nails; jointly, to the Committees on Ways and Means and Interstate and Foreign Commerce.

By Mr. MOTTL (for himself, Mr. BADHAM, Mr. EILBERG, Mr. EMERY, Mr. EVANS of Georgia, Mr. HILLIS, Mr. KETCHUM, Mr. KINDNESS, Mr. LAGOMARSINO, Mr. LEDERER, Mr. MCDONALD, Mr. MURPHY of Pennsylvania, Mr. SEBELIUS, Mr. SPENCE, Mr. CHARLES WILSON of Texas, and Mr. YATRON):

H.R. 12128. A bill to reduce the amount of paperwork required by Federal agencies and to increase congressional awareness of the increase in paperwork required by bills and joint resolutions under consideration by Congress; jointly, to the Committees on Government Operations and Rules.

By Mr. PRESSLER:

H.R. 12129. A bill to provide for improved controls over the labeling and inspection of meat and meat food products; and to enhance stability in the supply and price of meat and meat food products; jointly, to the Committees on Agriculture and Ways and Means.

By Mr. RICHMOND:

H.R. 12130. A bill to amend the Rehabilitation Act of 1973 to require that rehabilitation counslers hired under State plans approved under such act have certain minimum qualifications; to the Committee on Education and Labor.

By Mr. RISENHOOVER:

H.R. 12131. A bill to amend title XIV of the Public Health Service Act to provide Federal grants for small public water systems to meet national primary drinking water regulations; to the Committee on Interstate and Foreign Commerce.

By Mr. SIMON (for himself and Mr. SHIPLEY):

H.R. 12132. A bill to end the authorization of the Helm Reservoir project, Skillet Fork, Ill.; to the Committee on Public Works and Transportation.

By Mr. SNYDER:

H.R. 12133. A bill to amend the Occupational Safety and Health Act of 1970 to prohibit restrictions on work rules in locations in which there is hunting, fishing, or shooting sports, and for other purposes; to the Committee on Education and Labor.

By Mr. TRAXLER:

H.R. 12134. A bill to defer from income certain amounts deferred pursuant to State or local public employee deferred compensation plans; to the Committee on Ways and Means.

By Mr. BINGHAM (for himself, Mr. SEIBERLING, Mr. MURPHY of Illinois, Mr. CARNEY, Mr. SOLARZ, Mr. BENJAMIN, Mr. EDGAR, Mr. WEISS, Mr. WOLFF, Mr. BONIOR, Ms. HOLTZMAN, Mr. STARK, Mr. RANGEL, Mr. EDWARDS of California, Mr. METCALFE, Mr. ADDABBO, Mr. BEILENSON, Mr. FRASER, Mrs. CHISHOLM, Mr. MIKVA, Mr. NIX, Mr. GARCIA, Mr. RODINO, and Mr. STOKES):

H.R. 12135. A bill to amend title I of the Housing and Community Development Act of 1974 for the purpose of providing rehabilitation grants to metropolitan cities and urban counties; to the Committee on Banking, Finance and Urban Affairs.

By Mr. FRASER (for himself, Mr. ADDABBO, Mr. DAN DANIEL, Mr. PRICE, Mr. EILBERG, Mr. LEHMAN, Mr. BRODHEAD, Mr. FLOOD, Mr. WEISS, Mr. PRESSLER, Mr. SEIBERLING, and Mr. NEDZI):

H.R. 12136. A bill to amend the Internal Revenue Code of 1954 to allow a credit against tax for the cost of removal of trees required by the United States or a State or local government to be removed to prevent the spread of a disease caused by pests; to the Committee on Ways and Means.

By Mr. JENRETTE (for himself, Mr. HEFTEL, and Mr. YOUNG of Alaska):

H.R. 12137. A bill to amend title 5, United States Code, to provide that certain air traffic specialists be considered as air traffic controllers for retirement and certain other purposes; to the Committee on Post Office and Civil Service.

By Mr. JOHNSON of California:

H.R. 12138. A bill to name a certain Federal building in Laguna Niguel, Calif., the "Chet Holifield Building"; to the Committee on Public Works and Transportation.

By Mr. JOHNSON of California (for himself, Mr. ROBERTS, and Mr. DON H. CLAUSEN):

H.R. 12139. A bill authorizing additional appropriations for prosecution of projects in certain comprehensive river basin plans for flood control, navigation, and for other purposes; to the Committee on Public Works and Transportation.

H.R. 12140. A bill to amend the Federal Water Pollution Control Act to provide additional authorizations for certain operating programs under the act; to the Committee on Public Works and Transportation.

By Mr. MILLER of California (for himself, Mr. CUNNINGHAM, Mr. DOWNEY, Mrs. HOLT, Mr. MURPHY of New York, Mr. PATTISON of New York, Mr. PRITCHARD, Mr. STUDDS, and Mr. TREEN):

H.R. 12141. A bill to amend the Longshoremen's and Harbor Workers' Compensation Act to clarify the act's coverage to employees engaged in the manufacture, repair, servicing, or sale of recreational boats; to the Committee on Education and Labor.

By Mr. MARRIOTT (for himself, Mr. ANNUNZIO, Mr. ARCHER, Mr. BADHAM, Mr. BALDUS, Mr. BEARD of Tennessee, Mr. BEVILL, Mr. BOLAND, Mr. BRODHEAD, Mr. BROWN of Ohio, Mr. BROWN of Michigan, Mr. CEDERBERG, Mr. DON H. CLAUSEN, Mr. DEL CLAWSON, Mr. COCHRAN of Mississippi, Mr. COHEN, Mr. CORCORAN of Illinois, Mr. CORNWELL, Mr. CORRADA, Mr. DAN DANIEL, Mr. EILBERG, Mr. ERTEL, Mr. EVANS of Indiana, Mr. EVANS of Delaware, and Mrs. FENWICK):

H.J. Res. 850. Joint resolution to authorize the President to issue a proclamation designating the week beginning on November 19, 1978, as "National Family Week"; to the Committee on Post Office and Civil Service.

By Mr. MARRIOTT (for himself, Mr. FRENZEL, Mr. GAMMAGE, Mr. GAYDOS, Mr. GRASSLEY, Mr. GARCIA, Mr. HAMILTON, Mrs. HECKLER, Mr. HEFNER, Mr. HEFTEL, Mr. HILLIS, Mr. HORTON, Mr. HUGHES, Mr. JOHNSON of California, Mr. KAZEN, Mr. KEMP, Ms. KEYS, Mr. KINDNESS, Mr. LAFALCE, Mr. LAGOMARSINO, Mr. LENT, Mrs. LLOYD of Tennessee, Mr. LONG of Louisiana, Mr. LOTT, and Mr. LUNDINE):

H.J. Res. 851. Joint resolution to authorize the President to issue a proclamation designating the week beginning on November 19, 1978, as "National Family Week"; to the Committee on Post Office and Civil Service.

By Mr. MARRIOTT (for himself, Mr. MCCLORY, Mr. MCDADE, Mr. MCDONALD, Mr. MCHUGH, Mr. MADIGAN, Mr. MAHON, Mr. MANN, Mr. MAZZOLI, Mr. MURPHY of Pennsylvania, Mr. MURPHY of Illinois, Mr. NEAL, Mr. NICHOLS, Mr. O'BRIEN, Mr. PATTERSON of California, Mr. RISENHOOVER, Mr. RODINO, Mr. ROE, Mr. ROYBAL, Mr. SATTERFIELD, Mr. SEBELIUS, Mr. SIKES, Mrs. SMITH of NEBRASKA, Mr. SOLARZ and Mrs. SPELLMAN):

H.J. Res. 852. Joint resolution to authorize the President to issue a proclamation designating the week beginning on November 19, 1978 as "National Family Week"; to the Committee on Post Office and Civil Service.

By Mr. MARRIOTT (for himself, Mr. STOKES, Mr. WAXMAN, Mr. WINN, and Mr. WOLFF):

H.J. Res. 853. Joint resolution to authorize the President to issue a proclamation designating the week beginning on November 19, 1978 as "National Family Week"; to the Committee on Post Office and Civil Service.

By Mr. RINALDO:

H.J. Res. 854. Joint resolution expressing the determination of the United States with respect to the situation in Cuba; to the Committee on International Relations.

By Mr. ASHBROOK:

H. Con. Res. 558. Concurrent resolution disapproving proposed regulations of the Department of the Treasury requiring centralized registration of firearms and other matters; to the Committee on Ways and Means.

By Mr. WEAVER:

H. Res. 1131. Resolution providing for closed conference committee meetings on H.R. 5289; to the Committee on Rules.

## PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

Mr. BONIOR introduced a bill (H.R. 12142) for the relief of Victor Manuel Romero, which was referred to the Committee on the Judiciary.

# EXTENSIONS OF REMARKS

## ELECTRIC UTILITY FUEL ADJUSTMENTS

### HON. GOODLOE E. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. BYRON. Mr. Speaker, during the recently completed Easter congressional recess I traveled to every county in the Sixth Congressional District in order to meet with constituents and exchange views on a wide range of issues. While the people of central and western Maryland expressed concern over many different issues, clearly the issue most on the minds of the people of the Sixth District is the very large increases in electricity bills being experienced this spring due to the effects of the coal strike. Despite conscientious efforts by many citizens to conserve energy as much as possible, the electricity bills received this year have been staggering. I have received many complaints from constituents who have experienced electricity bills in excess of $500 for the 2-month billing period. Some bills were even higher than $1,000.

I am sure that many of my colleagues in the House have also heard from citi-

zens who find it very difficult to pay these unexpectedly high electric bills, which in many cases exceed the monthly mortgage payment. Understandably, citizens are upset over the effects of the fuel adjustment charges, which permit hundreds of dollars to be added to the total of the electric bill even though the actual usage of electricity might be lower than previous bills.

The House of Representatives addressed this issue last summer when we passed the National Energy Act, which contained a strong section on utility rate reform. Included in the bill were restrictions on the ability of Federal and State utility regulatory bodies to approve fuel adjustment charges.

The enormous increases in the fuel adjustment charges being experienced by the residents of central and western Maryland this year have convinced me that the fuel adjustment charge is unfair to citizens already burdened with inflation, taxes, and the high cost of all forms of energy. Therefore, on March 22, 1978, I introduced H.R. 11783 to prohibit the use of fuel adjustment charges in electricity pricing systems. This bill would ban fuel adjustment charges from all electric rates, whether the electricity is subject to regulation by a Federal or State utility regulatory agency. The present Federal and State utility regulatory structure would be retained. The bill stipulates that all rates for electricity must be established in advance only after full public hearings which guarantee the opportunities for participation by the public in the ratemaking process. I invite the support of other Members of Congress in cosponsoring this legislation.

At the beginning of the 95th Congress in January 1977, I appointed a task force on energy made up of citizens representing a cross section of Maryland's Sixth Congressional District. These citizens met frequently last year, reviewed the national energy plan in detail, and submitted recommendations to me on energy policy and its impact on the people of central and western Maryland. The majority of the members of the task force feel that there is a need for utility rate reform on a Federal level and their views have been very helpful to me studying the effect of fuel adjustment clauses and in preparing this legislation. I am very grateful for the guidance of the thousands of constituents who have written to me on this subject, called me, attended one of the energy town meetings I held last year, or dropped by to visit with me to express their views with respect to this issue. I am indebted to each of the members of the energy task force; the cochairpersons are Sylvia Hancock and Barry Teach and the other members are Homer Berry, John Estes, Robert Gentry, John Hose, William McClean, and Joseph Sottile.

I think it is important to note that the Maryland General Assembly has recently passed legislation to protect utility consumers by limiting the ability of utility companies to pass increased fuel costs directly on to consumers and by strengthening the role of the Maryland Public Service Commission in reviewing increased fuel expenses and other practices of the utility companies. I commend the members of the Maryland General Assembly for their action and feel it underscores the important responsibilities of State government in the field of utility rate regulation. The Federal Government is very restricted in its ability to help individual citizens cope with high utility bills unless the State public service commissions also take strong action to effectively regulate public utilities.

Because of the tremendous increases in the cost of energy in recent years, the Federal Government must become more sensitive to the difficulties created for many citizens by our present utility regulatory practices. The House of Representatives recognized this fact last year when we approved the National Energy Act. The bill I have introduced, H.R. 11783, would further protect the interests of consumers by banning the use of fuel adjustment clauses in electric rate structures and mandating greater public participation in decisions affecting electricity rates. I would like to include a copy of this bill in the RECORD at this time. I would welcome the comments and questions of other Members of Congress who would like additional information about this bill or who may wish to cosponsor it.

A copy of the bill is inserted at this point:

H.R. 11783

A bill to prohibit fuel adjustment clauses in electric utility rate schedules

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

PROHIBITION OF FUEL ADJUSTMENT CLAUSES AND SUMMARY, EX PARTE RATEMAKING PROCEDURES

SECTION 1. (a) All utility rate schedules and parts thereof made lawful by a regulatory authority shall provide for the sale of electric energy at prices which have been subject to and ordered into effect after prior public notice and full hearing by the regulatory authority.

(b) As used in this section:

(1) The term "Commission" means the Federal Energy Regulatory Commission.

(2) The term "consumer" means any person, State agency, or Federal agency, to which electric energy is sold other than for purposes of resale.

(3) The term "hearing" means, in the case of a State regulatory authority, a proceeding (A) which includes notice to, and an opportunity for, participants to present direct and rebuttal evidence and a written decision based upon evidence appearing in the record of the proceeding, and (B) which is subject to review in accordance with the laws of each State. In the case of a Federal regulatory authority, such terms mean a proceeding on the record after agency hearing.

(4) The term "Federal agency" means any agency or instrumentality of the United States; but does not include the District of Columbia.

(5) The term "Federal regulatory authority" means any Federal agency which has ratemaking authority with respect to the sale of electric energy by any utility.

(6) The term "rate" means any rate, charge, or classification made, demanded, observed, or received with respect to sale of electric energy, any rule, regulation, or practice respecting any such rate, charge, or classification and any contract pertaining to the sale of electric energy.

(7) The term "ratemaking authority" means authority to fix, modify, approve, or disapprove rates.

(8) The term "rate schedule" means the rates which a utility charges consumers.

(9) The term "regulatory authority" means a State regulatory authority or a Federal regulatory authority. A State agency or a Federal agency which is a utility and which has ratemaking authority with respect to its own rates shall be treated as a regulatory authority only to the extent that no other regulatory authority has ratemaking authority with respect to such rates.

(10) The term "sale" includes an exchange of, or a charge for transmission of, electric energy.

(11) The term "State" means a State or the District of Columbia.

(12) The term "State agency" means any agency or instrumentality of a State or political subdivision thereof.

(13) The term "State regulatory authority" means any State agency which has ratemaking authority with respect to the sale of electric energy by any utility.

(14) The term "utility" means any person, corporation, State agency, or Federal agency, which sells electric energy.

ENFORCEMENT

SEC. 2. (a) No utility may sell electric energy except in accordance with a rate schedule which has been fixed, approved, or allowed to go into effect by a regualtory authority. No regulatory authority may fix, approve, or allow to go into effect any rate schedule which violates section 1.

(b) If any person alleges that a regulatory authority's action, or failure to act, violates subsection (a)—

(1) in the case of a regulatory authority which is a Federal regulatory authority (or which is a State regulatory authority whose action or failure to act is not reviewable by a State of competent jurisdiction), such person may obtain review of such action or failure to act, insofar as it relates to a violation of subsection (a)—

(A) in any statutory review proceeding which is otherwise applicable to such action or failure to act, or

(B) if there is no such statutory review proceeding applicable to such action or failure to act, by commencing a civil action in the United States court of appeals for any circuit in which the utility sells electric energy, which court shall have jurisdiction to review such determination in accordance with chapter 7 of title 5, United States Code; and

(2) in the case of a regulatory authority which is a State regulatory authority, such action, or failure to act, insofar as it relates to a violation of subsection (a)—

(A) may be reviewed by any State court of competent jurisdiction, and

(B) if such action is reviewable by such a State court, may not be reviewed by any court of the United States, except by the United States Supreme Court on writ of certiorari in accordance with section 1257 of title 28, United States Code.

(c) If (but this subsection) no regulatory authority has ratemaking authority with respect to a utility, a Commission shall have ratemaking authority with respect to such utility for purposes of this Act.

EFFECTIVE DATE

SEC. 3. The provisions of this Act shall take effect six months after the date of enactment of this Act.●

## FOREIGN STEEL DUMPING

### HON. THOMAS N. KINDNESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. KINDNESS. Mr. Speaker, while there is in my opinion ample evidence of the "dumping" of steel by foreign steel companies, for those who still are not convinced, the following article from the Sydney Morning Herald offers ample proof. And, it comes straight from the financial editor of one of Australia's leading newspapers, the Sydney Morning Herald in discussing the finances of BHP (Broken Hill Proprietary Co., Ltd.) a leading Australian steel producer:

BY ALL ACCOUNTS STEEL'S THE LOSER

(By Malcolm Wilson, Financial Editor)

It will now take a very major effort indeed for BHP to climb out of the deep hole into which it has fallen on its steel operations.

Steel continues to be BHP's big problem area and whichever way you prefer to do the accounting on the steel operations the result was a lot worse in the six months to November, 1977, compared with the previous corresponding period.

Yes, again, we find that the company has incurred a big loss on its steel operations. Using BHP's accounting methods, the loss was $35 million in the six months to November compared with a loss of $21.6 million in the previous corresponding period.

Adopting the more widely used accounting methods (which are less severe as far as depreciation is concerned) the company would have shown a profit on its steel operations of $10.5 million but even this would have been half the previous profit of the previous profit of $20.6 million.
